A number of parchments, belonging generally to the thirteenth and fourteenth centuries, have been found at Paris by workmen engaged in the demolition of the tower of St. Jean de Latran, opposite the College de France.

The mischievous rumour of a compulsory ballot for the militia being impending has gone abroad amongst the Irish peasantry, and in some districts has caused quite a panic, causing the people to neglect their work, and in a great many instances inducing them to fly to America.

Orders have been received by the Irish constabulary, giving permission to the whole of the force to wear the moustache.

One of the principal tanners in Lyons is buying up all the sheepskins he can find, in order to fulfil a contract with Government to furnish 80,000 for the clothing of General Canrobert's army.

A meeting of the well-known Society for the extension of conjugal principles, and one of the persons condemned at Bourges for being concerned in the attack of May 15th, on the Constituent Assembly, has just expired in the public prison at Sarthe, in consequence of the loss of his wife.

The strike of the Glasgow cab and omnibus men against doing any work on Sunday is virtually at an end. An arrangement has been made by which they will have time to attend church at least on alternate Sundays, and will be paid for their extra labour.

An electric telegraph office is to be established within the walls of the Castle at Windsor, in order that all messages at this important crisis may be instantly sent to her Majesty and Prince Albert.

The Government of Canada have agreed to send £20,000 in aid of the funds for the widows and orphans of the killed at Alma—one-half for France (about a third of the whole population is of French origin) and one-half for England.

A postal line is to be established between Malta and Cagliari, by which means intelligence will be received much sooner at Paris and London, by means of the electric telegraph through La Spezia.

Joseph Paxton has issued an address to the electors of Coventry, in which he announces his acceptance of the invitation given to him to come forward as a candidate on the Liberal interest at the approaching parliamentary election for that city.

The fishing-boat, intended for the voyage to Australia, has sailed for her destination. She is named the *Mystery*, and is only 12 tons. Her crew, on leaving Mount's Bay, in Cornwall, were in the best health and spirits, and appeared sanguine of a safe and speedy voyage.

A new system of footlights for the stage of theatres has just been invested by the Chevalier Taddeo del Conseri, of Florence. It consists of lamps or burners and lenses doubly convex, and gives a finer and more intense light than the present system, and at much less expense. It has been tried at the great theatre of Florence with marked success.

Turkey has just decided, notwithstanding the charges of the war now going on, she will send products of her industry to the Universal Exhibition at Paris next year.

The *Nubia*, on her last passage to Alexandria, encountered such bad weather that two valuable horses, presents from her Majesty to the Pacha of Egypt, died.

Mr. George Cowell, the prime leader in the late Preston turn-out, is now imprisoned for debt in Lancaster Castle, whence he has indited an advertisement to the public for their assistance.

Several very large nuggets have recently been discovered in Australia. One was found at Maryborough, weighing 900 ounces; and a quartz specimen found at Ballarat, containing a large proportion of gold weighed 95 lbs.

JULLIEN and CO., 214, Regent-street.

"THE ONLY EDITION."—These words are advertised in several works intended to compete with NOVELLO'S Cheap Editions. The sole end appears to be an endeavour to make it appear that real cheapness always has the words "the only" (dear) edition, or some such peculiarity, but there is one member the public may surely depend upon when "only" is used—that there is a Cheap Edition of Novello's, which is "the only" one that is not cheap. Novello's Cheap Edition is that strictly "Abercrombian" work where "the people" are invited as the "only" editors to suggest more airs, and when it may not be stated that it is the only large, an edition in which the plan does not progressively expand from the interest, but where each (having learnt the meaning of "only") absolutely does not call for "Variations," a complete edition, with the examples properly inserted in the text, at about 2s. 6d. per volume, or all will be published in the 1d. way for the Million of Musical Knowledge. Twelve numbers, each 32mo. sheets, fcap. 8vo, 7d., Penny. New York: Sold Brothers.
Novello's, 1861.

PURE LITERATURE FOR THE PEOPLE.

RE-ISSUE of THE HOME CIRCLE.—The most sincere friend of the family is the publication which elevates, instructs, and amuses its members, without deteriorating them; this, by the disinterested testimony of two eminent judges—the public press, and a very large number of private individuals—is pronounced to be the peculiar characteristic of the HOME CIRCLE. In pages, including Tales, Essays, Poetry, Music, &c., embracing Histories, Biographies, and Household Recipes, Original Translations, Chess, Music, &c., embellished with Wood Engravings. Every thing shall be done to improve, and nothing to offend. Order this Work of your Bookseller. No. 1 price 1s.; Part I., 8d.; and Vol. I., 4s. or 4s. 6d. to be had of all Booksellers. The HOME CIRCLE, being a standard Work, is kept in print, so that, no fear can be entertained in being unable to order can be sustained as it may always be had at the Office.

London: W. S. ORR and Co., 86, St. Martin's-lane, Charing-cross.

NEW BOOKS, &c.

PAUL JERRARD'S DRAWING-ROOM BOOKS FOR THE APPROACHING SEASON.

1.

PAUL JERRARD'S NEW CHRISTMAS BOOK, SHAKSPEARIAN TABLEAUX. A Series of Heroines illustrative of Passages in the Plays of Shakspeare; consisting of Twelve Highly-finished Compositions richly coloured. Each Picture is accompanied by an Appropriate Quotation from the Passage from the Play, printed in Gold, and emblished with appropriate Ornamentation, in which animated Vignettes are introduced, illustrative of Scenes in the Plays. Price 21s., in cloth, with bevil cover; or 31s. 6d. in enamel, richly embossed panel in cloth.

2.

GARDEN BEAUTIES, a Series of the most magnificent of our Garden and Greenhouse Flowers, exhibited in a succession of brilliantly-coloured Plates executed on fac-similes from highly-wrought Floral Studies by an Eminent Artist. Each Plate is accompanied by an Account of the Plant and its associations printed in Gold, and embellished with Inner-wire Borders The work being intended to form a splendid Present suitable to all occasions, a Dedicatory Page is appended, ornamented by a highly finished design formed of a Wreath of five different varieties of the Rose, intended for the reception of a Name or Verse. Imperial 8vo. Price 31s. 6d. Patent binding.

3.

FLOWER PAINTING in TWELVE LESSONS. A Course of Instruction, in which the whole Art of Painting Flowers in Water Colours, from the first sketch outline through every successive stage of progress, is both described and illustrated. Price 21s.

4.

Sent free, with Instructions (on receipt of stamps), by the Inventor and sole Patentee, T. GILLETON, 3, Long-acre (one door from St. Martin's-lane).

LANGUAGES.—Hamiltonian System.—"This is the age." A pupil can acquire more in five or six weeks on this system than in two years on the old."—We answer Hamilton.

Mr. ROSENTHAL continues to give LESSONS in the French Russian, Italian, Spanish, Latin, Greek, Hebrew, &c., LANGUAGES.—Mr. Rosenthal, 353, Oxford-street, near the Pantheon.

HANWELL COLLEGE and PREPARATORY SCHOOL. A sound, rapid, and economical preparation is secured for the Universities, the Queen's and East India Company's Examinations, the Army, Civil Service, and Commercial Life. Prospectuses forwarded on application to the

Rev. JAMES EMERTON, Principal.

"Hanwell College is fully sustaining its high character."—United Service Gazette.

TO ANGLERS.—CHARLES FARLOW, Manufacturer of Rods, &c., Strand, invites anglers to inspect his large and varied STOCK of superior FISHING TACKLE, at moderate prices. Catalogues forwarded gratis.

SOYER'S EXQUISITE SAUCES, seasoned to suit the palates of Ladies or Gentlemen. SOYER'S RELISH, of general acceptance; and SOYER'S AROMATIC MUSTARD, if all Grocers and Italian Warehousemen; and wholesale of CROSSE and BLACKWELL, 21, Soho-square. Caterers to her Majesty's Royal Household.

OYSTERS.—J. SWEETING is happy to inform his Friends and the Public that his ROYAL RIVER NATIVE OYSTERS are as fine as last season. He has also a large supply of Fine Rock, 2d., four dozen from the beds, at his Fish and Oyster Establishment, 129, Cheapside. Superior Oyster-rooms, Stead's Ale, Isaac's Stout.

TO LOVERS of FISH.—100 Real YARMOUTH BLOATERS for 5s., package included.—The above forwarded to all parts on receipt of postage stamps, per Post-office order (preferred) for the amount. Address, THOMAS LETTIS, Jun., Fish Curer, Great Yarmouth. Send plain address, name, and nearest station.

"Oct. 30, 1854."—Mr. Lettis has supplied us with Yarmouth Bloaters, and we find the quality excellent.

"Dec. 30, 1854."

BRANDY.—Dr. URE and Dr. LETHEBY, having analysed our BAL-DE-VIE cognac in proof, owning it a spirit of undoubted purity, peculiarly free from acidity perfectly wholesome, and decidedly preferable to direct importation from Cognac." Imperial gallon, 16s.; Bottles, 1s. per dozen. Bottles included. HENRY BRANDT and CO.

Old Furnival's Distillery, Holborn

KINAHAN'S Celebrated LL WHISKY is highly recommended as the most delicious and wholesome spirit, either for mixing or for medicinal purposes; being perfectly pure, matured with age, very mild, and free from terms sory or burning qualities, so much objected to in other spirits. Can be obtained in sealed bottles, at 1s 6d each, at all the respectable retail houses in England; or wholesale from KINAHAN, ROBB, and SMYTH, Wine, Spirit, and bottled Beer Merchants, 3, Great Windmill-street, Haymarket.

G. FRIEND, WINE MERCHANT, begs respectfully to acquaint private Gentlemen, Tavern-keepers, and others, that he is SHIPPING MUET'S CHAMPAGNE direct from the Estate Epernay.

The most superior quality, per Dozen, 66s.

The most superior quality, in Pints, per Dozen, 32s.

Other Champagnes to suit all tastes and purses. A delicious make if two or more casks are taken. Rhine Cases of one dozen quarts, or two dozen pints, at 30s. per case. Sherries, G. F.'s stock of Pure, dry, and other wines, amounting to five thousand dozen, will be found well worth an inspection. Terms, Cash. Prices from 18s. to 84s. per dozen. Hocks, Moselle, and other Rhenish wines, sparkling and still. Foreign and British Brandies of the first quality. Foreign Liqueurs. The lowest possible price will be taken for cash Warehouse, 71, Fleet-street; Lorrimore, Bridge-street, Blackfriars. Fifty Cases of one-and-last light Champagne, at 50s. per dozen; or 48s. per dozen by the case.

ON the SOUTH COAST.—BOGNOR, Sussex, a mild winter retreat, sheltered by the Downs, light gravelly soil, drainage excellent. The beauties of the place is proverbial. There never has been a case of consumption known. No marshes. Those who are in search of health and economy, should visit this delightful Watering Place. Furnished Houses and Lodgings making from four to twenty Beds, from 10s. to 60s. per week.—For further particulars, apply at the Post-office.

PROFITABLE INVESTMENT.—WEST-MINSTER IMPROVEMENTS. BONDS for £1000 and £500 each, to be SOLD to realise an advance, upon terms that will pay a large rate of interest. They are secured upon the Freehold ground-rents and houses, including Victoria-street, and are situated to realise upwards of One Million Sterling.—Apply to Mr. W. TOOGEY, 194, Tot-ssam co rt-road

THE BEST OIL in the WORLD!—PURE FRENCH COLZA OIL, 5s. 6d. per gallon, Manufactured by Messrs. HEARD and CO., 49, Berners-street, and 23, Paris; and sold in England by the only Agents, the London Soap and Candle Company, 78 New Bond-street

THE ILLUSTRATED LONDON NEWS.

No. 716.—VOL. XXV.] SATURDAY, DECEMBER 9, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE "NATIONALITIES," AND THEIR INFLUENCE ON THE WAR.

WHAT are the "oppressed nationalities," without whose aid M. Kossuth and many other persons insist that the war cannot be carried to a successful issue? In such a conflict as that in which Great Britain and France are engaged, it is well that they should accept all honourable assistance and alliance; but the public, before it is carried away by eloquence like that of M. Kossuth, should inquire whether the alliance and aid of such "oppressed nationalities" is possible? and, if so, whether it would be honourable and advantageous? It may serve to clear up some of the confusion and misapprehensions created by the glowing appeals of M. Kossuth, if we consider, in the first place, who and what are the "oppressed nationalities" of which he speaks; and, in the second place, how far it is wise, politic, or just, to have anything to do with them.

It is said that the war is one of principle; that it is the war foretold by Napoleon; the great war of Despotism against Liberty, and Civilisation against Barbarism. On the one side we are told to look for Great Britain and the friends of popular institutions and liberty of thought and speech. On the other side we are told to expect Russia and all who admire and uphold the Russian system; all the friends of absolute power; all the opponents of freedom of conscience, and the rights of man. Certainly, it is not impossible that the war may assume this formidable shape; but at present the line of demarcation between the belligerents does not leave on either side of it any such principle and counter-principle. Though all the friends of freedom and civilisation feel themselves to be the enemies of Russia; many absolute Sovereigns look with as much detestation upon the ambitious projects of the Czar as the most furious exile in Leicester-square, and have interests at stake quite as mighty as the people of Great Britain and France. To separate the States of Europe into two hostile camps with this principle as their watchword and "shibboleth," would be to deprive Great Britain of the invaluable aid of the Emperor Napoleon III., and to array that Sovereign and his magnificent armies on the same side as the Emperor of Austria, the King of Prussia, and the Czar, with all their multitudinous hordes and hosts against this country. Nay, Turkey itself the very subject of dispute—would have to unite with Nicholas, and fall foul of England; for, if Barbarism and Despotism have a representative more barbarous and despotic than Russia, it must be sought in the Government of the Ottoman Empire. It is clear, therefore, that no such state of things exists at present, as the war of Despotism against Liberty, on which M. Kossuth and others are so fond of expatiating. If the war ever attain such colossal dimensions, it must be from the defection of France which, happily, is a most unlikely, if not impossible, catastrophe and from the defection of Austria, which, after the signature of her treaty of alliance, offensive and defensive, with the Maritime Powers, is in a high degree improbable. The war—as has been stated a thousand times, and as most sane and impartial people know—is a war in vindication of the public law of Europe; a war in defence of a weak State, unjustly attacked by a strong one; a war waged on the principle that animates Society in each country when it declares and enforces laws against felony and murder; and which was undertaken with the full conviction that if one State were allowed to make such attacks against another for the purpose of aggrandisement and extension of territory, Europe would speedily be reduced to a condition of such hopeless anarchy that Civilisation would become impossible.

In no sense can the war be considered a war against Despotism as a principle. It is not forms of government which are involved, but the eternal principles of Right. If it had been the United States of America which had attacked Turkey, on the pretences and for the objects avowed by Russia, the duty of Great Britain and France, and of all the other States of Europe, would have been identically the same as now. It would have been necessary to confront the free and enlightened States of America with the same boldness with which we now confront the enslaved and barbaric Power of Muscovy. This country has no quarrel with the Czar because he is a despot and a semi-barbarian. Our grievance is that he wrongfully attacked his neighbour, and would attack other neighbours if the outrage were tolerated. On this plea we fight; and on this plea, with the aid of Heaven, we will conquer.

In such a struggle, Great Britain and France have clearly nothing to do with the "nationalities" that may form the component parts of the States and Empires with which they are at peace. It would be fatuity to prefer the aid of the imaginary armies of M. Kossuth to the aid of the real armies—a quarter of a million strong—of the Emperor Francis Joseph. But this is the course which M. Kossuth and others assert to be the only wise and only available one. The Emperor Napoleon III. might with as much unreason disapprove of an alliance between France and Great Britain. If he were no wiser than M. Kossuth, he might ask if the late O'Connell did not vehemently assert, during his long and busy life, that England oppressed the nationality called Ireland? If the still-living Smith O'Brien did not repeat the same story? And if the Earl of Eglinton, Sir Archibald Alison, and certain Scottish Bailies and Provosts, do not assert—from the Salt-market, and elsewhere—that England behaves with injustice and contumely towards that noble nationality called Scotland On the actual state of the conflict, the alleged wrongs of Hungary and Italy, whatever they may be—and we have no wish to under-

THE SIEGE OF SEBASTOPOL.—THE RIFLES IN THE TRENCHES.—(SEE NEXT PAGE.)

rate or to extenuate them have no more to do with the principle at issue than the wrongs of Connemara, or the indignities which are said to be inflicted on the Scottish unicorn.

The nationality of Poland involves a totally different question. Hungary and Lombardy were not the result of any spoliation on the part of Austria. That power did not declare war against the public law of Europe to acquire either of those portions of her Empire. If one or both be misgoverned, England may deplore the fact, but has no more right to remonstrate or intermeddle, than Austria would have to interfere with this country in the internal administration of Ireland or Scotland. The case of Poland stands in solitary grandeur, and has little affinity with that of Hungary; and less still with that of Lombardy. Poland was incorporated with Russia by an act of unparalleled iniquity. Its partition was not only "the bloodiest picture in the book of Time," but a great European calamity. It was robbery and murder on the largest scale. It was an outrage against all law—divine and human, national and international; it was an act of infamy to the States which perpetrated, and a disgrace to those which permitted it. If the nationality of Poland had been taken under the safeguard of Europe—as it would have been, had Europe been wise—the present war, and perhaps many future ones, would have been avoided. Great Britain and France, and all Europe, who have learned their lessons in the school of bitter experience, have a clear right, and will yet, we hope, feel it to be an imperative duty, to strive for the re-establishment of that State—not simply as an act of justice, and atonement for past wrong, but as a barrier against future aggression. If, in the gigantic struggle which they are now waging they prove to be the stronger—as every true patriot, and every true friend of humanity and civilisation most devoutly prays—they will show mercy untempered with justice, and undignified by discretion, if they do not argue the question of Poland on the broad basis of Truth and Justice. Austria, by her tardy but welcome alliance with Great Britain and France, has placed herself in the front of Germany; and all true Germans will follow her lead. Prussia—reduced to a secondary position by the impotency of will, and infirmity of purpose displayed by her pettifogging King—will vindicate at a future time her own claim to better fortune, and to higher rank in the European commonwealth. In the meantime Austria is Lord of the Ascendant, and Prussia must walk in her footsteps. To neither of those Powers as we endeavoured to show on a former occasion has their share of the partition of Poland been of the slightest real advantage. The ill-gotten gain has brought ill-luck along with it. If the re-establishment of Poland be, as we think it, absolutely essential to the maintenance of a European equilibrium, those Powers will be no losers by the disgorgement, voluntary or involuntary, of the plunder, which has so long been their opprobrium and their punishment. Hungary and Lombardy are questions that do not vitally concern Europe. They are highly interesting, and may hereafter become important; but the question of Poland, like that of the Crimea, is pressing and paramount. The Allies will not do their great cause the injustice to neglect it.

THE RIFLEMEN IN THE TRENCHES.

When Prince Menschikoff writes home to the Czar that nothing new has occurred in the siege operations, it must not be inferred that all is going on comfortably in Sebastopol. The latest accounts from the English Camp inform us that our riflemen in the trenches continue to pick off the Russian gunners in the most astonishing manner. One rifleman is said to have killed no less than fourteen in one battery, so that we need not be surprised at their bad gunnery. Never was the superiority of skill and science in war so plainly demonstrated as it has been in the use of the Minié rifle, both by the French and English, during the campaign in the Crimea.

The Emperor Nicholas, who begins to see that sheer brute force and numbers are hardly a match for such enemies as he has to encounter, has resolved to organise a regiment of sharpshooters for the spring campaign, "in full view" as he says, "of the dangers that threaten our beloved fatherland." If he do not succeed any better in the training of his riflemen than he has done in the manufacture of fire-arms and powder, there will not be much reason to be afraid of his new regiment.

SPIKING CANNON.

In your Journal of the 25th ult. the method of spiking cannon was attempted to be explained—but was scarcely made intelligible to the general reader.

It is only when the last glimmering hope fails, that the Artillery officer gives the word "Spike the gun," to render it unserviceable to the enemy. The spike used in this case is of steel, four inches long, about a quarter of an inch in diameter at the head, and one tenth at the point; it is driven into the vent by a tap with the hammer, and then broken short off. A gun so spiked may be unspiked by loading it with a charge of powder equal to half the weight of the shot, laying a leader of quick match along the bore, double shotting the gun, and firing it; but generally a new vent has to be drilled.

The *spring*-spike described in your Number, of the 25th ult. is only used when a gun has to be abandoned *for a time*; that is when it is intended to be retaken, and is called the *temporary spike*. It is made much smaller in diameter than the common spike, that it may pass easily through the vent. When the spring is clear of the metal it expands, and cannot be withdrawn, unless it is again compressed sufficiently to allow of its being again driven into the vent, which may be done by pressing a rammer-head against it, provided the spring is towards the muzzle, which may be known by a small notch cut in the head of the spike to point out its direction. When such a spike as this is used, the attention of the enemy may be sure of being so well kept up, that its withdrawal by him is a remote chance.

The motto of his regiment, "Quo fas et gloria ducunt," is never forgotten by an artillery officer or man either; his gun is his standard, which it is his pride to defend to the last possible moment, and which he never deserts without *positive orders*. R.A.

The Twerton New Parochial Schools were opened by the Bishop of Bath and Wells on Monday, the 4th inst. The building is in the Tudor style, from the designs of Mr. Charles Davis, of Bath. The schools are calculated to educate 300 children, and consist of a boys' and a girls' school-room, with class-rooms attached.

Russian Emulation.—The *Journal de St. Petersbourg* states that, on the 16th ult., thirty-one Sisters of Charity left Moscow to devote themselves to the care of the wounded Russians in the Crimea. Their expenses are to be paid by the Grand Duchess Helena. They are accompanied by their superior and a chaplain.

Captain Stuart, the Conservative candidate for Bedford, has been returned. The polling took place on Wednesday, and the numbers at the close were:—Stuart, 422; Trelawney, 331: majority, 91.

The officers of the Ordnance at the Tower were actively engaged on Monday in forwarding bale goods, consisting of blankets, fur cloaks, caps, and gloves, waterproof capes, cowhide boots, suits of inner flannel clothing, waterproof leggings, 40,000 of each description, to Portsmouth and Woolwich, for shipment to the Crimea. There were also forwarded 10,000 suits of the above-mentioned articles for the use of officers.

A man, named Sellers, stands remanded before the magistrates at Manchester charged with attempting to set fire to some warehouses. A police officer saw the prisoner issue from behind a block of warehouses with a ball of burning cotton-waste in his hands.

A Philadelphia court has decided that a landlady has a right to get rid of a boarder, who does not pay, by covering the sheets of his bed with thistles.

FOREIGN AND COLONIAL INTELLIGENCE.

FRANCE.

(*From our own Correspondent.*)

Paris, Thursday.

The decisive step at last taken by Austria has had, as may be supposed, a cheering effect here; though the reports from the Crimea, and the rapid closing in of the winter season, with all its dangers and severities, continue to excite much anxiety and uneasiness for the fate of the troops engaged in this dangerous and harassing campaign. The Emperor takes the strongest and deepest personal interest in all the plans proposed to add to the comforts and diminish the hardships of the brave soldiers who so manfully support all the difficulties of their position. He has had erected in the Jardin des Tuileries, opposite the Palace, three different models of tents—in wood and in canvas—that he might examine the construction of all, and decide which might be best suited to send to the seat of war. Having made his determination, an immense number are now in the course of construction according to the model he has chosen; and, such is the expedition used, that they are to be dispatched to their destination at the end of the month.

The Duc and Duchesse d'Alba, accompanied by the Comtesse Montijo, have completed their visit to their Imperial Majesties, and have left Paris on their return to Madrid.

A plan is in agitation for establishing a grand national subscription for the widows and orphans of the men who have fallen in the East. The Empress has, we believe, already pledged herself to head the subscription.

A number of arrests, made on the ground of a pretended conspiracy in the south, have, on examination, proved to be wholly causeless; and the persons accused (some of whom were public functionaries) have not only been set at liberty, but reinstated in their offices.

The *Mousquetaire* publishes a letter from M. de Lamartine, which we cannot resist translating for our readers:—Alexandre Dumas, in a notice on the "Turquie Contemporaine," of M. Charles Rolland, makes some remarks as flattering to M. de Lamartine and the Sultan as they are severe on the ingratitude of France towards her noble poet and statesman. Here is his reply:—

My dear Dumas,—Your voice reaches far, because it comes from the heart; it has reached me in my retreat; I thank you for your appreciation of the book of M. Rolland; I take in it the interest which is inspired by the youth of the writer, his talent ripened before the time, and this cause of Ottoman independence, which has become the cause of the equilibrium of Europe. Never was it better exposed by reasoning, while it is pleaded with so much disinterestedness by the heroism of France and England, in the batteries of Sebastopol.

Let me thank you for the too flattering allusions which you make in these articles to my short and forgotten public life. But do not pronounce the word ingratitude. I have experienced none; and, had I experienced it, I should have blushed to own it. Our country, according to my idea, sufficiently recompenses her children in permitting them to serve her; she is like the Divinity, we owe her all—she owes us nothing. *Au revoir.*

Alph. Lamartine.

The new police service is now in action over a large portion of Paris. Though organised on the model of our English system, it partakes also of the military character, which always distinguishes the municipal guardians in France. The members of it are, for the most part, men of from five-and-twenty to three-and-thirty, selected from those who have served their term in the army. The uniform has a much more military type than ours, and they wear swords.

The death of the Duc de Mouchy is much regretted in society here: his high character, liberal and gentlemanlike sentiments, and amiable and distinguished manners, rendered him universally popular. Few Frenchmen displayed such a decided taste and sympathy for English ideas, customs, and usages as the Duc de Mouchy: his household, one of the best organised in France—was entirely established on the model of those of the upper class in England; and all his mode of life showed the same tendency. The Duc's illness was long, severe, and complicated: the principal and first immediate cause of his death was disease of the stomach. The health of M. Bineau, Minister of Finance, is in a state to excite the utmost uneasiness. A consultation of M M. Rayer Chomel, and Andral recommended a visit to Nice; but there seems little reason to hope that the invalid's strength will enable him to support the journey.

The Louvre has just received a new acquisition, in the shape of a beautiful painted statue—discovered by M. Mariette, in the course of his excavations in Egypt. The figure—which is coeval with the pyramids—represents a man sitting cross-legged, and holding a roll of papyrus in the hand. Preparations are being made to place a variety of other no less curious and precious objects resulting from the researches of this enlightened traveller.

A remarkably fine picture, though of small size, representing Louis XIV. on horseback, and painted by Vander Meulen, has been deposited at the Préfecture de Police, by the finder, who, when the Palais Royal was sacked, in 1848, discovered it in the palace garden. Ignorant of its value, more especially as the canvas was, in various places, pierced by bayonet thrusts, he carried it home; but, being lately informed of the value of his *trouvaille*, even in its dilapidated condition, he resolved to restore it to its rightful possessors.

One of the greatest theatrical successes of the day is that of the "Roman de la Rose," at the Théâtre Lyrique, in which piece Mdlle. Bourgeois, a singer and actress of much promise, made her début.

AMERICA.

The *Atlantic* steam-ship, which left New York on the 25th ult., arrived at Liverpool on Wednesday.

The steam-ship *George Law* arrived at New York on the 24th ult, from California, with upwards of a million and a half of dollars. The Anglo-French fleet had arrived in San Francisco, and had brought with them a Russian prize ship, which was taken off Petropaulovski.

Captain James Smith, who had been sentenced to death for trafficking in slaves, had applied to the United States Circuit Court for a new trial. After hearing argument, the Court postponed the consideration of the motion until February term.

Twenty people were severely injured on the Harlem and New Haven Railway on the 22nd, through a freight train having stopped on the track, and those in charge neglecting to send back signals.

The third reading of the Clergy Reserves Secularisation Bill was carried in the Legislative Assembly, Quebec, on the 23rd ult. The minority consisted of High-Church Tories and extreme Reformers.

The Turkish Ministry.—A telegraphic despatch from Constantinople announces the retirement of Mehemet-Kipreli Pacha, who had been the Sultan's Grand Vizier since May last. Redschid Pacha, Minister of Foreign Affairs, again becomes Grand Vizier, and the office which he lately held falls to Ali Pacha, previously in the Ministry without portfolio.

According to letters from Dantzic, the *Impériense* and consorts have picked up several prizes, of greater or lesser value. Russian merchants, supposing that our squadron had drawn off, and being further encouraged by the report attempted by half a dozen Russian steamers, had ventured to put to sea, and thence fell into the hands of our sailors.

A Bold Stroke for Freedom.—About forty French sailors, including two officers, having been cast on shore during the late storm in the Black Sea, and made prisoners by the Russians, were left under the guard of a strong picket of Cossacks. In the middle of the night, whilst seated round a fire, the sailors, on a signal from their officers, arming themselves with burning sticks, attacked their keepers, disarmed some, put the others to flight, and escaped to the coast, where they embarked in boats sent by the vessels that were able to weather the storm.

The Imperial Revolutionist.—Russian agents are making their appearance again in Greece, in the provinces of Thessaly and Epirus; and it is believed that a rising is being prepared, in the anticipation of some great reverse befalling the Allied armies in the Crimea. Almost all the Turkish troops have been withdrawn from Thessaly and Epirus, and these provinces are, consequently, but ill guarded.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Address of the House of Commons, in reply to her Majesty's Speech from the Throne, will be moved by Mr. Henry Arthur Herbert, M.P. for Kerry.

M. Bineau, the French Finance Minister, is so ill, that it is doubtful whether he will be able to travel to Nice, where he has been ordered by his physicians to pass the winter.

Sir Joseph Paxton has been elected to represent Coventry in Parliament, without opposition.

The French Emperor and Empress have quitted St. Cloud, and have taken up their residence at the Tuileries for the winter.

The Queen has appointed Lord Dufferin one of the Lords-in-Waiting, in the room of the Marquis of Ormonde, deceased.

The Duke and Duchess of Brabant arrived at Venice on the 24th ult., and alighted at the Hôtel de l'Europe, where apartments had been engaged for them. It is thought that their Highnesses intend to pass the greater part of the winter at Venice.

A great addition to the different grades of the Noble Order of the Bath will be shortly made. The promulgation is only waiting for Lord Raglan's report upon the Battle of Inkerman.

Queen Christina and the Duke of Rianzares, on the occasion of their return to Paris, have paid a visit to the Emperor and Empress, at St. Cloud.

On Saturday evening last, the Liverpool People's Concerts were honoured with a visit from the Right Hon. Lord Stanley, M.P., who kindly acceded to a request made to him to take the chair on that occasion, and delivered an excellent speech to the company.

Under the Emperor of the French, has instructed his Ambassador to present a gold watch, of the value of £50, to Sergeant Morrison, of the Scotch Fusilier Guards, as a testimony of his thanks for his kindness to the Imperial band of the Guides during their visit to London, to play at concerts for the benefit of the Patriotic Fund.

It has been determined to place the Leeds statue to the late Duke of Wellington (by Marochetti) in the Leeds Infirmary gardens until the Town-hall is erected, the area in front of which is to be the permanent site of this monument.

M. de Lartic, Aide-de-Camp to the French Emperor, is about to proceed to the Black Sea to present Admiral Hamelin with the bâton of a full Admiral, just granted to him by the Emperor.

Father Mathew, the Apostle of Temperance, has arrived at Madeira. That genial climate has already produced a beneficial change in his health.

The Russian Baron de Streglitz, who has been for some time at Vienna, endeavouring to induce capitalists to subscribe to the Russian loan, has taken his departure after having failed in all his efforts.

Mr. Cowan, M.P. for Leith, was presented with a large silver inkstand, and a purse of 400 guineas, by Roman Catholics in London, at the Sablonnière Hotel, last week.

A Madrid journal states that General Liprandi is a Spaniard, who has been several years in the Russian service, and that his real name is Espejo.

Several papers, including journals and sketches, sent to this country by Livingston, the intrepid African traveller, were lost in the steamer *Forerunner*.

Professor Maurice delivered his first lecture on the Religion of the Romans, and its Connection with Christian Civilisation, on Tuesday last, at the Edinburgh Philosophical Institution.

The French Commission charged with the organisation of the Fine Art department of the Universal Exhibition, has extended the date (November 30) already fixed for sending in the lists of foreign artists desirous of exhibiting their works, to the 30th of December.

The Rajah of Puttealah has arrived at Allahabad, on the Ganges, on his way to Calcutta, to embark for his visit to the Queen of England.

Sir William Jardine, Bart., and Professor Harkness, of Cork, are among the candidates for the chair of Natural History in the Edinburgh University.

The scarcity of ship-carpenters in the French ports is so great at the present moment, that Messrs. Barbey, of Havre, who are building ships for the Government, have been authorised to employ Russian prisoners for that purpose.

The strike of the shipwrights, at first confined to Sunderland, now extends, in a greater or less degree, to most of the ports along the north-east coast; and there seems little prospect at present of a termination to it.

A national subscription is to be raised in France, in favour of the widows and orphans of the soldiers who lose their lives in the Crimea. The Empress is to place her name at the head of the list.

The orange season is remarkably forward this year. Large quantities of ripe oranges have been imported at Southampton for the last three weeks—being a month earlier than is usually the case.

All the shipbuilding yards in Devonshire are now full, and there is a great demand for shipwrights. During the past week several vessels have been launched from ports in various parts of the county.

A body of Mormons, 400 in number, has left Denmark for this country, on their way to America.

Orders have been given by the French Government to commence immediately the necessary surveys and estimates for a railway from Lisieux to Honfleur, by Crépy and Villers Cotterets.

There are now on the books of the relieving officers of Preston forty-six more persons than in the corresponding week of last year, when the strike was raging fiercely.

The Estates of the Grand Duchy of Luxembourg have adopted a bill prohibiting any one from carrying on trade in corn without a special permission from Government.

The London and North-Western and Midland Companies are said to have concluded an alliance of a character so intimate as to be little less in effect than an amalgamation under Act of Parliament.

A cave, beautifully adorned with stalactites hanging from the roof and sides, has been discovered at a limestone-quarry at Oystermouth, in Glamorganshire.

The coasting trade of Norway has been thrown open to British vessels.

Winter has set in early this year in Poland. Between Kowno and Warsaw sledges are now used, and in the neighbourhood of Kalisch and Leuzcio the ground is covered with snow.

During the ten months ended the 5th November, 1852, the quantity of tobacco entered for home consumption was 47 124,979 lbs.; in 1853, 49,800,647 lbs.; and in this present year, 51,46..,318 lbs.

The Swedish Parliament has granted a sum for a railway between Fahlun and Gefle. It has also purchased one of Professor Nyander's sewing machines.

At the towns which supply, in sales, the averages, there were sold, in the last three months, 1,868,429 quarters of wheat, being an excess over the same three months in 1853, of 726,444 quarters.

Judson's Hotel, Broadway, New York, was, with its contents, almost entirely destroyed by fire on the 30th ult. The entire loss is estimated at 70,000 dollars.

Yang-Sien-Chai of the Chinese insurgents, has published an edict against the drinking of wine. In this document he calls himself Prince of the East, the Consoler, the Holy Ghost, the Precursor, the Supreme Physician, the First Minister of the State, and the Captain-General of the Army.

In Paisley about a third of the weavers are stated to be idle—some report even more. In Kilbarchan, where chiefly plain weaving is carried on, the number unemployed is as high as 700 out of 900.

Now that hemp is looking up in the English market the *Delhi Gazette* hopes some adventurous trader will turn his eyes on the hundreds of acres spontaneously produced in the mountains of Kumaon, where it is the chief of the weeds, and but little checked in its superabundance.

The French photographers in the East have already sent to Par s 468 photographs of incidents in the campaign.

One of the passengers to Australia by the *Great Britain* says:—"We had a charming passage—no terrors, no horrors, nothing but a long pleasure-trip in a large yacht. Dancing, singing, eating, drinking, sleeping, all the way, to a most enjoyable extent."

Amongst the most important of the developments of the resources of Texas, is the discovery of an inexhaustible bed of anthracite coal, which is said to be located convenient for the purposes of the projected Pacific railroad.

A majority of 144 Spanish deputies against 40, have declared that the Ministry of the Duke of Victoria deserves the confidence of the Cortes.

The shores of the harbour of Vera Cruz were for several days in the beginning of the month of November, covered with thousands of dead fish, the effect of disease, or of some volcanic eruption.

On Thursday evening week, Mr. Macready, in compliance with an invitation from the committee of the Midland Institute, gave readings in the Town-hall, Birmingham, from Milton, Dryden, Wordsworth, Shakspeare, and Pope; the proceeds to be devoted to the funds in aid of that institution.

A Congress is now assembled at Vienna to consult on the means of creating a uniform gold coinage for all the States of the Germanic Confederation.

MESSRS. PETO, BRASSEY, AND BETTS' OFFICE, WATERLOO-ROAD.

ESSRS. PETO, BRASSEY, AND BETTS, AND THE RAILWAY FROM BALACLAVA TO SEBASTOPOL.

In consequence of the advertisements put forth by the above leviathan contractors, on their having been requested by the Government to supply the Civil Engineering Corps for the Crimea, their office in the Waterloo-road, on the Surrey side of Waterloo-bridge, adjoining the York Hotel, was on Saturday and Monday last besieged by masses of fine stalwart men, eager to be engaged for that service, in the capacity of navvies, masons, carpenters, blacksmiths, plate-layers, and engine-drivers; and also as gaugers, time keepers, and foremen.

They came in crowds, and the only difficulty was that of selection. The outer room was filled, and the office doors beset like the pit door of a theatre. Judging of them by their conversation, it would appear as though the men thought they were going out to fight rather than to work in a civil capacity. "Hope we shall get out quick," remarked one athletic fellow, to his neighbour in the crowd, as he stood with his hands in his pockets; "Hope they'll hold out till we come." "We'll give it 'em with the pick and crow-bar, them Russians, instead of the rifle," said another.

The men employed in our engineering works have been long known as the very *élite* of England, as to physical power;—broad, muscular, massive fellows, who are scarcely to be matched in Europe. Animated, too, by an ardent a British spirit as beats under any uniform. If ever these men come to hand-to-hand fighting with the enemy, they will fell them like ninepins. Disciplined, and enough of them, they could walk from end to end of the Continent.

The applications were so numerous that the office was closed on the second day, and the notice posted on the door, "no more men wanted."

Some, nevertheless, lingered about, loth to leave the spot. Those engaged quit England in steamers from Liverpool, Sandelland, and Southampton; which also carry out the necessary materials for constructing the railway. Mr. Beatty, the engineer, will immediately follow his chief assistant, who goes out in the first steamer from Marseilles. Most of the workmen have been employed, under Mr. Beatty, on the Canadian railroads, and are, consequently, well acclimatised for a Crimean winter.

They are not pensioned in case of wounds, but they are very highly remunerated—a labourer obtaining five shillings per day and soldier's rations, and his passage paid out and home. The engagement is for six months.

Those now going out will form a nucleus to direct our troops and the Turks. There are now about to sail, 300 navvies, 100 carpenters, 30 masons, 20 blacksmiths, 12 engine-drivers, and about 30 well-sinkers, besides gaugers, foremen, and plate layers.

The Railway will be a double line from Balaclava to near the batteries. From a certain point single lines of rails will radiate to each of the latter, and supply them with shot, shell, guns, and stores, from the fleet. Materials for fifteen miles are to be immediately dispatched. The rails will resemble those of the Great Western. The line will be worked by means of stationary engines, four or five in number; and the trucks be drawn by wire rope.

It is not intended that this body of men, or that which will follow them, shall work in the trenches. Such labourers would, however, be most efficient in that capacity. It is well known to military men that our soldiers, unlike the Roman Infantry, have a great repugnance to spade-work. They regard themselves as fighting men only, and do not appreciate the axiom of old Tilly, who contended with the great Gustavus, "that as many battles were won by the spade as the musket."

The public will hail with much satisfaction the departure of Government in this instance from the usual routine of office and red-tape traditions. Messrs. Peto, Brassey, and Betts, will execute their business in a business-like manner. They are not likely men to land their workpeople without tents or tools, or to fill the hold of a vessel with medical stores and put tons of shot and shell over them, any more than they would lay the rails of a line and then tip an embankment on top.

PORTABLE PAVILION BARRACKS FOR THE TROOPS IN THE CRIMEA.

It is striking how rapidly these gentlemen have organised this force. Their employment by the Legislature in this matter is a great step in advance. Its indication, it is to be hoped, of a disposition to make use of the intelligence of the country, irrespective of party and patronage.

The sagacity, energy, resources, and heroic feeling of our military station, have but to be well directed and wisely launched forth, to "shook the world in arms," and finally to terminate the great struggle we are now entering on, so as to add new glories to our ancient renown, and to spread and maintain freedom and liberal institutions throughout Europe.

The following is the form of agreement signed by the above parties proceeding to the Crimea:—

Whereas her Majesty's Government have requested Messrs. Peto, Brassey, and Betts to supply a Civil Engineering Corps for the Crimea, for the purpose of forming and laying a line of Rails from Balaclava to the Heights round Sebastopol, and for other general purposes in assisting the operations of the Allied Forces in conducting and carrying on the present War And whereas James Beatty, of No. 8, Great George-street, Westminster, Civil Engineer, is authorised by the said Messrs. Peto, Brassey, and Betts, to get together and form such Engineering Corps. Now these presents witness that

Each hut will comfortably lodge twenty to thirty men; and such dwellings will, doubtless, prove very acceptable to our brave soldiers against the inclemency of the weather, more especially if a winter campaign outside the walls of Sebastopol be inevitable.

The dimensions of each hut are 26 feet long by 16 feet wide. The men will lie feet to feet, and this will allow of a four-feet passage up the middle, in which space a stove will be placed for the warming of the building, as well, if required, to assist in the cooking of provisions.

The hut, or barrack, is entered by a single door, made to look, with a window above, and two sliding windows at the other end for ventilation. The roof, sides, and ends are made water-tight by a system of close boarding, and the nail ng of strips of wood over the joints; in addition to which it is proposed to cover the roof with felt. Two rows of shelves are placed along the room for the purpose of holding the men's accoutrements.

The whole are carefully fitted up, taken down, packed into easy, portable packages for the convenience of stowage in the ship's hold, and easy removal afterwards, hooped toge her with iron, and systematically lettered. The letters and numbers on each package will agree with that on a lithographed plan, which is to accompany each house. A box will also be sent with each house, containing two hammers, two gimlets, two pair of pincers, and 14 lb. of nails, in case the Sappers and Miners, who are to erect them, have not sufficient at their disposal.

The Russians call our revolvers infernal machines, which have been given to their enemy by the Devil, and imagine that they will go off whenever required by invoking his aid; hence the great terror always evinced whenever these weapons are brought forth.

NAVAL AND MILITARY INTELLIGENCE.

The Heroes of Inkerman.—Among the passengers by the *Indus*, which brought the Indian and Australian mail to Southampton, were Lieutenant-General Torrens, Captain Torrens, his Aide-de-Camp; Lieutenant-Colonel Gambier, R.A.; Major Heyland, 95th Regiment; Staff-Surgeon Legrees. Lieutenant Morrison, 19th Regiment; Lieut. Hon. W. Amherst, of the Coldstream Guards; Captain Murani, 68th Regiment; Dr. Skelton, of the Coldstream Guards; Lieutenant Harrison, of the 79th Regiment, Captains Taylor and Wethered, and Lieutenant the Hon. A. Crofton—most of them wounded at the Battle of Inkerman. General Torrens nearly lost his life at Gibraltar. While on shore there the horses of his carriage ran away, and the vehicle was upset. Colonel Gambier is internally injured. He was knocked off his horse by a 24 lb. shot, which had touched the ground and struck him afterwards in the chest. One of the above-named officers, a beardless youth, had his arm in a sling; another, scarcely older, was walking on crutches. Some were married, and others were led on shore. Some hundreds of people were in the docks when the *Indus* arrived, and the most intense curiosity was manifested to see the heroes of Inkerman. A lane was formed by the spectators, who treated the wounded soldiers as they passed with the greatest respect. The pale appearance and maimed state of the officers prevented anything like cheering. The labourers and coal-heavers working in the docks and on board ships stopped their work and ran to look at the men who fought so gloriously in the Crimea.

Volunteering for the Crimea.—In consequence of a communication from Colonel Anderson, commanding the field batteries at Woolwich, the men belonging to the Royal Artillery now lying in Leeds were informed that 20 men might volunteer for service in the Crimea. Instantly 53 stepped from the ranks and offered themselves. They were subsequently inspected by Colonel Anderson, who selected from them 20 unmarried men. The remaining fifteen, who were a good deal disappointed on being told that they could not go, were informed that, in all probability, further volunteers would hereafter be required; and, in that case they would have the preference.

The 10th Royal Hussars, serving at Kiokee, Bombay, are held in readiness to embark for service in Turkey, should Lord Raglan send for the regiment, which he is empowered to do. Ships belonging to the East India Company's navy are held in readiness to convey the regiment from Bombay to Suez.

Militia Volunteering.—From all parts of the country reports arrive of the volunteering of militia men into regiments of the Guards or the Line. The Northamptonshire Militia has just offered 300 men to the Guards. The South Middlesex Militia have given 100 volunteers to the Rifles, Marines, and the Line; the Lanarkshire have also given upwards of 150 to the Line and Guards; the Essex Rifles have furnished over 200, and the Wiltshire 158 volunteers to the Line, and more daily join. The South Lincolnshire Militia, which has for some months been quartered at Chichester barracks, under the command of Colonel Sibthorp, M.P., exhibit a great desire to join the Line, and no less than 150 of them have volunteered during the past week.

Royal Sappers and Miners.—The bounty money for the corps of Royal Sappers and Miners has been raised to £7 19s. 6d; and upwards of 600 men are wanted to complete the strength of that branch of the Ordnance service.

More Nurses for the East.—Fifty nurses for the hospitals of the East arrived at Boulogne on Saturday last by the Folkestone steamer, and departed by the 12.30 p.m. train for Paris, *en route* for Marseilles. They were accompanied by the Hon. J. Percy, a medical gentleman, a lady, and two couriers. An excellent dinner, wines, &c., was ready for them at the Hôtel des Bains; but, as before, the proprietor and his servants refused to receive a single sou, and this generous conduct was marked with every kindly feeling and attention. The same liberal display of good nature was experienced from the Custom-house authorities and the Chamber of Commerce. Mr. Hamilton, her Britannic Majesty's Consul, was in attendance, and kindly saw them off by the rail to Paris.

Winter Clothing for the Troops.—On Saturday the Messrs. Almond completed the following contract with the Ordnance for the army in the East: 44,000 fur caps (helmets), 44,000 fur cape (helmets), 44,000 fur gauntlets (gloves), 44,000 waterproof capes, 44,000 long boots (cowhide material), 44,000 suits of inner clothing, 44,000 pairs of leggings, 10,000 suits of fur clothing for officers.

More Sailors.—So very numerous were the applicants for service in her Majesty's ships fitting out and in commission, that police constables were stationed at the doors of the naval rendezvous, Tower-hill, on Tuesday, to prevent the overcrowding of the reception-room. A large number of fine athletic young men were entered for general service, and will be sent to her Majesty's ship *Excellent*, at Portsmouth; and *Firequard*, at Woolwich, for instruction.

A number of ladies in Southampton have advertised to receive contributions of knit, linen, knitted comforters, mufflers, warm caps, flannel, worsted stockings, list slippers, gloves, books, newspapers, lucifer matches, pens, paper, envelopes, ink, potted meats, arrowroot, tea, coffee, pepper, curry powder, jams, raspberry vinegar, biscuits, tobacco and pipes, to forward free to the sick troops at Scutari, or to the fighting Englishmen at Balaclava. Large contributions have already been received.

Minie Rifles, to the number of from 1100 to 1200, are now being sent into the Ordnance stores weekly. Upwards of 570 tons of round shot and shell are now in course of delivery at the Royal Arsenal, Woolwich, for service in the Crimea.

The Commissioners for Victualling and Transport Service have issued contracts for the supply of 400,000 lbs. of preserved boiled beef for the use of the forces in the Crimea; also for the conveyance of 2400 tons of prov sions from Deptford and 1100 from Gosport, to Malta; as also 375 tons of powder to Malta. Contracts were also issued for the supply of 22,800 pair of boots—one half to be delivered within six weeks.

PORTABLE BARRACKS FOR THE CRIMEA.

We annex a Plan of the 1000 Pavilion Barracks, or wooden huts, constructed by order of the English Government, for the Crimea; a moiety of which were contracted for by Messrs. Price and Co., timber-merchants, of Gloucester; and the remainder given for execution to a Portsmouth firm. By this time the whole will probably have been shipped for their destination.

We are indebted for the intelligence and illustration to Mr. G. R Jeens, C.E.

WRECKS AT BALACLAVA.

THE HURRICANE IN THE BLACK SEA.

By the steamer which left Constantinople on the 20th ult., we have received ample details of the damage inflicted by the terrible storm by which the Euxine was visited about the middle of last month. From Monday morning, the 13th, until the afternoon of Thursday, the 16th, the most terrific gale ever known in that part of the world continued to rage throughout the length and breadth of the Black Sea. Pilots accustomed to the navigation of the Euxine cannot remember a tempest so lamentable as the one which has committed such ravages The prevalent wind was from the south-west, with occasional shifts to other quarters. It commenced about seven o'clock on Monday morning, and, with the abruptness common to this sea, soon lashed itself into a perfect hurricane. Ever and anon, through the gale, fearful gusts came sweeping down the wind, blinding men with hail and mist, snatching strong ships from their holding-ground and snapping the iron cables like bands of tow. Whenever this "scud" lifted, another and again another hapless craft was seen dashed miserably upon the inhospitable shore. It was impossible to give them help of the faintest kind in the midst of the resistless swell of that wild surging sea and the mad howling of the tempestuous wind

A Correspondent, to whom we are indebted for the Sketch of the wrecks at the Katcha, gives the following account of the *Samson* and the other vessels:—

"The first mishap which occurred in the anchorage off the Katcha (where the Commander-in-Chief was stationed, and the larger number of the Allied vessels) was to her Majesty's ship *Samson*, which, together with other steamers, had got up steam the moment the gale began. About half-past seven a.m. it began to blow most fearfully, many old sailors saying they had never seen it blow so before. The two transports in the Sketch were lying ahead of the *Samson*, No. 20 being a little ahead of No 1. About nine a.m. we observed No. 20 part and fall astwart hawse of No. 1, both bowsprits and cutwaters getting smashed, and then they both drove on top of the *Samson*. The *Samson* being close we could see everything. They turned their hands up and went ahead, full speed, seemingly to separate the transports, which was done; No 20 passing on the port side of the *Samson* and bringing up just under her stern and there smashing the stern boats, bulwarks, &c. No. 1 fell athwart-hawse the *Samson*, and topped her bowsprit right up and in on her forecastle. Shortly after, the transport's foremast fell, and was followed by the *Samson's* foremast falling against her mainmast, mainmast against her mizenmast, and she lay a wreck. The Sketch shows the *Samson* with her masts down. No. 20 under her stern with her foremast gone, and No. 1 drifting astern, where she brought up. Both Nos. 20 and 1, about an hour after, drove and went on the shore, followed by Nos. 31, 57, and 89 transports, together with the Maltese barque *Idole Adam*, and five or six small brigs—in all, making fourteen wrecks on the beach on the Wednesday. We could see the Cossacks come down and take the crews of one or two prisoners, as well as pick up anything of value on the beach and load their horses."

At ten o'clock on Tuesday morning a small French brig stranded near the mouth of the Katcha, and from this time till darkness hid the scene from view, a series of terrible disasters followed each other in quick succession Fortunately, the shore in the neighbourhood of the river is terminated by a sandy beach; hence here we have not had to deplore the loss of life as well as property. At one p.m. her Majesty's ship *Terrible* parted all her anchors and the cry rose to every tongue, "The *Terrible* will be on shore:" but gradually the noble ship faced round to the wind, and passed majestically out through the fleet The wind, perhaps, was at its utmost height about 10:30; but after successive squalls, accompanied by sleet and hail, it passed to W.S.W. and W., from which none of our anchorages on the Crimean coast afford any shelter, and an awful rolling sea then set in, during which the English transports 37, *Rodney*, and 57, *Tyrone*, a Maltese brig, and four more small French transports, went on shore. Meanwhile hordes of Cossacks and cavalry hovered round the wrecks, and, as each of the smaller vessels was thrown up, were seen occupied in examining what the chances of the sea and war had sent them. The French sailors could be seen from the ships led off towards Sebastopol with horsemen before and behind them. Our transports, from their greater burden, were at some distance from the shore; and the Cossacks rode backwards and forwards regarding them as the hungry fox did some grapes in the days of Æsop. Darkness fell that evening on anxious hearts, and few eyes could have closed that night amid the roaring of the pitiless and unabated storm. Soon after midnight its force was broken, and men thanked God, for neither hemp nor iron could have stood such a strain much longer. But the sea continued as heavy as ever during the darkness, which was only broken by the lurid flash of the cannon over Sebastopol, showing that the war of the elements had been powerless to suspend that of men. The grey dawn showed that to the disasters of the previous day had been added that of another transport (No. 83, *Lord Raglan*, and that the Egyptian line-of-battle-ship, which still remained, had been compelled during the night to cut away her fore and mizenmast, and had also lost her bowsprit. Daylight also showed the inland hills covered with snow. In the course of the morning the transports on shore made signals of distress to the Admiral who ordered the *Fury* to weigh; she, however, signalled that communication was yet impossible on account of the surf. but, in the afternoon, the sea had gone down sufficiently to attempt their relief, although the effort was still attended with much danger. The Cossacks had been busy during the day, and they made one or two attempts even to swim off to our transports, but were carried back by the surf, aided by a knock or two on the head from our merchant sailors, who by no means relished the idea of a Christmas in Sebastopol. One gentleman, in a carriage, drove down to the beach, near the *Tyrone*, and, in good English, exhorted the sailors to make a trial of Muscovite forbearance. 'We, too,' said he, suiting the action to the words, 'have hearts as well as the English.' The reply was what somebody calls "John Bull's great everlasting "No" accompanied by certain rather strong adjectives. No fire had been opened on the enemy during the day from the fleet, and it was determined not to do so till they proceeded to overt acts of hostility. About four p.m. volunteer boats from the *Queen*, *Rodney*, *London*, and some steamers, pulled in, and the *Firebrand* got under way to cover them. On seeing them approaching the Cossacks drew up on the cliff and fired on the boats, killing a man belonging to the *Queen*. This fire was immediately returned from the steamer and they at once scurried off. The surf prevented the crews being rescued till the morning of the 16th, when they were recovered by the boats of the *Firebrand* and other steamers, after having, in one of the ships, fired a parting salvo at the Russians with cartridges which had been collected from the field of Alma.

The tempest commenced at Balaclava about seven o'clock on the morning of the 14th and in two hours eleven transports had been wrecked and six dismasted and rendered unfit for service. The most terrible disaster was the total loss of the new magnificent steam ship *Prince* which had arrived a few days previously, with the 46th Regiment and a cargo valued at £500,000, and indispensably necessary for the prosecution of the siege and the comfort of the army. The loss of the *Prince* seems to have been partly owing to the negligence of her officers. When she arrived at Balaclava she let go one of her anchors in thirty fathoms water. It appears that the cable had never been clinched, and the whole of it ran out; anchor and cable were lost together. She then let go the other anchor, the cable of which was so inefficiently fastened that she lost this also She then steamed out to sea until she could get up another cable from the hold, and at last let go a smaller anchor, with which she rode until the tempest broke upon her on Tuesday morning. An eye-witness saw her carried from her moorings on to the rocks with such force that in ten minutes there was hardly a piece a yard long remaining. She might almost be said to go to powder. Of a crew of 150 only six were saved. This splendid vessel, of 2700 tons, was purchased by Government some time since, and sent out full of most valuable stores and munitions of war. Everything is lost. With the exception of the troops, everything remained in her at the time she was dashed on the rocks. The whole of the winter clothing for the men went down—40,000 suits of clothes, with under garments, socks, gloves, and a multitude of other articles of the kind; vast quantities of shot and shell; and, not least in consequence, the medical stores sent out in consequence of the deficiencies which formerly existed. The latter were, with not uncommon negligence, stowed away under the shot and shell, and could not be landed at Scutari. They are now lost, at a time when the demand for them is likely to be more urgent than ever, and when the commissariat is fully occupied in ministering to the wants of those who still remain onboard

A first glance at Eupatoria after the storm showed that it had suffered even more than the Katcha. True, the *Bellerophon* and *Leander* rode it out, but the total wreck of an Egyptian line-of-battle ship, and near the beach the tricolour floating mournfully over the *Henri Quatre*, strong and erect as ever, but never again to carry the flag of France to victory, as well as the stranded transports in front and to the southward of the town, told a dreary story. In front lay the stranded remains of five French merchant vessels; just beyond it, along the sandy isthmus, between the sea and Lake Sasik, lay what three days before were strong and well-found ships, in the following order, commencing from the town:—No 81, *Georgina*; No. 61, *Hirtzinger*; French Government screw-steamer, *Pluto*, No. 3, *Her Majesty*, No. 55, *Glendalough*; a small French steamer; No. 53, *Asia*; an Egyptian two-decker; *Henri*

WRECKS OFF THE KATSCHA.

Quatre, 100 guns. All these ships, with the exception of the two line-of-battle ships, were stranded during the day. The *Henri Quatre* parted after the force of the gale was spent; but when the sea was at its heaviest shortly after six in the evening, she went on shore without any damage, and no doubt might have been recovered in better times. The Egyptian was a perfect wreck; she also stranded during the night. The *Sea Nymph* foundered during a heavy squall in the day. The enemy took advantage of the gale by advancing on Eupatoria with about 6000 cavalry and twelve field-pieces; they were, however, warmly received with such a heavy fire, both of guns and rockets, that they retired with a loss of about a hundred killed and wounded. Our loss amounted to only two men wounded. Lieut. Hood, of H.M. *Arethusa*, was in command of the battery which repulsed this formidable assault.

Although there is every reason to be satisfied with the way in which the fleet behaved during the storm, yet it would be folly to expose them to another such trial. All the sailing transports are to proceed immediately to Buyukdéré, the sailing liners to Sinope; the idea of Baltschik being abandoned as too exposed. Four only from each fleet will remain at Cherssonese, in one of the small harbours to the eastward. Report says that the *Britannia*, which laboured so heavily as to have had at one time more than four feet of water in the hold, is among the ships to proceed to Sinope, the Commander-in-Chief shifting his flag to the *Furious*. Five French line-of-battle ships damaged, especially about the rudder and stern frame, have left for the Bosphorus. Admiral Hamelin's flag is on board a steamer. Many of our ships, especially the steamers, which have been through the whole campaign, from Besika downwards, are in want of a thorough repair before undergoing the further chances of a Euxine winter. Still there are plenty of fresh ones, both already arrived on the station, and now in England, to supply their places.

It has been determined to abandon Eupatoria, and orders have been sent thither to destroy the *Henri Quatre*. There is a rumour that the Tartar inhabitants who have trusted to our protection are to be removed to Sinope. The gale appears to have injured the Russian breakwater at the entrance of Sebastopol, as they sunk another two-decker on the 17th, in the same position as the others.

DEJEUNER TO THE 89TH REGIMENT, PREVIOUS TO THEIR DEPARTURE FOR THE CRIMEA.

The city of Waterford, on Wednesday week, presented the very interesting scene of the public farewell of this gallant regiment, now on their route to the Crimea. This demonstration of the sympathy of the citizens of Waterford, for those who are going to fight the battles of their country, was participated in by all classes and creeds. These gallant soldiers, headed by the Mayor, and the Protestant and Roman Catholic Bishops, filed into the Town-hall: and the cheer that greeted them evidenced how heartfelt was the joy in this union of two such

DEJEUNER TO THE 89TH REGIMENT, IN THE TOWN-HALL, AT WATERFORD, PREVIOUS TO THEIR DEPARTURE FOR THE CRIMEA.

dignitaries in honouring our brave defenders, and showing that the religious bodies, of which they are the head in this locality, were equally anxious to show their approval and sympathy with the war, and those who were staking life and fortune on its hazards.

In the Town-hall, the Union Jack, the Tricolour, and the Crescent were blended over the Mayor's seat; and the fine apartment was decorated with other flags and evergreens. Soon after the arrival of the soldiers, the Mayor and High Sheriff, accompanied by the Bishop of Cashel and the Roman Catholic Bishop—who, we were informed, met this day for the first time—went down to the Hall to receive the guests; and a procession was formed, with the Mayor bearing his wand of office at its head. The officers and troops following amounting to about 250 men. On entering the large Assembly-room, they were received with hearty cheers. Lieut.-Colonel Graham was prevented attending by illness, and his place was filled by Captain Hawley. The other officers present were Captains White, Thorp, and Atkinson; Lieutenants Haycock, Morris, and Holmes; Ensigns Robinson, Hall, Beech, Breaden, Lloyd, and Barslow.

The Mayor took the chair, supported on his right hand by the Lord Bishop of Cashel, and on his left by the Right Rev. Dr. Foran, Roman Catholic Bishop. The soldiers having filed into the room during the most rapturous cheering, were seated at the tables, with a civilian at the head of each to see that their wants were supplied.

The Mayor addressed the company, stating—

That he felt much pleasure in the cordial reception given by the citizens to these brave soldiers, now about to go to defend their country from the enemy. Allusions were being done honour to those departing to the seat of war. The English army had in various climes maintained its character for valour and intrepidity; it had shown those qualities in the Peninsula, on the Scheldt, as well as at Alma and Balaclava (Great cheering). When Nelson lived he gave to British sailors the signal, "England expects every man to do his duty." Now, it can be said of the British army—and the England expects them to do their duty—but they have most nobly and gallantly done it. (Here all the soldiers rose and cheered at the top of their voices). Up to the present time the troops of England had merited their fame and covered themselves with laurels—they had contended against unequal numbers—they had fought as brave men and they had triumphed (Great cheering). Soldiers and officers, you are going to join your comrades—you are going to unite with those who never turned their backs on the foe. You will emulate their ardour (Immense and prolonged cheering). You will lead the van, and never pause until you send back the Russian eagles deprived of their claws and stripped of their feathers, to their home in the north (Great applause). Brave 89th, we have great pleasure in meeting you; we send you forth wishing you every success.

The Lord Bishop of Cashel then rose, and, after a long continuance of enthusiastic cheering, his Lordship said:—

Officers, non-commissioned officers, and soldiers of the 89th,—I deem it right to explain the feelings with which the citizens of Waterford are actuated in asking you thus to meet them previous to your departure to the seat of war, to express their sympathy with those engaged in the arduous struggle that is going on in the East, and in which you are so soon to take a part. We, who tarry at home, have an interest, a vital interest, in the character, and conduct, and movements of the soldiers and sailors who are sent to foreign climes to fight for the welfare of their country. We pray that God's blessing may rest upon those engaged in this contest. 89th, you are going to assist in this war; we know your deeds in India and in Egypt; we feel that you will not allow British valour to be su lied (Great cheering); we know that you will add glory to glory, and we hope you may be crowned with triumph (Renewed cheering). But we, who stay at home, have asked you to meet us ere you leave, to say that we feel for you, we sympathise with you, we bear you on our hearts; I may say, for myself, that I never kneel before God to ask his blessing on myself that I do not put up prayers for the welfare of the army. I pray God that he will, through the efforts of the army and navy, bring about peace, that the horrors of war may cease throughout the world (Cheers). Every family in the country has a personal interest in this contest, as they have some near relative at the seat of war. Waterford has sent soldiers and officers to the field, and every family who has some relative or friend engaged in the war feels a personal interest in the success and welfare of our troops. I myself had one nephew dangerously wounded at the battle of Inkerman—that noble but glorious fight—and who now lies in the hospital at Scutari. I have another nephew in the 89th, who will either meet you at Gibraltar, or precede you to the seat of war (Cheers). His Lordship concluded by proposing the "Health of the Queen," which was drank most enthusiastically.

Lord Carew then rose, and briefly proposed "The Health of the Army and Navy"—viz "Rule Britannia."

General Roberts returned thanks for the Army, and Captain Anthony on behalf of the Navy.

The Right Rev. Dr. Foran then proposed "Success to the 89th Regiment and the Allied Army in the East" (Great cheering). As the paper was originally put to him, it was the "89th Regiment and the army in the East" he had taken the liberty of changing it, as he thought the French were equally concerned (At the mention of the French the whole assembly rose, and the most vociferous cheering took place, in which the soldiers joined). Both armies were fighting in the same cause; the two great Powers, England and France, were fighting to put down the Autocrat of Russia (Great cheering). He hoped the brave 89th Regiment would fight the battles of their Queen and their country; he wished them every happiness, and proposed the toast; which was drunk amidst great applause.

Captain Hawley returned thanks, the Colonel being laid on the bed of sickness:

Were I to say for my brother officers that they leave you with light hearts, I should be far from representing their true feelings, but both officers and men quit with strong ones; trusting they will prove worthy to fill the gaps which pestilence and the enemy have made in the ranks of that gallant band that left their homes in the spring—many now no more. If report speaks truly, we go to encounter a barbarous foe, but we hope that even in the heat and fury of the battle, we shall never tarnish the bright name of soldiers and Christians, by forgetting the humanity due to a fallen and disabled enemy. But that we shall do as we would be done by (The soldiers cheered at this sentiment and cheered most heartily). This is the second time within a few days in which publicly has been expressed to us most kind and generous feelings by the inhabitants of Waterford and the neighbourhood. The conclusion of your sympathy will indeed cheer us in the dreariness of our winter campaign and bivouac. May our future actions in some degree repay you. I beg to propose the "Health of the Right Worshipful the Mayor and the citizens of Waterford."

The Mayor, in returning thanks, said he had been requested by his brother magistrates to thank the 89th Regiment for their orderly and peaceful conduct while in this city.

The soldiers were then ordered to retire, and they formed in the street, in front of the Town-hall, where they were saluted with cheers from the spectators which followed them as they marched to their barrack; and so closed the "Farewell to the 89th Regiment."

The gallant Regiment left Waterford on Friday; previous to which they were addressed by General Roberts. Captain Hawley replied. The whole regiment then took off their shakos, and gave three loud and hearty cheers for the citizens of Waterford; which was so loudly responded to. The word was given—"Quick march!" Captain Hawley placed himself in front; the band struck up "British Grenadiers;" and the fine fellows (250 strong) left the barracks with stout hearts and many blessings.

The *Parlamento* of Turin states that the Conference of Bishops at Rome was closed on the 2nd, after coming to a nearly unanimous conclusion on the matter under debate.

At the Italian Opera, Paris, the efforts of a lady who made her début as *Marguerite*, the other night, were very unhappy. Her appearance was so unprepossessing, that when *Raoul* spoke of her "Beauté divine, enchanteresse," there was a general titter throughout the house.

In the sitting of the Municipal Council of the Seine on Monday, the necessary funds were voted for building a new bridge, to be called the "Alma," which the Emperor desires to have built across the Seine, between the Pont des Invalides and the Pont d'Iéna. The cost is estimated at 1,700 000f., half of which sum will be defrayed by the State and half by the city of Paris.

The very discouraging advices lately received from the Australian colonies, with regard to the markets for European manufactures, have caused a great check to the shipment of fresh goods. At the present moment there are few vessels loading for Australia.

Abraham Hayward, Esq., Q.C., has been appointed one of the Secretaries to the Poor-law Board, in the place of Lord Courtenay, who has succeeded to the Commissionership of the Royal Forests and Woodlands, lately held by the Right Hon. T. F. Kennedy.

The first-born son of Prince Frederick of Hesse has been baptized, at Berlin, in the presence of the King and the Court, &c. Of the diplomatic bevy, only the Russian and Prussian Ministers were present. The child was called Frederick William Nicholas Carl.

So favourable was Prince Menschikoff's report of the conduct of the Grand Dukes at the battle on the 5th, that the Czar has rewarded their bravery by bestowing upon them the title of Knights of the Order of St. George of the fourth class.

MEETING OF PARLIAMENT, SKETCHES OF THE WAR, AND THE BATTLE OF INKERMAN.

A great Pressure of Engravings of the most interesting character enables us to announce to our Subscribers an

EXTRA DOUBLE NUMBER

FOR SATURDAY NEXT, DECEMBER 16,

which will, from the Variety and Interest of the Subjects, prove one of the most attractive Double Numbers of this Journal ever issued.

THE ILLUSTRATIONS

WILL INCLUDE A SERIES OF

SKETCHES OF THE WAR,

From Correspondents and Artists of the ILLUSTRATED LONDON NEWS in the Crimea:—

THE BATTLE OF INKERMAN.

Final Effort of the Russians to Dislodge the Allied Troops: Joint Charge of the French and English. (Two-page Engraving.)

Sand-bag Battery, sketched on the morning after the Battle, by an Officer engaged.

Valley of the Inkerman.

Charge of the Light Cavalry at Balaclava. (Two-Page Engraving.)

Rocket and Gun Batteries, and French Works at Eupatoria. (Four Views.)

Portraits of Brigadier Tylden and Lieutenant Clutterbuck; with the Obituary of Officers, continued.

The New Hospital at Soutari.
The *Europa* and Troops.
Head-Quarters of Lord Raglan.
Ambulances for the Wounded.
Arabas of the Crimea.
The Spahi Battery.

PORTRAIT OF OMER PACHA.

OPENING OF PARLIAMENT.

Views of the Entrance to the Courts in New Palace-yard. The Commons' Staircase, from Westminster-hall. Portraits, Statues, and Historical Bas-reliefs. Ventilating Tower, &c.

With full Reports of the Debates in Parliament.

Also, a Variety of Illustrations of the Domestic News of the Week.—The Westminster Play; The Wrecked Steam-ships "Nile" and "Prince;" Agricultural Implements Exhibition; Majority of the Hon Rowland Clegg Hill—Festivities at Hawkstone, &c., &c.

Price of the DOUBLE NUMBER, ONE SHILLING; with SUPPLEMENT GRATIS.

CALENDAR FOR THE WEEK.

SUNDAY, Dec. 10.—2nd Sunday in Advent. Charles XII. killed, 1718.
MONDAY, 11.—Louis XVI. brought before the National Convent on, 1792.
TUESDAY, 12.—Lord Bolingbroke, 1724. Oliver Cromwell declared Protector, 1653.
WEDNESDAY, 13.—St. Lucy. Dr. Johnson died, 1784.
THURSDAY, 14.—Washington died, 1799. Izaak Walton died, 1683.
FRIDAY, 15.—Earl Stanhope died, 1816.
SATURDAY, 16.—Cambridge Term ends.

TO CORRESPONDENTS.

A SUBSCRIBER FOR ELEVEN YEARS.—The publication rests with the Fund Committee.

T. D., Dublin.—Declined.

S. K., Dover; and A RETIRED OFFICER, Ringwood, are thanked; but we have not room for their letters.

A. F. may find the number of killed at the Battle of Waterloo, by reference to the ILLUSTRATED LONDON NEWS for Sept. 25 1852.

Holyrover is mistaken: the statue of Newton has not been erected at Liverpool; but at the recent meeting of the British Association he'd there, the propriety of placing the monument at Grantham, where Newton was educated, was much discussed.

AN OLD SUBSCRIBER.—"The Royal Asylum for Destitute Females" is now "The Royal Female Philanthropic Society:" the address is Manor Hall, Little Chelsea, Fulham-road.

E. C., Putney-heath.—A pamphlet, entitled "An Account of the Tonic Solfa Method of Teaching to Sing," is published by Messrs. Ward and Co., 27, Paternoster row, at the nominal price of four copies for one penny. The "Tonic Solfa Association" meets at the "School Room, Jewin-street, Aldersgate-street," on Tuesday and Friday nights. A letter addressed to Mr. E. Grant, the Honorary secretary, there, will meet with early attention.

W. C.—Sturgeon's Treatise on Draughts.

ETONENSIS.—The account was written by an eye-witness.

MUCH WEENDER.—Your fine is a brass jetton of Nuremburg, made by Hans Krauwinckel, in the sixteenth century; and the other is a coin of Caracalla, A.D. 207 to 223.

ENQUIRER.—The Queen Anne's shilling is of no value, numismatically.

H. S., late of Reading, Berks, is referred to the Supplement to the Census.

A. D. P. can obtain information respecting the expense incurred by the various countries of Europe, and by the United States, in the maintenance of a standing army in almost any modern Geography (say Mr M'Culloch's) or Gazetteer (say Blackie's). For very precise information she may consult the Appendices to the Annual Returns of the Population, Revenue, &c., concerning Foreign Countries, published by the authority of Parliament. She will observe, however, that the number of troops and the expense varies from year to year; and that, at present, all the great European Powers have larger armies on foot than is anywhere described except in the last annual budget, or financial statement, of each country. On several occasions, of late years, the information she seeks has been published in a compendious form in the newspapers; and she will find in the *British Almanack* for 1852 a statement, copied from a well-conducted German newspaper, the *Cologne Gazette (Kolner Zeitung)*, which may, perhaps, suit her purpose.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 9, 1854.

A TREATY of Alliance offensive and defensive was signed at Vienna on the 2nd instant, by the representatives of Great Britain, France, and Austria. As the ratification has not yet been exchanged, the exact terms of the document are unknown to the public. But, as the new alliance is expressly stated to be "offensive and defensive" the treaty, whatever its exact terms may be, cannot fail to exercise a powerful influence on the progress of events, and, at some future, and no remote period, to link Austria still more closely to the policy of the Western Powers. It has been remarked that the day on which the treaty was signed was the anniversary of the battle of Austerlitz, and of other great events in the history of the House of Bonaparte, not the least remarkable of which was the *coup d'état* by which Louis Napoleon re-established the Empire. The day will be still more memorable hereafter if the new treaty shall lead to the cordial understanding and joint action of the three Powers against Russia.

It would have been better if Austria had resolved to declare immediate war against the Czar, for the offences which he has already committed against the European Commonwealth. This course of proceeding would have been the wisest in itself, and the most merciful towards Russia, as tending to bring the war to a speedier termination. But, although Austria has not chosen to adopt so bold a line of policy, the Western Powers, strong in their own resources, and in the justice of their cause, may be well content to secure her adhesion on her own terms; certain as they are that her last act binds her effectually to their interests, and secures her co-operation at a future time. The basis of the treaty appears to be that Austria will insist, in her own right and for her own reasons, upon the adoption by the Czar of the four celebrated conditions of the Conference at Vienna—conditions which he refused, unless he could put an interpretation upon them which would altogether nullify the spirit of the compromise, and stultify the Powers which agreed to it; and which interpretation Turkey, France, England, Austria, and Prussia refused to sanction. These conditions are the minimum upon which a project of pacification will be entertained by Austria. The minimum of Great Britain and France depends upon the fortune of war, and will be considered hereafter. In the meantime Austria, with the sanction, though not with the assistance, of the Maritime Powers, will press those points—in their spirit as well as in their letter—and with an interpretation which will leave no room for cavil, perversion, or *arrière pensée*. Three months—one of our contemporaries, not celebrated for the trustworthiness of its news, asserts one month—will be allowed by the Czar to give an answer to the Austrian summons. If he refuse, Austria binds herself—so it is understood the document runs—to declare war against Russia, and to assist the Allies by all the means at her disposal. In this case Prussia will be compelled to support Austria; or, failing compliance, will be forced from her neutrality, and exposed to the hostility of the three Powers. But here another question not unreasonably suggests itself. May not the progress of events breed a misunderstanding on the very terms of the treaty? May not Great Britain and France find themselves at issue with Austria, if Russia, at the end of the three months, and before that time, should endeavour to confound the policy of the Maritime Powers by acceding to the minimum terms of Austria? In other words, may not the Czar, as the best means of extricating himself from a dilemma in which he finds the whole of Europe against him, yield the four points, with the view of saving Sebastopol and the Crimea? In this contingency would Austria be satisfied? And, if Austria were satisfied, would the Government and people of great Britain and France be contented to let the arch-offender escape so easily? The answer is obvious. Neither Great Britain nor France could consent to a pacification on such terms, unless they should be defeated by the Czar. Defeat we do not hold to be possible. True men never despair of their country. It was treason to do so in the days of old; and is, virtually, as treasonable now. And neither France nor England does or will despair, or "bate one jot of heart or hope" in this mighty struggle. While Austria is negotiating, it will be their duty to fight, as long as the elements allow them. The Minimum of To-day may be rendered obsolete by the Victory of To-morrow; and, until Russia sues for peace, the Minié rifle, the shell, and the bayonet must be the arbiters between us. Our only business is to fight and conquer, and reduce Russia to submission. Austria can pursue her object while we pursue ours. If, at the latest moment, Austria should endeavour to convert her present minimum into a maximum, binding on other Powers, Great Britain and France victorious over Russia, and having the right as well as the power of dictation, will know how to treat the proposal. England and France will not accept peace, merely to relieve themselves of the burthen of war. They detest war too much to make an unstable pacification. The peace which they will effect must be a durable one; and, to be durable, it must deprive Russia of the opportunities which she has perverted, and of the territorial advantages which she has turned to such deadly account against her neighbours. Austria, having gone so far, will yet go further. She has pledged herself to the policy of Great Britain and France, and vindicated her claim to rank among the great States of Europe. If France and Great Britain were defeated—a consummation which would be the downfall of European civilisation—it is possible that Austria might play false and side with the winner. But such a consummation is, happily, not probable, and has never entered into the calculations of the highest or the lowest in either of the two nations. Great Britain and France will, therefore, not relax in their efforts in the slightest degree, in consequence of their alliance with Austria. The Maritime Powers are glad of help, however small; but will pursue their own objects with as much earnestness and singleness of purpose as if help were not offered them. This is the secret of success; and, as portion of that success, we fully expect to reckon on the entire adhesion of Austria to her policy. Austria, we think, would not have dared to go so far, if she had not fully made up her mind to go as far as England and France may find it necessary to lead her.

THE friends of "Peace at all price"—the drab (we will not say the black) sheep of society—who make it a point of principle not to resist the wolves—and who flatter the Great Wolf Nicholas—and attribute all the mischiefs and enormities of the war, not to him who originated the evil, but to those who have resisted it—have been placed, it appears in a dilemma by the Patriotic Fund. "The question is," says their monthly newspaper, the *Herald of Peace*, "whether the Friends of Peace ought to contribute to the Fund?" It might have been thought that it was a question of charity and benevolence—if it be not one of justice—the members of the Peace party, who are for the most part substantial citizens, sleek and portly, and well to do in the world, would have opened their purse-strings, and remembered the case "of the widow and the fatherless—and of those who were ready to perish." But, after earnest deliberation, the friends of Peace have decided that they will not, directly or indirectly, contribute one farthing to the Patriotic Fund. "It does

not seem to us possible to take part in this movement," says their organ, "without directly contributing to feed and further the system by which these orphans and widows have been created, and which, the more it is encouraged, will only the more add to the number of such sufferers, day by day and year by year. For, in the first place, no one can have marked the tone of the meetings which have been held to promote this Fund, without perceiving that, with very few and rare exceptions, their whole tendency is to glorify the entire war system, and to fan into a broader and hotter flame the sinister enthusiasm for the present war, which already burns so fiercely among the people." We might expatiate upon the Quaker immorality which considers it sinister to resist the Czar in his sanguinary attempt to appropriate to himself the territories of his neighbour; and which attributes the making of widows and orphans to the evil passions of their countrymen, and not to the wickedness of their model hero, the Czar—a Sovereign who, in the eyes of Quakers, seems as if he could do no wrong; but the Quaker mind is so obtuse, or so perverted, that it is useless to attempt to shame them out of their delusion. It scarcely needed a display of such meanness as their refusal to relieve the distresses of those whom even the friends of Peace must admit to be the most interesting, the most helpless, and the most blameless of the victims of the war, to render the very name of the Peace Society odious in the nostrils of the people. If, in affecting to blame their countrymen, because in the fierce battles already fought in the Crimea, there have been such horrors as "fearful sabre cuts," "heads cloven to the chin," "wounded men dying for want of assistance," and "moaning horribly for a drop of water," "shattered limbs," and "frightful gaping wounds," they seek an excuse for saving their money, and leaving the widow and the fatherless to die of starvation, in consequence of a struggle which they could neither foresee nor influence, words are insufficient to express the contempt in which their parsimony will be held by all right-thinking people. But let the "Friends" keep their money. The country will have this consolation, that it will not be missed; and that the generosity of all classes will raise a noble Fund for the relief of those whom the pitiless Quakers, if they had their will, would either leave to die by the road-side, or drive into the paths of crime for a subsistence. Yet, the interpretation which may be put upon their refusal to join with their fellow-countrymen in this act of piety, has been forced upon their attention. "We have reason to believe," says the Peace editor, "that it would be a satisfaction to not a few among the Peace party if some suitable channel could be opened, into which they might cast the contributions which, but for the principles they hold, they might have been disposed to give to this Fund. As there are no conceivable means so likely to strike at the root of the entire war-system, as a settled conviction diffused among Christians of its utter antagonism to the principles and spirit of their religion," it has been decided "to raise a fund for the special purpose of printing and distributing, particularly among Christian ministers of all denominations, such works as treat of war on this great and fundamental principle." One five-pound note distributed among the widows and orphans of the slain would, in the opinion of millions of as true Christians as are to be found among these sham friends of Peace, be a more acceptable offering in the sight of Heaven than five hundred, or five hundred thousand, pounds distributed in such tracts as the "Friends" propose. "Christian ministers of all denominations," and Christian men and women throughout the length and breadth of our land need no tracts to teach them how fearful and how wicked a thing is War. They do not leave to the "Peace party" the feeling of horror which such sanguinary scenes as War occasions must ever evoke in every Christian and humane mind. They do not leave to Messrs. Sturge and Bright any monopoly of indignation against those who provoke war. But, unlike these men, they can distinguish right from wrong; and do not give all their countenance to the aggressor, and refuse all sympathy or aid to him who resists. Although men of Peace proclaim themselves to be wiser, better, and holier than all the rest of the world; although they hold their heads high in consequence, and walk through public places with that most offensive of all pride—the pride that apes humility, their principles, if resolved into their elements, are principles of immorality, of injustice, and of pandering to evil. They would fill the earth with the blood of the innocent—and would throw the world into barbarism, extinguishing civilisation with all its products—Quakerism included. The "friends of Peace" may, of course, keep their "dirty money;" but after their refusal to consider the hard case of the widow and the orphan, it will not become them to boast any longer of their charity or their benevolence.

THE COURT.

The Queen and the Prince Consort have received a succession of visitors during the week just closed. The Lord Chancellor and Lady Cranworth, and the Chancellor of the Exchequer and Mrs. Gladstone closed their visit on Saturday last. On the same day Major-General Bentinck had the honour of an interview with her Majesty, on his return from the Crimea.

On Monday the Prince Consort, with the two elder Princes of the Royal Family and Prince Ernest, came to London by a special train of the Great Western Railway, and visited the Exhibition of Prize Cattle and Implements of the Smithfield Club, at the Bazaar in King-street, Portman-square.

On Wednesday morning all the company visiting at the Castle left for London.

The Court will arrive in London on Monday next.

The Earl Somers and Lieut.-Colonel the Hon. N. Hood have succeeded the Earl of Listowel and Lieut.-General Sir Frederick Stovin as Lord and Groom-in-Waiting.

We are glad to announce that the Duke of Somerset continues to go on favourably. The inquiries after the health of his Grace are still very frequent.

The Viscountess Doneraile gave birth to a daughter, at Doneraile, on Thursday last. The Lady Heron Maxwell also gave birth to a daughter on Monday last, at Springkell.

Hookeem Abdool Nubbee Khan and Sirdar Gholab Khan Bahadoor, Aides-de-Camp to his Highness the Rajah of Putteeala, paid a visit of ceremony to Sir Charles Wood, President of the India Board, on Friday last. They notified to the right hon. Baronet that the Rajah had, by the last accounts from India, arrived at Allahabad, on the Ganges, on his way to Calcutta, to embark for his visit to the Queen of England.

PATRIOTIC FUND.—On Wednesday, 135 of the children of the St. Leonard's, Shoreditch, Sunday and National Schools, contributed one penny each, towards the Patriotic Fund, to be added to the liberal subscriptions of this parish.

MUSIC.

A NEW Musical Game, called the "Poly-Harmonicon," has been published by Messrs. Dean and Son, of Ludgate-hill. It is pleasant and entertaining; and may, moreover, be employed in giving useful lessons to young musical students. Dr. Paris, in his work, "Philosophy in Sport made Science in Earnest," has shown in what a variety of ways instruction may be conveyed through the medium of amusement; and this new Musical Game is an addition to the number. It is founded on a scientific principle—the astonishing and almost infinite variety of combinations into which a few numbers may be thrown. A musical air is made up of a few simple elementary phrases; and, generally speaking, one air differs from another in the order in which these elements are arranged. In this game, a number of such phrases, each consisting of two bars, are printed on *separate* cards; and they are so constructed that, when they are arranged continuously in various orders of succession, every such arrangement will give a different air. The separate phrases, when now combined, form a polka in the key of G, modulating in the first part into D, and closing in the original key. Every combination will produce a tune of this general form; but each variety will be essentially different in its details. In this manner, and by varying the accompaniments according to certain given directions, upwards of two thousand different polkas may be produced. This musical pastime is not entirely new; but we have never seen it made so simple and easy. To fabricate such an endless variety of tunes, and then to play them over on the pianoforte, is a delightful amusement, calculated to keep a young person's attention constantly alive; and this pastime, enjoyed under the eye of a teacher or relative acquainted with music, may be made the occasion of useful lessons in the rudiments of the art.

MISS DOLBY has commenced her Chamber Concerts for the season, at her own residence, as usual. The first took place on Thursday evening, the 30th of last month, and attracted a numerous and fashionable audience. It was an elegant and interesting entertainment. Miss Dolby herself sang several beautiful pieces, in various styles; the most remarkable was Mozart's very fine, but little-known cantata, "Alcandro, lo confesso," which gave full scope to her powers of execution and dramatic expression. She also sang Haydn's celebrated "Spirit Song," and a couple of pretty national ballads. Miss Amy Dolby sang Mozart's air from "Figaro," "Vieni non tardar," with taste and feeling. This young lady is making much progress, and following in the footsteps of her sister. There was some classical instrumental music, admirably performed by Mr. Stendale Bennett, Herr Ernst, Mr. Lucas, and Mr. Lazarus. The vocal pieces were accompanied on the pianoforte by Mr. Lindsay Sloper, in his usual masterly manner.

THE SACRED HARMONIC SOCIETY commenced their concerts for the season at Exeter-hall, on Friday evening, with Handel's oratorio of "Deborah." We shall give some account of this performance next week.

It is said that there are again to be operatic performances at Drury-Lane after the termination of Jullien's Concerts; and it is even affirmed that Meyerbeer's new chef-d'œuvre, "L'Etoile du Nord," is to be the first opera produced. But how this arduous task is to be accomplished, and by whom, rumour saith not.

THE THEATRES, &c.

LYCEUM.—A new farce, entitled "Aggravating Sam," was produced on Wednesday. It is partly indebted to the French—"Un Drôle de Pistolet"—a vaudeville by MM. Varin and De Leris. The morbid hero of the piece is well calculated to set forth and exemplify the talents of Mr. Charles Mathews. *Sam Naggins* habitually indulges in the propensity indicated by his prefix in the title; and it will be readily seen that an English colouring is attempted to be given to the incidents and character. Thus the victims of *Sam's* aggravating temper are named *Mr. Biffin*, *Clara* and *Arabella Biffin*, his daughter and sister, *Peregrine Popplewig* (Clara's lover), *Simon Stowboy*, and a Mexican lady, grandiosely christened *Saphonisba*. The last character was performed by Miss Harriet Gordon, who made in it her début at this theatre. The lady has been deserted by *Popplewig*, and pursues her faithless lover with spirit and determination. In this fact *Sam* finds an element of mischief, assumes himself the name of *Popplewig*, having already informed *Saphonisba* of the latter's approaching marriage with *Clara*, and thus introduces confusion among the party, which is increased by *Stowboy*, having also, at *Arabella's* instigation, assumed the name of *Popplewig*, the perfidious *Peregrine*. As a consequence of these perplexed relations, errors, accidents, and tribulations, without end, take place; through which the aggravating *Sam* moves with agreeable *nonchalance*. In this assumption, Mr Mathews, as we have suggested, meets with an attribute that comports admirably with his forcurite style—one which he always performs with felicity, and which affords occasion for the display of that artistic ease, that with him has become a second nature His success was, therefore, complete; and we are glad to state him on having accepted a part likely to be beneficial to his management.

MR. ALBERT SMITH'S MONT BLANC.—Under this title, as we have already intimated, Mr. Albert Smith has considerably varied his entertainment, by a change in the route to Chamouni, viâ Holland, the refashionment of its lyrical interludes, and the introduction of many new views from the pencil of Mr. William Beverley, and a panorama of the Rhine by M. Groppius, of Berlin. The lecture, with its original matter and novel attractions, recommenced on Monday, and was successfully delivered to a full and fashionable audience; the room being, as usual, decorated with the representation of a Swiss village, buildings, wood carvings, fountains, heaths, Alpine plants and flowers. The panorama (by M. Groppius) embraces Rotterdam and the chief objects of interest between Cologne and Bingen. Mr. Beverley's new views are rich and various, and include Amsterdam, on the Rokin Canal, looking towards the site of the old Bourse; the village of Broek; the High-street of Berne, with the clock-tower; the pass of the Gemmi; the hut lately erected on the Grands Mulets; Lyons; and the Place de la Concorde, Paris. With the hut or cabin recently built on the Grands Mulets, an interesting story is connected. It is the work of the guides of Chamouni, who, during last winter, employed themselves on it, and composed a framework for shelter during the night-bivouac of the travellers on the rocks. "Hitherto," remarks Mr. A. Smith, "blankets and railway rugs have formed the chief protection against the low temperature; and these, under ordinary circumstances, were found sufficient in the majority of cases; but as the rocks themselves are situated at an elevation of 10,500 feet above the level of the sea, and consequently about 2000 feet above the Alpine line of perpetual snow; and, moreover, are frequently exposed to fearful and unexpected storms, the want of some sort of refuge, however rudely constructed, has long been felt." The hut itself, he describes as being "constructed after the manner of the dissected barns sold in the toyshops, and kept together by wooden pegs and braces. Its external walls are formed of flat blocks and splinters in the rock, and these also serve to keep the roof in its position, during high winds, by their weight. It is fitted up with a few rough planks, forming tables and shelves. There are two sliding windows, glazed; a door which closes tolerably well; and an iron fireplace, the chimney of which passes out at one of the windows. Its size is about fourteen feet long by seven broad, and the roof of the lean-to slants towards the west, so that the afternoon sun melts the snow thereon; and the water that drips from the eaves is carefully collected in bottles, as there is no other chance of getting any, except by the stove. As soon as the sun goes down, if there be the least puff of wind, the cold is very sharp and biting, and icicles form, almost immediately at the edge of the roof."

In describing his new route, Mr. Smith indulged in that rapid and comic style so replete with *bonhommie* and humorous excitement, which hitherto has made his lecture so popular; but the theme was frequently serious, and the argument instructive. There is a general feeling now current, that this attractive form of exhibition should be rendered useful as well as amusing; and Mr. Smith is apparently willing to go with it. But the lecturer was never heavy. Whether he described Belgium or Brussels, expatiated on the peculiarities of foreign hotels, or painted the eccentricities of Brown, he maintained the same facility and felicity of matter and manner. He told a capital story of Brown's photographic mania, and his invisible nocturnal view of the Rotterdam Cathedral. A family group of the Simmonses was also in capital, their sayings and Mr. Peabody Taylor, with his American criticisms on Byron and Tennyson, proved sufficiently extravagant. A rhythmical running commentary on the scenery of the Rhine was so well timed that the stanza and the object to which it referred in the Panorama, eventuated simultaneously, thus producing a theatrical effect that was highly successful. Mr. Pringle likewise re-appears; and the ascent of the Alps proceeds with all the old spirit and more than the usual celerity of utterance. In a word, "Mont Blanc" has lost none of its former attractions, and acquired many that are not only novel but remarkably interesting.

TOWN AND TABLE TALK, ON LITERATURE, ART, &c.

MR. LAYARD has returned from "before Sebastopol" to his Parliamentary duties. He is said to be full of anecdote and life-like description of what he has seen and heard, but does not meditate a book about the War, though tempting offers have been made to him for even a little volume about the Alma and Inkerman. We can hardly suppose that the member for Aylesbury will be silent in the House when the subject of the Crimea is discussed. Mr. Disraeli may, in a debate, extract from Mr. Layard what Mr. Murray's liberality is unable to obtain in the shape of a printed narrative. We shall see.

The British Archæological Association is on its last legs. It has had a noisy life. It began in a quarrel—existed through a continued series of internal bickerings—had some pleasant congresses—contributed a few papers of real importance to the study of antiquities—and is now about to die. The story of its approaching dissolution is this. The Chepstow Congress of last year was a pecuniary failure. "The members," says Mr. Pettigrew, in a letter to one of the Secretaries, "attended very badly at the Congress, *twenty-three* only being present—and three of these residing in the locality: some of these, too, but for very pressing solicitations, would not have been there. The product, I fear, will be bad, for I have received only *sixteen shillings* as the balance from Chepstow." This is not a cheering account; and so it has been considered by two of the three Secretaries, and by other members who have taken an active part in the welfare of the Association. What is to be done? Two of the Secretaries require a meeting of the Council. Mr. Pettigrew, the Treasurer, is against a Council. The two Secretaries call a Council. Mr. Pettigrew is now roused. He calls a Council at his own house; refuses to have any further correspondence with his late dear friend, Mr. Thomas Hugo, one of the three Secretaries; and then it is that seven members of the Council resolve on telling the whole story in print to the public. We have the circular of the seven before us while we write. It is well drawn up, and concludes with the notice of a special general meeting to be held elsewhere than at Mr. Pettigrew's house. Here are nuts for Mr. Albert Way and Mr. Edward Hawkins, and all the early members of the Archæological Institute.

Poor Dr. Kitto has not enjoyed his pension from the Crown, of £100 a year, for any very long time. It was given to him early in the year 1851, "in consideration" of the service he has rendered to Biblical literature, especially by his works entitled "The Pictorial Bible," "The Pictorial History of Palestine," and "The Bible Cyclopædia." The pension was well earned, but was too small to be of much use. He is now no more. He was born in 1804; and died on the 25th of last month, at Cannstatt, near Stuttgard, "whither he had gone for the benefit of his health."

None of our contemporaries has noticed the death, at Edinburgh, on the 5th of last month, of Jane Ferrier, the well-known authoress of "Marriage," "Inheritance," and "Destiny." Miss Ferrier was born at Edinburgh, on the 7th September, 1782. Her father, James Ferrier, was an Advocate in Edinburgh, and an associate of Sir Walter Scott at the Clerks' table. It was to Mr. Ferrier's kindness that Scott was indebted for the arrangement by which, in 1811, he came into full possession of his rights as Clerk of Session. Miss Ferrier's best-known and most-admired novel was "Inheritance." Nor is it too much to say of her, that she combined many of the talents of Miss Edgeworth and Miss Austin—the wit and humour of the one, with the keen observation of the minutiæ of domestic every-day life of the other. "Tals gifted personage" (says Sir Walter Scott, in his Diary), besides having great talents, has conversation the least *exigeants* of any author—female, at least—whom I have ever seen among the long list I have encountered; simple, full of humour, and exceedingly ready at repartee; and all this without the least affectation of the blue-stocking." By marriage, Miss Ferrier was nearly connected with Professor Wilson—an edition of whose works, including the "Nootes," her nephew, Professor Ferrier, is now preparing for publication.

Her Majesty's Government, we observe with regret, will not take any part in the preservation of the triangular-shaped opening that allows St. Paul's Cathedral to be seen at present to such surprising advantage. The land is valued at £60,000; and Lord Palmerston observes, in his letter to Mr. Tite, the architect, that the preservation of the opening is peculiarly a City matter. The City thinks it peculiarly a national matter; and so the spot will be covered with some huge Manchester warehouse, that will disfigure the great work of our greatest architect. Lord Palmerston has evidently not profited—architecturally—by his recent visit to Paris and Louis Napoleon.

The Bernal Collection of Mediæval antiquities, French art, and books in beautiful bindings, is valued at £40,000. The antiquities will be sold by Messrs. Christie and Manson; the books by Messrs. Sotheby and Wilkinson.

Mr. Owen Jones is offering the remaining copies of his many beautiful publications to public competition. The hammer of the auctioneer will, on Monday next, commence dispersing his "Alhambra," and other works at the highest prices which John Bull may be willing to pay for them. Mr. Shaw's exquisite works sold so well under the hammer of Messrs. Sotheby and Wilkinson, that we have little fear for Mr. Jones's labours under the hammer of Mr. Hodgson. Mr. Jones's services to Art have not been sufficiently appreciated: and hitherto the prices of his works have been too high for the pockets of many who have waited eagerly for some such public distribution as Mr. Jones has now ventured to make of his many labours.

The rarest of all the rare early-engraved portraits of Shakspeare—a fine impression of the medallion of 1655—has just been secured by Mr. Halliwell, at the low figure of seven pounds fifteen shillings. It is said that only two other original impressions are known. We may add that Mr. Halliwell has just issued to his subscribers the *third* volume of his splendid folio "Shakespeare."

The war has had no effect as yet on the prices obtained for the luxuries of life when made of silver. At the recent sale (by Messrs. Dowells and Lyon) of the effects of the well known Campbell of Islay, a silver-gilt wassail-bowl sold for £120; a silver salver and gilt tea-set brought £115; tea sachets, £115; four épergnes, £140; gilt-silver dessert, set, £325 11s.; six silver-gilt salts, £67; six small fruit-plates, £48, or 31s. per ounce; the ormolu candelabrum, £75; bread-basket, £37; a claret-decanter, 21 guineas. Other objects of a like character sold equally well: a specimen of Palissy-ware brought 23 guineas; a Majolica vase, 21 guineas; painting on lapis-lazuli, 42 guineas; and a Bohemian dessert-service, £25 15s. We remember to have heard it observed by a distinguished traveller, an author, that "there are more silver forks and spoons in Mayfair than in the whole of Madrid."

THE Opposition papers speak of Sir James Ferguson, as their candidate for Ayrshire, in the room of Colonel Blair. Should a Conservative come forward, the Solicitor-General for Scotland (Mr. Crauford) will, it is said, not divide the Liberal interest by opposing Mr. Oswald.

THE *oldest church in America* is one in the state of Virginia, and built of timber imported from England during the reign of Charles I. *Notes and Queries.*

AS a PROOF, says the *Suabian Mercury*, that Saxony is making preparations for war, it may be mentioned that the contingent has been called out for the 30th of December. For many years past it has not been called for before April.

A DESPATCH from Madrid, dated the 4th, states that the Cortes had, by a majority of 146 to 40, given a vote of confidence to the new Ministry.

THE SIEGE OF SEBASTOPOL, GENERAL

—SKETCHED FROM THE HEIGHTS.—(SEE NEXT PAGE)

SIEGE OF SEBASTOPOL.

(From our Special Correspondent.)

BEFORE SEBASTOPOL, Nov. 12, 1854.

THE working parties, told off for the purpose of burying the dead Russians on the field of Inkerman, had gathered about 2400 bodies up to the 10th, when their labour ceased, owing to the difficulty of removing bodies under the fire of the enemy; for it is one of the peculiarities of the Imperial artillery that it cannot respect those who are performing the last duties to their dead. "We are enemies," said a Russian General, in answer to a flag of truce asking whether our men had been interred after the Battle of Balaclava. "We are enemies, but we are Christians, like you." If this were intended to convey a reproach against our allies the Turks, it is a pity that the Russians should now lay themselves open to the serious charge of committing offences surpassing in magnitude those which they accuse others of perpetrating. Shelling burying parties, as the Russians did for three days, is nothing compared to the cruelty of stabbing defenceless, wounded men on the field of battle; and the instances of this are too well known to admit of doubt for a single moment. I told you in my last letter of Colonel Ramsden of the Guards receiving six bayonet wounds as he lay on the ground. Other officers and numerous men were killed in the same manner. Colonel Carpenter, of the 41st, would possibly have survived his gun-shot wounds, if he had not been struck on the head when he lay bathed in blood on the ground. It is the object of civilised nations to give the example of generosity in war; and therefore our men have not, and will not, imitate the conduct of the Russians, but it is necessary that proved instances of cruelty on their part should be punished severely. A Greek officer in the Russian service was taken prisoner on the 5th, and is proved, on undeniable testimony of officers, to have stabbed wounded men on the field. He has, I am told, been tried by Court-martial, and now awaits his sentence at Balaclava. His fate is not known to be decided as yet; but surely, if the case is proved, the man deserves the utmost rigour of Martial Law.

The field of battle, when I visited it on the 8th, was still encumbered with dead and wounded. The paucity of our arrangements for the conveyance of sick rendered it impossible even to complete the attendance of our own wounded men for forty-eight hours after the engagement. The wounded Russians, therefore, remained most of them a longer time without any relief for their hurts. With the assistance of the French *cacolets*, all the wounded were cleared off by the 9th; but many of the Russians complained bitterly of the delay in looking after them. Charity, however, begins at home; and when the cases in the Grenadier Guards alone required the attendance not only of its own assistant-surgeon, Mr. Wyatt, but of Mr. Cross and Mr. Wilkin, of the 11th; of Mr. Kendall, of the 4th; and of numerous others, for forty-eight hours, to deal with them all—the Russians must not complain. They drove us into the war, and they must bear the sufferings attendant on our insufficient staff for medical purposes. Many of their wounded men spoke the Wallachian language, and addressed me in that tongue, requesting water. Food and drink they were not left to want; but they must have suffered much from cold, notwithstanding their heavy great-coats and boots. None of them had packs with them, and they were in a filthy state. It may be inferred from this that they had been lightened to march quick; and the worn appearance of their shoes proved that they had come a long distance. They were well provided with black bread, both in loaves and reduced to powder. They had their wooden spoons and canteens, and the bayonet scabbards stuffed with the long wooden pegs which serve as their musket-stoppers. The wounded informed us that some of the Imperial Princes were in the action, and that the attack was made with 52,000 men. It is scarcely a matter of surprise that, with such a force, they should have succeeded in forcing our weakened regiments back for a time, until the assistance of the French enabled us to repel them, and throw them back gradually from the position they had gained. As usual, there is no lack of episodes related in camp since the engagement. Deeds of daring are numerous, and wondrous were the escapes of many. It is strange that any of the men who accompanied Sir G. Cathcart in his downhill charge on the enemy, should have escaped with life. There was a moment when English and Russians were hand to hand in the two-gun battery, and both parties having no ammunition, were hurling stones at each other. Sir George Cathcart, as he charged, was struck in the chest by a fragment of a shell which ripped off his coat and waistcoat. He remarked to an officer by his side, that that was a narrow escape, and he had hardly said so when he fell mortally wounded by five musket balls. General Strangways, who had his leg shot off, and did not long survive, was buried by Sir George's side; and it was remarked as the grave closed over the remains of these gallant soldiers, they were the last Generals here who had seen Waterloo.

Sir G. Browne retired early from the field, and rode up almost to the powder-mill, before he complained of his wound. The blood was pouring down along his scabbard. He was immediately attended to by Drs. Gibson, Dumbreck, and a couple of other gentlemen; and after having his arm bandaged he was carried from the ground on a stretcher. General Adams, General Bentinck, General Buller, who are wounded, are doing well. Sir Colin Campbell, by the disabling of all the generals around him, has become Commander of the Fourth Division.

The progress of the siege has not been great during the last five days. The enemy are very numerous in the town, and I suspect that this is the cause of the assault being delayed. There is a prospect consequently of the army wintering here. The siege, at all events, will not be so speedily brought to a termination as the most sanguine expected. Our positions in the meantime are stronger every day, and the enemy will be unable to attack us any more on what has been hitherto our weak side—the flank, guarded by our Second Division. Works have been erected on a large scale to protect us there, and these have been executed notwithstanding a heavy fire from the shipping in the harbour, of which the range was wild at first, but which became more deadly as the gunners received signals from the observatory of the Russians at Inkerman.

There has been no further attack on Balaclava, and the works there have been improved so as to defy the enemy. But that which is now the most troublesome to us is the weather, which, for the last four days, has been a succession of gales of a terrific character, accompanied by rain. The roads about the camp are rendered very bad by the weather, and working parties in the trenches and redoubts suffer much from wet and cold. The *Trent*, the *Medway*, and other ships have arrived at Balaclava, and at French Bay, with detachments. The 46th has safely arrived, and contrasts, by the brilliancy of its uniforms, with the wea her-beaten regiments which have been in bivouac so long.

Lord George Paget, who was in command of the 4th Light Dragoons, has left for England.

From the 8th to the 28th of November the Russian army appears to have remained at rest, trying to recover from the fearful injuries sustained at Inkerman. The brief telegraphic despatches during the last few days are of a satisfactory nature. On the 28th General Canrobert forwarded the following report:—

The rain has ceased, and the weather seems disposed to improve. Our works will now exhibit fresh activity. Our reinforcements continue to arrive; and I have just received the 6th Regiment of Dragoons, the 6th Battalion of Chasseurs, besides various detachments of different regiments. The enemy still shows no signs of activity; but continues to protect the town by repeated retrenchments.

The position of the Russian army in and around Sebastopol is described as being very bad, on account of the want of proper equipage for Dannenberg's corps, while the heavy rains have so delayed the Steppes as to cut off all immediate hope of fresh reinforcements from Bessarabia, even if they could be spared from that province. Some accounts speak of the Russian army having been reduced to short allowance. Each man, it is said, receives only half a pound of meat per week. The garrison has made several sorties, but has always been repulsed. On one occasion the English made themselves masters of a redoubt, of which they kept possession. This was on the 26th. On the 26th a part of the garrison attacked the French lines, but was routed with a loss of 230 men. The French lost 75 men, three of whom were officers.

The *Copirie Zeitung's Correspondenz* learns from the best authority that Prince Menschikoff has written to St. Petersburg for fresh orders. He describes the position at Balaclava to be extremely difficult of attack. Twice has he in vain attacked it, and will do so a third time if the Czar should so order it; but no better result is promised, and he will not answer for the consequences.

Vienna papers, favourable to Russia, state that the want of proper surgical assistance is much felt in the Russian hospitals. On the 19th ult., there were 5000 sick or wounded Russians in Sebastopol.

The *Moniteur de l'Armée* publishes accounts from Sebastopol of the 18th ult., which are of a more encouraging nature than those for warded by most of our English correspondents:—

Our letters (it says) state that the results then known of the battle of Inkerman by far exceed the first appreciation. Thus, the dead bodies were counted one by one, and upwards of 5,000 Russian dead bodies had been interred. The total loss of the enemy on that memorable day amounts to between 18,000 and 20,000 men. The Russians appear to have charged for the present their plan of campaign. They have destroyed the bridge of Inkerman, and retired to the height on the right bank of the Tchernaya, only leaving in the plain the division of General Liprandi and the cavalry. Should they attempt a new attack, the Allied troops are ready to receive them, and, if possible, to treat them still better than the first time. With the large reinforcements already arrived, and in the position they occupy, the French and English armies may defy all the troops of Russia; the more so, as, beyond a certain limit, the great number of the latter would render their position more difficult. The country is unable to maintain any large agglomeration of troops, and the conveyance by land of the necessary provisions is extremely difficult, if not altogether impossible. The Russian army must suffer more from the rigours of the bad season than that of the Allies. The men are not sheltered by tents, and the last arrival having left their knapsacks behind, have only the clothes they were on the march. The roads being now almost impervious, they will have to remain along time in that state of destitution. With the exception of the brandy, which is abundantly distributed to them on the day of battle, the muddy water of the Tchernaya is their sole beverage. The fire of the besegers and besieged continues, but only at intervals. In the evening of the 12th, being no doubt apprehensive of an assault, the garrison opened a tremendous fire of artillery and musketry. All their powder was burned to no effect, while every one of our shots tells, in consequence of our converging fire. On that account the garrison and people within the town suffer greatly see the end of the siege according at least to the reports of the prisoners and deserters. But on our side we prefer proceeding slowly and surely. The fleets have landed additional guns, to arm new batteries. Several have been executed in the direction of Inkerman, which produce excellent results against the ships still lying in the port. Redoubts have been likewise constructed to strengthen the position on which the battle of the 5th was fought. Those works obviate in a certain degree the inconvenience resulting from the incomplete investment of Sebastopol, which constitutes its principal strength. The English have sent to Malta for heavy mortars, which will be usefully employed on that side. The French army has received a number of great-coats with hoods and capes, with which the soldiers are very well pleased. Skin jackets have likewise been distributed and found excellent. Thanks to all those precautions, the army will be able to pass the winter without suffering too much; and, in the interior of its positions, it will find wood in sufficient quantity for its wants.

THE AUSTRIAN TREATY.

A treaty between Austria and Great Britain and France was signed at Vienna on Saturday—but nobody is enabled to tell what obligations it imposes upon Austria, nor when we shall see any fruits. It may be assumed, however, that it binds Austria to the Western Powers as to some community of objects and interests; and the general belief is that it stipulates that Austria shall lend armed aid in the event of Russia not submitting to the terms proposed for her acceptance before the 1st of January. It would be rash to infer more than that Austria has agreed to something demanded by the Western Powers, and placing her, at least prospectively, in a more hostile attitude towards Russia. In Germany the prevailing impression appears to be that Russian diplomacy has not been so successful at Vienna as was anticipated.

The report in Paris on Thursday, was that the treaty is to become eventually a treaty of alliance offensive and defensive. Peace will be proposed to Russia by Austria on the basis of the four points, *interpreted as mentioned in the treaty*. If by March 2 Russia shall not have accepted the four points *so interpreted*, Austria will recall her Ambassador from St. Petersburg; and if by March 2 the four points (or at least some conditions satisfactory to the Western Powers based upon the four points) shall not have been accepted by Russia, then Austria will declare war. The interpretation of the four points includes the throwing open of the Black Sea, Russia not to be allowed to have a larger number of vessels therein than France and England. Six ships from each nation is to be the stipulated number. A European port is to be formed as a counterpoise to Sebastopol, either at Batoum or at Sinope. The liberty of the Danube is to be declared; and, as a guarantee for such liberty, the town and fortress of Ismael and all the Russian forts near the mouth of the Danube are to be destroyed. The protectorate of the Christians (subjects of the Sultan in Turkey) is to be exercised collectively by the Five Powers. Each Power will have the right to protect separately its own subjects of its own religion, but not the subjects of the Sultan. Should Austria be compelled to declare war, she will enter with all her forces into Bessarabia, and will send 20,000 men to the Crimea.

The three contending parties engage themselves not to accept any proposition for peace without having deliberated in common.

WARLIKE MOVEMENTS AGAINST AUSTRIA.

There are several indications of a Russian movement on the Austrian frontiers. The Russian Guard and Grenadiers are advancing into Poland. The entire First Infantry Corps, under General Sievers, is being concentrated on the left bank of the Vistula. The Second Corps, under General Paritsitin, has orders to proceed to Volhynia and Podolia. An Imperial decree, dated Nov. 12, orders that 20,000 more battalions to be added to the regiments of the Finland army. Sixty battalions of sharpshooters are to be raised. The "state of siege" at St. Petersburg had been suspended by a ukase, dated Oct. 10.

THE AUSTRIANS IN THE PRINCIPALITIES.

A statement, copied from the Vienna *Wanderer*, has been going the round of the press, to the effect that Mussar Pasha (Sir Stephen Lakeman)—an officer whose previous career has been mentioned with well-deserved eulogium in the columns of the ILLUSTRATED LONDON NEWS—has positively been removed from his post as Governor of Bucharest. Like many other pieces of intelligence from Vienna, the announcement is untrue for although Count Coronini, the Austrian General, presented an order for the dismissal of the Governor to Omer Pasha, the latter returned it on the spot. Mussar Pasha continued to perform his duties as formerly, and soon afterwards a despatch was received from Constantinople, which withdrew the dismissal, and approved of his conduct in every way.

As regards the movement of the Turkish army against the Russians, it is affirmed that Austria no longer offers any obstacle to it. Now that the rainy season has begun, when Omer Pasha cannot move his troops, without great loss, Count Coronini has been instructed not to interfere. Had the same instructions been given two months ago, before the Russian reinforcements were forwarded to the Crimea, the Allies would probably have been masters of Sebastopol some weeks ago.

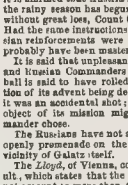
It is said that unpleasant messages have passed between the Austrian and Russian Commanders in the neighbourhood of Galatz. A cannon-ball is said to have rolled into an Austrian camp; and, on an explanation of its accidental being demanded, the Russian officer coolly stated that it was an accidental shot; but that, since it had reached the camp, the object of its mission might be construed just as the Austrian Commander chose.

The Russians have not altogether abandoned Moldavia. Their patrols openly promenade on the right bank of the Pruth, and even in the vicinity of Galatz itself.

The *Lloyd*, of Vienna, contains a letter from Bucharest of the 23rd ult., which states that the whole of the Russian troops in Bessarabia do not amount to more than 40,000 men—viz., 15,000 at Kilia, Ismail, and Reni; 20,000 at Reows, Kesshenew, Kagul, and Bolitsch; and about 6000 dispersed on various points on the frontier.

OBITUARY OF EMINENT PERSONS.

SIR ALEXANDER CRAY GRANT, BART., OF DALVEY, ONE OF H.M. AUDIT COMMISSIONERS.



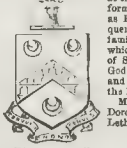
THE death of this Baronet occurred on the 29th ultimo—the eve of his seventy-fourth birthday. He was the eldest son of Sir Alexander Grant, fifth Bart., of Dalvey, by Sarah, his wife, daughter and heir of Jeremiah Cray, Esq., of Ibley, Hants; and represented a branch of the very ancient family of Grant, of that ilk which diverged from the main stem about the close of the fifteenth century.

Sir Alexander filled the office of Chairman of Committees in the Parliaments of 1826 and 1830, and was a member of the Board of Control during Sir Robert Peel's Administration of 1835. In 1842 he vacated the representation of Cambridge (for which borough he had been twice returned) by accepting the appointment of Commissioner for Auditing the Public Accounts.

THE REV. HENRY RAIKES, M.A., CHANCELLOR OF CHESTER.

THE Rev. Chancellor Raikes died on the 28th ult., at his residence, Chester, in the seventy-third year of his age. He was second son of the late Thomas Raikes, Esq., an eminent merchant of London, Governor of the Bank; and nephew of Robert Raikes, the well known philanthropist and founder of Sunday Schools. One of Mr. Chancellor Raikes's sisters married Lord William Fitzroy, and another Sir Stratford Canning, now Viscount Stratford de Redcliffe.

AMBROSE GODDARD, ESQ., OF SWINDON.



MR. GODDARD, of Swindon, died on the 29th ult., at the Crescent, Bath, aged seventy-five. He was formerly a Captain in the 10th Hussars; served as High Sheriff of Wiltshire 1819-20, and subsequently sat in Parliament for Cricklade. His family is one of high consideration in Wilts, of which county his father, Ambrose Goddard, Esq., of Swindon, was M.P. from 1772 to 1806. The Goddards derive their origin from a Saxon source, and possessed property in England previously to the Norman Conquest.

Mr. Goddard married (August 1st, 1818) Jessy Dorothea, eldest daughter of Sir Thomas Bateler Lethbridge, Bart., and leaves several children.

WILLS AND BEQUESTS.—The will of Rear-Admiral Joseph Gulston Garland has been proved under £40,000; that of Charles Geach, Esq., M.P. for Coventry, at £40,000. A long list of legacies to public institutions, some of which we enumerate is left by the late Henrietta Octavius Roe, Esq., of Weston, near Baldock, Hertford, whose personal estate was estimated at £26,000:—Society for Promoting Christian Knowledge, £1500; Propagation of the Gospel in Foreign Parts, £1500; education of the Poor in the Principles of the Established Church, £800; Enlargement of Churches, £500; Church Missionary, £300; Church Pastoral Aid Society, £100; British and Foreign Bible Society, £100; Queen Anne's Bounty, £200; Baldock's Providence Society, £200; Addenbrooke's Hospital, Cambridge, £100; Bedford Lunatic Asylum, £200; Ditto Infirmary, £500; Hitchin Infirmary, £500, and £300 for its enlargement; Brompton Consumption Hospital, £500; Anniversary Festival of the Sons of the Clergy, £500; Corporation for the Relief of Poor Widows and Children of Clergymen, £500; and for the Clothing, Maintaining, and Educating the Children of Clergymen until Apprenticed, £200.

RESULTS OF THE ASTRONOMER ROYAL'S RECENT PENDULUM EXPERIMENTS.—In the ILLUSTRATED LONDON NEWS for Nov. 4, we gave the details, with Engravings, of the Paduan Experiments recently made by the Astronomer-Royal, in the Harton Pit, at South Shields. By the following letter, addressed by Professor Airy to Mr. James Mather, it will be seen that the important question of the real density of the earth has been at length solved; for the average weight of the shell, 1260 feet, thick, between the bottom of Harton Pit and the surface of the earth, is all that remains to be done, and which is within easy command:—"Royal Observatory, Greenwich, December 2, 1854.—My dear sir,—It will be, I am sure, matter of satisfaction to you to know that the result of the comparison of the pendulum-vibrations given the highest confidence in the certainty of the results to be deduced from them. The comparison of the rates of the pendulums before and after their interchanges prove that there is no evidence of their having undergone any mechanical change whatever, and almost positive evidence against their having undergone any change, amounting, in its effect on their vibrations, to 1-20 part of a vibration in a day. The immediate result of the comparisons is this. Supposing that a clock was adjusted to go true time at the top of the mine, it would gain ¼ seconds per day at the bottom. Or it may be stated thus: that gravity is greater at the bottom of the mine than at the top by 1-19190 part. To go a little further into the interpretation. If there had been no coal-measures or rocks of any kind between the top and the bottom, but merely an imaginary stand to support the pendulums, the gravity at the top *would have been* less than at the bottom by 1-8400 part nearly. But it *is* less by only 1-19200 part. And what is the cause of the difference? It is the attraction of the shell of matter, whose thickness is included between the top and the bottom of the mine. The attraction of that shell, therefore, is the difference between the two numbers which I have given, or is 1-14900 part of gravity nearly. But if that shell had been as dense as the earth generally, its attraction would have been 1-5600 part of gravity nearly. Therefore the earth generally is more dense than the coal measures, in the proportion of 140 to 56 nearly. You will remark that all these numbers are rough, and that to make their results available, some small corrections are required (to which I have not alluded) and some knowledge of the density of the different beds, &c., which I do not possess at present. I am, my dear Sir, yours, very truly, G. B. AIRY."

AGES OF AMERICAN POETS.—J. K. Paulding, 75; H. Dana, 67; C. Sprague, 66; W. C. Bryant, 60; Ralph Waldo Emerson, 51; N. P. Willis, 47; R. W. Longfellow, 47; J. G. Whittier, 46; H. T. Tuckerman, 41; J. R. Lowell, 35; Bayard Taylor, 29.

ACCORDING to the Italian correspondence of the *Independance Belge*, Mazzini and his followers were again busily at work. By a sudden change, which appears unaccountable, the Mazzinians, it says, have become the warmest partisans of Russia, praying fervently for the success of her arms, and building thereon hopes, to which the Democrats alone have the clue.

FINE ARTS.

PUBLICATIONS OF THE ARUNDEL SOCIETY.

ENGRAVINGS ON WOOD FROM GIOTTO'S FRESCOES IN THE ARENA CHAPEL AT PADUA. By MESSRS. DALZIEL; after Drawings by W. O. WILLIAMS.

GIOTTO AND HIS WORKS AT PADUA. By JOHN RUSKIN.

The Arundel Society are doing important service in producing examples after the great masters of the early Italian School;—men who broke the fetters which had hitherto confined the pencil and the fancy of Art, and who bequeathed the domain of Art, thus extended and emancipated, to Leonardo, Michael Angelo, and Raphael. These productions, carefully considered and rightly understood, will serve to reveal the secret of the power and proficiency displayed by that bright triumvirate; and will also afford means to judge of the chances of a similar revival of Art in our own day by a proper use of the same examples.

Upon this point, Mr. Ruskin, whose fervid language breathes of the pure love of his subject, is very sanguine,—more sanguine than we confess to be. This gentleman, in his able essay on Giotto, scatters the innovations made by Giotto, "consisted in the introduction A, of gayer, or lighter colours; B, of broader masses; and C, of more careful imitations of nature than existed in the works of his predecessors." Upon points of A and B, we will not enter; but the writer's observations on point C, we propose to bring directly on the subject under consideration. In respect to the "close imitation of nature," Mr. Ruskin says:—

In this one principle lay Giotto's great strength, and the entire secret of the revolution he effected. It was not by greater learning, nor by the discovery of new theories of art, not by greater taste, nor by "ideal" principles of selection, that he became the head of the progressive schools of Italy. It was simply by being interested in what was going on around him, by substituting the living men for conventional attitudes, and portraits of living men for conventional countenances, and incidents of everyday life for conventional circumstances, that he became great, and the master of the rest. Giotto was to his contemporaries precisely what Millais is to *his* contemporaries—a daring naturalist, in defiance of tradition, idealism, and semi-classicism. The Giottesque movement in the fourteenth, and pre-Raphaelite movement in the nineteenth centuries, are precisely similar in bearing and meaning: both being the protests of vitality against mortality, or spirit against letter, and of truth against tradition: and both, which is the more singular, literally links in one unbroken chain of feeling; for exactly as Niccola Pisano and Giotto were helped by the classical sculptures discovered in their time, so the pre-Raphaelites have been helped by the works of Niccola and Giotto at Pisa and Florence: and thus the fiery cross of truth has been delivered from spirit to spirit, over the dust of nineteen long generations.

No one can dispute the eloquence of this passage: it almost carries conviction by storm. But at the same time it is very fallacious: for, that it attributes Giotto's excellence to matters formative, whereas his greatness was in matters creative; and, 2ndly, that even as regards matters formative, it is a very different thing for Giotto and Pisano, who evidently commenced a new style, to borrow assistance from the classical sculpture (models of perfection in themselves) of the ancients, and for the artist of the nineteenth century to borrow at secondhand from Giotto and Pisano, who are not models of perfection even in matters formative, which, as we observed, is of secondary consideration; and in which, spite of Mr. Ruskin's view, Giotto's "great strength" did not lie, nor the "entire secret of the revolution he effected."

Giotto's strength consisted in his fine comprehensive appreciation of nature—that is, of the passions, impulses, and habits of nature; he not only gave men in the real attitudes of "every-day life," and with the portraiture of "living men," as suggested by Mr. Ruskin, he did more, he dived into the recesses of the heart, and depicted men in every variety of trying and exciting incident, with a dramatic power scarcely surpassed by any artist since his time. We need hardly add that a man who thus drew from the pure fount of nature, could stand in little stead for the invention and sentiment displayed in his works, to the sculptured or any other works of another age, itself influenced by a totally different creed and fancy; and that, in asserting the creative faculty, Giotto was, what creators always must be, strictly original. In the copying of nature in the various details of animal and vegetable life, and in other secondary matters, Giotto, like the other artists of his time, was careful, but with a certain dryness of style, and even faultiness of drawing, which contrasts marvellously with the life and truth which breathe through all that relates to the action and sentiment of the scene.

Upon this subject we will quote a writer of no mean authority, who laboured assiduously in the cause of Art a generation and more ago:—"Before Art had become fashionable, much less popular, amongst us, but whose works, published in a large and expensive form, are as yet known only to a few. We refer to the late William Young Ottley, who, in his great work, "The Italian School of Design," and "The Early Florentine School," was the first to draw serious attention to the works of the artists of the early period of the Revival, and to illustrate them with facsimiles upon a suitable scale. In the following brief passage he sums up his appreciation of the peculiar merits of the early Italian artists of this progressive school, and of Giotto in particular:—

But, whatever may be the defects of their works, they are more than compensated by positive beauties, and those of a very high kind. In regard to the *three great requisites of an action, composition, and expression*, and for the foldings of the draperies, the best of these productions may even now be studied with profit; and those of Giotto, especially, abound in examples in which, by the unpolymented and ingenious distribution of the figures, the interested subject is developed with a degree of perfection seldom equalled, and perhaps never surpassed, by painters of later times. We may add, that it is among the chief characteristics of the paintings and sculptures of the early Florentine artists, that they are also entirely exempt from affectation of manner, and that their figures often possess the charm of greatness without the alloy of extravagance.

We have here the claims of our pre-Raphaelite artist resting upon a wider and more important basis than Mr. Ruskin assumes for him. Of the influence undoubtedly exercised by his works, one amongst many instances will suffice. In reference to the frescoes of the "Life and Miracles of St. Francis at Assisi," W. Young Ottley says:—

Assisi is not far distant from Perugia, and there can be no doubt that Raphael attentively studied this extraordinary work; many of the compartments of which, in respect to invention, composition, and expression, merit the highest praise. It may safely be asserted that Giotto was one of the greatest geniuses that ever lived. His talents were duly appreciated in his own time, and his style continued to be generally followed throughout Italy till some time after the commencement of the fifteenth century.

The question remains, whether genius as original and as truthful as that of Giotto's (that of Mr. Millais, for instance, whom Mr. Ruskin pronounces to be the Giotto of our day) might succeed in raising Art again to the grandeur of its culminating point in the fourteenth century: whether, in fact, the pre-Raphaelite movement in the nineteenth century is "precisely similar in bearing and meaning" to that of the fourteenth. This question we would answer in the negative, and for reasons suggested less to faithfully by Mr. Ruskin himself, in the very next page of his Essay:—

One point more remains to be noticed respecting him (Giotto) As far as I am aware, he never painted profane subjects. All his important existing works are entirely devoted to the illustration of Christianity. This was not a result of his own peculiar feeling or determination—*it was a necessity of the period.*

Here, in our opinion, lies the whole secret of the case. "It was a necessity of the period;" it was a necessity to decorate church walls with Scripture subjects and Church legends, for the instruction of men who had no other prayer-book, and also as aids to fix the attention and secure the devotions of an ignorant multitude. These subjects were so numerous, and so frequently accepted, that no assertion that Giotto was one of the greatest geniuses that ever lived. His talents were duly appreciated in his own time, and his style continued to be generally followed throughout Italy till some time after the commencement of the fifteenth century.

An artist's "invention," in the great days of Italian Christian art, was restricted to the mode of treatment of well-known and oft-repeated subjects; how it has to hunt up the subjects themselves—subjects novel and s range—and to seek them every time "further afield," further from the sphere of every-day experience and every-day necessity; till at last it has become a wretched mannerism between insipidity and extravagance.

When Mr. Ruskin suggests that "the day has perhaps come when genius should be shown in the discovery of *perpetually various interest amidst the incidents of actual life*," he puts genius indeed a fearful task, only to be equalled by that of making a hempen rope out of a desert of sand. The incidents of actual life are mostly of more or less interest to those actually engaged in them, but comparatively of little interest to others: there are few, or none, of a generic character commanding the sympathies as a "necessity," of all the world; and this being the case, Mr. Ruskin speaks with undue severity of the artists of the present day—having only such materials at their command—when he sees on to say, "the absence of inventive capacity is very earnestly proved by the narrow selection of subjects which commonly appear on the walls of our Exhibitions." The walls of our Exhibitions display much to give us for the prospects of Art, but the fault is not always wholly with artists. Art languishes for want of material—material of "necessity;" and hence arises a curious problem as to its future destinies, which we will not stop to discuss. Suffice it that Art flourished in Italy, as in Greece of old, when it had a field to work upon, wherein it was a "necessity," and languished only when the field grew barren and the material failed. The case is the same with the drama and the poetic art generally: without a subject, without a demand, which depends upon the subject, there is no hope for genius.

To return to the Arundel Society and Giotto. The subjects in the two parts before us, fourteen in number, are drawn with a fine bold pencil, and the engravings on wood having very much the free and marked expression of etchings. They are accompanied by a pamphlet full of curious and eloquent disquisitional matter by Mr. Ruskin—whom though we cannot always agree with, we must always admire. Thus produced, and aided by the lights of ingenious criticism, the publication is one of extreme interest and value.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS, TAKEN DURING THE WEEK ENDING THURSDAY, DECEMBER 7

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading	Thermometer. Lowest Reading	Mean Temperature of the Day.	Departure from Temperature Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches	°	°	°	°			Inches.
Dec. 1	29 427	51·0	28·7	43·3	+ 1·6	80	W.	0.00
„ 2	29 746	45·0	34·3	40·7	— 0·9	79	W.S.W.	0.00

„ 7	30·036	42·0	34·8	38·0	— 3·0	81	N.	0.00

Note.—The sign + denotes above the average, and the sign — below the average.

The reading of the barometer increased from 29·42 inches at the beginning of the week, to 29·93 inches by the 3rd; and decreased to 29·86 inches by the afternoon of the same day; increased to 30·04 inches by the 4th; decreased to 29·40 inches by the 5th; and increased to 30·12 inches by the end of the week. The mean for the week, at the height of 85 feet above the sea, was 29·762 inches.

The mean temperature of the week was 42·4°, being 1·1° above the average of the corresponding week during thirty-eight years.

The range of temperature during the week was 16·7°, being the difference between the highest reading of the thermometer on the 1st, and the lowest on the 2nd and 6th.

The mean daily range of temperature during the week was 10·1°.

Rain fell during the week to the depth of rather more than one-tenth of an inch.

The weather on the 3rd and 5th was dull, and the sky overcast, the rest of the week fine, and the sky during the former part of the day nearly cloudless.

For the month of November, the mean reading of the barometer at the level of the sea was 29·870 inches. The highest temperature during the month was 62·0° on the 1st, and the lowest was 26·5° on the 27th. The range of temperature during the month was, therefore, 35·5°. The mean of all the highest temperatures by day was 47·8°, and of all the lowest by night was 32·3°; the mean daily range of temperature during the month was, therefore, 14·2°. The mean temperature of air during the month was 40·8°, being 2·7° below the average of the corresponding month during 38 years. The mean temperature of evaporation was 39·2°. The mean temperature of the dew point was 37·6°. The mean degree of humidity was 88 (complete saturation being represented by 100). And the fall of rain during the month was 1¼ inches.

Lewisham, Dec. 8, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday the births of 1610 children were registered within the metropolitan districts: of these 806 were boys and 804 were girls, exceeding the averages of the nine corresponding weeks of the nine preceding years by 86 and 131 respectively. The number of deaths during the week was 1501: the average of the ten preceding weeks of the ten preceding years, corrected for increase of population, is 1230; therefore, the present return shows an excess of 120 above the average number. To zymotic diseases, 298 deaths are attributed, the average being 251; of these 7 only were caused by cholera, which epidemic has now happily subsided in London, and which in the first week in September destroyed 2650 of the inhabitants; and 30 to scarlatina, the average being 53. To tubercular diseases, 188, of which 120 were caused by consumption. To diseases of the heart and blood-vessels, 41. To diseases of the lungs, and the other organs of respiration, 200, the average being 238; and to violence, privation, cold, and intemperance, 25 deaths are attributed.

LONDON AND WESTMINSTER BANK.—We are requested to correct an error at page 515, wherein it is stated that the architect to the Bloomsbury Branch had obtained some useful hints from Mr. Richardson's "Prize Essay on Banking," the source of such information being the Essay written by Mr. Granville Sharpe, who obtained for the same the prize of £100, offered by Mr. Gilbart, in 1851, for the best "Essay on Practical Banking."

TRIAL OF THE PYX.—The Lords of her Majesty's most honourable Privy Council met on Wednesday morning, at the office of the Comptroller of the Exchequer, for the trial of her Majesty's gold and silver coins set apart from every coinage between the 16th December, 1850, and the 30th June, 1854, in the Pyx of the Mint. The jury (composed of goldsmiths) having been sworn, were charged by the Lord Chancellor, and the proceedings were then adjourned, the jury taking the specimens deposited in the Pyx in order to test them, for the purpose of ascertaining that they were of the legal weight and standard.

ALARMING FIRE IN BISHOPSGATE-STREET.—On Tuesday morning a fire broke out on the premises belonging to Mr. Heath, builder, 122, Bishopsgate-street Without, owing to the high wind that prevailed, speedily extended to the neighbouring houses; and, although every effort was made to extinguish it no less than eight houses were burned to the ground in the space where the fire commenced, and in Acorn-street and Skinner street. The Royal Society's fire-escape promptly attended, as well as powerful bodies of the City and metropolitan police; and, had it not been for their timely arrival, some dozen persons must have been burnt to death.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. G. G. Bayley, to Burnham-Sutton, Norfolk; Rev. N. Davies, to West Lexden, near Rougham, Norfolk. *Vicarages:* The Rev. C. W. Wood, to Atwick, near Sigglesthorne, Yorkshire; Rev. J. M. Rice, to Wye, near Ashford, Kent. *Incumbencies:* The Rev. B. J. Binns, to St. Ann's Church, the parish of Llandegfy; Rev. T. Cox, to Threapwood, Flintshire; Rev. W. R. Wroth, to St. Philip's, Clerkenwell.

QUEEN'S COLLEGE, CORK.—The chair of Natural History in Queen's College, Cork, vacant by the removal of Professor W. Thompson to Queen's College, Belfast, has been filled by the appointment of the Rev. W. Smith, of Lewes, in the county of Sussex.

NEW ECCLESIASTICAL DISTRICT IN ST. JOHN'S-WOOD.—The vestry of St. Marylebone has adopted the report of a committee, recommending that the income of the incumbents of the new district of St. John's-wood Chapel, shall be £250 a year, in addition to a parsonage-house and one-tenth of the pew-rents. This will render the benefice worth about £400 a year. The new district will be assigned as soon as the necessary arrangements have been made. The living is in the gift of Lord Aberdeen.

TESTIMONIAL.—The Rev. Irwin Lloyd, M.A., Curate of St. Peter's Church, De Beauvoir-town, Kingsland, has been presented with the works of St. Chrysostom and a purse of 100 guineas; being the sixth testimonial presented by the inhabitants to their worthy pastor, during a residence of five years.

CHESS.

TO CORRESPONDENTS.

J. W. N. SUBSCRIBER, HON. SEC.—GRAND CHESS TOURNAMENT IN PARIS DURING THE EXHIBITION OF 1855.—We know not what steps have been taken to realise the project—which a very committee has been organised, or any subscription set on foot; but from the following appeal which appears in the last Number of *L'Illustration, a Universal* it would seem that the subject is on the "tapis" of the Parisian Chess circles:—" M Staunton s'efforce à rendre du terrain dans les Parties encore indécises, mais on prend toute cette question au sérieux à Londres, et on espère que M Staunton y viendra bien vite. Si l'on propose, on espère aussi que la Commission Impériale pourra s'occuper de cette intéressante question, et encourager par quelques primes d'honneur la lutte des échecs pendant l'Exposition."

C M C. We think your two attempts are fair ones. Black escapes in both cases easily.

DOLLY. We are sorry to say, we know nothing whatever of the game you mention.

ALPHA, W. B. A., R.M., CAROLINE, J. F. S., F. C., Islington.—We believe it must be admitted that Mr Healey's Position of No. 59 is a decisive yet still the Mate can be effected in three moves by—1. P to K 4th (ch), 2. P to Q 5th, &c.

CHESSING HOURS.—It shall have attention.

GRADUATE.—Go through the selection of games at the odds mentioned, which are given with our own notes from p. 41 to p. 151 of the "Chess-Player's Companion." Bohn, London, 1849.

A. TELEMACO.—The Paris Circle des Echecs is held at the Estaminet de Lyon, Galerie Montpensier, Palais Royal. If desirous of admission, while resident in Paris, you must apply to the Honorary Secretary, M. Riel re.

R. R. J.—In saving our Chess Problems the most amusing, and by much the most instructive course is to work them out in the head, without touching a Piece. You Solution is very near, but not quite perfect.

J. R., Melrose.—It is truly surprising that a Solution so very simple and obvious should have been overlooked.

Sigr or l' ctf Genoa.—The parabloid in question, together with a reply to your last communication, was duly received a fortnight ago by the channel indicated in your letter.

R. S. G.—Will still consider. May we not add, improve?

ARMITAGE. The Amateur Chess-players of the St. James's Literary and Scientific Society, Oxford-street, have lately organised themselves into a Chess-club, to be called the St. James's Amateur Chess-club. You will no doubt obtain all the practice you require at very little expense, by joining this Institution.

GRADUATE.—The famous matches between La Bourdonnais and McDonnell, were played at "The Westminster Chess-club" (since defunct), which was held in Bedford-street, Covent-garden.

SUBSCRIBER.—1. You should procure one of Jaques's excellent Staun-ton Chessboards and sets of men. 2. To give the list of Chess-clubs and the particulars regarding them which you seek, would occupy two sheets of a column. You will find a complete list on the wrapper of each month's number of the *Chess-players' Chronicle*.

CRITICUS.—Why so, MAYFOLE, JAMES, and not rather Mayfole, James, and Others. Refer Notice to "Alpha," &c., above.

A CONSTANT READER.—We quite concur with your friend in his view of the case.

SOLUTIONS OF PROBLEM No. 563, by Bicknell, C. P. Q., Sultan, A., R., J. P., Dalston; Lewis, Devonshire; J. P., Pole, F. R., of Norwich; Mona, and others.

SOLUTIONS OF PROBLEM No. 568, by Dereson, F. R., Norwich; Stricklands, J., D., J. T., Derby; J. A. M., Fakenham; Mrs Pitt-orly, C. P. F., Hants, Harry V., H. N., J. T., of Plymouth; J. G. Wills, J. R. Malcom, J. D. Pain, A. E., Gregory, Alpha, R. N., Mona, Sultan, and Mr. F. Perreau.

SOLUTIONS OF ENIGMAS, by J. F., W. H. M., Sultan, M. P., Launceston, R. D., Phin, Dereson, F. R. C., R. P., F. R. of Norwich; Lee, F. R. S., Stricklands, Osborn, J. R. Rose, Sidgreaves, and others. All others are wrong.

*** The notice of many communications is unavoidably postponed until next week.

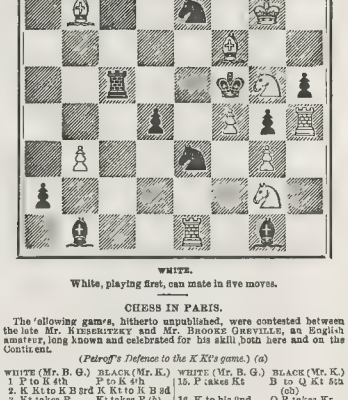
SOLUTION OF PROBLEM No. 568.

WHITE.	BLACK.	WHITE.	BLACK.
1. P to K B 4th	P tks P in passing	2. Kt to Q 6th	Anything
		3. B or Kt Mates	

PROBLEM No. 564.

A clever piece of Chess strategy, by Mr. J. G. CAMPBELL.

BLACK.



WHITE.

White, playing first, can mate in five moves.

CHESS IN PARIS.

The following game's, hitherto unpublished, were contested between the late Mr. KIESERITZKY and Mr. BROOKE GREVILLE, an English amateur, long known and celebrated for his skill both here and on the Continent.

(Petroff's Defence to the K Kt's game.) (a)

WHITE (Mr. B. G.)	BLACK (Mr. K.)	WHITE (Mr. B. G.)	BLACK (Mr. K.)
1. P to K 4th	P to K 4th	15. P takes Kt	B to Q Kt 5th (ch)
2. K Kt to K B 3rd	K Kt to K B 3rd		
3. Kt takes P	Kt takes P (b)	16. K to his 2nd	Q R takes Kt
4. Q to K 2nd	Q to K 2nd	17. R takes P	R to Q 2nd
5. Q takes Kt	P to Q 3rd	18. P to Q R 3rd	B to Q 8th
6. P to Q 4th	P to K B 3rd	19. K R to Q B sq	B to Q 3rd
7. P to K B 4th	Q Kt to Q 2nd	20. R takes B	K takes R
8. Q Kt to B 3rd	B to K 2nd	21. K Kt to Q B 4th	R to K sq (ch)
9. Q P takes P	Q P takes P	22. K R to K 4th	R takes R (ch)
10. Q Kt to Q 4th	Q Kt to K B 3rd	23. P takes R	K to K 4th
11. B to Q 3rd (c)	B to Q Kt 5th (ch)	24. P to Q 6th	R to K sq (ch)
12. Kt takes Q B	P takes P (d)	25. K to Q 7th	P to Q B 4th
13. K Kt to Q 4rd	Kt to Q B 4th	26. R takes K Kt P	
14. Kt take Q R P	Kt takes B (ch)		

And in a few more moves Black resigned.

(a) This defence, though called by Mr Petroff's name from the circumstance of that distinguished player having brought it into vogue a few years since, is one of the very strongest upon which we have experience. The accomplished authors of the German Handbook have mentioned it but in touched on in the sixteenth and seventeenth Parts of their work, namely, the "Attack of Greco" and "Defence of Lucena," supposed to have commenced about 1495, where it begins practically as far as the present game.

1. P to K 4th	P to K 4th	3 Kt takes P	Kt takes P
2. K Kt to K B 3rd	K Kt to K B 3rd	4 Q to K 2nd, &c.	

(b) The move usually played at this point is P to Q 3rd which is found in Cozio, and has of late years undergone complete analysis at the hands of Mr. Jaenisch.

(c) We should have preferred playing B to Kt 5th, shutting out and then taking the Kt (ch), &c. White however obtains some advantage by the line of play adopted.

(d) This may be done with safety, since the White Kt has no means of escape.

(e) We cannot see how Black can satisfactorily save the game by moving his King to K Sq; but we believe at bringing the Rook into action, ensuring as it did the gain of a Pawn, was a highly scientific order of play.

BETWEEN THE SAME PLAYERS.

(At the same opening.)

WHITE (Mr. B. G.)	BLACK (Mr. K.)	WHITE (Mr. B. G.)	BLACK (Mr. K.)
1. P to K 4th	P to K 4th	20. Kt takes Kt	P takes Kt
2. K Kt to K B 3rd	K Kt to K B 3rd	21. Q B to K 6th	Kt to K B 2nd
3. Kt takes P	Q P takes P	22. P to K 5th	P to Q 3rd
4. P to Q 4th	P to Q 3rd	23. P to Q Kt 4th	P to K R 4th
5. K Kt to K B 3rd	Q Kt to Q B 3rd	24. B to K B 2nd	P to K R 5th
6. B to K 2nd	B to K 2nd	25. B to K B 5th	P to Q Kt 4th
7. P to Q B 4th	B to K to 3rd	26. Q to Q Kt 3rd	Q R P takes P
8. Q Kt to Q B 3rd	K Kt to K B 3rd	27. P takes P	Q to K Kt 2nd
9. P to K R 3rd	Castles	28. Q to K 2nd	B to Q R 6th
10. Q to Q 2nd	P to K Kt 3rd	29. Q to Q R 2nd	P to Q Kt 4th(f)
11. Q B to K R 6th	K R to K sq	30. Q B to Q Kt P	P to K R 6th
12. Castles on K side	P to Q Kt 4th	31. B takes B	P takes P
13. Q R to K sq	Q to Q 2nd	32. Q to Q Kt 3rd	Kt to K Kt 4th
14. P to Q 5th	Q Kt to Q sq	33. B to Q B 6th	R to K B sq
15. K Kt to Q 4th	K Kt to Kt 5th	34. P to K B 4th	P takes P
16. B to K B 4th	K B to B 3rd	35. P to Q 6th (dis. ch)	K to R 2nd

19. K R to K sq	K Kt to K 4th	38. P Queens	

And Black surrendered.

FIRE IN THE STRAND.—SITE OF ARUNDEL HOUSE.

NORTH VIEW OF ARUNDEL HOUSE IN 1646.

FIRE has much to do with changing the aspects and reminding the associations of great cities. On Sunday last, within a few hours, the Whittington Club House, formerly the Crown and Anchor Tavern, extending from Arundel-street to Milford lane, was laid in ashes. The building itself had little to recommend it, in age or design: it was scarcely 70 years old; but it, in part, occupied a site of great historic interest, such as the void caused by a conflagration rarely revives. Upon the ground now covered by Arundel-street, Surrey-street, and Norfolk-street, stood the old Inn, or town-house, of the Bishops of Bath, with its gardens and appurtenances, reaching from the south side of the Strand to the Thames; and shown, with its water gate, in the river views in the sixteenth century. The house was then called Bath's Inn, or Hampton-place. It was wrested, or, in the parlance of history, it passed "without recompense," from the possession of the Bishops, in the reign of Edward VI., into the hands of the King's uncle, Lord Thomas Seymour, who, when Stow wrote, had lately "new builded the house," and given it the appellation of Seymour-place. In 1547, Seymour, who held the post of Lord Admiral, married the Queen Dowager Catherine, Henry VIII.'s last wife, and buried her the year following. He next contrived to place here the Princess Elizabeth, evidently with the object of marrying her and sharing in the succession to the Throne; but his trial and execution for treasonable practices put an end to all his schemes. Seymour-place then reverted to the Crown, and was sold to Henry Fitz-Alan, Earl of Arundel, for the sum of £41 6s. 8d., with several other messuages, tenements, and lands adjoining. The Earl dying in 1579, was succeeded by his grandson, Philip Howard, who, being attainted in the reign of Queen Elizabeth, and dying abroad, in 1595, his house passed into the keeping of the father of Robert Carey, Earl of Monmouth. At Arundel-house, according to the parish register of Chelsea, 25th Feb., 1603, died the Countess of Nottingham, after her interview with Queen Elizabeth, to implore forgiveness for having withheld from her Essex's ring.

On the accession of James I., the Duc de Sully, then Marquis of Rosny, Ambassador from Henry IV., was lodged at Arundel-house; he having been accommodated for one night at the French Ambassador's, in Butcher-row, in the Strand while "the Palace of Arundel" was preparing for his reception. It is described by Sully as one of the most commodious houses in London, from its great number of apartments on the same floor; he adds, that the views from the extensive gardens, up and down the river, were remarkably fine. In this reign was restored to the Earldom of Arundel, Thomas Howard, son of Philip, above mentioned; and here he began to assemble the celebrated Arundelian Marbles: the inscribed slabs he inserted in the garden walls, and the statues he placed in the gardens; altogether 250 inscribed marbles and thirty-seven statues, besides sarcophagi, altars, and fragments, and the inestimable gems Peacham, in his "Compleat Gentleman," thus commemorates this collection:—"To the Earl's liberal charges and magnificence this angle of the world oweth the first sight of Greek and Roman statues, with whose admired presence he began to honour the gardens and galleries of Arundel-house, and hath ever since continued to transplant old Greece into England."

In the Journal of Sir Thomas Browne's nephew, MS. Sloan., 1906, we find the following entry:—"March 1, 1664.—I went to Arundel-house, where I saw a great number of old Roman and Grecian statues, many as big again as the life, and divers Greek inscriptions upon stones in the gardens. * * * March 2.—I went to Mr. Foxe's chamber in Arundel house, where I saw a great many pretty pictures and things cast in brasse, some lemmings, divers pretious stones, and one diamond, valued at eleven hundred pound."

Even in those days the atmosphere of the metropolis was ill-adapted for the out-door location of these treasures; for John Evelyn, in one of his visits to Arundel-house, records "how exceedingly the corrosive air of London impaired the marbles."—"A view of the Statue Gallery forms the background to Van Somer's portrait of Thomas, Earl of Arundel, and a view of the Picture Gallery, to Van Somer's portrait of his Countess."—Cunningham's "Handbook of London."

The Earl, who met with Hollar in 1636, when proceeding on his Embassy to Ferdinand II., took the engraver into his retinue, and brought him to Arundel-house, where he was not confined to his Lordship's service, but allowed to take employment from others. While here, he engraved several views of Arundel House, and a prospect of London from the roof. "This print is very rare: an impression, at Sir Masterman Sykes' sale, in 1824, sold for £13."—("Curiosities of London.") The originals of the accompanying Views of Arundel-house, of the same date as Hollar's, 1646, bear in the left hand corner, "Adam A. Bierling delin," and were "published by J. Thane, Rupert-street, Haymarket, February 1, 1792." They are, however, evidently copied from Hollar's prints. They show the several buildings of "Arundel-house," to have surrounded a quadrangle, and to have been rather remarkable for number than architectural character. In the North View, the principal building is the great hall, with its large Tudor windows, and a louvre upon its roof; above the lower buildings we obtain a glimpse of the opposite bank of the Thames. On the left is a cavalcade of riding horses; and, on the right, is the Earl's coach, with six horses. One of the Earls of Arundel is stated to have introduced the use of coaches, about 1580; but, upon the better authority of Stow, the first coach was used by Queen Elizabeth, in 1564.

Lord William Howard (Belted Will), who lived in the reigns of Elizabeth, James I., and Charles I. and died in 1640, resided at Arundel-house; and in the household book of his receipts and expenses for several years, we find "the cost of the long cavalcade which accompanied him on his occasional journeys to the metropolis; his expenses there whilst living at Arundel-house, in St. Clement Danes, and amongst them a payment to Mr. Shakspeare, the parish sanvenger; his purchases on the road, and in London; his payments for gowns for his wife, trinkets for his daughters, provisions for his house, payments for books, pictures, and

VIEW OF LONDON FROM THE ROOF OF ARUNDEL HOUSE.

other interesting things."—(*Athenæum*, No. 1403.) Among these payments are several of 5s. to the barber for cutting hair and trimming my Lord's beard; a pair of silk hose, 35s. (this was in 1619); a black frize jerkin for my Lord, 16s.; and every year two pairs of spectacles, one set down at 1s. 6d. We also find the entry of a payment to Mr. Leonard Milborn, for a coach and four horses, £30; two saddle clothes, bridles, reins, and furniture, for my Lord, £2 18s.: possibly the coach here engraved may be that above specified. There are likewise charges for plate, Turkey carpets, and crimson velvets. These items are quoted in Mr Sidney Gibson's Third Series of his very interesting Notices of Northumbrian Antiquities; and some of them appear in Mr. Howard's privately-printed "Memorials of the Howard Family." There is a transcript of this curious household book, at Corby Castle; the original is in the possession of the Earl of Carlisle, at Castle Howard. We should much like to see it printed.

In the South View is shown a strange assemblage of gabled and half-timbered buildings, more in the style of offices than the mansion of one of the most magnificent nobles. On the right is seen the angular pinnacles and central bell-turret of the tower of the old Church of St Clement Danes, in the Strand; the tower of the present church was not built until 1719, although the body of the church was rebuilt to the old tower in 1683.

The centre Engraving shows part of the view of London, from the embattled roof of Arundel-house: in the foreground are the temple buildings; and beyond are old St. Paul's, spireless, and London bridge, with the houses upon it: showing a picture-in-little of London two centuries since.

Thomas, Earl of Arundel, died at Arundel-house, in 1646 the year in which the above views were taken. His house and marbles, which had been taken from him during the Civil War, were restored to his grandson, Mr. Henry Howard, at the Restoration, in 1660. After the Great Fire of 1666, the Royal Society, who had given up their meeting-place, Gresham College, for the use of the Lord Mayor, were offered the use of Arundel-house, by Mr. Howard; and here they accordingly met for the first time, Jan. 9, 1667; when, to quote the Journal-book of the Society, "the President took notice of the great favour which Mr. H. Howard had expressed to the Society, not only in accommodating them with convenient rooms for their meetings, but also in presenting them with the library of the said house." Pepys records their first assembling here as "a great meeting of worthy noble persons: addressed by my Lord Bronncker, who pretended to make a congratulatory speech upon their coming hither, and great thanks to Mr. Howard, did do it in the worst manner in the world." The visit of the eccentric Duchess of Newcastle to the Society, and other interesting occurrences at this period, are recorded in the "History of the Royal Society," by Mr. Weld. In the following year Mr. Howard at the instigation of Evelyn, gave the inscribed marbles, still known as the Arundelian Collection, to the University of Oxford. Evelyn records, in his *Diary*:—"Sept. 19, 1667.—To London with Mr. Henry Howard, of Norfolk, of whom I obtained ye gift of his Arundelian Marbles. * * * When I saw these goodly monuments miserably neglected and scattered up and down about the garden, and other parts of Arundel-house, and how exceedingly the corrosive air of London impaired them, I procured him to bestow them on the University of Oxford. This he was pleased to grant me, and now gave me the key of the gallery, with leave to mark all those stones, urns, altars, &c., and whatever I found had inscriptions on them, and not statues." The donor of the marbles died in 1677. In the following year, Arundel-house was taken down. Sir Christopher Wren designed a new mansion for the Duke of Norfolk, on the site; on which, however, were built Arundel, Surrey, Howard, and Norfolk streets, already named: the Norfolk family then removing to St. James's-square. But, for the Hon. Charles Howard, the eminent chemist, was built, on the east side of Surrey-street, a large garden-house, fronting the Thames: here Mr. Howard is thought to have discovered his process of refining sugar in vacuo. The philosopher, however, also resided at the Deepdenes, near Dorking, where he built a laboratory for his experiments.

The streets which now occupy the site of Arundel-house and gardens have had many celebrated residents; but we can only notice Arundel-street, the scene of the late conflagration. Hatton, in 1708, described it as "a pleasant and considerable street;" and Gay thus commemorates the noble mansion:—

Behold that narrow street which stoop descends,
Whose building to the skinking shore extends,
Here Arundel's fam'd gardens rear'd its frame,
The structures retinue an empty name:
Where Titian's glowing paint the canvas warm'd,
And Raphael's safe design the judgment charm'd,
Now hangs the bellman's song, and pasted here,
The coloured prints of Overton appear;
Where statues breathed the work of Phidias' hand,
A wooden pump or lonely watch-house stands.—TRIVIA.

The Crown and Anchor Tavern was on the east side of the street, upon the site of an older house with the same sign. Strype (1720) mentions it as "the Crown Tavern," a large and curious house, with good rooms, and other conveniences fit for entertainments." This was the house mentioned in Boswell's "Life of Johnson," as one of the Doctor's resorts, where he occasionally supped with Boswell. Mr. Cunningham notes:—"Here Johnson quarrelled with Percy about old Dr. Mounsey; and here, when Sir Joshua Reynolds was maintaining the advantages of wine in assisting conversation, and referring particularly to himself, Johnson observed, "I have heard none of those drunken—nay, drunken is a coarse word—none of those *vinous fights*." Here was instituted the Academy of Ancient Music, in 1710. In this house the Royal Society Club, who had originally met at the Mitre Tavern, in Fleet-street, removed in 1780, when they dined for the first time on December 21, at the Crown and Anchor; and here they continued to meet until that tavern was converted into a club house, in 1847.—("Mr. Weld's "History Royal Society.") The tavern-house, just destroyed, was built on the site of the former one, with additions, in 1790. Its first landlord was Thos. Bumpkin a very corpulent man, who, in leaning over a balustrade giving directions as to the serving-up of a large dinner, had the misfortune to break the

SOUTH VIEW OF ARUNDEL HOUSE IN 1646.

REMAINS OF THE WHITTINGTON CLUB, AFTER THE FIRE.

railing, when he fell from a considerable height to the ground, and was killed. The sign appears to have been originally the Crown, to which may have been added the Anchor, probably, from its being the emblem of St. Clement's opposite; or from the Lord High-Admiral having once resided upon the site. The Tavern contained several large rooms, and a ball-room 84 feet by 35 feet 6 inches. In 1798, on the birthday of C. J. Fox, was given, in this house a banquet, to 9000 persons, when the Duke of Norfolk presided.

The large room was noted for its political meetings in the stormy Tory and Radical times; and the Crown and Anchor was long the rallying point of the Westminster electors: the great room held 2500 persons. One of the latest popular orators who spoke here was Daniel O'Connell. In 1847 the premises were let to the Whittington Club, originated in 1846 by Mr. Douglas Jerrold, who became its first president.

The premises occupied a frontage in Arundel-street, whence they proceeded nearly at a right angle, eastward, to Milford-lane—the latter range including the large room. There was formerly an entrance from the Strand, by a long passage, such as was the common approach to our old metropolitan taverns. (This entrance was engraved in the ILLUSTRATED LONDON NEWS, No. 612.)

The fire on Sunday broke out in the kitchen of the Club-house, at half-past five o'clock in the morning; and so rapid was the spread of the flames, as scarcely to allow time for the escape of the inmates sleeping on the premises. The flames were discovered by Mr. Brace, secretary to the Club; and who, with his wife and child, slept in one of the first-floor rooms fronting Arundel-street. He was awoke about ten minutes to six o'clock, by a loud crackling noise, as of wood burning; and, hastily arousing his wife, he ran to the upper floor and called the servants, nearly twenty in number. The fire, which had evidently originated in the kitchen, in the basement, had made great progress before Mr. Brace was aroused; and it advanced so rapidly up the staircase and through the passages of the building, that, before the servants could descend, the whole interior was in flames. Only one man succeeded in following Mr Brace down-stairs; and he, with Mr. and Mrs. Brace and their child, escaped by the entrance-door. All that the servants could do was to effect a rapid exit through one of the parapet windows, and, by making the circuit of the stone coping round the building, get on to the roof of the ILLUSTRATED LONDON NEWS printing-office, abutting on the south side of the Club premises: whence some were rescued by means of the Royal Society's fire-escape, and others were lowered by the "110" attached to the premises. Scarcely one of these persons saved a particle of their clothing, and several were in their night-dresses.

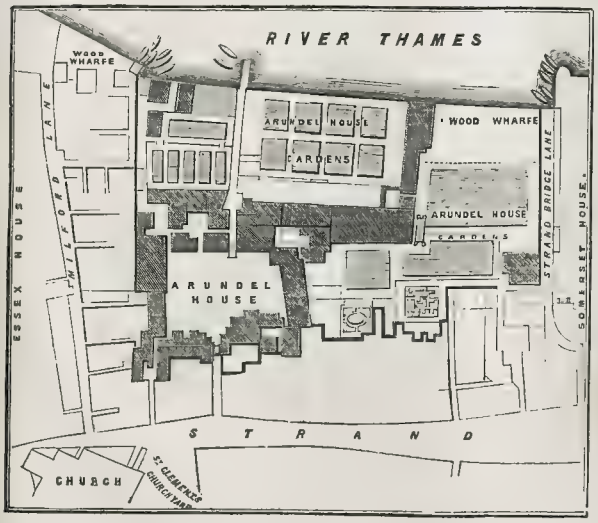
The alarm having been given to the police, the engines were soon upon the spot; but, before they could be got into play, the flames had attained complete ascendancy over the building, and threatened destruction to much of the adjoining property—to the saving of which the efforts of the fire-brigade were chiefly directed from the first. The Tavern was ill built; and it is chiefly to the strength and thickness of the newly-erected printing-office adjoining that these premises were saved—a measure of precaution due to the foresight of Mr. H. R. Abraham, the architect.

The flames swept furiously through the great room, and bursting through the large windows at the east end, across Milford-lane, had a most alarming appearance; so that, before seven o'clock, an entrance was forced into the premises opposite (Milford-House), a hose was conveyed to the upper stories, and thus a large volume of water was directed upon the most dangerous parts of the fire, and its violence somewhat abated. Soon afterwards, the steam floating fire-engine was brought up from the station at Southwark-bridge to the bottom of Arundel street, and the machinery being in full work, an immense quantity of water was thrown upon the premises. But all the efforts of those engaged failed to arrest the fire: first the roof of the enormous building fell, and ultimately little more than the bare walls were left standing.

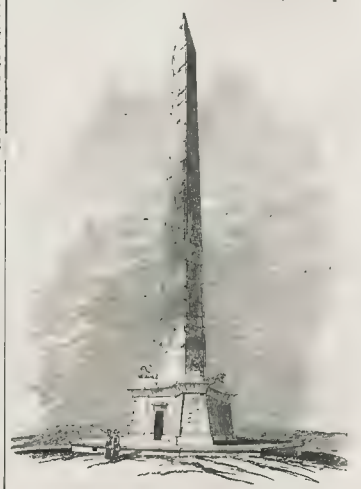
The deputy-foreman of the West of England Fire-office, and Wilkinson, an officer of the brigade, narrowly escaped being killed by the unexpected fall of ruins. For some time their brother officers considered they were killed, and their escape unhurt is described to have been miraculous. The plate and money were dug out of the ruins on Sunday.

We regret to add that there have also been lost a good library of modern books, files of newspapers since 1847, &c.; and an interesting memorial of the Club—a picture of Whittington listening to Bow-bells, painted by F. Newenham, and presented by Mr. Douglas Jerrold. The picture has been ably engraved.

The premises, which were part of the Arundel estate, and the pro-



GROUND-PLOT OF ARUNDEL HOUSE AND GARDENS. (THE DARK LINE ENCLOSES THE PREMISES.)



WELLINGTON MONUMENT, WELLINGTON, SOMERSET.—(SEE NEXT PAGE.)

perty of the Duke of Norfolk, were insured for £10,000—£5000 in the Westminster Fire-office, and £5000 in the County Fire-office. The Club-house was rented at about £500 a year. In the vault beneath the range in which was the ball-room, was a large quantity of paper for printing the ILLUSTRATED LONDON NEWS. This paper was supposed to have been greatly injured; but, on clearing away the ruins of the fire, only the edges were found to be slightly discoloured, and for which we have this and next week to claim the indulgence of our subscribers.

The clearing away of the ruins of the Club-house has been commenced. On Thursday afternoon the workmen began pulling down the lofty north wall of the premises by a rope attached to its upper east end, when the entire wall, to the height of the first story, fell with a tremendous crash, destroying the premises in the rear of the three adjoining houses in the STRAND. The alarm to some of the inmates was very great; but, fortunately, the unlocked-for fall of this long and lofty mass of brickwork was not attended with loss of life.

THE WELLINGTON MONUMENT, AT WELLINGTON, SOMERSET.

IT will be recollected that, soon after the lamented decease of the Duke of Wellington, the completion of the Wellington Memorial, near the town of Wellington, Somerset, was resolved on. The Committee, after satisfying themselves of the stability of the old shaft (which had been struck by lightning), decided that the original shaft, which was triangular, and about 100 feet high, should be carefully repaired, where necessary; and be carried up about 50 feet higher, so as to bring it more to the proportions of an obelisk. The staircase is to be carried to the top, where there is to be an opening in each face, commanding a magnificent view of the surrounding country. These restorations are expected to be completed before the close of the present month. The funds hitherto raised have not been sufficient to justify the Committee in laying out any additional sum for ornamenting the Pillar.

We are happy to hear that subscriptions continue to be received, so as to enable the Committee to carry out the design in its original integrity. The Committee therefore, hope also to raise sufficient funds to place colossal granite lions on the basement, as shown in the accompanying Sketch; and to surround the whole by a sunk fence, or "ha-ha."

A collection has lately been made at Wellington for the Patriotic Fund, amounting to £368—a very large sum when reference is made to the smallness of the town and its limited population.

NATIONAL SPORTS.

THE racing season of 1854—which comprised 185 race meetings at 165 places in England and Scotland—came to an end at last, at Wolverhampton, last Tuesday, only to open again, at Lincoln, in about two months' time. The chestnuts have had quite the best of it, as Virago has been beaten but once out of eleven starts, and Kataplan (who is again in Mr. Thellusson's hands) has won eighteen races (nine of them Queen's Plates) out of twenty-nine starts. Steeplechasing, now that its military supporters are nearly all away, is at an utter stand-still. The struggle at Wolverhampton, which Peter won, was a very good one; but there are no more, as yet, set down for this month.

Coursers are still taking every advantage of the open weather, with a zeal which nothing can quench. The Lanesharp "division" have a day at Pilling on Tuesday; Mountsinnows (Meath); and Southminster (Essex), always for Tuesday and Wednesday: Hainton, for Wednesday and Thursday: Cound (Salop), for Thursday; Caledonian (Lanark), for Thursday, &c.; and the Alcolar Club for Thursday and Friday. A meeting at Shiffnall is also, we believe, arranged for Tuesday. But we are not quite sure on the point.

At Tattersall's the Derby betting goes on very quietly, and speculation is varied at times by the apparition of an invalided sporting hero from the banks of the Alma or the Tchernaya. Some few speculators seem to expect now that Gay Lad will not close with General Charritties' offer to take £1000 even that Sebastopol was taken before Christmas-day. A biennial race, called the Alma Stakes, has just been established at Chester, to celebrate the bravery of the 33rd Rifles, who were for a long time quartered there. The bloodstock sales at "the corner" are rare at this season, but Heapy, of Liverpool-Cup memory, is to be sold there next Monday, along with five blood-mares (including Sacrifice, half-sister to Virago), and four very high-bred Touchstone foals. A sunning of Joan Scott's stable, which have been officially declared, comprise £30,900, divided among fifteen masters, and of which Lord Derby claims £15,300. This is the second sunning that Joan Scott has won the largest amount in stakes; but last year he won only £13,300. Baron Rothschild has, it is said, offered something under £3000 for the Derby colt, Wild Dayrell, which has been refused. We are glad to hear that, though Lord Exeter's string is absent, there are noble horses in training at Newmarket than have been seen there for some years past, and that some additions are expected. "Racing men, however, are mere "men of straw" now, as a body, to what they were during the late war, which was positively a benefit to Newmarket, by keeping the great owners of race-horses from wandering off to the Continent all the summer. At present, owing to the absence of Lord Exeter's name in the Two-year-old Races, Ruff's "Winter Guide" has on y a scanty Newmarket list for 1855, and the whole number of matches on the *topis* both there and elsewhere, is only fifteen. One of them at Newmarket, between the Duke of Bedford and Earl Glasgow, is for £1000 h. f. aided, and is to be run three years in succession. The Duke has six nominations, and the Earl five, living out of seven. The 2000 guineas promises well, as Bonnie Morn, Dirk Hatteraik, St. Hubert, Claret, and Lord of the Isles, are all in it. Virago has only one engagement, viz., against Acrobat, &c., on The Port. The Duke of Beaufort and Sir Robert Peel are both added to the list of young John Day's masters; and the Duke of Rutland has become "confederate" with Lords Chesterfield and Wilton, and trans ferred his small stud of horses to Tom Taylor's care, at Bretby-park. We hear, also, that a subscription is going on for Sam Day, the ex-jockey; and that Robinson, whose excessive kindness and liberality to his relatives, had placed him in somewhat straitened circumstances, before he was compelled to leave the saddle, has had an annuity settled on him by a subscription among his old masters and admirers. Would that the spare money of turfites was always devoted to setting such a mark on honesty and talent, instead of being frittered away at the hazard-table!

Fox-hunting goes merrily on; but its devotees will not be sorry to see a frost ere long, as four to six days a week are beginning to play havoc with some of the smaller studs. The season will long be marked by the celebrated "Talegalla-fever's Pheasant," which has just been delivered by Lords Redesdale and Yarborough, on a most point between the Essex and Herts Hunts. It is civ ded into seven heads, and w.ll no doubt settle, for all time, the hunting etiquette, as regards neutral coverts, quite as firmly as Baron Alderson did the law of "Leave and License;" or Chief Baron Ho t that of "Batliments." It is a pity that Messrs Merry and Dorling cannot get some such arbitrators to settle their present dispute about the Great Metropolitan Stakes Day.

WOLVERHAMPTON AUTUMN MEETING.—TUESDAY.

Sherts Handicap.—Kennyside Hero, 1. Kiteflyer, 2.
Selling Stakes.—Romeo, 1. Voucher, 2.
Grand Annual Steeplechase.—Peter, 1. Jemmy the Black, 2.
Match, £100.—Mr. C. Boyce's 8st. Hilary received forfeit from Captain Rhy's Royalty.
Free Handicap Hurdle Race.—Sailor, 1. Garland, 2.

TATTERSALL'S.—THURSDAY EVENING.

DERBY 9 to 1 agst Gowthorpe Nonsuch (c). 12 to 1 agst 88 Hubert (c); 16 to 1 agst Oaiten (1). 20 to 1 agst Wild Dayrell. 1000 to 12 agst Rambling Katie.

ANACHARIS ALSINASTRUM.

About three years ago I was walking by the river Trent, near Wilden Mill, when my attention was arrested by an aquatic plant which I had never seen before. It was then growing in small patches, or clumps, about a yard in width, in a particular part of the river only; but since that period it has spread very rapidly, and it may now be found in great abundance in all the shallow parts between Swarkeston-bridge and King's Mills. It grows beneath the surface of the stream, seeming to prefer those parts where the bottom is muddy; and, if examined rather closely, has a pretty appearance in the water. From a most excellent Engraving in the ILLUSTRATED LONDON NEWS for September 30, I find that it is the *Anacharis Alsinastrum* (of new water-weed), which is likely to prove such an annoyance if navigable rivers and canals. In that part of the Trent which I have named it appears to be very rapidly increasing; and, during the last year, owing to the absence of floods to dislodge and carry it away, it has formed very large beds, over which accumulates other weeds of different kinds, which instigate the surface of the stream. I have been induced to send this short notice of the plant, growing in a locality not named in your interesting account of it, thinking that it might be useful to botanists wishing to obtain a knowledge of its geographical distribution.

I am, Sir, yours truly,
King's Newton, Derbyshire. JOHN JOSEPH BRIGGS.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent).

It having been asserted on the best authority that no fresh loans or taxes will be demanded by the Government during the present month's sitting of the Legislature, and that the Chancellor of the Exchequer anticipates a balance in the Bank of England equal to four millions sterling in January next, even after making full allowance for an extraordinary war expenditure, the Council market has ruled active, this week, and prices have advanced nearly one per cent, the Three per Cents having touched ½. The upward movement in the quotations has been materially aid-d by the further large amount of stock taken by the public, and the somewhat heavy investments made by parties desirous of receiving the dividend. The transfer books are now closed, consequently stock can only be transferred under special circumstances. The supply of Stock in the Exchange is now smaller than for some weeks past; and altogether matters in the City have worn a favourable appearance. There has been a steady, though not to say, brisk demand for money, and the rates of interest have been well supported.

We have again to report the arrival of a very large supply of bullion, including the supplies of that metal from Australia and India, the total import has been little short of £900,000. For export to France, there has been very little; hence, the bulk of the importations are finding their way into the Bank. The stock of gold is nearly £18,000,000; and it is fully expected that the returns to be issued next week will show a further increase in it.

A full average business was transacted in the English stock market on Monday:—Bank Stock was done at 210 to 208½; the Three per Cent Reduced were 90¾; the Three per Cent Consols, 91¼; the Three per Cents for the Account, 92½; and the New Three per Cents, 91¼. Long Annuities, 4 5-16; India Stock, 231; India Bonds, 10s.; and Exchequer Bills, 3s. to 5s. pm. Of foreign securities, all securities were steady. Bank Stock, 208 to 209½; Three per Cent Reduced, 90¾; Three per Cent Consols, 91¼ to 92⅛; Consols for Account 92⅜ up to 92⅝; New Threes per Cents, 90⅝; Long Annuities, 4 5-16; India Bonds, 10s. prem.; Exchequer Bills, 3s. to 6s. prem.; Exchequer Bonds, 99⅝. There was active business transacted on Wednesday, at enhanced quotations. Bank Stock, 208. The Three per Cents Reduced varied from 91¼ to 91½; the Three per Cent Consols, 92⅝ to 93⅛; Consols for Account, 93½ to 93⅝; New Three per Cents, 91¼ to 91⅝; Long Annuities, 1860, 4⅛; Ditto, 1859, 4⅛; India Stock, 230 to 232; India Bonds, 8s.; and Exchequer Bills, 4s. to 6s. prem. Exchequer Bonds were 99⅜. Thursday was the settling day in Consols, and the "contango" was as high as 5 16ths to 3 per Cent. Consols were done at 93 to 93⅛, and 93⅜ for Transfer, and 93½ to 93⅝ for Account. Exchequer Bills, 3s. to 6s.; and India Bonds, 8s. to 11s. prem. The New Three per Cents were 91⅛ to ⅜, and the Reduced, 91½ to ⅝. Bank Stock, 208.

The Foreign-house has been steady, and prices have improved. Brazilian Four-and-a Half per Cents have realised 92⅜; Buenos Ayres Six per Cents, 86; Danish Five per Cents, 101¾; Mexican Three per Cents, 21½; Peruvian Four-and-a-Half per Cents, 68; Portuguese Four per Cents, 39½; Dutch Two-and-a-Half per Cents, 61; Dutch Four Cents, 91; Russian Five per Cents, 97; Russian Four-and-a-Half per Cents, 86¾; Spanish Three per Cents, 33½; Turk.sh Scrip, 7 to 6¾ discount; Sardinian Five per Cents, 84¾ ex div.; and Belgian Four-and a-Ha.f per Cents, 96. A small remittance has come to hand on account of the Mexican Dividends.

Joint-Stock Bank Shares have been tolerably firm and the quotations have been well supported:—Australian have marked 79; Commercial of London, 30¾; Oriental, 26⅜; South Australian, 69; Union of Australia, 26. In Miscellaneous Securities very little has been doing:—London Stock per Cent Bonds, 97; Crystal Palace, 1½; Hull and River Land and Mineral, 5⅜; Peninsular and Oriental Steam, 67; Ditto, New, 65¾; Royal Mail Steam, 62; Van Diemen's Land, 12¾; London Dock, 104¾; Electric Telegraph, 9; General Shares have continued dull:—Ashton and Oldham 164; Birmingham, 92¾; Coventry, 209; Derby, 84; Grand Surrey, 48; Leicester, 59; Loughborough, 57⅝; Neath, 130; Oxford, 110; Peak Forest, 86; Regent's Canal, 96; Stainforth and Keadby, 42⅝; Stourbridge, 265; Worcester and Birmingham, 23. In Waterworks' Shares, very little passing:—Grand Junction, 70; Kent, 80; New River, 55; Southwark, 82; Ditto, New, 104; West Middlesex, 95; Ditto, New, 16. Gas-light and Coke Companies' have sold:—British Provincial, 21; City of London, 100; Equitable, 38; Great Central, 11; Imperial, 91¾; Ditto, New, 8; Phœnix, 5; Ratcliff, 70; Surrey Consumers, 11; Westminster Chartered, 38; Ditto, New, 7¼; Insurance Companies' Shares have sold as follows:—Alliance, 18¾; Atlas, 18; Argus, 21; City of Glasgow, 125; Crown, 17½; Eagle, 10¾; Ditto, New, 6; Guardian, 5⅝; Imperial Fire, 330; Ditto Life, 18¾; Law Life, 56; London, 29¾; Phœnix, 180 ex div.; Rock Life, 74; Victoria Life, 6⅜. In Bridge shares only a few have been done:—Chelsea, 10; Hungerford, 9; Southwark, 9; Waterloo, 4¾; Ditto, Old Annuities of £8, 3½; Ditto, New Annuities of £7, 7s.; Vauxhall, 22.

The returns of the trade of the country are very satisfactory. The aggregate value of our exports during the first ten months of the present year has been £79,809,466 against £73,155,755 in the same period in 1853.

There has been a steady market for all Railway Shares, and prices have slightly improved. The total value for the present month are only £197,940. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 22¾; Amberzate, Nottingham, and Boston Junction 4⅜; Caledonian, 81¾; Chester and Holyhead, 14¾; Eastern Counties, 11¾; Edinburgh and Glasgow, 53¾; Great Northern, 88; Ditto, A Stock, 75; Great Western, 70¾; Lancashire and Yorkshire, 72¾; London and Blackwall, 7¾; London and Brighton, 106; London and North-Western, 99¾; Ditto, Fifths, 19¾; Ditto, £10 Shares, 6¾; Ditto, Eighths, 11¾; London and South-Western, 85; Midland, 68¾; Newmarket, Bury Extension, 4¾; North British, 33; North-Eastern, Berwick, 75¾; Ditto, York, 83½; Oxford, Worcester, and Wolverhampton, 21; Shrewsbury and Hereford, 9; South Devon, 12¾; South-Eastern, 93¾. Thames Haven Dock and Railway, 33

LINES LEASED AT FIXED RENTALS.—East Lincolnshire, 135; Manchester, Buxton, and Matlock, 7¾; Ditto, Guaranteed, 4½; Ditto, 5 per Cent, Preference Shares.—Eastern Counties Extension, No. 2, ½ prem.; Edinburgh, Perth, and Dundee, 60; Great Northern, Five per Cent 105; Ditto, Four-and-a-Half per Cent, Quarter Bonds, 102; Ditto, Three Thirds, 74; Consol dated bristol and Birmingham Six per Cent, 135; North Eastern, Berwick Four per Cent, 91⅜; Ditto, York, 94½; Oxford, Worcester, and Wolverhampton, 109; South-Eastern Four-and-a-Half per Cent, 100.

THE MARKETS.

CORN EXCHANGE, Dec. 4.—We had a fair ave age supply of English wh'at on sale in today's market. The demand for it, in fact, was in a sluggish state, at a decline of 1s per qu rter, as obtained on Monday last, of from 1s to 2s per quarter, and a clea ance was no off-shot. Foreign was best, the supply of which was by no means extensive, was in limited request, at late currencies. We were well supplied with both English and foreign barley. A ki ness were dull, and 2s per quarter lower. Malt sold heavily, on rather easier terms. Oat eal trade was in a sluggish state and prices were rather easier. Beans, peas, and flour commanded very little atten tion, at barely last week's quotations.

The f llowing is the return of the aver ge prices of corn (in round numbers).

English.—Wheat: Essex and Kent, red, 68s. to 73s.; ditto, white, 72s. to 80s.; Norfolk and Suffolk, red, 67s. to 72s.; ditto, white, 74s. to 77s.; grinding barley, 32s to 34s.; distilling ditto, 35s. to 35s., malting ditto, 35s to 37s.; Lincoln and Norfolk malt, 60s to 74s.; brown ditto, 57s. to 70s. Ringmon and Wisbeach, 72s. to 76s. Kingston and Ware, 74s. to 78s. Hertford and Marlborough ditto 70s to 75s.; potato ditto, 42s to 51s.; Youghal and Cork, black, 29s. to 30s.; ditto, white, 30s. to 32s. Sligo, 29s. to 30s.; per cwt., oats, Dublin, 30s. to 40s., maple, 34s. to 36s.; white, 26s. to 30s., Rollers, 47s. to 51s. per quarter. Town-made flour, 40s. to 43s.; Suffolk, 36s. to 38s. Stockton and Yorkshire, 34s. to 36s. per sack. Americ n, 46s. to 48s per bar el.

Seeds.—Linseed commands very full prices. Cakes are quite as dear as last week, with a good inquiry. All o her articles are steady.

Linseed, English, sowing, 66s. to 68s.; Baltic, crushing, 56s. to 58s.; Mediterranean and Odessa, 54s. to 55s.; hempseed, 44s. to 45s., per quarter. Coriander, 20s. to 24s per cwt. Brown mustard seed 8s. to 10s.; white ditto, 10s., winter tares, 11s. to 12s. per bushel. English imported, 230 lbs. to 234 per last or two quarters. Linseed cakes, English, £11 15s to £12 10s.; ditto, foreign, £10 15s to £12 10s. per ton. Rapeseed cakes, £8 5s. to £8 10s. per ton. Canary, 50s to 55s. per quarter.

Bread.—The prices of wheaten bread in the metropolis are from 10d. to 11d.; of household ditto 8½d to 9½d. per 4 lbs. loaf.

Imperial Weekly Average.—Wheat, 74s. 4d.; barley, 34s. 10.1.; oats, 29s. 3d.; rye, 45s. 9d.; beans, 40s. 9d.; peas, 40s. 6d.

The Six Weeks' Average.—Wheat, 73s. 3d.; barley, 34s. 5d.; oats, 28s. 8d.; rye, 43s. 5d.; beans, 40s. 7d., peas, 40s. 6d.

English Grain sold last week.—Wheat, 109,071; barley, 111,399; oats, 16,733; rye, 481; beans, 4,767; peas, 1,080 quarters.

Tea.—The public sales held this week have gone off slowly and prices have been with difficulty supported. In the private m rket, very little business is doing, yet we have no sellers of fine qualities except at full quotations.

Sugar.—Our ma ket has been inactive. In prices, however, scarcely any change can be noticed. Low to good brown Mauritius has changed hands at 51s. 6d. to 52s 6d.; low to good yellow, 52s to 54s.; white Sourabaya, 56s to 57s.; native Madras 55s. 6d to 57s per cwt. Crushed and fine sugars afloat are tolerably firm. Refined goods have changed hands steadily, at from 62s. 6d to 63s. 6d per cwt. The total clearances to the 2nd inst. were, 5,76 2 tons, against 6,102,261 ditto in 1853.

Coffee We have to report a slow sa'e for all kinds Prices almost generally are a shade easier. Good ordinary native, 46s per cwt.

Rice.—All descriptions command very little attention, and the quotations are barely supported.

Provisions.—The demand for most kinds of Irish butter has rule l very inactive, at barely last week's prices. Foreign qualities have changed hands slowly, at late rates. For English bacon the demand is sluggish on lower terms. The bacon market continues dull, at 2s per cwt. less money. In the value of other kinds of provisions we have no change to notice

Tallow.—The transac ions are only m derate. P.Y.C on the spot, 63s. to 63s 3d.; all the year 63s. spring, 62s. 3d per cwt. Town tallow, 61s 6d, per cwt. net cash.

Oils.—Linseed oil on the spot, is selling at 37s 6d. per cwt. Pine spars is worth 2?9s. Palm itself is pillo at £47; cet., £45; pale seal, 84s.; brown, 78s. No change in turpentine

Spirits.—The sa e of rum is steady. Proof Leewards, 2s 7d to 2s 9½.; East India, 2s. 5d. per gallon. Brandy is rather dearer, with an improving market. Geneva and corn spirits are quite as dear as last week.

Hay and Straw.—Meadow hay, £3 16s. to £4 15s.; clover ditto, £3 3s. to £5 5s.; and straw, £1 5s to £1 12s. per load.

Coals.—Lynn and Hetton, 17s. 3d.; Gosforth, 20s. 6d.; Riddell, 20s. 6d.; Eden Main, 20s.; Bein cut, 22s.; Haswell, 22s.; Lambton, 22s. 9d.; Whitwell, 20s.; Cassop, 21s. 6d.; Tees, 19s. per ton.

Hops.—Fine hops are scarce, and quite as dear as last week. All other kinds are dull, at barely a nominary prices.

Potatoes.—The supplies are but moderate, and a steady business is doing, at from 90s. to 120s. per ton.

Smithfield.—The general demand has been less active, and, in some instances, prices have had a downward tendency.

Beef, from 3s. 4d. to 5s 0d.; mutton, 3s. 6d. to 5s. 6d.; veal, 4s. 0d. to 5s. 6d.; pork, 3s. 4 to 5s. 8d. per 8lbs., to sink the offal.

Newgate and Leadenhall.—Each kind of meat has sold heavily, as follows:—

Beef, from 3s. 4d. to 5s. 0d.; mutton, 3s. 8d. to 4s. 6d.; veal, 4s. 0d. to 5s. 8d.; pork, 3s. 4d. to 4s. 10d. per 8lb, by the carcase. ROBERT HERBERT.

Old Furnival's Distillery, Holborn

KINAHAN'S Celebrated LL WHISKY is pronounced by the Faculty to be the most delicious and wholesome spirit, either for mixing or for medicinal purposes; being perfectly free from acidity with age, very mild, and free from those fiery or burning qualities so much objected to in other whisky. Can be obtained of most of the leading wine merchants in London and its vicinity; in respect of all the principal towns in England; or wholesale from KINAHAN, SONS, and SMYTH, Wine, Spirit, and Bottled Stout Merchants, 9, Great Windmill-street, Haymarket.

GO FRIEND, WINE MERCHANT, begs respectfully to acquaint private Gentlemen, Tavern-keepers, and others that he is SHIPPING MONT'S CHAMPAGNE direct from the Estate at Epernay.

The most superior quality, per Dozen, 36s.

The most superior quality, in Pints, per Dozen, 24s.

Other Champagnes at Reduced prices. A deduction made if two or more sorts are taken, sma. Cases of one dozen quarts, or two dozen pints, at the above prices. G. F.'s stock of Port, Sherry, and other wines amounting to five thousand dozen, will be found well worth the attention of buyers. Clarets from 8s. to 48s. per dozen. Hocks Sparkling Hock and other Rhenish wines, sparkling and still. Foreign and British Spirits of the first quality; Foreign Liqueurs. The lowest possible profit will be taken for cash. Warehouse, 71, Fleet-street; Bar, 1, Bride-lane. P. S. Five dozen of sparkling light Champagne at 50s. per dozen; or 25s. per dozen by the case.

NEW BOOKS, &c.

THE ILLUSTRATED LONDON NEWS. TO FUTURE READERS.

The Year 1855 bids fair to be one of the most eventful of modern history. On the 5th of January, 1855, will be issued the first number of a new volume of the ILLUSTRATED LONDON NEWS—each volume being perfect and complete in itself—containing, for the time, a faithful record, pictorial and descriptive, of all Events of Interest in every part of the world. To that public, secured for the Paper who do not subscribe to this Journal, it may be stated, that no period could be selected more important for commencement. The whole expense is but Twenty six Shillings per annum, exclusive of double numbers, which are issued on rare occasions when it would be impossible to crowd the important Events and Engravings into a single number. For this extent sum the Subscriber will receive twenty-four large Pages—seventy two Columns—of the most interesting information, carefully select d from the News of the Week, interspersed with a variety of attractive Articles on the other topics of the day.

The ILLUSTRATED LONDON NEWS has, by its impartial and consistent advocacy of the wishes of the People, secured for itself a political influence scarcely sec nd to any Newspaper in the Empire; and reference can, with some pride, be made to the support afforded by this Journal to all beneficial measures, proposed and adopted by the English Parliament.

The Russian Politics will ever command the attention which ought to be devoted to so important a feature of a Newspaper. On the question of the European War, during the last TWELVE THOUSAND ENGRAVI GS appeared in the ILLUSTRATED LONDON NEWS Extensive arrangements, calculated to improve its popular Journal and engravements, such as will greatly enrich its Literary, Scientific, and other departments, have been made and the New Year will be combined the greatest talent of he day.

The ILLUSTRATED LONDON NEWS has been established thirteen years, during which period it has received a great degree of encouragement and support, so that any Journal ever published. This is proved by the Returns of Stamps issued from time to time by order of Parliament. The Stamps supplied for the first six months of 1854 were upwards of 7,751,000

The means by which the Gallery of Pictures in the ILLUSTRATED LONDON NEWS is rendered unrivalled consist in the unremitting labour, skill, and truthful representation, such as can only be ensured in an age when scientific triumphs, it has been said, "are the world's palmiest time and space." The Steam-boat, the Railway, and the Daguerreotype, have created the pictu e Art to the amazement of the ensamples which first projected the ILLUSTRATED LONDON NEWS, in which the Engraver was to be the chief and essential interest. It has been well remarked, what valuable records would the Journal furnish a hundred years hence, if the Exhibition of 1851, and the many thousands supplied to the first six months of 1851, and the many thousands supplied to the first six months of 1851, and the many thousands supplied to the first six months

ROYAL COMMISSION OF THE PATRIOTIC FUND,

16A, GREAT GEORGE-STREET, WESTMINSTER,

FOR THE RELIEF OF THE WIDOWS AND ORPHANS OF SOLDIERS, SAILORS, AND MARINES, WHO HAVE DIED ON ACTIVE SERVICE SINCE 28TH MARCH, 1854.

THE attention of the public is particularly requested to the following extracts from the Royal Commission:—

"Whereas amidst the glorious successes which, through the power of Almighty God have attended Our arms during the present war, many sold ers, sailors, and marines serving in our armies and fleets, have gallantly fallen in battle or by other casualties during war; and many who shall hereafter be engaged in conflict, or in the further prosecution of hostilities may as well by sacrifice their lives in Our service, while entitled to the grateful liberality of Our Ally, and expressing the lawful ambition of Our enemies:

"And whereas it hath been represented to Us that many of Our loving subjects throughout Our Kingdoms and Dominions actuated by a just sense of the claims which those who fall in the country's service, and as a portion of Our just cause of war are anxiously desirous of testifying their ready sacrifice to Us and to Our Throne, by all and every means hereby in a manner to widows and orphans of those of Our brave soldiers and sailors and marines who shall hereafter die amidst the ravages and casualties of war and also to the afflicted and misfortunes occasioned to a portion of those means with which Our nation has been blessed to a the exercise of the noble and manly skill of those who are to their husbands and parents in battle, or by death in active service on the present war, are unable to maintain and support themselves:

POSITION OF THE ALLIED FORCES BEFORE SEBASTOPOL.

(See the Plan upon the preceding Page.)

On the preceding page we give a Map of Sebastopol, and the Position of the Besieging Army before it; showing al. the works constructed up to the date of the latest accounts from the Crimea. In what remarks we have to make upon the subject, we shall at present confine ourselves to what concerns the defensive works of the besiegers. The fortifications of the town itself and the batteries of attack set up against it by the Allies, have already been sufficiently described at various times, and their nature and position will be easily understood on an inspection of the Map.

The severe and costly battles of Balaclava and Inkerman, and the approach of winter—which will necessarily delay, if not temporarily stop the active siege operations of the Allies—pointed out the necessity of putting the Camp of the latter into an efficient state of defence, by means of complete lines of circumvallation. Before proceeding to the examination of these works, we will pause, to investigate upon the Map the purpose and scope of the operations intended by the Russian on the two occasions above referred to, and the extent of defensive works with which the Allies were then prepared to receive them. The object of the two attacks was very different. That of Balaclava was to take the Allied armies in the rear, and cut off their communications with the sea at Balaklava. The forwardness of heights which commanded this important point it on was protected only by three or four redoubts (which will easily be discovered on the Map), which had been hastily constructed, and were garrisoned by Turkish troops. How sudden was the attack, how the Turkish soldiers fled from their assailants after a vain resistance in the first redoubt, how the brave 93rd came gallantly to the rescue, and how the defeat of the assailants was completed by the irresistible charge of our cavalry, heavy and light—the Chasseurs d'Afrique coming just in time to support the latter after a brilliant exploit which has had its full share of fame—are facts well known to all our readers. The effect was to prove to the enemy that they had no chance of taking any advantage of us in that quarter.

The battle of Inkerman was fought upon different ground, and with a different object on the part of the assailants. Now, it was not to take the Allies in the rear, but to attack and "pound" them in their right flank—a manœuvre which, if successfully carried out, would probably have ended in the rout and destruction of the whole Allied army. The attack in this case was made up the heights of the Tchernaia, which overlook the Valley of the Inkerman, and immediately in face of the camp of the enemy. These heights—so strongly crowned with thick, stunted wood—were (contrary to the opinion of Sir De Lacy Evans, we see division, the Second, occupied this position) considered to well defended by nature as to render artificial works of defence almost unnecessary. The result most disastrously disproved these imputations; and there can be little doubt that if these heights had been properly scarped (that is, their faces cut down so as to present a wall-like front), and their crests crowned with intrenchments and batteries, the attack would never have been attempted, which ended in such fearful loss, and which was within an ace—within the length of a British bayonet, wielded by British "pluck"—of ending in complete disaster. Let the reader look again upon the Map at this ever-memorable point, and consider what the consequence would have been if the thickly-massed forces of thousands of the Czar, whom we kept at bay in the narrow gorge of the Tchernaya (as was done of old by the Spartans, in the pass of Thermopylæ), had pressed against our clear little band of heroes, and, running over their bodies, had deployed over the plateau whereon was established our camp: taking our batteries, both those of siege and of defence, in the rear. In spite of all the desperate energy of men in the heart's core, there could have been but one solution of the problem.

To return to the works, however, as they are; and with a view to the future. At the extreme right of the Camp, opposite the position of the Second Division, and the site of the battle of Inkerman just spoken of, at about 200 feet from the top of the height, is a sand-bag Battery, intended for two guns, which it appears had not been mounted at the time of the battle in question, in consequence of Sir De Lacy Evans considering that they could only be used for attack, and would be certain to be taken, unspiked as they would have been by any line of defence. In this opinion the gallant General was probably right: it being an unfailing maxim in field defences, that works are never thus placed which may not reasonably be expected to hold out against a sudden assault by any probable amount of attacking force; and another, that a single gun should never, and a pair of guns rarely, be used, unless well supported. As it is however, this objection will be obviated in the future. Immediately after the sad but glorious day of Inkerman, the engineers of the besieging army were set to work to fortify the Camp with a complete line of intrenchments. These intrenched works, covering the crest of a hill, varying from 800 to 1200 feet in height, the latter being deeply scarped wherever occasion requires; with advanced works, in the shape of redans—one of which will be seen on the Woronzoff road; and with redoubts at all the more important and commanding points; the whole being supplied with sufficient materiel, and sufficiently garrisoned, may, we think, be considered next to impregnable; such at least as to enable the Allied army to keep their position until, strengthened with ample reinforcements (making their number not less than 200,000 men), they may be in a condition again actively, and for the first time efficiently, to besiege the neighbouring stronghold of the common enemy. When this time arrives (and it is of operations will commence by returning the compliment of the day of Inkerman; attacking the Russians on their extreme left, turning their position in the valley of the Inkerman, and then, extending our line along the north side of the place to the sea, thus effecting its complete investment.

It is but proper to add, however, that in this sanguine view of the case we are not borne out by the weight of authority, or by the average experience of the past; "for we know by experience," says Simes ("Portable Military Library"), quoting "a celebrated author," whom, however, he omits to name, "that scarce any intrenched camp was ever attacked without being forced. And it was so with the ancients, as well as among the moderns." The reason of this superiority of the attack over the defence, there can be generally little doubt, is the same which applies in sieges and other similar operations, namely, that the assailants have the choice of time and place for the attack; thus keeping the besieged always on the alert, and wearing them out with watching; that the numbers of the attacking force are always matters of uncertainty to the defenders, even during the progress of the conflict; added to which, that the moral as well as physical influence which must affect men rushing boldly and confidently to the assault, gives a momentum to their attacking force, which is not to be expected in a similar body of men waiting for, and resisting, attack.

There are many occasions, however, in which it is indisputably necessary to intrench, on these occasions to quote again from the author last cited, he "should at least endeavour to take post in such a manner as to leave the enemy no inclination to attack him. It was thus Fabius, styled the shield of the Roman (and the case is parallel in some respects to that now engaging our attention on the Crimea), contrived to stop the progress of Hannibal, and give his country time to recover her strength after all the blows she had received. He avoided the plains, and *encamped always on heights*, to avoid coming to battle, and to wear down the Carthaginians to nothing, merely by the length of the war. This was conduct could not but succeed *against an adversary very inferior to the Romans in cavalry, but the reverse in infantry.* Was it not for this circumstance, all the prudence Fabius was master of would not perhaps have been sufficient to prevent his being forced in some one other of his posts. But Hannibal knew that the command of the Roman army was likewise chiefly passing from one hand to another. He still hoped, by means of some stratagems, to be able to draw the Romans into the open country, and would not hazard an attack in his enemy might be ruined. *Such reasons as these, or others equivalent to them, will ever be sufficient to secure a strongly intrenched camp against any assault.*" We may add that, in many essential particulars, the present position of the Allied Camp has infinitely the advantage over that which they would have occupied to the north of Sebastopol, if the first intention of the Commanders—from which they were prevented by the obstructions thrown down in the Katcha river—had been carried out. The present Camp is situated high, limited in extent, and in the circumference to be guarded, compact, and safe against attack in the rear.

In a future Number we intend giving a description of the various kinds of field-works, as *breastworks, redans, redoubts, &c.*; the materials of which they are constructed and strengthened, as *fascines, traises, abbatis, trous de loups, &c.*; their method of construction; and the operations in their attack and defence; with numerous Engravings of the subjects.

THE BATTLE OF INKERMAN.

OFFICIAL DESPATCHES.

(FROM A SUPPLEMENT TO THE "LONDON GAZETTE.")

War Department, Dec 2, 1854.

His Grace the Duke of Newcastle has this day received a despatch, of which the following is a copy, addressed to his Grace by Field-Marshal the Lord Raglan, G C B :—

Before Sebastopol, Nov. 11, 1854.

My Lord Duke,—When, on the 5th instant, I reported the gallant and successful repulse of the very considerable attack made upon the position occupied by our troops above the ruins of Inkerman, I stated that I would, in a subsequent despatch, lay before your Grace the names of the officers whose conduct upon the occasion had been brought to my notice. I now proceed to discharge that duty.

His Royal Highness the Duke of Cambridge reports most favourably of the exertions of Colonel the Hon. George Upton, of the Coldstream Guards; Lieutenant-Colonel Reynard-on, of the Grenadier Guards; and Colonel Walker, of the Scots Fusilier Guards; as well as of Colonel Cunynghame, Assistant Quartermaster-General; and Lieutenant-Colonel Brownrigg, Assistant Adjutant-General; Captain the Hon. Percy Fielding, Acting Deputy-Assistant-Quartermaster General, who was severely wounded; and Captain Butler, Deputy-Assistant-Adjutant-General, who was unfortunately killed; and here I may pause to mention that he was the brother of Captain Butler, who so distinguished himself at Silistria, and fell just before the siege was raised.

His Royal Highness also recommends Lieutenant-Colonel Dacres, of the Royal Artillery, who commanded the field batteries of the First Division, which were admirably served by Captains Paynter and Woodhouse. Captain Hamley of the Royal Artillery, acting as staff-officer to that branch of the service; Captain Ellison, the Brigade-Major to the Guards; and Major the Honourable James Macdonald (whose conduct particularly attracted my attention), and the other officers of his personal staff.

His Royal Highness speaks also in the highest terms of the spirited exertions of Assistant-Surgeon Wilson, of the 7th Hussars, who, at a critical moment rallied a few men, which enabled them to hold the ground till reinforced.

In the Second Division which, as I have already informed your Grace, received the first attack, and was engaged throughout the day, the officers whose names I have to bring forward are very numerous.

Those who commanded the regiments of which it is composed were, without exception, either killed or wounded; and, in many instances, those who succeeded were wounded. Major-General Pennefather commends them highly. Colonel Warren, of the 95th, in command of the 1st Brigade, and Lieutenant-Colonel Sweeney, 94th, who succeeded to it on the former being wounded, and was himself wounded afterwards; Lieutenant-Colonel Mauleverer, 30th, and Major Patullo, of the same regiment, who took the command of the regiment when the Lieutenant-Colonel was wounded, Major Champion, 88th Regiment, and Major Hume, of the same corps, who were both wounded, the latter having also seeded the former in the command and being himself relieved by Captain Davis, when he was obliged to leave the field; Lieutenant-Colonel Carpenter, of the 41st, who was mortally wounded and succeeded in the command by Major Eman; Lieutenant-Colonel Haly, of the 47th, who was obliged, when wounded, to relinquish his command to Major Farren; Major Dalton, of the 49th, who fell at the head of his corps, and was succeeded by Major Grant; Lieutenant-Colonel Fitzmayer, commanding the batteries of the Second Division, under the able direction of Captains Pennycuick and Turner; Lieut. Colonel Wiltrasham, and Lieut. Colonel the Hon. Percy Herbert, the Assistant Adjutant and Assistant Quartermaster-General, and Captain Thompson, 19th Hussars, and Captain Glasbrook, 49th Regiment, the Deputy-Assistant Adjutant and Deputy-Assistant-Quartermaster General of the Division; Captains Thackwell and Armstrong, the Brigade Majors; Captain Hardy, Aide-de-Camp, and the other officers attached to the Major General's personal staff—one of whom, Captain Alix, the First Aide-de-Camp of Lieutenant-General Sir de Lacy Evans, and a most promising officer, was unfortunately killed.

The Third Division was only partially engaged; but having been actively employed in all the siege operations, Lieutenant-General Sir Richard England avails himself of the opportunity to mention, in terms of high approbation, the conduct of Colonel Shirley, of the 68th regiment, and has drawn my attention to the services of Major Wood, Assistant-Adjutant-General, the Honourable Major Colborne, Assistant-Quartermaster-General, Captain Wortley, Deputy Assistant-Quartermaster-General, Lieutenant-Colonel Bell, the Royal Engineer; Colonel Cobbe, of the 4th Regiment; Colonel the Honourable A. Spencer, of the 44th; Lieutenant-Colonel Lorkin, of the 38th; Lieutenant-Colonel Adams, of the 28th; and Lieutenant-Colonel Waddy, of the 50th Regiments; Captain Hope, of the Royal Fusiliers, but Captain Daniell, of the 38th, Brigade Major; and Captain Edward Neville, Scots Fusilier Guards, his Aide de Camp.

The superior officers of the Fourth Division, Lieutenant-General the Honourable Sir George Cathcart, and Major-General Goldie, having fallen, and the survivor, Brigadier-General Torrens, having been severely wounded. I take upon myself to recommend the surviving officers of the staff, viz.—Colonel Wyndham, Assistant Quartermaster-General; and Major Leigh Smith, Deputy-Assistant-Quartermaster-General; Major Maitland Deputy-Assistant-Adjutant General, who is wounded; and Captain Street, 57th Regiment, and Lieutenant Torrens, 32nd Regiment, Brigade Majors; and I may here express my deep regret that Lieutenant-Colonel Charles Seymour, Scots Fusilier Guards, should have fallen. He had served on the staff with the lamented Sir George Cathcart at the Cape, and had accompanied him to this country in the capacity of Assistant-Adjutant-General; and he was remarkable for his intelligence, gallantry, and zeal.

I would likewise beg to solicit your Grace's attention to the services of Colonel Horn, who commanded the 20th, and came out of action the senior officer of the Division; Captain Inglis, commanding 57th, and Lieutenant-Colonel Smyth, commanding the 55th Regiment, who was severely wounded; and Captain Dallas, commanding detachment of the 49th; of Lieutenant-Colonel Ainslie, of the 21st, who was wounded; of Lieutenant-Colonel Lowry, who unfortunately fell at the head of the 63rd, and was succeeded in the command by Major the Hon. Robert Dalzell: and Lieutenant-Colonel Horsford, of the Rifle Brigade; of Lieutenant-Colonel D. Wood, the senior officer of the Artillery of the Division; and Major Townsend, of the Royal Artillery, who was unfortunately killed. He was considered a most valuable officer, and was ably succeeded by Captain Hoste. Lieutenant-Colonel Powell would have commanded the 57th, but he was on duty in the trenches.

The officers of the Light Division whose services have been brought to my notice by Lieutenant-General Sir George Brown, who was obliged, by a wound in his arm, to quit the field before the action terminated; and by Major General Codrington, who succeeded him in the command; are—Lieutenant-Colonel Yea, of the Royal Fusiliers; Major the Honourable Troubridge, of the same regiment, who was commanding in a battery—and, though desperately wounded, behaved with the utmost gallantry and composure; Major Bunbury, of the 23rd, who replaced him in command; Brevet-Major Mundy, commanding the 33rd; Lieutenant-Colonel Shirley, of the 88th, who was employed in the trenches; Lieutenant-Colonel Jefferies, commanding the portion of that regiment which was in the field; Lieutenant-Colonel Egerton, commanding the 77th; Majors Seaton and Dixon, of the same regiment; Lieutenant-Colonel Unett, of the 19th, on duty in the trenches; Lieutenant Colonel Lawrence and Captain Elrington, of the Rifle Brigade; and Captain Hopkins, commanding a detachment of Royal Marines, which had been brought up to replace a wing of the Rifle Brigade that had been sent down to Balaclava, and fully maintained the reputation of that distinguished corps; Lieutenant Colonel Lake, of the Royal Horse Artillery; and Captain Norris, commanding the battery attached to the Division; Colonel Sullivan, Assistant-Adjutant-General; and Colonel Airey, Assistant-Quartermaster-General; Captain Hallewell, Deputy-Assistant-Quartermaster General; Captain Macdonell and the other officers of the Lieutenant-General's personal staff; Lieutenant the Hon. H. Campbell, Aide-de-Camp to Major General Codrington; and Brigadier-General Buller's Aide-de-Camp, Lieutenant the Hon H. Clifford, whose conduct is represented to have been peculiarly conspicuous; Captains Mackenzie and Glyn, the Brigade Majors of the Division.

It is due to the principal medical officers of the several divisions—Drs. Alexander, Cruickshank, Forest Linton, and Humfrey—to report that their able exertions have been strongly represented to me, and deserve to be most honourably mentioned; and the arrangements of the Inspector-General of Hospitals, Dr. Hall, for the care of the wounded, merit the expression of my entire approbation.

Lieut.-Colonel Gambier, of the Royal Artillery, who had the command of the Artillery in the trenches during the siege, a duty which he discharged to my perfect satisfaction, was, I regret to say, unfortunately wounded, when moving up with the two 18-pounders which I had ordered to be brought to the right of the Second Division; and I have great pleasure in speaking in terms of high panegyric of Lieutenant-Colonel Dickson, who had charge of those guns, Captain D'Aguilar, and the officers and men who worked them; they performed under Lieut.-Colonel Dickson's directions the most effective service, notwithstanding that they had a very heavy fire upon them, and that their loss in consequence was very severe, seventeen men having been either killed or wounded, and one officer wounded.

I deserved, as upon every other occasion, the most able and effective assistance from the Adjutant and Quartermaster-General, Brigadier-General Estcourt and Brigadier General Airey, and their aids-de-camp, the Officers and men who worked them; they performed under Lieut.-Colonel Dickson's directions the most effective service, notwithstanding that they had a very heavy fire upon them, and that their loss in consequence was very severe, seventeen men having been either killed or wounded, and one officer wounded.

I deserved, as upon every other occasion, the most able and effective assistance from the Adjutant and Quartermaster-General, Brigadier-General Estcourt and Brigadier General Airey, and their aids-de-camp, the Honourable W. Fakenham and Lieut.-Colonel the Honourable A. Gordon, and the officers of their departments; and from the Military Secretary, Lieut.-Colonel Steele, Lieut.-Colonel Poulett Somerset, and the officers of my personal staff; and I feel deeply indebted to Lieut. General Sir John Burgoyne for the consistency with which he applied himself to the discharge of his arduous duties, and the beneficial advice from his advice and assistance; as well as to Captain Gordon, Commanding Royal Engineers, Captain Chapman, and the officers of that corps; and to Major Adye, the Hon. Captain Gage, Captain Fortescue, the Staff Officers of the Royal Artillery, to the command of which Lieut.-Colonel Dacres has succeeded by the lamented death of Brigadier-General Strangways, whose Aide-de-Camp, Captain Gordon, I would also bring to your Grace's notice.

I profit by this opportunity to render justice to two officers whom I omitted to mention in my despatch of the 28th September.

The one, Captain Maude, of the Royal Horse Artillery, who has since been badly wounded, distinguished himself at the battle of the Alma, as I myself observed; the other, Captain W. Pitcairn Campbell, became the senior officer of the 23rd Regiment when Lieutenant-Colonel Chester was killed, and, though severely wounded, could hardly be persuaded to quit the field.

I have, &c.,
RAGLAN.

His Grace the Duke of Newcastle, &c.

War-office, Dec. 2, 1854.

The Right Honourable Sidney Herbert, M P., the Secretary-at-War, has received no list of casualties amongst the non-commissioned officers and private soldiers of the forces under the command of Field-Marshal the Lord Raglan, G C B., at the battle of Inkerman; and it appears that no such lists can be forwarded to England until after the next or following mail, in consequence of the great difficulty existing in obtaining complete and corrected lists from the several regiments of the army in the Crimea.

The following General Orders have been issued from Lord Raglan's head quarters:—

The Commander of the Forces has reason to think that the advanced sentries are not sufficiently quick in stopping those who approach them from the enemy's side, or in firing upon those who do not answer them in a satisfactory manner.

Men, both on foot and on horseback, have come up close to the sentries, and have been permitted to turn away without being questioned or fired upon.

The only persons who may be permitted to approach them from the enemy's side are deserters and flags of truce; but these must be made to halt, and not be allowed to come forward until a party from the picket has arrived to receive them.

When patrols go out in front, or officers go forward to reconnoitre, notice should be given to the sentries, and all this should be fully explained to them when they are posted.

From the following order, published by Lord Raglan, we may suppose that some arrangement has been come to by Prince Mentschikoff, which will have the effect of preventing a recurrence of the inhuman proceedings referred to.

GENERAL ORDER.

October 11.

When burying the dead, if the party so employed will hoist a black flag, the enemy will not fire on the party.

FRENCH OFFICIAL DESPATCHES.

The General-in-Chief of the Army of the East has addressed to the Minister of War the two following reports, which he has received from the Generals Forey and Bosquet, commanding the French troops engaged on the 5th of November, at the battle of Inkerman:—

ARMY OF THE EAST—CORPS DE SIEGE.

Before Sebastopol, Nov. 7.

Mon Général,—I have the honour to acquaint you that, on the 5th of November, at nine o'clock in the morning, the left of our attack against Sebastopol was assailed by a Russian column, composed of four battalions of the Regiment of Minsk; three battalion of the regiment of Wolhynsk, and of a certain number of volunteers who joined them. This column 8000 strong, sup orted by a battery of artillery left the city by the bastion of the Quarantine, and proceeded along the ravine at its extreme left of our lines. Its march, favoured by a thick mist, could not be immediately arrested, and it threw its force upon the batteries Nos 1 and 2, which it carried. The troops of these batteries having been compelled to retire towards the battalions of the 39th and the 19th Regiments of the line, and upon four companies of the Foreign Legion charged with the defence of the trenches. These battalions, or portions of battalions, were also compelled to retire before the efforts of the Russian column, but they vigorously resumed the offensive, when two companies of the 20th battalion of Chasseurs, in reserve at Clocheton, and four companies of the Foreign Legion, from the building of the Carrieres, arrived at the scene of the conflict.

The Generals De la Motte Rouge, who occupied his post at the trench in the first parallel, rapidly advanced with some companies of the 20th Light infantry upon the points attacked. When he reached the batteries No. 1 and 2, they were already abandoned by the enemy, who was thrown back upon the opposite side of the ravine, at a little distance from the trench. Encouraged by the General, our soldiers advanced with ardour beyond the first lines of defence, pursuing the enemy, and subjecting him to a murderous fire. They stopped themselves at the height of the building called, "Victoria Regia," taking up a position behind the walls, whence they continued their fire.

While these events were going on, and at the first report of the *fusillade*, I mounted my horse and issued the following dispositions:—I ordered General of Lourmel to proceed directly upon the battalions, and General d'Autemarre to march in advance of his front along the Sebastopol road, which borders the sea.

His Imperial Highness Prince Napoleon was instructed to hold his division under arms, and it advanced as far as the Maison du Clocheton to support my right, while at the same time being made on the left.

Lieutenant's division, having taken the place of the brigades of Lourmel and of Aurelle, at the moment of their departure, went in advance of their position. The column by brigades, General Levaillant placed himself at 800 metres behind this line, to judge of the moment when his aid would be necessary.

I placed myself at the head of the 5th Battalion of Chasseurs, and of my Artillery, and I followed the ravine of Carrière perpendicular to the Sebastopol road, for the purpose of cutting off the retreat of the enemy in case he should have advanced beyond the batteries No. 1 and No. 2. Such were the general dispositions which I took to put myself in a condition to be prepared for every event on the side of the *corps de siège*. I was briskly attacked. I heard the fire in the direction of Inkerman. I knew that you were then smartly engaged; but, not being able to judge from what side the most violent effort would be made, I felt bound to advance to the centre with my first lines, supported by the whole of my reserve.

The brigade of Lourmel, carried away by indescribable ardour for their chief, bore down the enemy before them as soon as they met. Two battalions of the 7th Regiment of the Line rushed impetuously pursued the Russians, who retired in disorder. It was then that General de la Motte Rouge, perceiving General de Lourmel arrive on the height of the Quarantine where he was in position, followed by his division, placed himself at 800 mèt

time, and to retire into the fortress. It was upon the opposite side (the north) that I wished to arrest the pursuit of the enemy, if, impelled by a warlike ardour, which I deplore, the brave General de Lourmel had decided his troops beyond. In this pursuit, seriously wounded by a ball which traversed his chest, he gave up the command to Colonel Niol, who was obliged to effect a retreat under an extremely violent fire of all the batteries of the place, a movement which did not terminate until they reached the bank of the ravine of the Quarantine.

Our losses have been very considerable; but I do not believe I am far from the truth in calculating at about 1200 the number of the Russians killed or placed *hors de combat*.

The enemy obtained no advantage in compensation for his losses, for our trenches are intact; and of the eight guns spiked, six renewed their fire immediately, and the other two did so to-day.

I cannot give too much praise to the troops engaged on the 8th of November. I was most completely supported by every one—generals, officers, and soldiers. The officers of my staff, from the commencement of the siege, a fact particularly during the day of the 5th, have never ceased to distinguish themselves by their bravery and *sang froid*. General d'Aurelle exhibited a high degree of military intelligence during this day. General Lourmel—who, though wounded very seriously, did not give up his command until his strength was exhausted—has been the admiration of all. He has succumbed to his wound. I cannot entrust to you the great this misfortune occasions me. The army loses in him a General whose enlarged bravery knew no obstacle, and a chief for whom there seemed to be reserved a high destiny.

You will remark, General, by the number of officers put *hors de combat*, that they were the special object of the fire of the enemy. The French officers, proud of their position, do not disguise their rank, like the enemy, under the *capote* of the soldier. I am, with respect, &c,

The General Commanding the *Corps de Siège*, FOREY.

ARMY OF THE EAST—CORPS OF OBSERVATION.

Before Sebastopl, Nov. 7, 1854.

At the break of day, on the 5th of November, the enemy showed themselves in position upon three points of our lines, namely—1. Upon this side of the brigade of Inkermann, opposite the right of the English. 2. In the plain of the Tchernaya, menacing the English redoubt. 3. In face of the Telegraph. They had occupied these positions during the night of the 4th and 5th, and they opened their fire about half-past six o'clock, before Inkerman, and before the telegraph.

I ordered the whole Corps of Observation under arms, and I went myself to reach the mill. General Bourbaki followed me with a battalion of the 7th Light Infantry, a battalion of the 6th Regiment of the Line, four companies of the Foot Chasseurs, and two Horse Batteries. I there met the two English Generals, Sir Colin Campbell and Sir George Cathcart, together. I offered them my aid, informing them that I was followed by the troops which I have just mentioned, and by others which I could withdraw from the lines, if the serious attack should occur at that point of the English. They thanked me, and assured me that they had at that moment reserves; but that they had no one towards the right in rear of the English redoubt, and they begged me to secure that part of the line, which I at once did. I then went to ascertain for myself what would be the effect of the two attacks by the Tchernaya and the plain of Balaclava in face of the Telegraphs. They were evidently false attacks.

I was examining the nature of the threatened attack in face of the Telegraph, when some English officers came to inform me that the fire had become serious on their right. Colonel Sirl especially gave me excellent information, and I instantly caused General Bourbaki to proceed towards the English right. At the same time I gave orders that a battalion of Zouaves and a battalion of Algerine Tirailleurs should march in the same direction. Finally, a little after, General Autemarre received instructions to march towards the same attack with a battalion of Zouaves and the two battalions of the 50th.

The two battalions of the Second Division had been directed, since the break of day, upon the Telegraph; I sent one of them to the right of the English in order that they might join the two horse-batteries already in motion.

I rejoined the troops led by General Bourbaki as they were about to form in line. All the ground in front of the English right was unoccupied, having no one upon it but the guard, who preceded by a distance of twenty paces the first row of tents. I did not hesitate to march up with the battalions in advance, with the four companies of Foot Chasseurs, who charged the enemy with extreme bravery, and very nearly reached the small advanced redoubt on the right. Upon the arrival of the battalion of Zouaves (Dubos commanding), and the Algerine Tirailleurs, I made a fresh charge, and continued it as far as the crest which commands the ravine of the road.

I reckoned that the English would be able to support my left beyond the road, but they were prevented from doing so. The enemy turned my left by the road and fell upon the rear. I may say, surrounded the Zouaves of the Commandant Dubos took the heads of the columns, which turned us, in the rear, and completely stopped them. It became necessary for me to form front in the moment, in order to receive the battalion charge, which this time also succeeded in a marvellous manner. But the enemy, crushed by the fire of British artillery and of the French artillery which I had caused to assemble on the crest in rear of my left, at length offered no further resistance, except while flying.

In these encounters with the bayonet, our field of battle was covered with dead; it was a real butchery; several officers had their horses killed under them. The 7th Light Infantry, commanded by Chef de Bataillon Vaisser, showed an ardent and brilliant courage, which merits particular notice, as likewise the enthusiasm of the Zouaves and the Tirailleurs of the 3rd Battalion. The battalion of the 6th Regiment of the Line charged most brilliantly; and well revenged the death of their brave Colonel, M. de Camas, who fell amid the ranks of the enemy. The battalion of Zouaves, commanded by Dubos, manœuvred with that intelligence and bravery at every turn which is never disturbed, even when surrounded by the enemy. The Algerian Tirailleurs leaped as agile as panthers at the gate to bar out the brushwood. This day does them honour, and likewise their Colonel De Wimpffen. The other battalion of Zouaves, and the two battalions of the 50th, were in vigorous support, without having occasion to charge the enemy.

During this combat the two horse-batteries (under Commandant Lebœuschère), and the battery of the Second Division (directed by Commandant de Barrel), had to maintain a fierce duel with the Russian artillery, which was composed of 24 and 30-pounders in position, and of a considerable number of field-pieces. Our batteries, aided by an English battery of 8-pounders, had the honour of extinguishing the Russian fire, and reducing it absolutely to silence. This combat of artillery was directed by the brave Colonel Forrest, who rendered me during this day the greatest services.

Finally, at the moment when the Russian fire was extinguished I caused to be led to the last crest a divisional battery supported by two battalions, which covered with shells and balls the bridge of Inkerman, over which the Russian troops rushed in the great disorder, and we had the pleasure of seeing them fly in a complete rout. But this rout was protected by the marshes of Inkerman, which we unfortunately could not traverse, for otherwise our cavalry would have ended the day gloriously.

The Brigade of General Monet, arriving in second reserve, had no occasion to act. It, however, experienced losses by the cannon-balls of the enemy, fired from places having an extreme range.

Before the Telegraph we had only one cannonade without wounded, but I feel real pleasure in here expressing how much the detachment of Marines, under Captain de Cantensen, served those excellent 30-pounders, which kept the enemy's line very distant, and caused them to experience severe loss.

I have thanked the Generals d'Autemarre and Bourbaki, who so valiantly headed their troops; and Colonel de Cissey, my Chef-d'Etat-Major, who has most energetically aided me. I wish I could mention all the brave men who so well fought at Inkerman; but this would be to name every one.

The General of Division commanding the Corps of Observation,

BOSQUET.

OFFICIAL DESPATCHES FROM THE PACIFIC.

We have been favoured by the Admiralty with the following despatches:—

"H.M.S. *Pique*, Sept. 19, 1854.

"Sir,—I have the honour to enclose, for their Lordships' information, copies of letters addressed to Captain Frederick, of H.M.S. *Amphitrite*.

"These copies will be forwarded in the event of a mail leaving San Francisco during Captain Frederick's absence from that place.—I have, &c.,

(Signed) "F. W. E. NICHOLSON, Captain.

"The Secretary of the Admiralty."

(Enclosure.)

"H.M.S. *President*, Petropaulovski, Aug. 30, 1854.

"Sir,—It is my painful duty to report to you officially the death of Admiral Price, Commander-in-Chief of the Pacific station, which took place at 4.30 p.m. this day.—I have, &c.,

(Signed) "R. BURRIDGE, Captain.

"To Captain Sir F. Nicholson, Bart., &c."

RETURN OF OFFICERS SEAMEN, AND MARINES KILLED WOUNDED, AND MISSING, ON BOARD H.M. SHIPS ENGAGED IN THE OPERATIONS AGAINST THE BATTERIES AND TOWN OF PETROPAULOVSKI THE 4TH SEPT., 1854:—

PIQUE.—Lieut. A. Bland, slight contusion; G. Robinson, mate, slightly wounded; L. Chichester, midshipman, slightly wounded; Lieut. J. M'Culloch, R.M., slightly wounded; Lieut. W. H. Clemmins, R.M.; severely wounded. Seamen 6 killed or missing, 5 dangerously wounded, 5 severely wounded, 1 slightly wounded. Marines 4 killed or missing, 2 dangerously wounded, 5 severely wounded, 1 slightly wounded. Total: 13 killed or missing, 7 dangerously wounded, 11 severely wounded, 2 slightly wounded 33

PRESIDENT.—Captain C. A. Parker, R.N., killed or missing; Flag-Lieut. E. H. Howard, wounded severely; Lieut. G. Palmer wounded severely; Lieut. W. G. Morgan, wounded slightly. Seamen, 3 killed or missing, 3 wounded dangerously, 14 bruised severely, 4 wounded slightly. Marines; 8 killed or missing, 19 bruised severely, 4 wounded slightly. Total: 11 killed or missing, 3 wounded dangerously, 33 wounded severely, 8 wounded slightly—55.

VIRAGO.—T. Whitelock, boatswain, wounded severely. Seamen, 1 killed or missing, 1 wounded severely, 1 wounded slightly. Marines; 1 killed or missing, 1 wounded severely. 1 wounded slightly. Total: 3 killed or missing, 3 dangerously wounded, 4 severely wounded, 2 slightly wounded—12.

DIANA.—E. BURRIDGE, Captain.

LIST OF OFFICERS AND SEAMEN KILLED, WOUNDED, AND MISSING, OF BOARD THE FRENCH FRIGATES, ON THE 3 AT ARGOS, AND 4TH SEPTEMBER, 1854, AT PETROPAULOVSKI—

31ST AUGUST, 1854.

FORTE.—Dumesnil, midshipman, slightly wounded. Seamen: 1 died on board, 1 dangerously wounded, 6 slightly wounded. Total: 1 died on board, 1 dangerously wounded, 6 slightly wounded.

4TH SEPTEMBER, 1854.

FORTE.—Seamen: 7 left on shore, 1 died on board, 16 wounded dangerously, 4 slightly wounded.

EURYDICE.—Lefebvre, lieutenant, left on shore: Rouzaset, lieutenant, died on board; D'Lacombe, lieutenant, dangerously wounded. Gingeot de Fouches, mate, dangerously wounded. Costa, midshipman, dangerously wounded. Gefroy, surgeon, dangerously wounded. Seamen: 8 left on shore, 7 dangerously wounded, 8 slightly wounded. Total: 16 left on shore, 1 died on board, 11 dangerously wounded, 8 slightly wounded.

ORIFLAMME.—D'Journel, mate, slightly wounded: Cleg de la Touches, mate, left on shore: Le roi ad'Espain, slightly wounded. Seamen: 8 left on shore, 1 died on board, 16 dangerously wounded, 16 slightly wounded. Total: 8 left on shore, 1 died on board, 18 dangerously wounded, 18 slightly wounded. Grand total. 32 left on shore, 4 died on board, 52 dangerously wounded, 32 slightly wounded—102

(Translation.)

Frégate la Forte, Sept. 5, 1854.

M. le Commandant,—If the disembarkment has not been fortunate, it is owing to difficult as of the soil; and if our men have been obliged to re-embark, we have at least acquired the certainty that the two nations can depend on each other, an I that, if circumstances place us in the presence of the enemy, our efforts will be crowned with success.

Our crews, little accustomed to fight on shore, showed great ardour. Receive, M. le Commandant, my acknowledgments, and transmit them to your captains, officers, and men; and I shall be happy to inform the Government of the courage, the discipline, and the devotion which they showed.

F. FONTES.

Rear-Admiral in Command of the French Naval Forces.

H.M.S. Ship *Pique*, Petropaulovski, Sept. 6, 1854.

Sir,—It is with great satisfaction that I have received the letter which you have done me the honour to address me, in which you mention in high terms the conduct of our men while engaged on shore with the enemy.

Allow me, sir, to convey to you the heartfelt thanks of every officer and man in the British squadron for the expression of your good opinion.

I hear from all quarters the highest praise of the ardent courage of your men while advancing, and of their coolness and discipline during the retreat—remarkable qual ties in seamen, who are, as you truly observe, unaccustomed to shore operations.

Allow me to take this opportunity of expressing my deep sympathy for the loss sustained among the officers and men of your squadron.—I have, &c.,

(Signed) F. W. E. NICHOLSON,

Captain and Senior Officer.

To F. Pontes, Rear-Admiral in Command of the French Naval Forces.

A MINUTE-GUN FROM THE BLACK SEA.

On the fourteenth of November, off the steep Crimean coast,
As we lay, a mighty leaguer, round about the Russian host:
From the southward came a tempest, driving on the shore a lee—
Storm and darkness in the heavens, seething mist upon the sea.

Now brave iron, stoutly welded, in the linked cable chain,
Hold for dear old England's honour, hold against the tightening strain;
Lond and louder grew the storm-wind, louder still the billows roar;
On the "weather" frowns the tempest, on the "lee" a foeman's shore.

Brave old walls of merry England—guardians of our distant home!
Lo! the wretched transports parted, reeling past ye through the foam.
Billow-tost, but all unscanted—drenched in driving seas and hail,
As ye battled with the foeman, so ye battle with the gale.

So the night passed dark and grimly, and on morrow's tardy morn
Shattered wreck: of noble vessels strew the Russian beach forlorn.
Down the angry billows—bare, mysteriously grand—
Tempest scarred, but still unconquered—rode the bulwarks of our land.

So, amid the truest sorrow for a loss so full of pain,
Let us bless the Hand that spared us—let us bow and work again.
England's wealth can well replace all these, and greater losses far:
England's honour still is guarded by her stout old dogs of war.

F. NEGUS, Surgeon,
Nov. 18, 1854. H.M.S. *Sevastopol*, Sebastopol.

THE CRIMEAN COMMISSARIAT.—Mr. Commissary-General Filder deserves the greatest praise for his exertions in supplying our men with food. The stories which have been circulated concerning the inefficiency and irregularity of the supply of meat, biscuit, and spirits, are base calumnies. No army was ever fed with more punctuality; and no army, I believe, was ever so well fed under such exceptional circumstances as those in which we are placed. The writers who describe the Southern Crimea as a land flowing with milk and honey, forget that to us it is a forbidden Eden, and that the Cossacks stand at the gate to bar our approach. We have eaten up everything edible within the precincts of the little angle of which we maintain possession by force of arms: the hay has been consumed, the vegetables have been devoured, the grapes have been consumed—nay, the very leaves have been boiled for food, and the vines used for fuel; the cattle and sheep have been consumed; and we are now masters of a huge camp as sterile as a rock, and from which the last vestige of shrub or tree will soon disappear under the campkettle. We are fed by Balaclava alone: thence comes our daily bread. It has to be carried on day by day; and yet no man in this army has ever been without his pound of good biscuit, his pound and a half or pound of good beef or mutton, his quota of coffee, tea, rice, and sugar, or his gill of excellent rum, for any one day, except it has been through his own neglect. We draw our hay, our corn, our beef, our mutton, our biscuits, spirits, and necessaries of all kinds from beyond sea. Eupatoria supplied us with cattle and sheep to a moderate extent; but the commissariat of the army depends, as a general rule, on sea carriage. Nevertheless, large as our advantages in the circulation and regularity of the supply of food, the officers and men have had to undergo great privations.—*Letter from Balaclava.*

HUNTING.

(Continued from Page 475.)

Then roused from sweet slumbers, the lad ye high horn
Her paifrey would mount at the sound of the horn,
With couching, up eased which trapping an ear,
And neighed with delight such a burden to bear.—WARBURTON.

Our two Illustrations—"Stag-hunting in the reign of George II.," and "Fox-hunting in the reign of Victoria I."—convey a better idea than pages of description of the essential difference between the sports of 1700 and 1800.

The stout, plump, coarse-bred horses; the huge hunting-horns; the yeoman pricker, with the slow lyme hounds in couples, with which he has marked down the stag for the swifter pack of the forest lords:—all speak of the age of slow, stately, scientific hunting, which was carried on in this country under the forms, and with the terms of our Norman conquerors, until the progress of agriculture thinned our forests and exterminated the great herds of deer, which, down to the middle of the eighteenth century, were to be found in all wild and wooded districts between Enfield-chase and their last refuge, Exmoor.

Stag-hunting, after the fashion of the time of George II., is still practised in the German forests; and during the reign of Charles X. in France, we have ourselves seen huntsmen and *valets de chasse* in the forest of Chantilly, dressed, armed, and horsed very much like the figures of our Illustration.

The great French-horns, such as Beau Nash had played before him on his triumphal entries into Bath, were not in the olden chase merely ornamental, or employed like the short, straight, silver horn, used with fox hounds to encourage the pack in woodland hunting, and call them quickly out of cover to a "Tally-ho—away!" It was the privilege of every noble follower of the hunt to use a horn, and to give with it a kind of telegraphic intelligence of the progress of the chase. One set of notes called the sportsman out of bed; another informed him that the game was on foot; others indicated that a red deer, or fallow deer, or wolf, or wild boar, was the chase of the day. An appropriate blast told that the game had taken to the open plain, or was at bay in water, while a chorus of horns celebrated the holiall or dead-hallao.

If we may venture to guess, our Artist had Sir Roger de Coverley with the fair widow in his mind, when he drew the subject before us. The scene may be in Gloucestershire, Somersetshire, or Devonshire—for wild deer abounded in all those counties in Sir Roger's time. It is to be presumed he hunted them in his youth, before he took to beagles. It is evidently not a Royal or noble hunt, but the establishment of well-estated country squires. Our Fox-hunting Picture is an average provincial scene, with more sport and fun than fashion. We should say that Reynard has been dodging them round a big wood for an hour or two, until the whole field has become thoroughly impatient; and, on the welcome sounds of "Tally-ho—away!" a good many are dressing out of the cover and over the post and rails—the pace is not to last. The boy on the pony is making tremendous play, and means to go while he can. The young lady, on the other hand, has enjoyed the morning ride to cover, and the excitement and sounds of the find, and the repeated ringing of the fox round the big wood; she will now discreetly leave her father and brothers to ride to the hounds, and return under charge of the old groom who brought up papa's hunter.

It is odd that, in these days, when so many laborious investigations are made into the history of the manners, customs, and amusements of the English, that so little light has been thrown upon the origin of Fox hunting. It is quite certain that the fox was not accounted a noble beast of chase before the Revolution of 1688; for Gervase Markham classes the fox with the badger in his "Cavalrie, or the part of Arms wherein is contained the Choice Training and Dieting of Running Horses, whether for Pleasure or for Wager. The Third Booke. Printed by Edw. Allde, for Edward White; and are to be sold at his Shop, neare the Little North Door of St. Paul's Church, at the signe of the Gun. 1616." He says:—

"The chase of the foxe or badger, although it be a chase of much more swiftness (than the otter), and is ever kept upon firm ground, yet I cannot assent for training horses, because for the most part it continues in woody rough grounds, where a horse can neither come easily make foorth his way nor can head without danger of stubbing. The chase, much better than any of these, is hunting of the bucke or stag, especially if they be not confined within a park or pale, but having liberty to chuse their swiese, whom some sentences call 'hunting at force.' When he is at liberty he will break forth his chase into the winde, sometimes four, five, and six miles forth right; nay, I have myself followed a stag better than ten miles forth right, before the pleace of his rousing to the place of his death, besides all his windings, turnings, and cross passages. The time of the year for these chases is from the middle of May to middle of September." He goes on to say, "which being of all chases the worthiest, and belonging only Princes and men of best quality, there is no horse too good to be employed in such a service; yet the horses which are aptest and best to be employed in this chase is the Barbary jennet, or a light made English gelding, being of a middle stature." "But on contrarie, and I come to the chase which is of all chases the best for the purpose whereof we are now entreating; it is the chase of the hare, which is a chase both swift and pleasant, and of long endurance: it is a sport ever readie, equally distributed, as well to the wealthie farmer as the great gentleman. And his beginning contrary to the stag and bucke; for it begins at Michaelmas, when they end, and is out of date after April, when they first come into season."

This low estimate of the fox, at that period, is borne out by a speech of Oliver St. John, to the Long Parliament, against Strafford, quoted by Macaulay, in which he declares—"Strafford would be regarded not as a stag or a hare, but as a fox, who was to be snared by any means, and knocked on the head without pity." The same historian relates that red deer were as plentiful on the hills of Hampshire and Gloucestershire, in the reign of Queen Anne, as they are now in the preserved deer forests of the Highlands of Scotland.

When wild deer became scarce, the attention of sportsmen was probably turned to the sporting qualities of the fox by the accident of harriers getting upon the scent of some wanderer in the old setting season, and being able a straight 30-mile run. We have more than once met with such accidents on the Devonshire moors, and have known well-bred harriers run clear away from the huntsman, after an outlying fox, over an unrideable country.

Fox-hunting rose into favour with the increase of population attendant on improved agriculture. In a wild woodland country, with earths unstopped, no pack of hounds could fairly run down a fox.

We have found in private records two instances in which packs of hounds, were established, were turned from bare hounds to foxhounds. There are, no doubt, many more. The Farquelys, or Cheshire Hunt, was established in 1762 for Hare-hunting, and held its first meeting on the 24th November in that year. "Those that kept harriers brought them in turn." It is ordered by the 8th rule, "that the number of the society kept hounds, or that it were inconvenient for masters to bring them, a pack be borrowed at the expense of the society."

The uniform was ordered to be "a blue frock with a plain yellow metilled buttons, scarlet velvet cape, and double-breasted flannel waistcoat. The coat sleeve to be cut and turned. A scarlet saddle-cloth, bound singly with blue, and the front of the bridle kept with scarlet." The third rule is that "which our members set at liberty about ten and half-past eleven o'clock:—" The harriers shall not wait for any member after eight o'clock in the morning."

As to drinking, it was ordered "that three collar bumpers be drunk after dinner, and the same after supper; after that every member might do as he pleased in regard to drinking."

By another rule, every member was "to present on his marriage, to each member of the hunt, a pair of wel-stitched leather breeches," which seems a good custom.

In 1769, the club commenced Fox-hunting. The uniform was ordered to be changed to "A red coat, unbound, with small flock sleeve, a green velvet cape, and green waistcoat, and that the sleeve have no buttons; in every other form to be like the old uniform; and the cape of the cloth to be bound with green instead of blue, the fronts of the saddles to remain the same."

At the same time there was an alteration in regard to drinking orders—"That instead of three collar bumpers, only one shall be drunk, except a fox be killed above ground, and then one other collar glass shall be drunk to 'Fox-hunting.' Among the names of the original members in 1762, we recognise many whose descendants have maintained in this generation their ancestral reputation as sportsmen. For instance, Green, Mainwaring, Wilbraham, Smith, Barry, Cholmondeley, Stanley, Grosvenor Townley, Watkin Williams Wynne, Stamford. But, although the Farquey Hunt Club has been maintained and thriven through the reigns of George III., George IV., William IV., and Victoria, the pack of hounds, de-troyed or removed by various accidents, have been more than once renewed. But the Brocklesby pack has been maintained in the family of Pelham ever since the year 1710 without more than a short break or change of blood; and a written pedigree of the pack has been kept for upwards of 100 years; and it is now the oldest pack in the kingdom. The Holtsemore, which was established before the Brocklesby, has been repeatedly disper-ed and has long passed out of the hands of the family of the Nicols—by whom it was first established, as we learn from Gelieri, 200 years ago.

By the kindness of Lord Yarborough we were permitted to examine all the papers connected with his hounds. Among them is a memorandum dated 26th April, 1713, by which it is agreed "that the fox-hounds, then kept by Sir John Tyrwhitt and Charles Pelham, Esq. 'ancestor of Lord Yarborough), should be joined in one pack, and maintained at the joint expense of Sir Thomas Tyrwhitt, Charles Pelham, and Robert Vyner for five years, each paying for one-third of the year; and that, on any of the three parties retiring, the pack should remain the property of those remaining.

In this manner the pack came into Mr. Pelham's hands, as sole proprietor. From that date a pedigree of the hounds was kept in a rough manner; but in 1746 a regular pedigree or stud-book was opened, and has been kept up with the greatest exactness by the father, the grandfather, and great-grandfather of the present huntsman.

Sir Thomas Tyrwhitt kept harriers at his Manor House of Aylsby, at the foot of the Lond in hire Wolds, before he turned them into foxhounds. A farm at Aylsby was formerly known as the "Kennels." The Aylsby estate has passed, in the female line, into the Oxfordshire family of the Tyrwhitt Drakes, who are so well known as masters of hounds, and first-rate sportsmen; while a descendant of Squire Vyner, of Lincolnshire, has, within the last twenty years, been a master of fox-hounds in Warwickshire and Worcestershire. Mr. Meynell, the father of modern Fox-hunting, and founder of the Quorn Hunt, formed his pack chiefly of crosses from the Belvoir blood.

Between the period that Fox-hunting superseded Hare-hunting in the estimation of country squires and that when the celebrated Mr Meynell reduced it to a science, and prepared the way for making hunting in Leicestershire almost an aristocratic institution, a great change took place in the breed of the hounds and horses, and in the style of horsemanship Under the old system, the hounds were taken out before light to hunt back by his drag the fox who had been foraging all night, and set on him as he lay above his stopped-earth, before he had digested his meal of rats or rabbits. The breed of hounds partook more of the long-eared, dewlapped, heavy, crook-kneed southern hound, or of the blood-hound. Well-bred horses, too, were less plentiful than they are now.

But the change to fast hounds, fast horses, and fast men, took place at a much more distant day than some of our hard riding young swells of 1854 seem to imagine. A portrait of a celebrated hound, Ringwood, at Brocklesby-park, painted by Stubbs, the well-known animal painter

STAG-HUNTING IN THE REIGN OF GEORGE II.—FROM A PAINTING BY FREDERICK TAYLER.

n 1793, presents, in an extraordinary manner, the type and character of some of the best hounds remotely descended from him; and though the song say—

> When each horse wore a crupper, each squire a pigtail;
> Ere Bluecap and Wanton taught fox-hounds to scurry,
> With music in plenty, oh! where was the hurry? –

It is more than eighty years since Bluecap and Wanton ran their race over Newmarket-heath; and a generation has passed away since, in Shropshire, the "Flying Childe," recorded by Cecil, and the father of the present Lord Forester, introduced the "bruising system" of riding to hounds. Perhaps they rode under the inspiration of "Tom Moody," one of the few classic names in fox-hunting. Tom was whipper-in to Squire Forester of Wiley, the uncle of the first Lord Forester.

We don't quote from "Somerville's poem of "The Chase," because it has been quoted, in season and out of season, ever since it was written; but it is worth noting that, although the poet died in 1742, his work is, with few exceptions, as clear and correct in its directions for Fox-hunting as if it were written yesterday. It appears from a work lately published, that the poet kept only one horse. In the long reign of George III., the distinction between town and country was much broken down, and the isolation in which country squires lived destroyed. Packs of hounds, kept for the amusement of a small district, became, as it were, public property. At length the meets of hounds began to be regularly given in the country newspapers.

With every change sportsmen of the old school have prophesied the total ruin of Fox-hunting. Roads and canals excited great alarm to our fathers. We ourselves expected to see sport entirely destroyed by railroads; but we were mistaken, and have lived to consider them almost an essential auxiliary of a good hunting district.

Looking back at the manner in which Fox-hunting has grown up with our habits and customs, and increased in the number of packs, number of hunting-days, and number of horsemen in full proportion with our wealth and population, we are amused at the simplicity with which Mrs. Beecher Stowe, who comes from a country where people never amuse themselves out of doors (except in making money), tells, in her "Sunny Memories," how, when she dined with Lord John Russell, at Richmond, the conversation turned on hunting; and she expressed her astonishment "that, in the height of English civilisation, this vestige of the savage state should remain." "Thereupon they only laughed and told stories about fox-hunters." If any of the company had been acquainted with old Gervase Markham they might have answered, "Of all the field pleasures wherewith Old Time and man's inventions hath blessed the hours of our recreations, there is none so excellent as the delight of hunting, being compounded like an harmonious concert of all the best parts of most refined pleasures, as music, dancing, running, and ryding"

(To be continued.)

FOX-HUNTING.

THE SMITHFIELD CLUB PRIZE CATTLE-SHOW.

CLASS 27, NO. 195.—DUKE OF RICHMOND'S SOUTHDOWNS. GOLD MEDAL, FEEDER; SILVER MEDAL, BREEDER.

CLASS 10, NO. 69.—DUKE OF RUTLAND'S ROAN OX. GOLD AND SILVER MEDALS.—PRIZE £25.

CLASS 22, NO. 136.—MARQUIS OF EXETER'S PRIZE LEICESTER. GOLD MEDAL, FEEDER; SILVER MEDAL, BREEDER.

In the next page we give the list of prizes awarded at this fat stock show, which annual event, although losing nothing in general interest, has almost gone beyond the reach of criticism. Living beings are not like machinery. There is a limit to their improvement, and that limit has certainly been reached by the principal breeds of Cattle, Sheep, and Pigs. What remains, is to extend to every district the benefit of the breeds suited to their respective climate, style of cultivation, and market. We can confidently state that the growing intelligence of farmers, stimulated by the facilities of modern travel and exhibitions of stock, local and general, is diminishing the number of inferior breeds year by year. Every farmer in the country has now a market for his meat; the rail and the steam-boat have all but abolished cheap beef and mutton districts. In addition to the great centres of manufacturing industry, iron and coal mines, opened within the last ten years, have created all over England and Wales new, profitable, and constantly-increasing markets for every kind of agricultural produce. In fact, all our efforts up to the present moment have failed in making the supply reach the demand. What we could do if the cattle of this kingdom were of the best of the half-dozen breeds which alone carry off prizes at fat-stock meetings, we have no means of calculating, without agricultural statistics. But, certainly, the difference between the Welsh runt, that is fed six or seven years, and then is not fat, and the Short-horn, Devon, Hereford, or cross-bred of those breeds, that you cannot prevent from getting fat with ordinary care, is enormous.

In the present Show, there were thirty-three entries of Devons in the usual four classes, twenty-two Herefords, and forty-two Short-horns; six Scotch and Irish only, five Welsh, one of the old Long-horn, two Sussex, one of the old Norfolk Polled breed, ten of Mixed Breed (chiefly crosses of the Short-horn), and twelve Extra Stock. If we average these entries at only £30 a piece—which is decidedly low, considering the quality and weight of the animals—we have an exhibition of cattle worth upwards of £4000.

The Gold Medal for the best Beast in the yard, the First Prize of £25, and the Silver Medal, as breeder, go to the venerable Duke of Rutland, for his four-year-old strawberry roan ox (No. 69)—as fine an animal as was ever exhibited at this Show for quality, symmetry, and weight combined. Many wonderful events—many extraordinary improvements—has the Duke seen in the fourscore years of his life. Among them, the general diffusion of the Short-horn; which, when he came

CLASS 31, NO. 251.—MR. J. V. WILLIAMS'S BLACK PIGS. PRIZE £10, FEEDER; SILVER MEDAL, BREEDER GOLD MEDAL, FEEDER.

CLASS 12, NO. 89.—MR. CHARLES TOWNLEY'S WHITE SHORT-HORN COW. PRIZE £20.—GOLD MEDAL.

NO. 282.—WHITE PIG, BETTY, THE PROPERTY OF H.R.H. PRINCE ALBERT.—SILVER MEDAL.

of age, and the long-famous festivities, including a herd of oxen roasted whole, took place, was confined to a few localities, and looked upon with considerable suspicion and disdain by the brown coated farmers—patrons of local breeds, and especially of the now all but extinct Long-horn of Bakewell. His Grace has lived to see fresh beef made accessible to tens of thousands, to whom it would have been a luxury as rare as house lamb, had it not been for the introduction of the early maturity of the Short horn, on farms in every county in England and Scotland, that early maturity being supported by the comfortable, warm, well ventilated farm buildings, the varieties of roots, the supply of oil-cake which we are able to obtain by the improvements of modern cultivation and the extension of modern commerce.

In quality the Short-horn is inferior to the Devon and the Highlander, but superior in general adaptabilty to different districts—superior in utility as a ox either for the butcher of the dairy. Among the Short-horn prizes Mr. Townley's white cow, No. 89, which carried off £30, is wonderfully perfect as a fat beast. At the Smithfield Stewards' private dinner, on the evening of the 4th inst., the carcass of this cow, with a text in very fine large round-hand. Her sisters could never be of much use in the dairy, as, although six years and eight months old, she has never had but one calf; but her brother bullocks would certainly fat as rapidly as could be desired. Of another kind, No. 84, a steer, bred by Mr. Thomas Webb, the celebrated Southdown breeder, which, although only "commended," is worth notice because bred out of a cow which had eight calves in three years, of which seven lived, and from a grandam which bred ten calves all single in eleven years.

The Devons are beautiful in quality, but rather small. The Devonian breeders declare that, although short on their legs, if the test of comparative measurement be applied, the amount of prime joints will compensate for the smaller dimensions. Certainly, they are very pretty little beasts; and Prince Albert carries off the first prize, No. 2, with a beautiful animal, mild and gentle enough for a Queen to pet and feed Mr. Farthing, who was successful in carrying off a string of prizes for Devon breeding stock at Lincoln, has the 2nd prize for a bullock in the same class as the Prince; the Earl of Leicester (whose father was the father of Norfolk agricultural improvements) wins the two first prizes in Class II. and Mr. Sheppard is fa'ther and breeder, with Devons, No. 19 and No. 25; and Mr. Hudson, of Castle Acre (who holds one of the largest arable farms in England, under L rd Leicester), wins, with No. 29, the first prize for Devon cows. That little cow may stand for an epitome of the perfection of Norfolk farming. A short account of how she was bred, and what she was fed on, and what was done to cultivate and import the food she ate, would be a picture of the best modern agriculture, based *on paying principles*.

The Herefords presented a useful class of beasts, which grow in favour in the Midland Counties, where they displace the old Long-horn. The cows seemed rather coarse. In steers, a Bristol innkeeper took the first prize, and Prince Albert the second.

The Scotch and Irish show was very small. Mr. Gurney had the one prize—which, if it does not bring out more numerous competitors, will not be worth giving.

Prince Albert had a very picturesque cream-coloured West Highlander. These were two or three pretty polled Galloways.

The Welsh do not improve in their Christmas shows. Would it not be well to supersede their native breed with a Highlander or North Devons?

Class XVII. presents the only instance in which we can find fault with the judges. The prize was given to an ugly, ill-shaped Long-horn, passing over a very handsome Sussex; while in the next class a Sussex cow, which, but for age, might have been own sister to the steer, took the prize. This cow is as fine and blooming in her coat as a race-horse. It was whispered in the yard that the Sussex ox was passed over from a suspicion of a Devon cross. It was a great mistake.

Among the Cross breeds there were some very nice beasts. All the prizes were crosses between Short-horns and Hereford, or Hereford and Short-horn. In the Class No. 115 is even a larger animal than that exhibited by Sir Henry Verney last year, and nearly as ugly.

We have no Foreign Cat le this time; yet the exportation of bulls of our best breeds is going on briskly. We look forward with interest to the result in Holstein and the breeding districts of North Germany and Holland. There they have excellent dairy cows, and they understand stall-feeding; they only want blood.

In the sheep of Long-Woolled breeds there were forty-one entries. The Marquis of Exeter carried off the first prize and the gold medal for the best pen of Long-Woo s, with three pure Leicesters, bred by himself, in Class XXII. The second prize went to Mr. G. S. Foljambe, of Osberton Hall. In the next class the positions of the Squire and the Marqu s were reversed as to first and second.

A peculiar interest is attached to Mr Foljambe's appearance as an exhibitor of sheep and cattle. He was for many years known as a most enthusias ic and popular master of fox hounds, and very successful as a breeder of hounds. Having been afflicted with total b indness, he has given up hounds, and applied the same enthusiasm and skill to breeding sheep-stock with great success. He can decide by feel better than most men by sight and feeling, on the form of a sheep.

In Short-Wools the Duke of Richmond earned the gold medal and prizes with a pen of very fine and very well got up South Downs, in Class XXVII., and also in Class XXIX.

Of Cotswolds, only two pens were shown. In Cross Breeds, both Downs and Leicesters and Downs and Cotswolds gained prizes.

The story of the origin of the present South Down deserves telling, at some less warlike time than the present.

In Pigs there was a famous show, both large and small breeds. The gold medal, the first prize of £10, and the silver medal to breeder, went to Mr. Williams, of Somerton, for a pen of black pigs, called Improved Leicesters—we should say, crossed with Essex. Prince Albert had a medal as feeder in extra stock, for white pigs; but out of five prizes, four went to black pigs, of Essex stain

Some of the Yorkshire pigs were enormous balls of fat, six feet from snout to tail.

As a whole, the Exhibition was a full average in quality, most beautifully and comfortably arranged. Perhaps there were never fewer inferior beasts.

The display of Roots and Implements was good, but cramped for want of room. Messrs. Gibbs have, as usual, a good display of seeds and roots. Mr. Skirving, who has spent thousands in investigating the potato disease, shows the best potato we have ever seen—the "Flukes," but he does not pretend to guarantee a total escape from the blight. His roots are well worth examination.

The roots above, and the Prize Sheets below, are the two ends of English farming—the corn coming between.

The following is a complete List of the Awards:—

DEVONS.—Class 1—Steers.

1st prize of £25 (No. 2), his Royal Highness Prince Albert.
Silver Medal to the breeder, Mr. R. Mogridge, of Molland, South Molton.
2nd prize of £10. (No. 8), Mr. W. Farthing, the representative of the late S. Farthing, of Stowey-court, Bridgwater.

Class 2.—Steers or Oxen.

1st prize of £25 (No. 10), the Earl of Leicester, of Holkham Hall, Norfolk.
Silver medal to the breeder, the Earl of Leicester.
2nd prize of £10 (No. 16), Mr. F. King, of Nursling, near Southampton.

Class 3. Heifers.

1st prize of £15 (No. 25), the Earl of Leicester.
Silver medal to the breeder, the Earl of Leicester.
2nd prize of £5 (No. 22), his Royal Highness Prince Albert.

Class 4.—Cows.

1st prize of £20 (No. 29), Mr. J. Hudson, of Castleacre, Swaffham, Norfolk.
Silver medal to the breeder, Mr. John Hudson.
2nd prize of £10 (No. 27), Mr. Thomas Bond, of Park, North Petherton Bridgwater.

HEREFORDS.—Class 5. Steers.

1st prize of £25 (No. 38), Mr. I. Nibletl, of Congyre House, Flitton, Bristol.
Silver medal to the breeder, Mr. T. L. Meers, of Coand Arbor, Shrewsbury.
2nd prize of £10 (No. 36), H.R.H. Prince Albert.

Class 6.—Steers or Oxen.

1st prize of £25 (No. 42), Mr. Wm. Heath, of Ludham Hall, near Norwich.
Silver medal to the breeder, Mr. Thos. Carter, of Dodmore, near Ludlow.
2nd prize of £10 (No. 40), Mr. J. Ford, jun., of Rushton, near Blandford.

Class 7.—Heifers.

1st prize of £15 (No. 51), Mr. F. King, of Nursling, near Southampton.
Silver medal to the breeder, Mr. Thomas Samson, of Kingston Russell, near Dorchester.
2nd prize of £5 withheld.

Class 8.—Cows.

1st prize of £20 (No. 59), Mr. Wm. Heath, of Ludham Hall, near Norwich
Silver medal to the breeder, Mr. R. Longmore, of Ludlow.
2nd prize of £10 (No. 54), Mr. J. Stevens, of 43, Holy well-street, Oxford.

SHORT-HORNS.—Class 9.—Steers.

1st prize of £25 (No. 60), Mr. Jas. Fatcher, jun., of Fovant, near Salisbury.
Silver medal to the breeder, Right Hon. Sidney Herbert, M.P., of Wilton, near Sa lisbury.
2nd prize of £10 (No. 61), Mr. Wm. Aldworth, of Frilford, Abingdon.

Class 10.—Steers or Oxen.

1st prize of £25 (No. 63), his Grace the Duke of Rutland, of Belvoir Castle, Grantham.
Silver medal to the breeder, his Grace the Duke of Rutland.
2nd prize of £10 (No. 67), Rev. J. Holmes, of Brooke Hall, Norwich.

Class 11.—Heifers.

1st prize of £15 (No. 83), Mr. Jos. Phillips, of Ardington, Wantage.
Silver medal to the breeder, Mr. W. Fussell, of Laycock, Chippenham.
2nd prize of £5 (No. 82), Earl Spencer of Althorp-park, Northampton.

Class 12.—Cows.

1st prize of £20 (No. 93), Mr. C. Townley, of Townley-park, Burnley.
Silver medal to the breeder, Mr. Alex. Bannerman, of South Cottage, Chorley.
2nd prize of £10 (No. 87), Mr. J. H. Langston, M.P., of Sarsden House, Chipping Norton.

SCOTCH OR IRISH BREEDS.—Class 13.—Steers or Oxen.

Prize of £10 (No. 99), Mr. John H. Gurney, of Canton Hall, Norwich.

Class 14.—Heifers or Cows.

Prize of £5 (No. 103), Mr. H. Lindsay, of Westdean, Chichester.

WELSH BREEDS.—Class 15.—Steers or Oxen.

Prize of £10 (No. 104), Mr. B. E. Bennett, of Marston Trussell Hall, Market Harboro'.

Class 16.—Heifers or Cows.

Prize of £5 (No. 108), Mr. Richard Worthington, of Saddington, Market Harbor'.

OTHER PURE BREEDS.—Class 17.—Steers or Oxen.

Prize of £10 (No. 110), Mr. R. H. Chapman, of Upton, Nassington.
Silver medal to the breeder, Mr. R. H. Chapman.

Class 18.—Heifers or Cows.

Prize of £10 (No. 112), Messrs. C. Neame and Sons, of Selling, Feversham.
Silver medal to the breeders, Messrs. C. Neame and Sons.

CROSS OR MIXED BREEDS.—Class 19.—Steers.

Prize of £15 (No. 115), the Earl of Radnor, of Coleshill, Berks.
Silver medal to the breeder, the Earl of Radnor.

Class 20 Steers or Oxen.

Prize of £15 (No. 116), Mr. William Hewer, of Sevenhampton, Highworth, Wilts.
Silver medal to the breeder, Mr. William Hewer.

Class 21.—Heifers.

Prize of £10 (No. 121), Mr. John Tucker, of Abbey Print Works, Stratford, Essex.
Silver medal to the breeder, Mr. John Tucker.

LONG-WOOLLED SHEEP.—Class 22.

1st prize of £20 (No. 136), the Marquis of Exeter, of Burghley-park, Stamford.
Silver medal to the breeder, the Marquis of Exeter.
2nd prize of £10 (No. 139), Mr. G. S. Foljambe, of Osberton-hall, Worksop.
3rd prize of £5 (No. 137), Mr. Thomas Twitchell, of Willington, Bedford.

Class 23.

1st prize of £20 (No. 143), Mr. G. S. Foljambe, of Osberton Hall, Worksop.
Silver medal to the breeder, Mr. G. S. Foljambe.
2nd prize of £10 (No. 142), the Marquis of Exeter, of Burghley Park, Stamford.
3rd prize of £5 (No. 144), Mr. R. Newman, of Harrowden, Bedford

LONG-WOOLLED (NOT BEING LEICESTERS).—Class 24.

Prize of £10 (No. 147), Mr. Wm. Slatter, of Surnton, Cirencester.
Silver medal to the breeder, Mr. William Slatter.

CROSS-BRED SHEEP.—Class 25.

1st prize of £10 (No. 172), Mr. Sam. Druce, of Eynsham, near Oxford.
Silver medal to the breeder, Mr. Samuel Druce.
2nd prize of £5 (No. 170), Mr. John Overman, of Barnham Sutton, Burnham Market, Norfolk.

Class 26.

Prize of £10 (No. 176), Mr. John Overman.
Silver medal to the breeder, Mr. John Overman.

SHORT-WOOLLED SHEEP.—Class 27.

1st prize of £20 (No. 195), the Duke of Richmond, of Goodwood, Chichester.
Silver medal to the breeder, the Duke of Richmond.
2nd prize of £10 (No. 201), Lord Walsingham, of Merton Hall, Thetford.

Class 28.

Prize of £10 (No. 216), Mr. Wm. Rigden, of Hove, near Brighton.
Silver medal to the breeder, Mr. William Rigden.

Class 29.

1st prize of £20 (No. 222), the Duke of Richmond, of Goodwood, Chichester.
Silver medal to the breeder, the Duke of Richmond.
2nd prize of £10 (No. 220), Lord Walsingham, of Merton Hall, Thetford.

SHORT-WOOLLED (NOT BEING SOUTH-DOWNS).—Class 30.

Prize of £10 (No. 230), Mr. Wm. King, of New Hayward Farm, Hungerford.
Silver medal to the breeder, Mr. William King.

PIGS.—Class 31.

1st prize of £10 (No. 251), Mr. J. V. Williams, of Haygrove Farm, Bridgwater.
Silver medal to the breeder, Mr. J. V. Williams.
2nd prize of £5 (No. 269), Mr. W. M. Barber, of Langley Broom, Slough.

Class 32.

1st prize of £10 (No. 262), Mr. John Coate, of Hammoon, Dorset.
Silver medal to the breeder, Mr. John Coate.
2nd prize of £5 (No. 266), Mr. Sam. Druce, of Eynsham, Oxford.

Class 33.

1st prize of £10 (No. 275), Mr. Samuel Druce, Oxford.
Silver medal to the breeder, Mr. Samuel Druce.
2nd prize of £5 (No. 276), Mr. S. Marjoribanks, of Bushey Grove, Watford.

GOLD MEDALS.

Gold medal to the best steer or ox in any of the classes (No. 60), the Duke of Rutland, of Belvoir Castle, Grantham.
Gold medal to the best heifer or cow in any of the classes (No. 89), Mr. Charles Townley, of Townley-park, Burnley.
Gold medal to the best pen of long-woolled sheep in any of the classes (No. 136), the Marquis of Exeter, of Burghley-park.
Gold medal to the best pen of short-woolled sheep in the 27th, 28th, or 30th classes (No. 195), the Duke of Richmond, of Goodwood.
Gold medal to the best pen of pigs in any of the classes (No. 251), Mr. J. V. Williams, Haygrove Farm, Bridgwater.

EXTRA STOCK.

Silver medal to the best beast in extra stock (No. 128), Lord Feversham, Duncombe-park, York.
Silver medal to the best long-woolled sheep in extra stock (No. 161), Mr. William Sanday, Holme Pierrepont, Nottingham.
Silver medal to the best short-woolled sheep in extra stock (No. 235), Mr. William Rigden, Hove, Brighton.
Silver medal to the best cross-bred sheep in extra stock (No. 185), Mr. George Hine, jun., Oakley, Bedford.
Silver medal to the best pig in extra stock (No. 282), his Royal Highness Prince Albert.

COMMENDATIONS.

Highly commended.—The Earl of Leicester's Devon steer. Mr. G. Hine's, jun., pen of Cross-bred sheep. Mr. W. Rigden's pen of South Downs; the Duke of Richmond's pen of South Downs; Mr. S. King's pen of Hampshire Downs; the Earl of Leicester's South Down wether; Mr. John Coate's pen of Dorset pigs; Mr. M. Newman's pen of Essex and Berks pigs; Rev. J. Holmes' pen of pigs.

Commended.—The Earl of Leicester's Devon cow; the Marquis of Exeter's Short-horned steer; Mr. Edward Frost's Short-horned steer; Mr. J. W. Brown's Short-horned steer; the Marquis of Exeter's Short-horned steer; Mr. S. Goodn's Short-horned ox; Rev. J. Arkwright's Short-horned and Ayrshire cow; Mr J Hutchman's Cross-bred wethers; Mr. H. Lugar's pen of South Down wethers; Sir R. Throckmorton's, Bart., pen of South Down wethers; the Earl of Radnor's pen of South Down wethers.

Class 31.—Young pigs—Commended generally.

AGRICULTURAL IMPLEMENTS AND MACHINERY.

THE Exhibitions of Implements and Machinery at the Smithfield Club Cattle Show have hitherto been little more than large colle tions of the various articles the different manufactures have to offer for sale; they have attended at their respective stands to dispose of such articles, and receive orders from the visitors to the Cattle Show; and, as no prizes are given here, novelties have been usually kept in reserve for the Royal and other Agricultural Meetings. This year the collection assumed more properly the character of an Exhibition—such machines and implements only being put forward as the manufacturers conceive necessary to uphold or increase their character for improved design and superior workmanship. Consequently, they were fewer in number and seen to much greater advantage—not being piled one upon another as in former years.

Mr. Howard, of Bedford, exhibited beautiful specimens of his Lincoln Prize Ploughs, which, for beauty of form and perfection workmanship, are not to be surpassed; although it is doubtful if the principle of increasing the length of the lines of the mould-board, to allow it to pass through the ground with the least possible resistance, does not render it a less efficient implement for disintegrating the soil, and producing the same effect as digging. These long ploughs doubtless make very clean work, and are of easy draught; but that is not all that is required in a plough; for the fact should never be lost sight of, that the plough is only a tolerable substitute for a spade.

Drills of every description were exhibited by Messrs. Garrett, of Leiston, and Hornsby, of Stamford, calculated to perform almost any description of work in any locality. We did not observe anything new in their arrangement, with the exception of an improved steerage apparatus, attached to one of Messrs. Garratt's large Drills, which will, doubtless, give increased accuracy in its working, by affording the operator much more control over the machine.

We should have been glad to see some advance in the construction of Dibbling Machines; but the makers seem to have exhausted all their ingenuity in the Drop Drill.

Chaff-cutters, Crushers, and Horse-hoes, of all kinds, were found at the different stands; but nothing of a novel character, except a Rotatory Hoe, exhibited by Garrett—an ingenious and well-made implement. It is designed for cross-hoeing turnips; or, as it is technically called, pitching—that is, cutting out the spaces in the drills to the width intended to be left between the plants.

Two descriptions of Rotatory Cultivators were exhibited: one by Messrs. Samuelson, the other by Gibson. These cultivators, or grubbers, or diggers, as they are variously called, are getting into favour with agriculturists, as they deserve to be; for in the cultivation of root crops they are of the greatest possible advantage, as no implement in use will so nearly produce the garden-like tilth, so necessary in the production of heavy crops of such plants.

A new show-yard has been added this year, in which are placed steam-engines and thrashing-machines. We shall, next week, engrave this interesting display.

Chief matters of increased powers were found at most of the stands. Considerable improvements have been made in these machines, as they now cut much more equally than formerly, and are not so jerking in their action; the necessity of superior framing has also forced itself upon the attention of the makers, and the consequence is, that the cutting powers of the engine are immeasurably superior to what they used to be.

The chief novelty in the collection was a large machine, called a General Cultivator or Lever Plough, intended to perform a variety of operations with greater ease and economy than they are at present done. It consists of a skeleton frame, having three wheels, two permanently fixed in front, and a swivel wheel in the rear, with vertical guide-rods at each end to receive the ends of several beams; to which are attached a set of ploughs, skim cultivators, drags, or scarifiers, as may be required. Each beam is fitted so as to alter its depths by means of two rows of pulleys in the frames, one at each end, over each of which travels a chain connected with the beam beneath, and to a lever handle in the rear, by which means the attendant can raise or sink the ploughs horizontally as required, or take them out of the ground altogether. The beams are fitted to front vertical guide-rods by means of a block which slips up and down, as a drill lever, and giving them an independent action. They are guided in the rear by slipping up and down the guide-rods, by which they are held, thereby doing away with the necessity of manually holding the same. There is a frame in front to which the pulleys are attached, which makes a cross-traverse, and carries with it the upper end of the front guide-rods—thus giving the plough an inclination to the right or to the left. This is a most important part of its mechanical arrangement, and displays considerable ingenuity. The frame is moved by a rack and pinion, the handle attached to which passes to the attendant in the rear, so that, as he follows the machine he has perfect command over the ploughs he may be employed. It is, on the whole, an exceedingly clever contrivance, and may be well adapted to ploughing by steam. Perhaps, in its present form it may not be quite what is required, yet it may nevertheless be the foundation of a very efficient and valuable machine. It is exhibited by Plenty, of Newbery.

Mr. Cro-kill, of Beverley, exhibited his Improved Reaper, Keeper, and M'Cormick's machine appears in model, with a new side delivery.

THE NEW WATER-WEED, *Anacharis Alsinastrum*, has been found growing in large masses at the mouth of some of the creeks, and other parts of the River Thames, above Bovency Lock. The mischievous plant was first observed by some of the Eton watermen last year, but no particular attention given it, until the engraving appeared in the ILLUSTRATED LONDON NEWS, when a specimen was gathered and forwarded to one of our leading British botanists, who speedily confirmed the suspicion that there were entertained respecting the troublesome stranger.—*Windsor and Eton Express.*

ADULTERATION OF FOOD AND DRUGS.—A meeting of medical and scientific gentlemen was held in Birmingham, on Monday, to take steps in aid of the resolutions of the recent conference on the serious and extensive adulteration of drugs and articles of food in general consumption. William Scholefield, Esq., M.P., occupied the chair, who briefly stated the progress made since the meeting of the conference, and announced that it was his intention to move, at an early period of the approaching session, for a Select Committee of the House of Commons to inquire into the practice of adulteration of articles of food and general consumption—including drugs—and the best means of preventing the evil.

THE PRICE OF AUSTRALIAN NEWSPAPERS.—The proprietors of the *Sydney Morning Herald*, the *Sydney Empire*, the *Melbourne Argus*, and other Australian newspapers, have increased the price of their respective journals from 3d. to 6d. per copy. The grounds put forth are their enhanced superiority as journals, and the consequently augmented cost of production. The new tariff came into operation in September last. The *Ballarat Times*, a very small paper, the *Mount Alexander Mail*, and others at the diggings, have for some time past been published at 1s.

MANCHESTER AND THE WAR.—The following memorial to the Mayor of Manchester is now in course of signature, and has already been signed by a number of the most influential Liberals of Manchester, supporters of Mr. Bright:—"To the Worshipful the Mayor of Manchester.—SIR,—We, the undersigned, having learned that the letter of Mr. John Bright, M.P. on the war, has been transmited and circulated in Russia, as embodying the sentiments of the people of Manchester, respectfully request that you will call a public meeting, in order to enable the citizens to declare that they do not concur in the opinions of Mr. Bright; but are fully convinced of the justice and necessity of the war, and earnestly hope that it will be carried on with the utmost vigour until the objects for which it was commenced are thoroughly effected."

THE ELECTRIC LIGHT AND THE WAR.—As the accounts from Sebastopol, both Russian and English, affirm that the damage inflicted on the defences of the town is, to a considerable extent, repaired under cover of night, it is suggested that the electric light is capable of sufficiently illuminating the works of the enemy at a far greater distance than exists between the two positions. By means of a simple lantern reflector and tube, a jet of light could be thrown on any spot of the enemy's works, keeping our own position in complete darkness, so that by the same means that the damage is done could its repair be prevented.

THE SERFS OF RUSSIA.—The Russian soldier's great-coat is grey, with certain facings; and with the exception of a small gilt strap on the shoulder, the officer's is precisely that of the private; indeed it is generally the case, going into action the generosity of unmounted officers put on the common great-coat, so that they may not be picked off. It is a very marked fact, that among the thousands of dead we find very few officers indeed. Perhaps the Emperor has laid down a stringent rule that, when possible, officers shall be carried off the field; or it may be the custom of the men, owing to the intense reverence that the serf has to rank, never to leave behind him the body of his leader. As to food, the Russian army has, in comparison with ours, a very rough commissariat: the bread is perfectly black, and when that runs short, resort is made to a bag of crumbled oil-cake, which is very nutritious, and therefore of the greatest possible value when troops have to march a long distance over uncultivated houseless steppes.

JONES'S £4 4s. SILVER LEVER WATCHES, and £10 10s. GOLD LEVERS, at the Manufactory, 3, Strand, opposite Drury-lane. Horses are warranted not to vary more than a minute per week. D'ALMAINE and CO., 20, Soho-square, London (Established 1750), respectfully intimate that, in addition to their ROYAL PIANOFORTES, 65 octaves, in rosewood and mahogany, with the improvements now Shown—more than one hundred exhibition of their ROYAL CONCERT PIANOFORTES with repeater actions, suited for equirements of the largest size, possessing the most brilliant and sustaining of the full scale, without the exaggerated and expensive; price 40 guineas. Every Instrument warranted. The peculiar advantages of these Pianofortes are best described in the following professional testimonial, signed by the majority of the leading Musicians of the day:—"We, the undersigned members of the musical profession, having carefully examined the Royal Pianofortes manufactured by D'Almaine and Co., have great pleasure in bearing testimony to their merits and capabilities. It appears to us impossible in pianofortes of the same size possessing more equality and finer tone, more elastic touch, or more equal temperament: while the unrivalled and most substantial manner of construction renders them for the library, boudoir, or drawing-room." (Signed) J. L. Abel, F. Benedict, J. B. Cramer, W. Dorrell, T. Harper, Geo. F. Harris, Percival, G. H. Dolby, E. F. Flavelliam, W. Forde, Stephen Glover, Henri Herz, E. Harrison, H. F. Hasse, J. Hart, Catherine Hayes, C. H. Jackson, Sir J. Benedict, Knyvett, E. Land, G. Lenne, Alexander Lee, A. Lefler, S. J. Loder, W. H. Montgomery, S. Nelson, G. A. Osborne, Henry Parry, H. Pascoe, Henry Phillips, G. Pressgrave, E. F. Rimbault, Frank Romer, G. H. Rodwell, E. Rodwell, Sims Reeves, J. Russell, Sainton, W. Shakspeare, C. Severn, Miss Stirling, &c. —D'Almaine and Co., 20, Soho-square. Lists and designs gratis.

THE GERMAN FAIR, Portland Bazaar, Regent-street, is NOW OPEN, from Ten Till Six, with the most magnificent display of TOYS, NOVELTIES, and CHRISTMAS TREES ever exhibited. Admission free. The musical arrangements under the direction of Mr. Bradley

NAYLOR'S PATENT POSTAGE-STAMP AFFIXER may now be obtained at all respectable Stationers in the London and Provincial districts, and is found very convenient to all engaged in correspondence. In addition to the most favourable notices of the London and Provincial Press, its simplicity, efficiency, and dispatch, are highly recommended by practical business men. Drawings, &c., may be had on application to the NAYLOR and CO., Patentees and Manufacturers, 16, Victoria-street, Birmingham.
TWO LICENSES of the above PATENT to be DISPOSED OF.

SHAKSPERE.—The admirers of the immortal Bard will be pleased to learn that W. H. KERR, BINNS, and Co. have published (under the direction of Mrs. Fletcher, of Boston, U.S.) a fine, the celebrated and curious JUG, proved to have been made by the Poet. An interesting Pamphlet given with each. It may be obtained of most respectable dealers, or at the Manufactory (late Chamberlain's), Royal Porcelain Works, Worcester. Price 7s. 6d. each; or, covered, 10s. 6d., by enclosing a Post-office Order.

GREEN PEAS at CHRISTMAS. This delicious Vegetable can be had during the Winter Season, fully equal to the

FRESH PICKED FROM THE GARDEN,

at 1s. per case (containing One pint each), at Robert Yeast's Oil, Italian, and Export Pickle Warehouse, 15 and 16, Pavement, Finsbury-square. Also, Yeast's Oil, the only unobjectionable substitute for Cayenne and Roses of Imperial French Plums in the metropolis.

R. Yeast begs to call the attention of the public generally to the invaluable articles of Preserved Provisions, Jams, Jellies, Marmalades, Pickles, Sauces, Soups, Beef-tea (all available at a moment's notice); put up in the most portable forms, warranted at the Italian and Export Stalls, and lowest prices, for the use of the

ARMY, NAVY, EMIGRANTS, AND MERCHANTS.

N.B.—The Prize Medal of the Great Exhibition of all Nations of 1851 was awarded to Robert Fields in the Class 30 for Farinas of all kinds.

Robert Fields, Sole Manufacturer, 15 and 16, Pavement, Finsbury-square.

SOAP and FAMILIES.—John Knight and Sons' Primrose Soap.—Robert Feast begs also to submit to the Public that he sells exclusively the celebrated Curled Soap, the merits of which is admitted to be superior to every other manufacture. Sold in bars at 4lbs. per owt. and in tablets at 1lbs. per owt. Cash on delivery.

ROBERT FEAST.

Oil, Italian, and Soap Warehouse, 15 and 16, Pavement, Finsbury-square.

DR. DE JONGH'S

LIGHT BROWN COD-LIVER OIL. Prepared for Medicinal Use in the Loffoden Isles, Norway, by the Inventor, DR. DE JONGH, Member of the Royal College of Physicians, London.

Prescribed by eminent Medical Men as the most effectual REMEDY for

CONSUMPTION, BRONCHITIS, ASTHMA, GOUT, RHEUMATISM, SCROFULA, GENERAL DEBILITY, RICKETS, INFANTILE WASTING, GENERAL DEBILITY, HOME DISEASES OF THE SKIN, AND ALL SCORBUTIC AFFECTIONS.

PURE AND UNADULTERATED.

The great difficulty of obtaining genuine and good Cod-liver Oil has long prevented a just appreciation of its acknowledged remedial virtues, and prescribed many valuable lives which from realising the benefits of this truly valuable Medicine.

Dr. De Jongh's Light Brown Cod liver Oil is of the best kind and finest quality, being extracted from the liver of the Dorse (Gadus Callarias) a species of Cod-fish caught at the Great Fishery of the Loffoden Isles, by a process avoiding a much greater proportion of iodine, phosphate of lime, volatile acid, the elements of the bile, and other essential principles, than the Pale Oils manufactured in England and Newfoundland, which, by their mode of preparation, are deprived in a great measure of their most active constituents.

The well-merited celebrity of Dr. De Jongh's Oil is attested by its extensive sale in France, Germany, Holland, Belgium, and Russia, by numerous spontaneous testimonials from eminent Members of the Faculty and Scientific Chemists of European reputation, and also from similar introduction into this country, by the nearest confidence, as well as great success, with which it has been prescribed by Medical Practitioners.

In many instances, where other kinds of Cod-liver Oil had been taken with little or no benefit, Dr. De Jongh's produced almost immediate relief, arrested disease, and restored health.

Sold wholesale and retail, in bottles, labelled with Dr. De Jongh's Stamp and Signature, by

ANSAR, HARFORD, and CO., 77, Strand, London.

Sole Consignees and Agents for the United Kingdom of the British Possessions, and may be obtained from respectable Chemists and Druggists in town and country, at the following prices:—

IMPERIAL MEASURE.—Half-pints, 2s. 6d.; Pints, 4s. 6d.; Quarts, 8s. 9d.; Four Half-pint Bottles forwarded, Carriage Paid, to any part of England, on receipt of a remittance of Ten Shillings.

FOG, COLD, and NIGHT AIR.—COOK and WILLIAMS' RESPIRATORY ORGAN and CHEST PROTECTORS.—"Cheap, elegant, and effective."—Lancet, Nov. 30, 1850. "The best thing of the kind we are acquainted with."—Medical Institute, March, 15, 1851. To be had of the Patentees, 10, Princes-street, Hanover-square; and of the principal Chemists in the United Kingdom.

SYDNEY. THE AUSTRALIAN JOINT STOCK BANK.

Letters of Credit and Drafts, at thirty days' sight, are granted at par on this Bank by the London Agents, Messrs. BESWICK, KINNERSLEY, and Co., 4, Lombard-street. They also undertake to sell Drafts, or to negotiate approved Bills on the Australian Colonies at the current rate.

EDWARD N. SERGEL, Manager.

SCRIPTURE READERS to the SEAT of WAR—SOLDIERS' FRIEND and ARMY SCRIPTURE READING SOCIETY.

Patron—The Right Hon. the Lord R. GROSVENOR, M.P.
President—The Rev. Dr. MARSH.

Office, 15, Exeter-hall, Strand, London.

The Committee of this Society have now thirteen Scripture Readers engaged with the Army. Though the Divine blessing in much good has attended their labours but a large increase to their numbers is needed, and which is confidently hoped may shortly be effected.

The need for this kind of agency must be self-evident. It being physically impossible for the military chaplains to accomplish all the duty within the battle field, the pestilence, besides the ordinary casualties of a military life, will, necessarily ensue. The non-sectarian character of the Scripture Reader being to aid, not to interfere with, the clerical duties of the chaplain, is commended to the sympathy and liberal support of the Christian public.

The Committee have much pleasure in stating that it is their intention to appoint a Scripture Reader to the Russian prisoners of war now in England. They have already, by one of their agents, distributed a large number of tracts in the Russian language, and hope shortly to receive the appointment of an agent who will exclusively devote himself to the spiritual necessities of labour.

The Secretary desires to express their gratitude to the Lord for sending them to institute a mission to the wives and families of that year of the army now engaged on foreign service, and that this part of their work has met the Divine approval.

Thus endeavouring to sow the seed of truth beside all waters, the Committee would humbly and earnestly entreat of the Lord the continuance of his blessing, and with the greatest confidence ask the continuance of Christian liberality on behalf of their mission, that they may yet more abound in the work of the Lord.

The following sums of £10 and upwards are thankfully acknowledged:—

Contributions will be thankfully received by the Treasurer, G. Burges, Esq., 17, Portman-road, Paddington-green; by the Hon. Secretary, Mr. William J. Blake, at the Office, 15, Exeter-hall; by Rev. Dr. Marsh, Bookseller; by Messrs. Nisbett, Berners-street, Oxford-street; Lent Bookseller, 37, Gloucester-place, Camden-town; by the Bankers, Royal British Bank, 439, Strand; and at the Offices of the Record and Christian Times.

HALF-DOZEN HAMPERS.—FINDLATER, MACKIE, and Co., Wine and Spirit Merchants (Agents for Guinness's Extra Stout), 1, Upper Wellington-street, Strand, make up Half-dozen Hampers for Twenty Shillings, bottles and hamper included, containing—

One bottle	Finest French Brandy.
One	Best Scotch or Irish Whisky.
One	Old Jamaica Rum.
One	Best and sweetest Gin.
One	Finest Old Port.
One	Sherry.

Delivered free within five miles of their Establishment.
Country orders to be accompanied by a remittance.

ROUSSILLON, 26s. per dozen; four dozen hampers for cash, carriage free.—FOSTER and INGLIS, Miter-court, Milk-street, Cheapside. Private evidences is restrained from matters of delicacy, which publicity in his wine "Roussillon," says, "About this time (1667) the French and English began mutually to repeal each other's industry by the like duties and prohibitions." Shortly after this date, Roussillon, and all other French wines, were absolutely excluded from the British consumption, by extravagant enactments. "The Methuen Treaty, in 1703, confirmed and perpetuated the system, and which was followed by establishing a differential duty of more than 100 per cent in favour of Portuguese wines. A better spirit pervaded our councils when Pitt came into duties on foreign wines, in 1786-7, at which period Roussillon, under another name, was introduced, and won favour and reputation. Messrs. Ireland and Co. imported it largely from 1786 to 1792, and said it as a wine that was esteemed one of our purest red wines. The first French Revolution intervened the moment, and the cessing war completely stopped it." James Busby, Esq., made an elaborate survey of the wine-growing districts of France and Spain in 1831, for the purpose of procuring cuttings of the choicest vines of those countries, and his published report thus describes the character of the cuttings obtained by him from the vineyards of Messrs. Calvet and Co., Caigan.—Caviness says of the grape, 'that it is rich in saccharine matter (although harsh in the taste), and very indulgences.' Grenache.—Cavilons adds of this grape, 'that it is rich in saccharine matter, and strongly impregnated with tannin.' Maser.—Cavelles observes, 'that this is the only vine of the province that yields annual and almost equal vintages.' Hermitage.—Hermitage was brought to Roussillon some years ago, by M. Durand, from the celebrated vineyards of Hermitage, on the banks of the Rhone. It yields little, but the flavour of its produce is excellent." "The best growths of a district were always on mountain lands, and to this day they retain their size."—Redding on Wines, p. 80. "I never remember having a fuller or more delicious wine."—Dr. Lardner on Chymistry, pp. 373-3. "Wine is surpassed by no product of nature or art."—Liebig's Letters on Chymistry, p. 454. Roussillon wine as a restorative, a means of refreshment when the powers of life are exhausted, and as a preventive of disease, is unrivalled. Brodie's Gazetteer, 1815, refers to its excellent qualities of Roussillon Wines—Article, Eastern Pyrenees. "The celebrated growths of Burgundy, Orleans, and Roussillon, which supply the canal consumption of Paris, were their immediate vicinity."—"Excellent."—Busby's Journal, p. 158. Roussillon Wines.—"Leur qualité augmente jusqu à l'âge de trente ans, et se conserve presque sans aucune diminution."—Topographie de tous les Vignobles connus; par A. Julien à Paris, 1816, p. 83. Inglis, in his "Travels in Norway," alludes to the Roussillon Wine imported there, and says, "I fancy wine growers would have saved me the disease to which I seated myself at Christiansand. The whole of the trade of the Metropolis of London could not have surmounted its equal in the London Tavern; and I believe I considerably increased my character in the eyes of the landlord by calling for a bottle of Port wine, of course a rarity there. When it was brought, he proved to be Roussillon, which, by-the-by, seemed the Port, and is far more wholesome." At public sale, 1835 6, by Samuel Lancaster, wine and spirit broker to the trade, Roussillon, old in bottle, was bought at 78s. per dozen, by one of the first wine merchants of the city, and the English representative of a Port wine grower, who will produce stands pre-eminent in our market; no price would induce the present possessor to part with it. In 1835 the wine committee at one of the largest west-end clubs purchased Roussillon wine, and in a few years, when it had partly developed its qualities, it was declared the finest red wine in their stock and is conformity with that opinion, and in accordance with the privileges of the members it was removed to several of their private cellars. Recapitulation.—I myself have some wine which I do not think there are any gentlemen would pronounce harsh, wine and spirit broker to the trade, Roussillon, old in bottle, was bought at 78s. per dozen, by one of the first wine merchants of the city, and the English representative of a Port wine grower, who will produce stands pre-eminent in our market; no price would induce the present possessor to part with it. No. 717.—VOL. XXV.] SATURDAY, DECEMBER 16, 1854. [WITH TWO SUPPLEMENTS, 1s.

THE WAR DEBATES.

THE Queen's Speech on the opening of Parliament, and the debates that ensued upon it in both Houses, will ring trumpet-toned throughout Europe. They are pitched in the right key, to invigorate our troops, to inspire our friends in every country with fresh courage, to strengthen the Governments that may still be wavering and to strike terror in the councils of the Czar. It has been long evident that the heart of the nation was in the great war which it has undertaken. The debates of Tuesday night will demonstrate to all the world that in this respect the British people and its Parliament are in unison. The same sympathy animates us all. The people and the Legislature, the Sovereign and the Government, are inspired by the same feeling of reliance upon the justice of our cause, and of confidence in the heroism of our fleets and armies.

The subject is twofold, and includes in the first place the policy;—in the second the conduct, of the war. On the first point there can scarcely be said to be a difference of opinion in the British Isles, unless we seek it among a clique of bigots and theorists, who consider war in a righteous cause to be a greater evil than the sacrifice of honour and the loss of independence. But, happily, such men are but units among millions—drops of dirty water in the great ocean of popular enthusiasm. As yet they have found no voice in the British Parliament, and will, it is to be hoped, exercise the smaller virtue of discreet silence, if they cannot raise themselves to the height of their countrymen, and participate in their patriotism. In Tuesday night's debate, men of all parties were unanimous in their support of the principle for which the nation is contending. The Earl of Derby and his political friends, from whom some opposition might not unreasonably have been expected, considering their antecedents, had not a syllable to say against the policy of the war. On the contrary, they were loud and even generous in its support. "In this war," said Lord Derby, "the whole nation, as one man, sympathises with the Crown and the Government. In the prosecution of this war the nation is pressing forward with a unanimity of feeling, and an abnegation of every selfish consideration, which is almost unparalleled in the history of our country." His Lordship was equally eloquent and emphatic in the tribute which he rendered to the bravery of the British and French armies:—"When, he exclaimed, "we read the history of this campaign—when we read it, not as politicians, but as men and as Englishmen, I say there cannot be a heart which does not throb with honest and generous pride that these much-enduring, all-daring, and all-achieving men, are our countrymen." "It is impossible," he added, "to conceive a more pleasing state of things than that France and England two nations which have, for many years, been accustomed to regard each other with feelings of enmity should now be rivals in glory and brothers in arms; having one common object, recognising the merit and bravery of each other, and cheerfully striving together in the teeth of victory." In the Lower House, Sir John Pakington and Mr. Disraeli were severally as emphatic, if not as eloquent, as the leader of their party. The hope expressed by the former, "that amongst every party in the House there would prevail a degree of cordiality and unanimity never exceeded in any popular assembly," was realised by the passing of the Address to her Majesty without a dissentient voice. "There was," said Mr. Disraeli, "no number of men, there was no amount of treasure, which the Government might not command. The money would be given freely by a free people, and the men would be animated by that immortal spirit which had already rendered their achievements a part of the classic recollection of human nature." "We had," he continued, "a prosperous people, a unanimous Parliament, a popular war, and the most powerful ally in the world." Such sentiments, even if they had been confined to the Ministerial side of the House, or been ratified by a mere majority of the Legislature, would have had a powerful influence in every country of Europe. But, coming as they did from the lips of men who are the party opponents of the Government, from men who would do it a mischief if they could, or dared, they have more than ordinary significance and value. British parties may be rancorous and strong upon all minor questions, but British patriotism becomes stronger than party when the honour or the safety of the nation is at stake. Despots like the Czar may enjoy the advantage of unity of will, but what is their unity of will compared with that which animates a great and a free people in a righteous cause? The will of a despot depends, in the last extremity, upon the acquiescence of his people. They may fail him in the hour of need, and though a people of slaves, they may sport with the life and the throne of a despot after the same rude fashion as the storms of the Euxine sported with the helpless fleets of Great Britain on the 14th of November last. Wrecks and misery mark the track of the tempest, and show the fury of the waves; and the heads of kings are sometimes thrown bleeding and lifeless upon the beach. But the will of a free people, convinced of the righteousness of its purpose, has no such mighty forces to subdue it. It stands immoveable when crowns and dynasties are shattered to the dust. Such, at this moment, is the will of the British nation; and wherever the records of this week's debates in its Parliament shall find their way, the fact will be patent to all who have understanding enough to measure it.

The same unanimity which approves the policy of the war is not to be expected to endorse all the measures by which it has been conducted. Neither do we think it is desirable that no ex-

OMER PACHA.—FROM A PHOTOGRAPH BY MR. ROBERTSON, OF CONSTANTINOPLE.—(SEE NEXT PAGE.)

ception should be taken to the acts of the Ministry in this respect. Ministers are liable to error like other people. It is wholesome that in every detail, and in every department of business, their conduct should be carefully and even jealously watched. Omissions apparently the most trivial may produce incalculable mischief; and errors which look slight when they are perpetrated may produce fatal results if they be not remedied in time. No one can go the length of saying that the Ministry is immaculate in this respect. It would do them no service to allege that they did all that ought to have been done, at the proper moment for doing it—or that they neglected nothing, forgot nothing, and mismanaged nothing. But enough has been said on all these points, both in and out of Parliament, to serve any useful purpose. The country is convinced that the Ministry, if it have failed at all, has not failed in good intention, in honesty of purpose, or in any great and essential object of the war; and the principal members of the Administration have fairly taken the sting out of party, as well as out of friendly reproach, by the frank admission of their errors and oversights.

Some of their errors were not peculiar to them, but were shared by the whole nation, and by all those portions of Europe which do not yet own the allegiance of Russia. They did not know the strength of Sebastopol, nor the resources of the Czar. Their ignorance was not very marvellous, when we think with what jealous care the Autocrat has prevented travellers from approaching his favourite fortress, or making themselves acquainted with its capabilities for aggression or for resistance. In such a case, to confess ignorance is to disarm criticism; and this is the course which the Government has adopted. As regards the delays with which they have been charged during the earlier stages of the conflict—especially by club and tap-room critics, and by factious grumblers, who think they prove their own capacity by denying all capacity to other people the Government have done wisely to remind their opponents of the magnitude of their task, of the unparalleled nature of the expedition against the Crimea, and of the necessity of a combination of movement with the forces of France. If France—essentially a military nation—could not despatch a greater number of men to the Crimea than those which were landed in the Bay of Kalamita on the 14th of September, it is surely not so wonderful, or so blameworthy, that Great Britain—which is not so thoroughly a military nation as its ally should not have sent as many regiments as paper generals—wise after the event—considered to be requisite. As to the minor charges, such as deficient hospital and medical arrangements, by which medicines were at Varna when they were required at Scutari, and by which lint at the moment of need was stowed away hundreds of miles from the hands of those who could have made it instrumental in the relief of human suffering, the Ministers could do no more than throw themselves upon the considerate forbearance of the country, and justify the appeal by showing that mistakes were no sooner pointed out than they were rectified; and that—whatever may have been the case in the past—all proper arrangements have been made for the present and the future. Political enmity is disarmed when present efficiency is proved in the same breath that admits past error. The country knows that the war has always been honestly, and that—at the present moment—it is zealously and ably, conducted. It will forgive faults of detail, for the sake of the great aggregate results which have been attained. France and England have been cordially united; Austria has been slowly, but surely, compelled to enter into the alliance; the moral no less than the physical supremacy of Great Britain has been asserted and vindicated; Russia has been humbled; her fleets have been reduced to inaction, or sunk by her own hands; her soil has been invaded, her prestige has been annihilated, her trade has been impeded and ruined; and the civilised world is banded in firm union against her power and her pretences. These are great results; and, with the blessing of Heaven, they will lead to yet greater. At all events, no domestic disunion will imperil such advantages, or make this country less effective in future war, or less skilful in future negotiations than she has already proved herself to be. Such, when party animosities shall have ceased to obscure contemporary vision, will be the meed of praise with which History will hereafter record the deeds of the present Administration in a crisis of unexampled peril and difficulty.

OMER PACHA IN THE CRIMEA.

After several months of unwilling inactivity, the Turkish Commander is likely to have an opportunity of showing what he can do once more. A telegraphic despatch from Bucharest, of the 8th inst., announces that the Turkish army will retrace its steps, and reoccupy the Dobrudja, while a force of 35,000 is to embark at Varna for the Crimea. Omer Pacha is said to have ordered this movement in consequence of a request from Lord Raglan and General Canrobert. Sadyk Pacha's corps, however, will be ordered to occupy the Dobrudja, and Turkish garrisons are to remain at Kalarasch and Giurgevo. Omer Pacha, who will personally command his troops in the Crimea, left Bucharest for Varna on the 11th, according to a despatch of that date, which adds that preparations were actively making at Varna for the embarkation of the remainder of the Turkish troops, a large number of them having already sailed. The remaining portion of the Turkish army will be disposed of in the Dobrudja and the fortified places on the Danube, the two most important points, Kalarasch and Giurgevo, being garrisoned by a full complement of men.

The sending the flower of the Turkish army to the Crimea, with the renowned Omer Pacha at its head, to reinforce our armies there, will make the Czar rather nervous. To make a rough calculation, the strength of the Allied armies by the end of this month will probably exceed 120,000 men, which force may be sufficient to accomplish the desired object. The whole of the French reinforcements will have been landed in the Crimea by the middle of next month, at the latest. The first step taken by the Allies, when they are in full force and well prepared, will no doubt be to detach a sufficient number of troops to drive the enemy from Bagtchesarai and cut off his communication with Sebastopol. This having been done, the storming will in all probability take place. It is said that the Russian army is very much distressed for want of provisions; and there must be some truth in this, for the precarious supplies upon which the Russian army depends can scarcely arrive in sufficient quantity, or regularly enough, to meet the demand.

The Portrait of Omer Pacha, engraved upon the preceding page, is from a Photograph taken by Mr Robertson, at Constantinople, and presented to her Grace the Duchess of Inverness—through whose courtesy we are enabled to present the accompanying Illustration to our readers. The portrait realises the most striking characteristics of the physiognomy of Omer Pacha described by our contemporaries. He wears a fez cap, which shows to advantage the clear, well-marked lines of his calm and resolute face, embrowned by exposure to wind and weather for many a year of a soldier's life, and the hue of which is well contrasted with his snow-white whiskers and beard. In the rude mouth, with compressed thick lips, is traceable enormous firmness and resolution. The chin, full and square, evinces the same qualities, which may also be discerned in the general form of the head. All the rougher features, the coarse nose, and the slight prominence of the cheek bones, are more than redeemed by the quick, penetrating, and expressive eye, full of quiet courage and genius, and by the calm though rather stubborn brow, marked by lines of thought, rising above the thick shaggy eyebrow.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

A significant symptom of the effect produced here by the adhesion of Austria, and the results expected therefrom, appears in the fact that the Court is emerging from its seclusion, and beginning to resume its usual routine of existence. A report went the rounds that their Majesties were to appear at the Opera last week; they did not do so, but a special representation was officially commanded at that theatre for yesterday—the piece chosen was the "Muette de Portici." On Sunday took place the first grand dinner at the Tuileries, to which were invited the members of the *corps diplomatique*. It is said that a regular series of evening receptions will take place on Sundays, through the rest of the season, for the Senate and Legislative Body.

The health of the Prince Napoleon is improved, and he expects shortly to resume the command of his division. He has sent to the troops a large supply of wine and tobacco.

We are happy to announce to-day an improvement in the health of M. Bineau that it is hoped he may ere long be able to return to the duties of his office.

The celebrated surgeon M. Jules Cloquet has offered to the Emperor his country house, situated on the borders of the sea, at Toulon, to receive the wounded sailors and soldiers of the Eastern service. The offer has been accepted by his Majesty, with many gratifying expressions for M. Cloquet.

A singular trait of modern manners is exemplified in the following fact. The son of the late M. Louis Perrée, formerly member of the Constituante, director of the *Siècle*, and a man of large fortune, and, that of M. Charles Lafitte, banker, and *député* under Louis Philippe have the same day been entered as apprentices in a mechanic's workshop, without any privileges or distinctions beyond those of their companions of the usual class.

On Monday began a sale of pictures which attracted an unusual number of amateurs; and, considering the times, many purchasers. This sale consisted of the collection of the Meklembourg—one well-known to connoisseurs, as containing a number of admirable specimens of the genius of Rembrandt, Ostade, Rubens, Wouvermans, Hobbema, &c.; besides some of the best productions of Decamps, Diaz, Troyon, Meissonier, Th. Rousseau, Jules Dupré, &c.

Public attention has been for some time on the stretch respecting a trial anno unced to begin on Monday. The accused, Mdlle. Doudat, being charged with the care and education of the five daughters of an English physician, one of the pupils die, it is alleged, by violence received at her hands. The father brought the affair to a trial, which, as we stated, was to commence on Monday; but, to the disappointment of an immense audience, English and French, it has been deferred, owing to the illness of the prisoner, till Friday (to-morrow).

Among the works in preparation for the Great Industrial Exhibition are 100 copies of the "Imitation de Jésus Christ," got up with a magnificence hitherto unexampled. The 100 copies will not, it is computed, cost less in the execution than 150,000 francs (£6000).

A report has been going the round of the theatrical world that M. Crosnier, whose appointment as director of the Grand Opera we but a short time since announced, was about to resign his functions. This rumour is, we believe we may confidently state, without foundation. M. Crosnier continues to give and receive the utmost satisfaction in his office, which he is likely long to fill. The principal theatrical success of the day is the "Ennemis de la Maison," at the Théâtre Français, by M. Camille Doucet. The piece itself possesses qualities which render the critics nearly unanimous in applause, and, even were it less meritorious, the fact of its being rendered by Regnier, Mdme. Allan, and Mdlle. Emilie Dubois, the first *ingénue* of the day, would cover a multitude of defects. A grand *féerie* at the Gaité, "Les Cinq Cents Diables," attracts a good many spectators; the decorations are very effective, the piece of about the usual force of this sort of representations. The Opéra Comique is preparing a work by MM. Lockray and Grisar, entitled "Le Chien du Jardinier." The same piece—of course, without the music—is, it is said, to be played at one of the principal theatres. The new play of Mdme. Emile de Girardin, "Le Chapeau de l'Horloger," at the Gymnase, is, however, the one which excites the greatest curiosity and interest, and for which the most brilliant success is anticipated.

AMERICA.

The steam-ship *Asia*, which left New York on the 28th ult., arrived at Liverpool on Sunday. Political affairs in the United States appear to be very quiet. Some anxiety was felt about the Message, which will probably arrive by next steamer. It is said that the President will strongly urge the necessity of enrolling three extra regiments of regular cavalry, and the building of six additional steam-frigates of the first class; not with hostile intent, but in order to meet the growing expansion of the settled frontiers of the Republic.

The war news from Europe is received with extraordinary avidity, and is made the subject of editorial remark in journals of every shade of party. Generally speaking, the leading papers express feelings friendly towards the Allies, but repudiate the idea that the war, *per se*, has any claim on the sympathies of the American people. An opinion—whether well or ill-founded time will show—has gained an extensive hold on the public mind, that the Anglo-French alliance will eventually interfere in the affairs of the western continent, and to this opinion much of the lukewarmness of feeling must be attributed. Mr. Bright's letter is reprinted in several papers, with favourable comments.

The Legislature of the State of South Carolina had assembled, and had received the Governor's annual Message. The Governor thinks that the laws relative to free persons of colour arriving at a southern seaport might be modified so as not to give offence.

In the Canadian Legislature, on the 25th November, the Feudal Tenure Abolition Bill was read for the third time in the Legislative Assembly.

The Nova Scotia Legislature has been summoned to meet on the 2nd December for the despatch of business. The session has been convened at this early day to take into consideration the Reciprocity Treaty, which must be acted upon before the 8th, if the province wishes to participate in the benefits to be derived from the treaty.

INDIA AND CHINA.

The *Calcutta* arrived at five a.m., in 108 hours from Alexandria, at Trieste, on Wednesday. The India and China mails left Alexandria on the 8th December, with advices from Calcutta 8th November, Madras 13th November, Shanghai 11th October, Amoy 22nd October, Hongkong 28th October, Canton 27th October, Bombay 14th November. Lord F. Fitzclarence, Commander-in-Chief at Bombay, is dead. An envoy from Bokan, and another from Dost Mohamed, had arrived in Peshawur to ask for assistance from the British Government against the Russians, the Afghan chiefs having decided on an English in preference to a Russo Persian alliance. Lord Elphinstone is at Bombay, suffering from the effect of a sun-stroke. The Governor-General was at Calcutta, but would leave for the Nilgherries in March. The insurgent cause was gaining ground in North China.

THE WAR IN THE CRIMEA.

The telegraphic accounts from the Crimea come as far down as the 7th inst., at which time there was said to be a great movement between the town and the north of the bay. The investment of the place by the French and English was nearly complete. The united strength of the Allies in the Crimea will soon be about 120,000 men, including the Turkish contingent. The most precise information relating to the condition of the Allies, up to the sailing of the *Thabor* steamer, which left Constantinople on the 30th, is contained in the following despatch from General Canrobert to the French Minister of War:—

Monsieur le Maréchal,—The weather is improving—a fact bearing closely upon our operations. A continual rain, and the bad state of the roads on the table lands where we are established, had considerably increased our difficulties in the conveyance of provisions and *matériel*. A little sunshine will soon remedy that evil, and we shall resume our labours with redoubled activity. The enemy on his side takes advantage of all these forced interruptions in order to increase his means of defence, as we are able to perceive. Hitherto he has done his best to intimidate us; and never before was there seen such a consumption of powder and ball. Our artillery officers calculate that they have fired off for the purposes, since our arrival before the walls of Sebastopol, 400,000 cannon-shots, and 1,200,000 kilogrammes of powder. From this some conception may be formed of the stores that have long been accumulating in the place. We nevertheless observe that their artillery has become more economical, and that the hollow projectiles in particular has much diminished. The number of our killed or wounded does not exceed 15 per day.

The army of Prince Menschikoff keeps on the defensive. It covers its positions with works defended by ship guns, and it seems a settled thing that, until fresh orders, it has given up all intentions of undertaking anything against us. In the meantime, our situation is improving in every respect. The reinforcements arrive, and the condition of our regiments of Zouaves, like that of all those originally from Africa, is especially satisfactory. Our commissariat supplies have assumed large proportions, and I find myself this very day enabled to distribute among the troops a daily ration of wine or brandy. This is a very important point, which will prevent much illness, and keep up our effective strength.

Winter garments are also arriving, and already the hood and the sheepskin paletot are common in our camps. The soldier will nobly and courageously support the trial of the bad season when he thus sees himself the object of special care, evidencing so much anxiety for his situation on the part of the Emperor and his Ministers.

The Turkish Government has promised me 6000 conical tents, which are in great request here, on account of their resisting better than our own the very violent winds of these countries.

I can assure you, Marshal, that the army is getting to be singularly inured, and you cannot imagine how our young folks, rapidly ripened by the greatness of the contest, are fast becoming old soldiers. It would have delighted you to see deployed lines remaining calm and immovable under a fire of artillery, which Lord Raglan declared to me was superior to what he had heard at Waterloo.

I give you these details because they cannot fail sensibly to interest you, and at the same time reassure you.

The new Division will find here elder ones that will set them a good example. I beg to accept, &c.

Admiral Hamelin writes, under the same date, that he was landing, for the use of General Canrobert, fifty-five heavy guns, chiefly taken from the *Henri IV.* They will be manned by the 500 marines who were disembarked with the seamen gunners, aided by thirty captains of guns. The naval brigade will then be serving no less than seventy guns directed against Sebastopol. The practice made by the seamen has gained them much respect throughout the Camp. A thousand French soldiers arrived in the Bay of Kamiesch on the 27th, and 2000 were every hour expected on the 28th.

The despatch of Vice-Admiral Dundas reports a service of much skill and gallantry which was executed in the Strait of Kertch by the *Tribune*, *Highflyer* and *Lynx*, under the orders of Captain the Hon. S. T. Carnegie, of the first-named ship. A large martello tower, commanding the road from Anapa to Kertch, was de-troyed on the 12th Nov. by the fire of the squadron and by a party which was landed to complete the work. It may be inferred from this fact that the Strait of Kertch is closely watched, and that every exertion is used to prevent reinforcements and supplies arriving in the Russian camp from Asia.

CAPTURE OF A RUSSIAN POST.

The capture of a Russian fort, as it was called in the telegraphic despatches, is described in recent letters from the Crimea. It appears that the Russian advanced posts in front of our left attack had taken up a position which incommoded our troops in the trenches, and which occasioned losses, whilst it also enabled the enemy to take in reverse the French troops working in their lines. On the night of the 20th ult., a detachment of the 1st Battalion Rifle Brigade, under Lieut. Tryon, was directed to dislodge the Russians. This service "was performed most gallantly and effectively," but at the cost of the life of the commanding officer, and of twenty-four men killed and wounded. The Russians attempted several times to re-establish themselves on the ground before daylight on the 21st, but they were repulsed. "This little exploit," adds Lord Raglan, "was so highly prized by General Canrobert, that he instantly published an "Ordre Général" announcing it to the French army; and combining, with a just tribute to the gallantry of the troops, the expression of his deep sympathy in the regret felt for the loss of every officer of so much distinction." Lord Raglan states, in his second despatch, that on the night of the 22nd and the following morning the Russians renewed their efforts to get possession of the ground from which they had been driven; but were repulsed in the most spirited manner by detachments of the 4th and 57th Regts.

THE BALTIC FLEET.

The *St. Jean d'Acre*, the *Princess Royal*, the *Cæsar*, and the *James Watt*, have arrived from the Baltic. Admiral Napier has sailed for England with the *Duke of Wellington*, the *Royal George*, *Nile*, *Hogue*, and *Exmouth*. They will be in Portsmouth in a few days. The only vessels now left in the Baltic are the *Edenburgh*, with the flag of Rear-Admiral Chads; the *Euryalus*, and the *Vulture*. These are at Elsinore, from whence they will probably soon depart for Leith.

The fears of a hostile visit from the ships of England and France entertained by the Governor of Riga were so great as to induce him to have large quantities of stones sunk in the channel to the harbour, so as to prevent the entrance of at least the ships-of-the-line. This has been executed with such success as entirely to impede the navigation. Several loaded merchant-vessels have endeavoured to leave the port, but they have been obliged to return.

A NEW DANISH MINISTRY.

Many of the electoral districts of the provinces which, since the establishment of the Constitution, have been accustomed to return the same members to the Second Chamber, have now elected members the most hostile to the Ministry. The feeling against the latter was such that in many districts the newly-elected deputies were carried in triumph through the streets and public places. M. Tutein, the deputy who proposed the impeachment of the Ministry a short time back, was made the object of a popular and general ovation. All the houses in the vicinity were illuminated in his honour. In consequence of these facts the Ministers tendered their resignation, which the King accepted.

A new Cabinet has been formed, which consists of the following members:—M. Von Scheel, from Pinneberger, Holstein, and *ad interim* for Foreign Affairs, in the absence of Count Plessen, Envoy at Stockholm; M. P. G. Bang, former Minister of the Interior, and *ad interim* for Ecclesiastical Affairs; Professor Hall, Minister for Public Worship; Colonel Andræ, Minister of Finance; Colonel Luttichau, War Department; Commander Michelsen, Marine; and M. Simony, formerly Minister of Public Instruction.

WHOLESOME RATIONS.—I can safely assert, from a good deal of actual knowledge on the subject, that a man can live on the rations of a private soldier day after day; and can, with the blessing of Heaven, maintain good condition and strong health upon them alone. Let any one who likes it get up at six o'clock every morning—earlier if need be; take his breakfast of soaked and tried biscuit, tea, and a slice of the fat ration pork; let him, after some hours of honest exercise, eat his dinner, composed of a good ration beef and soup, or of boiled pork and rice; then let him wash it down with his gill of ration rum; follow the meal (should he be a smoker) by a sound pipe of ration tobacco; eat a bit of ration biscuit, and drink a cup of ration tea or coffee, or he goes to bed at dark; and I am quite certain he will feel at the end of a week that he has lived, if not "mawt wely and too well," at least lealy and wholesomely as a gentleman should, and that he has consumed enough of nutritious food to develop his strength and fit him for any exertion of which his bodily frame may be capable. The Commissariat department of this army, in spite of miserable calamities, in spite of deficient transport, of bad roads, of sea delays, of winds and waves, have continued to feed the men wonderfully well; and I maintain, and ever will do so, that no body of troops ever took the field with such an abundance of supplies derived from distant countries, and that no army was ever so well fed when away from their own house, as the present British Expedition. That it may be so to the end is all a soldier can ask.—*Letter from Balaclava.*

IMPERIAL PARLIAMENT.

(Continued from page 615.)

HOUSE OF LORDS.—THURSDAY.

The Duke of RICHMOND, having presented a petition from Wakefield in favour of the vigorous prosecution of the war, paid a high compliment to the conduct of the officers and soldiers engaged, and to the conduct of the Commander-in-Chief. He recommended that medals should be struck immediately, in token of the high approbation with which the exertions of the army are regarded.

FOREIGN ENLISTMENT BILL.

The Duke of NEWCASTLE moved the second reading of the Bill for the Enlistment of Foreigners. He quoted the years of 1794, of 1804, and 1806 as precedents in support of the motion. It was highly desirable in the beginning of a war to have such a resource available, because of the limited number of our standing army. He assured the House that no communications on this subject had been made to any foreign Court, nor would her Majesty's Ministers do so until the bill on the table had received the sanction of both Houses of Parliament. It was proposed to limit the number of foreigners enlisted to 15,000, and they were to be placed in separate depôts in this country.

The Earl of ELLENBOROUGH rose to oppose the motion. He felt particular repugnance to that part of the bill which would sanction the admission of foreigners as a garrison into this country; and when he considered the nature of the bill lying at this moment on the table of the other House for the purpose of removing the Militia force lately embodied to the Mediterranean, that repugnance was still more increased. He believed that it was intended to substitute those 15,000 foreigners for our 15,000 Militiamen—a proceeding that would create great discontent in the country. There was nothing to justify any one in supposing that the people of this country were unable or unwilling to maintain their national interests by their own right arms. The cases quoted as precedents were altogether different to the situation of the country at the present time; inasmuch as during the last war the foreigners enlisted were, generally speaking, fighting for their own countries, which had been subjugated by France. He recommended the establishment of a uniform system of police throughout the country as the best foundation of our military system. He believed that the proposed bill was wholly unnecessary; that it would be most injurious and offensive to the people, who had shown a disposition to make every sacrifice to carry on the war; that the enlistment of such a force would lead to the most serious consequences in the general administration of the country; and that it was contrary to all constitutional principle.

The Duke of RICHMOND bore testimony to the gallantry and the valuable services rendered by the German Legion during the last war, and especially at Waterloo

The Earl of DERBY said that he could not oppose the second reading of the bill, inasmuch as he had given a pledge to that effect before he had ascertained the nature of the measure to be proposed. Having now ascertained the full character of the bill, he gave notice that he would oppose every clause of it in Committee.

The Earl of ABERDEEN urged the necessity of the measure, and vindicated the provisions of the bill.

The Earl of MALMESBURY opposed the bill.

After some further discussion, in which the Duke of Argyll, Earl Grey, and the Duke of Newcastle took part, the bill was read a third time without a division.

Her Majesty's most gracious reply to the Address of their Lordships on the Speech from the Throne was brought up, and ordered to be inserted on the journals.

HOUSE OF COMMONS.—THURSDAY.

The House met at four o'clock.

NEW MEMBER.

Major REID took the oaths and his seat for Abingdon, in the room of Lord Norreys, now the Earl of Abingdon.

Mr. HADFIELD asked whether it was the intention of the Government to introduce any bill this session for the abolition of the Ecclesiastical Courts?

Lord J. RUSSELL declined to answer the question, inasmuch as he thought it most inconvenient to put such questions at the present time. At the meeting of the House after the Christmas recess, the Government would be prepared to state the nature of the measures they intended to introduce in the present session of Parliament.

THE AUSTRIAN TREATY.

In reply to Mr. M. Milnes, Lord J. RUSSELL said, that a few days ago the necessary documents in connection with the treaty of Austria were sent off to Vienna for ratification by Austria. As soon as her Majesty's Government received information that those documents were ratified, they would at once lay a copy of the treaty upon the table of the House, without waiting for the return of those papers.

THE LOSS OF "THE PRINCE."

In reply to Mr. Hildyard, Sir J. GRAHAM said that he had received no official intelligence of the loss of the *Prince* at Balaclava; but he had reason to believe that the troops she carried were disembarked on the evening of the 8th November. They were, he believed, disembarked outside the harbour, by means of a small steamer. The right hon. Baronet made a statement in vindication of the efficiency of her commander, and of the security of her cables, which he supported by reading letters from the parties who had secured the cables, as well as from those by whom their strength had been tested.

Mr. M. GIBSON asked with whom the responsibility rested of directing the transports to anchor on such an exposed coast as that outside Balaclava?

Sir J. GRAHAM said that the responsibility rested with the senior naval officer commanding at Balaclava.

In reply to Mr. WILKINSON, Mr. CARDWELL said that the Government had a measure prepared on the subject of limited partnerships, which would be introduced after the recess.

Lord J. RUSSELL, in reply to Mr. Spooner, said that the Commissioners for Inquiring into the State of Education at Maynooth had not as yet made their report.

Sir J. YOUNG obtained leave to introduce a Bill to Consolidate and Simplify the Laws relating to Jurors and Juries in Ireland. At a subsequent part of the evening the right hon. Baronet brought in the bill, which was read a first time.

In reply to a question from Mr. Disraeli, Lord J. RUSSELL said that the Government intended to bring in only two bills before the House; and the Foreign Enlistment Bill, which was a measure to enable her Majesty to employ foreign troops. The noble Lord said he hoped they would be enabled to adjourn on Thursday next.

THE NEWSPAPER STAMP.

Mr. M. GIBSON asked whether the war journals, which deal in one subject only, were still to be exempt from the newspaper stamp? The journals who paid the stamp complained of this unfair competition to which they were exposed.

The CHANCELLOR of the EXCHEQUER admitted the anomalous state of the law upon the subject, and said that the Government would redeem the pledge they gave last session, by preparing a measure to settle this very difficult question. In the meantime they felt it their duty to enforce the existing law. The measure could not be conveniently discussed until after the recess, when he hoped that the Government would be able to introduce a measure that would satisfy even the right hon. gentleman that they had given every attention to the subject.

THE MILITIA BILL.

Lord PALMERSTON moved the second reading of the Militia Bill; which, after a few observations from Colonel Sibthorp and Lord Lovaine, was agreed to.

Upon the suggestion of Mr. DISRAELI, the Committee upon the Bill was fixed for Monday.

In reply to a question from Mr. Adderley, Sir G. GREY said that since the declaration of war with Russia the Government had received the most loyal and gratifying assurances from all our most important colonies. They made no distinct offer of men to serve in the war; but said that, if requisite, they would be ready to risk their lives in her Majesty's service.

After some desultory conversation the subject dropped.

BIRMINGHAM AND MIDLAND COUNTIES FAT CATTLE AND POULTRY EXHIBITION.

THE Birmingham Annual Exhibition was, by a judicious arrangement of the managing committee, fixed to take place on Tuesday last, the week following the Smithfield Club Cattle-show. For several years previously, either from want of concert, or some other cause, these two important exhibitions had been made to take place simultaneously, to the injury of both, and the great inconvenience of those who were desirous of seeing each.

It would, however, be an additional improvement if the Midland Counties Exhibition could be arranged so as to precede the Smithfield one; possibly the Smithfield Cattle Club will not concede this point. There can, however, be no doubt that the alteration suggested would greatly ben fit both exhibitions, and add to the convenience of the public and exhibitors generally.

The gross entries of stock were not quite so numerous as last year; but the lack of numbers was amply made up in quality; in fact, a more even and horned cattle had rarely been shown. By way of general remark, however, it may be observed that, notwithstanding the animals which obtained the gold medal in Class 1 possessed most of the points deliberated, and always looked for amongst Hereford cattle, we had to remark any decided pre-eminence in either of the animals over others shown at prior exhibitions; confining this remark, however, to Class 1 and 2.

In Class 8 (Hereford Cows) and Class 4 (Hereford Heifers) it was gratifying to remark the decided advance made in the symmetry and size of the animals exhibited. This is a very important and favourable circumstance; and it is pleasing to see so much attention paid to the development of the female animals—a point that, up to a recent period, has been much neglected amongst Hereford breeders. The first prize was awarded to a four years and ten months cow belonging to Mr. Stedman, near Ludlow; but we conceive that the one which obtained the second premium must, in her prime, have been the superior animal: the latter, taking her age (thirteen years and nine months) into consideration, was the finest specimen of female fat stock we ever saw, and must have proved to the owner a most valuable animal, as she is entered as having had two calves born alive. The Hereford Heifers (Class 4) were very superior animals. Amongst the Short-horns, that exhibited by Mr. Richard Stratton deservedly attracted much attention, being one of the finest animals of this kind ever exhibited. The other class of Short-horns, who had shown a disposition to make every sacrifice to carry on the war; that the enlistment of such a force would lead to the most serious consequences in the general administration of the country; and that it was contrary to all constitutional principle.

The Duke of RICHMOND bore testimony to the gallantry and the valuable services rendered by the German Legion during the last war, and especially at Waterloo

The Earl of DERBY said that he could not oppose the second reading of the bill, inasmuch as he had given a pledge to that effect before he had ascertained the nature of the measure to be proposed. Having now ascertained the full character of the bill, he gave notice that he would oppose every clause of it in Committee.

The Earl of ABERDEEN urged the necessity of the measure, and vindicated the provisions of the bill.

The Earl of MALMESBURY opposed the bill.

After some further discussion, in which the Duke of Argyll, Earl Grey, and the Duke of Newcastle took part, the bill was read a third time without a division.

Her Majesty's most gracious reply to the Address of their Lordships on the Speech from the Throne was brought up, and ordered to be inserted on the journals.

HOUSE OF COMMONS.—THURSDAY.

The House met at four o'clock.

NEW MEMBER.

Major REID took the oaths and his seat for Abingdon, in the room of Lord Norreys, now the Earl of Abingdon.

Mr. HADFIELD asked whether it was the intention of the Government to introduce any bill this session for the abolition of the Ecclesiastical Courts?

Lord J. RUSSELL declined to answer the question, inasmuch as he thought it most inconvenient to put such questions at the present time. At the meeting of the House after the Christmas recess, the Government would be prepared to state the nature of the measures they intended to introduce in the present session of Parliament.

THE AUSTRIAN TREATY.

In reply to Mr. M. Milnes, Lord J. RUSSELL said, that a few days ago the necessary documents in connection with the treaty of Austria were sent off to Vienna for ratification by Austria. As soon as her Majesty's Government received information that those documents were ratified, they would at once lay a copy of the treaty upon the table of the House, without waiting for the return of those papers.

THE LOSS OF "THE PRINCE."

In reply to Mr. Hildyard, Sir J. GRAHAM said that he had received no official intelligence of the loss of the *Prince* at Balaclava; but he had reason to believe that the troops she carried were disembarked on the evening of the 8th November. They were, he believed, disembarked outside the harbour, by means of a small steamer. The right hon. Baronet made a statement in vindication of the efficiency of her commander, and of the security of her cables, which he supported by reading letters from the parties who had secured the cables, as well as from those by whom their strength had been tested.

Mr. M. GIBSON asked with whom the responsibility rested of directing the transports to anchor on such an exposed coast as that outside Balaclava?

Sir J. GRAHAM said that the responsibility rested with the senior naval officer commanding at Balaclava.

In reply to Mr. WILKINSON, Mr. CARDWELL said that the Government had a measure prepared on the subject of limited partnerships, which would be introduced after the recess.

Lord J. RUSSELL, in reply to Mr. Spooner, said that the Commissioners for Inquiring into the State of Education at Maynooth had not as yet made their report.

Sir J. YOUNG obtained leave to introduce a Bill to Consolidate and Simplify the Laws relating to Jurors and Juries in Ireland. At a subsequent part of the evening the right hon. Baronet brought in the bill, which was read a first time.

In reply to a question from Mr. Disraeli, Lord J. RUSSELL said that the Government intended to bring in only two bills before adjourning for the recess—viz., the Militia Bill, already

"TRIAL OF THE PYX," AT THE OFFICE OF THE COMPTROLLER-GENERAL OF THE EXCHEQUER, WHITEHALL-YARD.

was called "a remedy," the derivation of which he (the Lord Chancellor) did not comprehend; and, therefore, could not explain. The difference allowed to the Master, however, was very minute. To one carat in the pound of gold the Master was restricted; if he kept within that it was held that he had performed his duty. He was not quite sure that he was right in this, but if he had made a mistake the Jury would be put right upon the point. He believed that, for the last century, upon the suggestion of a very eminent predecessor of his, Lord Talbot, it was agreed that the Jury should find, not only that the amount was within "the remedy," but that they should ascertain and declare how much. The Jury would now proceed, according to the terms of their oath, to examine the gold according to the standard; and he had no doubt they would discharge their duties conscientiously and with ability. He might add that he should be happy to receive their verdict in the Court of Chancery on the next morning, at a quarter-past ten o'clock.

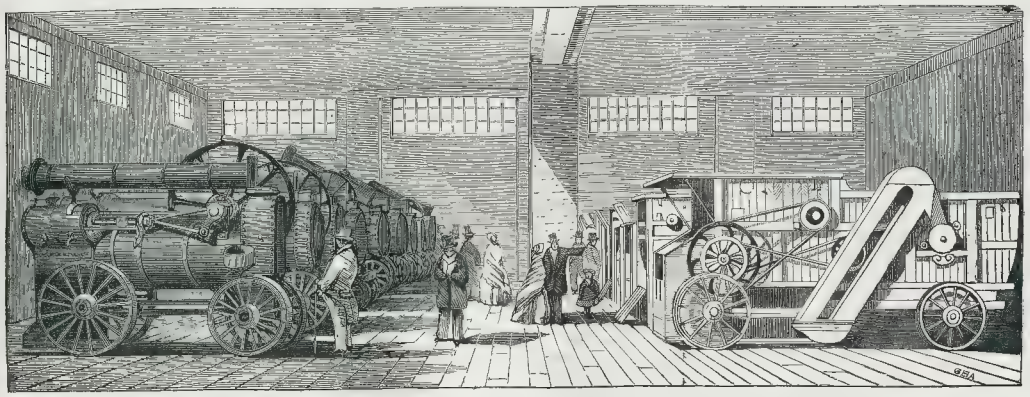
A piece of the standard was then clipped off, for the purpose of guiding the Jury; and the boxes were conveyed to Goldsmiths'-hall, whither the Jury proceeded; and the remainder of the day was occupied in the necessary examination.

The trial takes place in the principal apartment of the Exchequer Office, in Whitehall-yard. It is a handsome room, ornamented in the somewhat heavy style of the last century. The Lord Chancellor is seated in a carved chair, with the Privy Councillors at the board, or table; and the stage of the proceeding represented by our Artist is the Remembrancer administering the oath to the Jury.

THE STEAM-SHIP "EUROPA."

The large ocean paddle-wheel steamer *Europa*, one of the Cunard Company's British and North American mail-steamers, was taken up by Government, about the middle of last month, for the conveyance of troops to the Crimea. On Saturday morning, the 18th ult., a company of the Royal Artillery (150 rank and file, with five officers) embarked in the *Europa*, then lying in the Huskisson Dock, Liverpool; and in the afternoon a detachment of infantry from London arrived, and went on board the steamer, which sailed that evening for Dublin, where she arrived next morning before daybreak. At twelve o'clock the whole of the 90th Light Infantry left the Royal Barracks, Dublin, for the railway to Kingstown, preceded by two bands and followed by a dense mass of people, whose frequent cheers drowned the music of the bands. On the arrival of the troops at Kingstown Harbour, the *Europa* was hauled alongside the *Wolf* hulk, in waiting to receive them. A large assemblage of spectators was collected to witness their embarkation, and in a short time the whole of the 860 soldiers of the 90th Regiment were on board the transport, which sailed for the Crimea next morning. The Sketch represents the *Europa* steaming round the harbour after leaving the hulk.

"THE EUROPA" STEAM-SHIP LEAVING KINGSTOWN, WITH THE 90TH REGIMENT ON BOARD, FOR THE SEAT OF WAR



STEAM-ENGINES AND THRASHING-MACHINES, AT THE SMITHFIELD CLUB SHOW.

STEAM-ENGINES AND THRASHING-MACHINES, AT THE SMITHFIELD CLUB CATTLE SHOW.

In our Journal of last week we referred to this department as the most attractive novelty in the Exhibition of Agricultural Implements and Machinery at King-street Bazaar. This new display proved more forcibly than anything else the great progress that is making in the application of steam to agricultural purposes, and also the improved class of machinery that is being brought into use. The steam-engines (portable) and thrashing-machines were arranged in two rows—the thrashing-machine and engine of each manufacturer placed opposite to each other, as they would stand when at work, all of beautiful design and first-class workmanship. The effect produced on the spectator, as he walked between, was singularly striking. Thrashing-machines are being made larger, more elaborate in their details, and necessarily more expensive, at every succeeding exhibition of them that takes place; they are no longer the noisy, rudely-constructed contrivances of times past, but are now truly fine machines, capable of executing an immense amount of work in a short time. They are mostly capable of thrashing a bushel of wheat per minute—shaking the straw, separating the chaff, and so effectually cleaning the wheat, that, after being afterwards once run through a dressing machine, it is ready for market. Some improvements have recently been introduced, such as the side-blast, that have much improved the machine; yet it is remarkable that, with all the improvements that have been made in this machine, and the great amount of skill brought to bear upon it, the original principles of Andrew Meikle are still adhered to, and constitute its leading feature.

Another novelty in this department was the *Patent Spring-shaft Safety Car*, which, from its lightness, commodiousness, and strength, and, as we hear, its cheapness, bids fair to supersede the whole tribe of dog-carts, chaise-carts, bread-carts, &c. Nor is it likely to be the substitute of the two-wheeled vehicle only. It will prove a valuable substitute to families in the country whose incomes or desires are limited to the one-horsed chaise or the four wheeled phaeton; seeing that this carriage, seated for carrying five or seven persons, takes them, without inconvenience to themselves, and with greater ease to the horse than he would drag four persons on two axles with smaller wheels. While lighter of draught, and more commodious than any car-wheeled chaise, it is even nearer to the ground than the lowest of these; a circumstance which will doubtless commend its use to ladies, who can enter it without even the ordinary auxiliary of a step. The carriage can be got up in various shapes, of greater or less elegance of form; as a very elegant park chair, or country-road, or sea-side carriage, for ladies and children; in the latter, in the form of a comfortable headed sociable, under whose canopy the servants are, as well as the family, protected from the weather.

Our Illustration is a portrait of one of these useful carriages, which was, not long since, at the desire of his Grace the Minister of War, inspected by a committee of officers at Woolwich, and of which, we believe, some specimens are in course of construction, at present, at the Arsenal.

It is in its supposed military capacity that our draughtsman has made a soldier its driver. But though, doubtless, of great service in any country, the seat of war, where carts are seldom to be had, and none that can be relied on to carry great weights—rendering it necessary for Government to provide ample cart conveyance for its armies, still it is rather in being a cart for general use, that its great value consists; seeing that, besides meeting the wants of the gentleman, the sportsman, and the farmer it has already commended itself to the emigrant and the colonist as well as to the tradesmen of London for their uses. The Patentees state that the peculiar construction of this Car enables the horse in working to develop his powers to the fullest extent; whilst that of the springs (which admit of regulation) enables them to sustain almost any weight that can be placed upon them. This construction causes them, when duly adjusted, to spring equally with the greatest weight that the carriage can be expected to bear, and that of one person. The power of regulating the springs also enables the driver to adapt the power of either spring to the due sustaining of the weight to be carried; so that although the load on one side of the Car may be, for example, a full cask, and on the other an empty one, the proper horizontality of the floor will be preserved.

PATENT MILITARY FORAGING-CART.

REIGATE NATIONAL SCHOOLS.

This institution has recently been added to the many educational establishments which attest alike the charity of the opulent and well-to-do classes of the county of Surrey, and their anxiety to improve the intellectual condition of their poorer neighbours.

These Schools were dedicated to the great purposes for which they were erected, by the Lord Bishop of Winchester, on the 17th ult., when nearly 300 children were admitted. The buildings consist of two residences for teachers; three school-rooms for boys, girls, and infants—which will accommodate, in all, 446 children; there are also two class-rooms, hat and cloak-rooms, &c. The school-houses are in the Late English Domestic style; the walls are built of Nutfield stone; and the school-rooms are lined internally with unplastered

REIGATE NEW NATIONAL SCHOOLS.

bricks, coloured; and the roofs are open-timbered. The several buildings are covered with ornamental tiles, the tint of which harmonises with that of the stone. The fittings of the schools are in accordance with the suggestions of the Committee of Council for Education, by whom a considerable grant in aid of the building fund was promised. Mr. Henry Clutton, architect, of Whitehall-place, furnished the designs; and Mr. Carruthers, of Reigate, has executed the building in the most satisfactory manner.

The School's are situated at a short distance from the Police-station, upon an elevated site; and have a very picturesque effect in combination with the neighbouring buildings and the charming landscape for which Reigate is so much admired. The cost is stated at £2750.

CALENDAR FOR THE WEEK.

SUNDAY, Dec. 17.—3rd Sunday in Advent.
MONDAY, 18.—Oxford Term ends. Bolivar died, 1830.
TUESDAY, 19.—Dr. Darwin died, 1723 Tycho Brahe born, 1586.
WEDNESDAY, 20.—Ember Week. Gray born, 1716.
THURSDAY, 21.—Shortest Day. St. Thomas.
FRIDAY, 22.—Holcroft born, 1744.
SATURDAY, 23.—Abdication of James II., 1688. Antwerp surrend., 1832.

GRAND ANNUAL NUMBER
OF THE
ILLUSTRATED LONDON NEWS,
FOR CHRISTMAS, 1854.

Our usual Anniversary Extra Number for Christmas will be published on SATURDAY next, DECEMBER 23, 1854, containing the following

SPLENDID ENGRAVINGS:

"How the Christmas Pudding was made." In Ten Pictures. (Whole page Engraving).
Bring Home the Yule Log. The Christmas Dole. Drawn by DODGSON.
Cutting the Ashen Faggot in Devonshire. Christmas Trees in Covent-garden Market. The Mistletoe Sellers. Drawn by FOSTER.
Christmas Eve in Brittany. The Star in the East.
The Christmas Guest—Jacob's Dream. By REMBRANDT.
Charles the Second Knighting the Sir-Loin of Beef (whole page) Drawn by GILBERT.
"Very Fond of it." Drawn by JOHN LEECH.
The Christmas-Tree in the Cry-tal Palace (whole page).
A Child's Dream of Twelfth-Night. Drawn by CHARLES KEENE.
The Weetminst r Play.
And other characteristic Engravings.
With Tales and Sketches by Shirley Brooks, Angus Reach, Cuthbert Bede, J. Stirling Coyne, &c.
Acting Charades, Private Theatricals, &c.

Also, the Number of
Illustrations of the News of the Week, Foreign and Domestic.
Price of the Double Number, One Shilling. With Supplement gratis.

TO CORRESPONDENTS.

A QUAKER.—We are glad to learn, from a somewhat pugnacious letter which we have received under this signature; that the Quakers as a body do not recognise the *Herald of Peace* as their organ; that they do not collectively refuse their subscriptions to the Patriotic Fund; that they for the most part "look on the Czar as a monster of wickedness, duplicity, and blasphemy;" that Mr. Sturge's Quixotic mission to St. Petersburg was not authorised by the Society of Friends, who almost unanimously condemned it; and that "many Quakers have already contributed largely to the fund for the relief of the widows and orphans of the slain." So far we are happy to render justice to the Quakers, even upon the anonymous authority of our correspondent. But we must decline to publish his letter, or to enter into a theological controversy with him, or any other person, upon the alleged sinfulness of defensive war, or the moral duty of "peace-at-all-price." Upon these points the Quakers are fortunately in a minority—where we are quite content to leave them.

As regards the *Herald of Peace* and the Patriotic Fund, another Correspondent, who signs himself "A Quaker Fairlie," says:—"Allow me to enter my protest against the uncalled-for 'deci-sion' of the *Herald of Peace* quoted in your Journal. God forbid that I should leave anything undone to lessen the horrors of war! We do not oppose war because it is *horrid*, but because it is *wrong*. Do we sanction the system by alleviating the suffering it occasions? Do we sanction slavery by promoting the education of the slave? Did Howard sanction crime by lessening the horrors of the prison? And shall the Friends of Peace absent themselves from the meetings in aid of the Patriotic Fund because the spirit of these meetings is martial? Let them rather embrace the opportunity thus afforded of testifying at once their benevolence and their Peace principles. Let them *head* the subscription list in aid of the widow and fatherless, and they will then be in a position to denounce the system by which such suffering is caused."

THE STORM AT BALACLAVA. We have specially to thank several Correspondents in the Crimea for Sketches of the Wrecks at Balaclava, received subsequently to the Views which we this day engrave.

*** In consequence of the Sale of the ILLUSTRATED LONDON NEWS now reaching One Hundred and Fifty Thousand copies per Week, the Price of Advertisements will be advanced to 2s. per line, on and after January 6, 1855.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 16, 1854.

IT there had been no business to be transacted by Parliament in the few days between its assembling and its adjournment, its meeting would not have been without value. The expression of its unanimous approval of the policy of the war is a service more than sufficient to justify and to adorn the short preliminary Session. Yet Parliament has business before it of high importance, which happily can be performed with a unanimity as gratifying to the country, and as suggestive of the power of a free people, as that which marked the debate on the Address. As the Chancellor of the Exchequer is not in immediate want of money, and meditates no loan, the only business that our legislators will be called upon to undertake, before returning to their homes for the Christmas holidays, will be to pass an Act for legalising the service of militia regiments out of the kingdom; and to record a hearty vote of thanks to the Army in the Crimea. The first measure was introduced to the House of Commons on Wednesday afternoon by Lord Palmerston; and the second was announced to be brought before both Houses on Friday. The Militia Bill will excite no opposition in Parliament, and, when its provisions are thoroughly known throughout the country, it will be received by those most interested, with as much satisfaction as by its friends in the House

The Militia regiments are not to be sent to reinforce our heroes in the Crimea. Lord Raglan and General Canrobert are in want of tried and trained soldiers, and not of recruits, however valiant and spirited they may be; and the Militia will be employed in garrison duty in Gibraltar, Corfu, and Malta. By this means all the regiments now serving in those stations will be rendered available in the Crimea. Powers will also be taken to employ the Militia in our North American Colonies, should it be found desirable to do so—a contingency, however, which is not likely to arise. In the present temper of the nation, the Government has, we think, acted wisely in relying upon the voluntary services and the enthusiasm of the Militia, instead of rendering it compulsory for them to serve abroad. No Militia soldier will be forced to expatriate himself against his will; and, if he goes to the Mediterranean in the service of his country, he will go as a free agent. There is no fear of any backwardness or hesitation. All the men that are required will be forthcoming; and neither candidates for the Regular Army, nor for the Militia, will be deterred from offering their services to their country by the arduous nature of the struggle in which it is engaged, nor by the privations and hardships which it may be their lot to encounter. On the contrary, the greater the need and the greater the peril of the service, the greater becomes the readiness—or, we might say, the eagerness—of the people to offer their strong right arms and their gallant hearts for the defence of the national cause. Unlike the conscript soldiers of the Czar—driven to the battle-field or to the parade by the knout, maddened to the encounter by copious doses of raki, and by the incentives of fanaticism and superstition—the soldiers of Great Britain, whether in the Line or in the Militia, need no incentives but those of duty and the love of distinction, to arm them in the service of their country. A fact stated by the Duke of Newcastle in the debate on Tuesday night shows of what "stuff" our countrymen are made, and how immeasurably superior they are, and must necessarily be, to those knout-driven legions of the Czar, who murder the wounded, fire upon men engaged in the pious duty of burying the dead, and barbarously mutilate and insult the bodies of the slain. "It has been practically found," said the War Minister, "and is now most especially evident, that men in this country are more anxious to enlist when success has been somewhat retarded, and when increased energy appears to be necessary, than when everything is proceeding with the prospect of an early and successful issue. At the first declaration of war recruits came forward freely. They soon relaxed, and during the summer months they were so much fewer in number as to cause considerable anxiety to the Government. But as soon as it became evident that the siege of Sebastopol was likely to be protracted—that the undertaking was one of greater magnitude and difficulty than had been believed—from that moment, when the zeal and energy of the people were aroused, the young men of the country came forward in greater numbers, and week by week the number has been progressing. In the last week we have considerably doubled the number offering in any one week at the commencement of the war, and increased six or seven-fold the power of recruiting which was manifested five or six weeks ago."

The Czar will find his advantage in pondering upon this fact—and will have another instance, in addition to those afforded at Alma and at Inkerman, of the indomitable energy and noble spirit which animate the men of this kingdom. We have no unwilling soldiers in our Army; and even Ireland—which for many a long and unhappy year was a source of weakness on which our enemies were sure to taunt us—has proved in the hour of need, as it often proved in previous wars, a source of pride and of strength. We have no disaffected Poland or Hungary in our dominions; and the heart of Ireland is as sound as that of any other portion of our empire, and throbs with the same generous emotion, and the same determination to conquer the Russians, as the great heart of England and Scotland. In connection with the state of the Army, and far better than a vote of thanks—highly prized as that may be, both by the officers and the men—we are glad to see that the Government has recognised the merit and the services of the non-commissioned officers and privates of the Crimea in a manner the most appropriate, and, to brave men, the most welcome. By a notification in the *London Gazette* dated on the day of the opening of Parliament, one sergeant of each regiment of Cavalry, of the Guards, and of the Line, serving in the Crimea, is to be promoted to a Cornetcy or Ensigncy—their commissions to bear date from the day of Inkerman. In addition to this promotion—a departure from old routine which will be hailed with satisfaction in every town, village, and hamlet in the land—a warrant of the 4th of June, 1853, set aside a sum of £2000 per annum, to be increased by annual progression, at the rate of £250, to £4000 per annum, to be appropriated to good-service pensions to sergeants of the Army. This sum is to be at once raised to £4000—not more than which is to be granted in any one year. Furthermore—and to mark still more emphatically the gratitude of the nation—one sergeant, two corporals, and four privates of each cavalry regiment, of each battalion of the Foot Guards, and of the Rifle Brigade, are to receive a medal and a gratuity; that of the sergeants being £15, that of the corporals £10, and that of the private soldiers £5. But the great thing is the promotion. Every common soldier has long been taught that he may aspire to be a sergeant; but hitherto the sergeants could not aspire to be anything more. That system has been broken into; and, while the war lasts, every sergeant may aspire to be a general. This is the right course to make brave men still braver—to elevate each man in his own estimation, and in that of his fellows, and to raise for England's need a limitless supply of unconquerable soldiers.

We understand that the Commander-in-Chief in the Crimea has deemed it necessary to remonstrate with the Correspondents of two of our daily contemporaries in Sebastopol, for sending information to London of a nature to be of service to the Russians. The Duke of Wellington felt similarly annoyed when in the Peninsula; and as will be seen from the following extract of a letter to the Earl of Liverpool:—

BADAJOZ, NOV. 21, 1809.

My Lord,—I beg to call your Lordship's attention to the frequent paragraphs in the English newspapers describing the position, the numbers, the object, and the means of attaining them possessed by the armies in Spain and Portugal. In some instances the English newspapers have accurately stated, not only the regiments occupying a position, but the number of men fit for duty of which each regiment was composed; and this intelligence must have reached the enemy at the same time that it did me, at a moment at which it was most important that he should not receive it. The newspapers have recently published an account of the defensive positions occupied by the different English and Portuguese corps, which certainly conveyed to the enemy the first knowledge he had of them, and I enclose a paragraph recently published describing the line of operation I should follow in case of the occurrence of a certain event, the preparations I had made for that operation, and where I had formed my magazines. It is not necessary to inquire in what manner the newspapers acquire this species of information; but, if the editors really feel an anxiety for the success of the military operations in the Peninsula, they will refrain from giving the information to the public, as they must know that their papers are read by the enemy, and that the information which they are desirous of conveying to their English readers is misunderstood by the public, exactly in proportion as it is well-founded and correct. Your Lordship will be the best judge whether any other measures ought to be adopted to prevent the publication of this description of intelligence. I can only assure you that it will increase materially the difficulty of all operations in this country.

Every rational person must sympathise with men in such positions. The honour of England and the safety of the army are at this moment entrusted to Lord Raglan. If he finds information in the newspapers of which he believes the publication to be prejudicial, it is scarcely to be wondered at if he deems newspapers to be nuisances. On the other hand, the people at home, whose hearts are in the war, and whose best and bravest sons are serving in the Crimea, are naturally anxious for more copious information than Lord Raglan's despatches can afford them. In short, the newspaper and its ample details are absolutely necessary. The publication of letters from the Camp not only keeps up enthusiasm, and helps to create the valour which it extols, but administers in countless modes to the strength of the army and to the confidence and courage of the nation. It may be asked if there is no medium by which the duties performed by newspaper correspondents might be made in every respect compatible with the duties of the Generals in command? In other words, might not the Generals treat the newspaper correspondents as friends, and, by communicating to them what was desirable to be known, inform them at the same time of such facts as they thought it for the interest of the service should not be published? We are certain that if confidence to this extent were placed in those gentlemen it would not be abused; and that they have no desire but to aid the common cause, and to share the patriotism as they already do the dangers of the campaign. If they have erred at any time, it has been in ignorance; and it is competent to the military authorities, by conference with them, to set them right. and to prevent the publication of a syllable that might in the least degree endanger the success of our arms. But, while we are upon the subject, we must express our conviction that the persons who are to blame, if any, are not newspaper correspondents in the Crimea, but newspaper editors in London, who not only exercise no supervision over the necessarily hasty letters which they receive, but who go out of their way to publish falsehoods of their own invention, and who serve the cause of the enemy by discouraging the people. When an influential journal tells the world that this great empire is "tottering on the pinnacle of its greatness"—that it has undertaken a task "beyond the limit of its power"—that the Russian Commander in the Crimea is receiving reinforcements "at the rate of 30,000 a day"—that Austria has forbidden the march of Omer Pacha, and has virtually joined the cause of the Czar—when it exaggerates every loss and every calamity that befalls our army, whether it arises from the sword of the enemy or the conflict of the elements—when it asserts that the war will make bread dear, and press with fearful severity upon the lower classes, who fancy themselves almost exempt from its infliction because they do not pay an Income or a Property tax towards it—more mischief is done to England, more encouragement afforded to Russia, and more discredit thrown upon the newspaper press, than ever arose from the publication of any *bonâ fide* letters from the seat of war. When it is considered that the Emperor of Russia has agents in this country, who can transmit to him by Electric Telegraph in a few hours all the statements of the daily press of London, or any other information which they may conceive to be useful to him, the enormity of the mischief that may be occasioned must be clear to the slowest-minded reader. And this leads us to suggest a remedy which the Government has it in its power to adopt. If it cannot interfere with unpatriotic or traitorous newspapers, it can prevent the Electric Telegraph from disseminating their poison. It can forbid the transmission of such news, either openly or under cipher, and can prevent all electrical communication with foreign countries, by means of cipher, unless it be directed to our own Ambassadors, or the Ministers of our Allies. Such a course as this would diminish the evil; and the public in due time would learn to do justice to the craven-hearted or false newspapers which wilfully or ignorantly played into the hands of the enemy.

THE COURT.

The Queen, Prince Albert, and suite, left Windsor Castle at a quarter before twelve o'clock on Monday, for Buckingham Palace, where they arrived at a quarter before one o'clock. At three o'clock her Majesty held a Court and Privy Council, at which the Queen's Speech on opening the Session of Parliament was arranged and agreed upon. The Hon. Sir William Temple, K.C.B., was presented to the Queen at an audience, by the Earl of Clarendon, Secretary of State for Foreign Affairs. Sir William took leave of the Queen, on returning to his post at the Court of Naples, as her Majesty's Envoy Extraordinary and Minister Plenipotentiary.

On Tuesday the Queen went in state to the House of Lords to open the session of Parliament with a Speech from the Throne. The Royal procession left Buckingham Palace at ten minutes before two o'clock, returned to the Palace at three o'clock, and at half-past five o'clock left town on their return to Windsor.

On Wednesday Earl Spencer, Lord Steward of the Household, arrived at the Castle, and had an audience of her Majesty, to present the Address from the House of Lords in answer to the Speech from the Throne. The Earl Granville and Lord Churchill arrived on a visit to her Majesty.

The Hon. Flora Macdonald and the Hon. Caroline Cavendish have succeeded the Hon. Lucy M. Kerr and the Hon. Mary Bulteel as Maids of Honour in Waiting.

Her Royal Highness the Duchess of Gloucester was honoured with a visit at Gloucester House on Monday, by her Majesty. The Prince Consort visited her Royal Highness on Tuesday.

His Serene Highness Prince Ernest of Leiningen has left Windsor Castle for Germany.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Hon. and Rev. J. T. Pelham to St. Marylebone; Rev. F. R. Trail to Stanway, near Winchcombe, Gloucestershire; Hon. and Rev. W. W. E. Talbot to Bishop's Hatfield, with Totteridge Chapelry annexed; Rev. H. Harding to Stapleton, near Shrewsbury; Rev. G. A. S. Powell to Sutton Veney, near Warminster. *Vicarages:* The Rev. B. Edmunds to St. Edmund's, Southampton; Rev. G. S. Drew to Pullox hill, Bedfordshire; Rev. J. Mould to Tamworth, Staffordshire; Rev. J. Baverstock to Bream, in the Forest of Dean; Rev. W. J. Fardinon to Irchester, Northamptonshire. *Incumbency:* The Rev. E. H. Poole to St. Thomas's, Leeds.

THE REV. Charles Augustus Thurlow, M.A., Prebendary of York, and Rector of Malpas, Cheshire, Honorary Canon of Chester, and Rural Dean, has been appointed to the Chancellorship of the diocese of Chester.

THE REV. Theodore Preston, M.A., Fellow of Trinity College, has been appointed Lord Almoner's Professor of Arabic in the University of Cambridge, rendered vacant by the resignation of the Venerable Archdeacon Robinson, D.D.

„ 14	29 965	54·8	45 6	51·0	+ 11 0	91	W.	0.01

Note.—The sign — denotes below the average, and the sign + above the average.

The reading of the barometer decreased from 29.85 inches at the beginning of the week, to 29.42 inches by the 9th; increased to 30.03 inches by the 11th, and decreased to 29.94 inches by the afternoon of the 12th; increased to 30.10 inches by the 13th, and decreased to 29 inches by the afternoon; increased to 30.20 inches by the 13th, and decreased to 29.93 inches by the end of the week. The mean for the week, at the height of 82 feet above the sea, was 29.853 inches.

The mean temperature of the week was 39·7°; being 1·5° *below* the average of the same week during thirty-eight years.

The range of temperature during the week was 30·3°, being the difference between the lowest reading of the thermometer 24·0° on the 11th, and the highest, 54·3° on the 14th.

The mean daily range of temperature during the week was 16·1°. The greatest was 21° on the 8th, and the least was 9·3° on the 14th.

Rain fell during the week to the depth of two-tenths of an inch.

The weather from the 10th to the 13th inclusive was fine, and the sky almost cloudless; during the rest of the week the sky was cloudy and the weather dull and showery. There was a great range of temperature from the 11th to the 14th.

Lewisham, December 1, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday the births of 1646 children were registered within the metropolitan districts: of these 777 were boys, and 769 were girls, exceeding their averages of the nine corresponding weeks of the nine preceding years by 30 and 32 respectively. The number of deaths there was 1324, showing still a high rate of mortality. The average of the nine corresponding weeks of the nine preceding years, omitting 1847, when influenza was prevalent, corrected for increase of population, is 1272. Nearly half the number of deaths, 656, have occurred to children under fifteen years of age—scarlatina having carried off 98; measles, 40; hooping-cough, 52; convulsions, 30; bronchitis, 46; and pneumonia, 102, all more or less affected by the recent low temperature. Smallpox is making progress, and was fatal in the week to 19 children and 11 adults. To diseases of the heart, &c., 60 deaths are referred. To diseases of the lungs, &c., 303: and to violence, privation, cold, and intemperance, 35 deaths are attributed.

THE BOROUGH OF MARYLEBONE ELECTION.—The nomination of candidates to represent the borough of Marylebone, in the place of the late Lord Dudley C. Stuart, is appointed to take place on Monday, at twelve o'clock. The only candidates now in the field are Viscount Edrington and Mr. Jacob Bell: and both appear confident of success.

THE BISHOP OF LONDON AND THE WAR.—The Bishop of London has prepared the following prayer for the use of families and individuals in his diocese:—"O Almighty God, we humbly call to mind the protection of all that trust in Thee, accept, we beseech Thee, our humble intercessions for our brethren, Thy servants, now fighting the battles of our country by land or by sea. Protect and defend them with Thy mighty power. Grant them true courage in the danger, and mercifulness in victory. Be pleased, O Lord, to succour and relieve the sick and wounded, and to bless the means used for their recovery. Grant that all they who fall in battle may depart this life in the true faith of Christ. Minister abundantly the consolations of Thy Holy Spirit to the fatherless children and widows, and to all those who mourn. Defend, O Lord, in this our generation, the cause of all the nations of the world the blessings of peace. Grant this, O Heavenly Father, for the sake of thy dear son, the Prince of Peace, our Saviour Jesus Christ. Amen."

WIDENING OF LONDON-BRIDGE.—It has been resolved by the competent authorities to give up the entire present width of London-bridge, both road and footway, to roll ng traffic, and to provide for passengers by making footpaths on projections to be constructed along each side of the bridge. The resolution was taken at a meeting of the London-bridge Committee on Friday. As a considerable time will be occupied in carrying out the change, the committee came to a determination to try in the meantime the experiment of confining the heavy traffic each way to one line, and leaving the whole of the centre open for quick traffic. Notice-boards will be placed at each end of the bridge, stating that after a given day all heavy, slow-going carriages will be required to keep close to the kerb, and only such carriages as go at a trotting pace will be allowed to occupy the centre of the bridge. Application will be made to the Lord Mayor for his sanction, and to the Commissioner of City Police for the assistance of two officers, to enab.e the committee to test the efficacy of the project.

MURDERS IN WARREN-STREET, FITZROY-SQUARE.—A double murder was committed on Friday night week, just before nine o'clock, in the neighbourhood of Fitzroy-square. A man named Emmanuel Barthelemy, accompanied by a young woman, called upon Mr. Moore, a sods-water manufacturer in Warren-street. After he had been there some time, Moore's servant heard a scuffle, and the cry of "Murder!" and, running into the passage, arrived in time to see Barthelemy shoot Moore dead. The assassin at once made for the front door; but here he found that a neighbour, one Collard, formerly a policeman, but latterly a greengrocer, had entered the house. Looking the door, Barthelemy sought to fly by the back garden in the New-road. Collard, anticipating this, ran round, and seized Barthelemy as he alighted from the wall. The ruffian, however, drew another pistol, fired, and Collard fell. Fortunately, another person was near, who secured the assassin. Collard was carried to the University College Hospital, where he was found that the wound was mortal, the ball having passed through the body. He was able, however, to make a dying deposition of the facts, and to identify Barthelemy as the murderer. There were indications of a severe struggle in Moore's back parlour—blood spattered about, furniture smashed, and on the floor a broken cane loaded with lead, which had been used by Barthelemy. Collard died on Saturday night, after suffering extreme agony for several hours. Barthelemy, the assassin, it appears, had made his arrangements to leave England directly; and but for his apprehension, the Hamburg boat of the following morning would probably have borne both himself and his companion away from England. The following articles were found upon Barthelemy:—A pair of pistols, the barrels about six inches long; 24 cartridges; some percussion caps; a dagger, having a blade nine inches in length; 8d. in money; and a corkscrew. The mystery which prevailed as to the motive for the deed is not yet explained. One circumstance has transpired to which some importance may be attached. The key of Mr. Moore's iron safe, where his money and valuables were deposited, in his front parlour (which was used as his private office), was discovered, after the murder, upon the floor of the back parlour, the other keys belonging to the deceased being found upon his person. Mr. Moore was about sixty years of age, and is understood to have been a married man, though living separately from his wife. The prisoner, who was brought up for examination at Marlborough-street on Saturday, was remanded till Thursday, by which time it was thought that the person who accompanied Barthelemy, and who is said to have been a man in woman's clothes, would be in custody. The police had not been successful, however, and the prisoner was again remanded till next Thursday. A Coroner's inquest has been held on the bodies of Mr. Moore and Mr. Collard, and a verdict of "Wilful Murder" returned against Barthelemy. A third death has resulted, although indirectly, from this barbarous murder. The death of her husband preyed so intensely upon Mrs. Collard that she died on Thursday morning.

The mortal remains of the deceased Lord Dudley Stuart reached town on Monday afternoon, preparatory to interment in Hereford. They were brought to Lulbeck by steamer from Stockholm, and thence via Hamburg to London.

NAVAL AND MILITARY INTELLIGENCE.

INSTRUCTIONS have been given for immediately striking medals for the troops serving in the Crimea, and which are to have clasps with the words "Alma and Inkerman." The regimental colours are also to have those actions inscribed upon them.

ONE of the 24-pounder brass guns captured at Alma has been awarded, in division orders, to the 95th Regiment, having been claimed and taken possession of by that corps, being the first to enter the batteries out of which they had driven the Russians.

THE naval department has bought up, for shipment to the Crimea, all the deals, planks, and stanch ons in Malta—amounting, in all, to 10,000 dollars-worth (or £2000); these are intended to be converted into temporary barracks for the troops.

A MAIL for the British army in Greece, Turkey, the Crimea, and fleet in the Black Sea will now be made up every Tuesday and Friday evening, instead of six times a month, as heretofore. The postage remains the same—letters, 8d. the quarter ounce; newspapers, 2d. each.

M. GOUIN, the Postmaster of Marseilles, has just published a notice announcing that, from the 11th inst., the mails from Constantinople, by way of Messina, will be dispatched every Monday, at three p.m., and will arrive at Marseilles from Constantinople every Tuesday, at five a.m. The mails for Constantinople, *viâ* Malta, will be dispatched every Thursday at ten a.m., and will arrive at Marseilles from Constantinople every Saturday, at three p.m.

IMMEDIATELY on the disasters to her Majesty's transports in the Black Sea becoming known at Malta, the *Pyrenelia* and *Surinam* were ordered to Balaclava, laden with 1000 tons of shot, shell, and ammunition, and several other vessels freighted to convey provisions. The shipment of coals and stores from Malta to Balaclava continues unremittingly.

THE officers of the *Tiger*, lost on the coast of Odessa, have obtained one month's leave of absence, at the expiration of which they will proceed to Portsmouth, where they will be tried by court-martial, at the necessary witnesses will by that time have arrived in this country from the Black Sea.

THE DUKE OF CAMBRIDGE'S THANKS TO HIS DIVISION.—The Duke of Cambridge, writing from on board the *Retribution*, in Balaclava harbour, to Colonel Reynardson, in command of the Brigade of Guards, says:—"I am personally most grateful to both officers and men for their noble conduct in the battle of the Inkerman, and I feel confident their services will be duly appreciated by the country and the army. Where all distinguished themselves so much, it would be both impossible and wrong to name any one in particular. Most deeply do I deplore the heavy loss the brigade sustained; but the victory gained has been most important, and the enemy himself sustained a loss he will not easily forget. I wish you all health and happiness during my period of absence from you. (Signed) GEORGE." The above was read to the brigade by order of his Royal Highness.

NATIONAL SPORTS.

DECEMBER has done fair lately to produce only one steeplechase meeting; but, after one postponement, the Committee of the Waltham Abbey Steeplechase have fixed to have two days' sport, frost permitting, on Wednesday and Thursday next. There will be £225 of added money, and the list on Wednesday will consist of three steeplechases and a flat race, while that on Thursday is confined to three hurdle races and a flat race. Mr. McDonough's match ended in nothing, as the Knight of Glynn preferred his £50 to the chance of defeat, and left his fair competitor to "walk over the ground," which she did with only one slight mistake at a hedge and ditch, her husband hearing the way no doubt favourable to hunter. This lighter gentleman is considered the crack rider of Ireland; and Earl Berkeley, as fine a judge of the art as we possess, stated, at a Cheltenham Steeplechase some years back, that the style in which he "recovered" his horse, Sir William, at a gate, and then "handed" him out of the adjoining lane, was the strongest and coolest piece of horsemanship he had ever witnessed.

Coursing is only on a small scale during next week, unless some of the meetings which were fixed to take place on account of frost, which quite checked hunting in some of the midland counties early last week. At present, however, Limerick stands for Tuesday and Wednesday, and Cardington (open), the great meeting of Bedfordshire, for Monday, Tuesday, and Wednesday. Salop is as faithful as ever to its favourite "longtails," and its coursers have a day at Eyton on Tuesday, and another at Market Drayton on Wednesday; while the Cambrians hold a little meeting on the Vaynol estate, Anglesea, the seat of the last Lord Uxbridge, on Thursday.

The only subject of interest to a certain class of racing men during the ensuing week will be the prosecution at the Old Bailey of the two indictments under the new Gaming Act which were found by the Grand Jury during its last session. There is little general news connected with this sport. We hear, however, that Gracchus Receives is very much liked by those who have seen him at Malton lately, and that Voucher, Salop is as thriving as ever, and is reported to have brought him on to the turf in earnest again, has bought both Marchioness and Midsummer from the Hon. Stanhope Hawke. Although next year's prospects are not of a very high order (except, perhaps, as regards the two-year-old, which are said to be very fine), the returns of the past season show a great increase over those of 1853. In fact, a racing paper states the amount run for in the former at £269,012, and in the latter at only £205,189. Of this, the "added money" is about £60,000. Orlando's stock have won 70¼ races, in 1854, Touchstone's 60, Melbourne's 56, and Birdcatcher's, 39. Chanticleer has, however, done as well as any, as his eight winners have gained 94 races. Lord Derby is again "head" this season on the list of Scott's masters, but he is beaten for the "premiership" by "Mr. Howard," whose nine winners' winnings, thanks to the £10 075 gained by Virago, reach £17,797. This sum was, however, exceeded by Lord Eglinton in 1849, when his Lordship won £18,426. This year the winnings of "the tartan" were only £3155, while those of its "red spots" rival were £2215. Mr. Gully stands third on the list with £10,795, and the Duke of Bedford fourth with £6810. Lord Glasgow is as unlucky as ever, with only £775. The returns of blood foals so far during the present year are 511 colts, and 462 fillies—out of which number only 49 are dead. Birdcatcher, The Flying Dutchman, Chanticleer, Surplice, Melbourne, Touchstone, The Cure, Pyrrhus, Sweetmeat, and Orlando have each a goodly number credited to them, and the Duke of Cleveland's Cadock Company a one town 43, and the venerable Baronet of Sledmere 37. The Royal Stud foals comprise a score, principally sons of Iago and Alarm, but they can hardly be expected to average the treasured sum (441 guineas) at which they fetched at their recent sale.

Crucifix, Fhryne, and Canezou, do not seem to have had foals this year. Blue Bonnet has lost hers; and Beeswing died just before foaling, thus causing Lord Eglinton the loss of two very fine Flying Dutch colts. Her Lordship's favourite mare Isabella has also, after four seasons, produced a colt foal, Zuyder Zee, to Orlando; and there is also an Anton, own brother to Andover, on the list. As might have been expected, Inkerman, Omer Pasha, and Bashi-bozouk, are popular names for the young hopefuls of this period.

Arthur Wellesley, Cobnut (500 gs.), and Black Doctor (400 gs.), as beautiful a little specimen of the celebrated Dr. Syntax blood as ever wore a bridle, are for sale, along with old Peter Simple and Half-and-Half.

At Carlisle the races are henceforth to be reduced to two six-event days. The meetings at Newton will probably be given up, as they have not answered Mr. Topham's expectations; and it is most likely that the one at Cheltenham will follow suit. Thirsk has a new one, however, to replace them, on the same week as Doncaster Spring. The Doncaster people, who gave £2120 to be run for last year, have altered the time of closing their St. Leger from Jan. 1 to July, when its entries will be made along with the Derby and Oaks. Under the late system, the risk of those who entered yearlings in the St. Leger extended over upwards of thirty two months; while the risk for the two Epsom races was only sixteen months—a very great consideration in the eyes of breeders and owners.

TATTERSALL'S.—THURSDAY EVENING.

DERBY.—18 to 1 agst Ec Clare (t), 13 to 1 agst St. Hubert (t), 1000 to 15 agst c by Surplice out of Clementina (t).

SANATORIUM BAZAAR.—Colonel and Mrs. Waugh, of Branksea Castle, Hampshire, have liberally offered the use of their splendid domain, and in the grounds of the ancient Castle they lie a undertaken to hold a bazaar in aid of the Sanatorium of the Brompton Consumption Hospital. The Sanatorium is beautifully situated at Bournemouth, Hampshire, and when it is in full operation will no doubt prove a valuable auxiliary to the London institution. The committee are making energetic exertions to throw it open with the least possible delay. Towards the necessary funds "a friend" has offered to subscribe the princely sum of £5 0 if ten other sums of £50 each are given or collected by the 1st May next. Three or four names have already been received.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

BOOKSELLERS are complaining of the dulness of the season. There is little doing we are told; the Row is inactive, and the only book that sells with anything like activity is Lord Carlisle's "Diary in Greek Waters." And yet we are so sured that the demand for his Lordship's very pleasant volume has not exceeded 5000 copies. This seems, and is, a very small number of a work that everybody conversant with current English literature is talking g about. How few copies are apparently required to command notoriety! If his Lordship's volume is not in everybody's hands, the book itself is at least the subject of very general conversation.

In spite of this complaint, Mr. Murray, we are told, has just had an excellent trade sale of books forthcoming, and already publ shed. The demand, however, took chiefly an east ern turn, and a whole edition of a book not yet out, and of which the trade could only have a taste, was greedily bought up on the faith of the publisher's name, and the attractive title of the book itself. The volume we allude to is a narrative by an English lady of her twelve years' residence in Russia.

The memoir of Mr. Lockhart in the *Times* is deservedly admired. It is evidently by a friend of old standing, and is attributed (we believe correctly) to Lord Robertson—better known in Northern circles as Peter Robertson. The memoir in the *Daily News* gives the other s de of the question. If the two were taken toge her like bread-and-cheese, as Gray tells us he read poetry and prose, a truthful portraiture might be obtained.

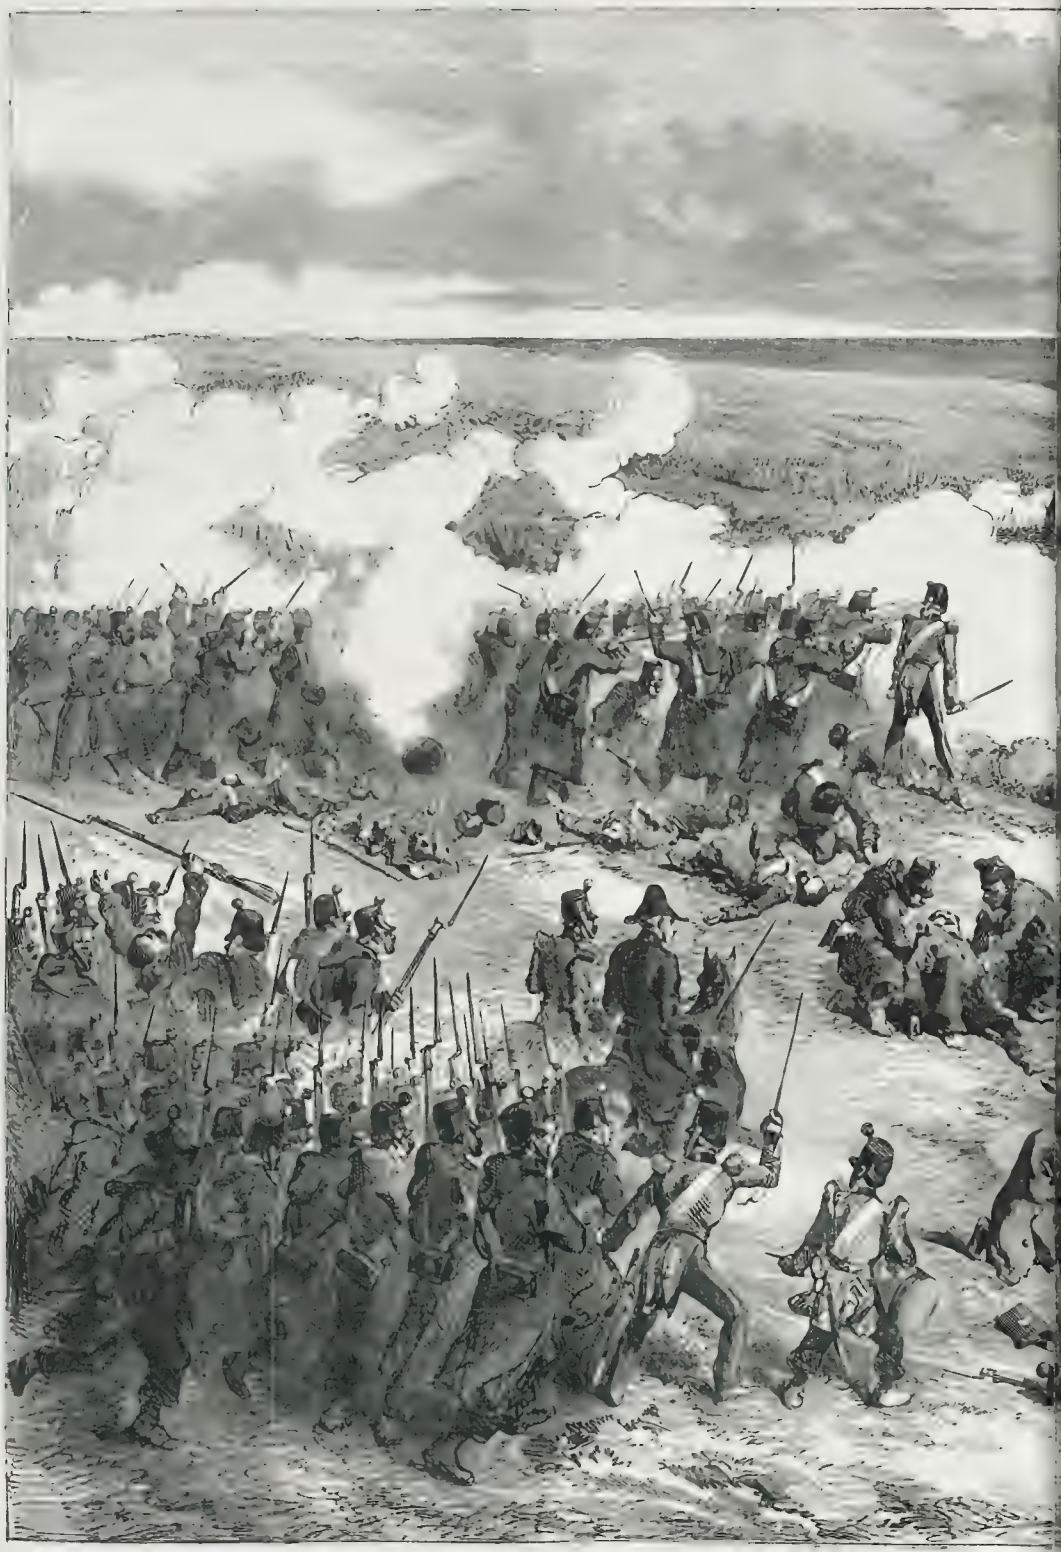
The hold which Burns has made upon mankind was strikingly exhibited on Wednesday last, when Messrs. Sotheby and Wilkinson dispersed a large and important collection of letters and poems in the well-known handwriting of the poet. The collection was made originally by Cromek, who published the "Reliques" of Burns; from Cromek the collection descended to Stothard, the painter; and from Stothard's hands was transferred, some thirty years ago, to those of the late Mr. Pickering, the bookseller. Mr. Pickering delighted in the genius of Burns, and no kind of temptation could ever induce him to part with a single autograph of his favourite Scottish poet. In his latter days, when difficulties beset him, he offered the entire collection for two hundred pounds. The sum was thought too high, and no one was found to take them at that price; but Mr. Pickering had not put too high a figure upon them, for they were sold on Wednesday last for considerably more than that sum. The highest price obtained for any one specimen was thirty pounds. This was given for that Scottish anthem—"Scots wha has wi' Wallace bled;" a noble example of the poet's genius—and, we will add, of his autograph—for each letter seems to have been written with the point of a bayonet converted into a pen. The next highest price obtained was for a copy of "Auld Lang Syne," viz., ten guineas. A second copy of the same favourite song brought £9 2s. 6d. The copy which the poet sent to "Clarinda," of his exquisite poem, "To Mary in Heaven," was thought to go cheap at £7 10s.; and the poet's appointment as an exciseman was carried off in triumph at £6 12s. 6d. The biddings throughout were quick and animated, and the sale itself as pleasant a gathering as we remember to have met even in such well-frequented rooms as those of Sotheby and Wilkinson. Some of the best things have gone to America: "Scots wha hae" (it has the redundant word in each stanza) was bought, it is said, for an American *dignitary*.

The sale of so many interesting autographs reminds us of the possessors of some of the best memorials of Burns. Mr. Archibald Haistie, M.P., has his punch-bowl, and the whole of the songs he sent to Johnson's "Musical Museum." The songs form two folio volumes. His sons at Cheltenham have the poet's snuff-box, the gold seal, with the crown motto, "Better a wee bush than nae bield," and he last letter which the poet wrote. In the Advocates' Library at Edinburgh are deposited (if we mistake not) the recently-sold correspondence of the poet with George Thomson. Mr. Peter Cunningham has the pistols which the poet carried in his Excise expeditions against the smugglers on the coast of Solway, together with "The Cotter's Saturday Night," "The Daisy," and "The Autobiography"—all in the poet's handwriting. The representatives of the Misses Stewart of Afton have "Tam o' Shanter" in Burns's autograph; and the rough draft of "The Whistle" has followed a soldier in the service of the East India Company from Calne to Jellalabad, and from Jellalabad to Bangalore, where, we believe, it still s.

Two epitaphs in English verse are attracting much attention in literary circles. They are privately printed, and are understood to be by the late Mr. Lockhart. One is called "Fulham Churchyard, August, 1841;" the other, "Walton-on-Thames Churchyard, August, 1842." The former is on Theodore Hook, the latter on Dr. Maginn. They are highly characteristic, and, we will add, clever, and, of course, caustic. That on Hook should be the wind-up hereafter of Lockhart's masterly article on his friend Theodore, and that on Maginn should be appended to the "Life of the Doctor" which has been so long promised by more than one friend to whom he was well known.

Our readers will thank us, we are sure, for calling their at'ention to the three days' sale, commencing on Thursday next, of the antiquities and "and nick-nackets" of the late Mr T. Crof.on Croker. Messrs. Puttick and Simpson, of Piccadilly, scatter the collection; and the catalogue which they have set forth contains a tempting list of rare things for antiquaries to covet and acquire. Mr Crofton Croker had been a curious collector for the last five-and-thirty years, and was the means of preserving many memorials of medieval workmanship, which every day is invested with additional interest. Some of the rarer articles in the collection which Horace Walpole and Sir Walter Scott would have sent commissions for, with a view to the enrichment of Strawberry Hill and Abbotsford.

"FIRING FROM THE REAR."—Sir Charles Shaw proposes a comparatively untried plan for repelling the advance of an attacking column:—On the 16th of September, 1854, a picket of 120 men for three hours kept a column of 1500 men at bay, and with a loss of only two men wounded. The was witnessed by many. Among those now alive I recollect the Duke of Teroeira and Colonel Hodges, now her Br tan c Majesty's Consul-General at Hamburg. The only road to the p sition of the picket which was not exposed to the fire of artillery from our batteries was about 300 yards in length, and about seven or eight in bread h, between two high garden walls. 72 men of the picket were formed in a close column of six sections of a front of six men, and placed in such a position as to command this road. The men had for some days before been instructed in the manœuvre. The moment the enemy's column was seen to enter the road, the order, in a loud, cle r voice was given, "The column of sections will commence firing from the rear." On this the five front sections drop on their knees, holding do n their heads, and the officer gave—"No. 6, Prepare! Fire! Load!" Then—"No. 5 (they spring up), Prepare! Fire! Load!" Then—"No. 4 (they spring up), Prepare! Fire! Load!" These three volleys were fired over the heads of sections 5, 3, and 1, and made the enemy scamper back, and to let them know what they might expect if they again attempted to advance, one or two more volleys were fired, which raised a cloud of dust from the road. From time to time this column attemp ed a forward movement; but, being received in the same manner, they had no better success. While in 1826 we were storming the heights of the Carlists near the Lazaretto, the Anglesea battery had formed themselves something after the same fashion in front of a road by which we wished to advance. Twice columns of attack were formed behind a house, and headed by that gallant officer Lieutenant-Colonel Neale, her Britannic Majesty's Consul at Varna, but they were obliged to retire; and when I wished to make a third attempt, the men called out to me, "You may as well take us to a slaugh er-house as against such a fire." This "firing from the rear" is a most formidable defence, and far superior to the regulation drill of street firing; but the front of the section, subdivision, or company should be of a force so that the word of command might be heard distinctly by every man. If a bridge is long, or if the road leading to it be seen for some distance, few troops will be found to advance exposed to such a crushing fire.



THE BATTLE OF INKERMAN.—FINAL EFFORT OF THE RUSSIANS.

JOINT CHARGE OF THE FRENCH AND ENGLISH TROOPS.—(SEE NEXT PAGE.)

BATTLE OF INKERMAN—THE FINAL EFFORT OF THE RUSSIANS.

THE battle of Inkerman lasted without a moment's pause, from daybreak on Sunday, the 5th of November, till about half-past two in the afternoon—eight hours and a half of the hardest fighting ever witnessed on any battle field.

The period of the battle represented in the Engraving is about one or two o'clock, when the half-drunk Russians made a final fruitless effort to gain possession of the heights of Inkerman. On the right hand may be seen the Algerine Rifles, who played so prominent a part in that day's affair, and along with them a battalion of the 7th Light Infantry is busily engaged in driving the Russians before them. The English infantry are making equal progress on the left; and as for the Russian forces, they are seen through the smoke to be extended to an immense distance, in the direction of the village of Inkerman. In spite of their numbers, however, they were soon forced to retire. By three in the afternoon the crests of the hills in front of Sebastopol were clear of the enemy, who soon after crossed the Tchernaya, and entered the hills on the other side, leaving a larger number of killed and wounded than the whole Allied forces engaged in the battle.

INCIDENTS OF THE STORM IN THE CRIMEA.

WHEN the first fit of dismay was over the Camp got filled with ludicrous stories of the sad plight of each and such a one whom the gale caught in such and such a way. Thanks to the Russians, every one sleeps in his clothes, ready to turn out at a moment's notice. But, as ill-luck would have it, and as no Russian attack was apprehended during that particular night, a good many officers treated themselves to a night's rest in the only night gown known in the Camp—a red flannel shirt of very scanty dimensions. The hurricane turned them out, and left them no less time to dress than the Russians would have done. With their tents twirling high in the air, or running a mad race across country, these men were seen stancing, while all their household goods lay shivered around them, gazing at the scene and at themselves with intense horror and astonishment. Some were actively employed in keeping their shirts in a position somewhat compatible with decency, while others stood on one leg, the tails of their shirts flapping about their ears, while the other leg was inserted into the corresponding half of a pair of refractory trousers that would swell out with the wind, and betrayed a strong inclination for an early trip to the Russian lines. In the camp of the Light Division a big drum rolled before the gale, making an awful noise, which astonished every one. A Colonel of Marines, stationed on the heights, on the extreme right of our Balaclava position, was taken up with his tent, in which he sat, with pillows and bolsters, clothes and weapons, cooking utensils, pots, pans, and kettles, and deposited at the bottom of a deep ravine. He knew not how he got in, and much less did he know how he should get out. When the first confusion in the Camp was got over, the gallant Colonel was among the missing. The wind howled and the sea thundered against the cliff, and drowned his voice. But at length he made himself heard, and some of his men, descending by means of ropes, assisted him in removing to other quarters. The accident which befel a Major of the 42nd Highlanders is more serious. A heavy barrel, driven down hill and running on with great velocity, struck him in the back, and hurt, if it did not break, his spine. Statements vary as to the extent of the injury. An officer of the Light Division, who had left the Camp the moment he was blown out, took horses to ride into Balaclava, so he must have proceeded at the rate of two miles per hour; and both man and beast were dead beat when they came in.

THE OVERTHROW OF THE TENTS.

The air was filled with blankets, hats, great coats, little coats, and even tables and chairs! Mackintoshes, quilts, indiarubber tubs, bedclothes sheets of tent-canvas went whirling like leaves in the gale towards Sebastopol. The shingle roofs of the outhouses were torn away and scattered over the Camp, and a portion of the roof of Lord Raglan's house was carried off to join them. The barns and Commissariat-sheds were laid bare at once. Carts, horses, or waggons, which stood loose to us, were overturned; men and horses were knocked down and rolled over and over; the ambulance waggons were turned topsy-turvy; and a large and heavy table in Captain Chetwode's tent was lifted off the ground, whirled round and round till the few effects left on it, and then came to mother earth, deprived of a leg and seriously injured. The Marines and Rifles on the cliffs over Balaclava lost tents, clothes—everything: the storm tore them away over the face of the rock and hurled them across the bay, and the men had to cling to the earth with all their might to avoid the same fate.

Along the hill occupied by the Second Division the blast had been of equal violence. The ridges, the plain, and undulating tracts between the ravines, so lately smiling in the autumn sun, with row after row of neat white tents, now lay bare and desolate, the surface turned into sticky mud as black as ink, and the discoloured canvas rolled up in heaps all over it. The camp of the Chasseurs d'Afrique presented an appearance of equal desolation and misery. Their little *tentes d'abri* stood for a few minutes, but at last the poles snapped, and they were involved in the common ruin. The face of the country was covered with horses which had torn away from their pickets. Nearly one-half of our cavalry horses broke loose. The French, flying for shelter, swarmed across the plains in all directions, seeking for the lee of old walls or banks for protection from the blast. Our men, more sullen and resolute, stood in front of their levelled tents while wind and rain tore over them, or collected in groups before their late camps. Woe betide the Russians had they come on that day, for, fiercer than the storm, and stronger than all its rage, the British soldier would have met and beaten their tremendous battalions. The cry was all through out this dreadful day, "Let us get at the town; better far that we should have a rush at the batteries and be done with it than stand here to be beaten by the storm."

THE MEN IN THE TRENCHES.

Let the reader imagine the bleakest common in all England, the wettest bog in all Ireland, or the dreariest moor in all Scotland, overhung by leaden skies, black as ink, and lashed by a tornado, sleet, snow, pelting drizzle, and rain—a few broken stone walls and roofless huts dotting it here and there—roads turned into torrents of mud or water across it, and then let him think of the condition in which men and horses must have been placed in such a spot on a November morning, suddenly deprived of their frail covering, and exposed to bitter cold and wet, with empty stomachs, and no fire or remotest prospect of obtaining food or shelter till the storm ceased. Think of the men in the trenches, the covering parties, the patrols, and outlying pickets and sentries, who had passed the night in storm and darkness, and who returned to their camp only to find fires out and tents destroyed. These were men who dared not turn their backs for a moment, who could not blink their eyes, on whose vigilance the safety of our position depended, and many of whom had been for eight or ten hours in the rain and cold. These are trials which demand the exercise of the noblest fighting qualities. A benighted sportsman caught in a Highland storm thinks no misery can exceed his own, as—fagged, and drenched, and hungry—he plods along the hill-side, and stumbles about in the dark towards some unseen light; but he has a companion in misfortune than the wind and rain to face, and, in the first hut he reaches, repose and food sit await him. Our officers and soldiers, after a day like this, had to descend to the trenches again at night to look out for a crafty foe, to labour in the mire and ditches of the works! What fortitude and high courage to do all this without a murmur, and to bear such privations and hardships with unflinching resolution!

SUCH HURRICANES ARE UNCOMMON.

Hurricanes similar to that of the 14th are not common to this country—at least not to this part of it. Of the few native inhabitants of Balaclava that are allowed to remain, the oldest cannot remember a storm like the one which has done us such serious injury. Besides, if such storms were frequent, the houses of Balaclava would be more firmly jointed, and their roofs more substantial. The hurricane blew down whole rows of poplars of twenty-five years' growth. They could never have attained that size if winter in the Crimea was usually ushered in by such convulsions of nature.

THE DAMAGE TO SEBASTOPOL.

One good effect of the gale is the damage it did to our enemies. Deserters tell us that the destruction of Sebastopol is terrible. A great many public buildings were unroofed; houses that had been fired by our shells fell in and buried hundred among the ruins.

During the hurricane a whole flock of sheep actually deserted from Sebastopol and came over to our side, the men chasing them in all directions; and on the following day all the tent-tables groaned with legs of mutton. Savoury odours arose from the slaughtered hecatombs of sheep.

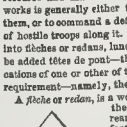
NOTES ON SIEGE OPERATIONS AND FIELD FORTIFICATION.

(*Continued from page 548.*)

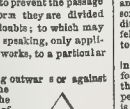
FIELD FORTIFICATION.

THE works used in field fortification are more simple in their outline and mode of construction than works of permanent fortification; but in strengthening and defending them, an almost endless variety of resource and material may be called into play. The object of field works is generally either to defend an intrenched camp, lying behind them, or to command a defile, road, or bridge, so as to prevent the passage of hostile troops along it. According to their form they are divided into flèches or redans, lunettes or bastions, and redoubts; to which may be added têtes de pont—though these are, strictly speaking, only applications of one or other of the above descriptions of works, to a particular requirement—namely, the defence of a bridge.

A flèche or redan, is a work of two faces, pointing outwards or against the enemy, and open in the rear. When planted at the foot of a glacis, or in front of another work, it is called a *flèche*; when standing by itself, to command a pass, or to defend the avenues to a village, dike, bridge, &c—in which case it is more considerable in size—it is called a *redan*. Redans, connected by means of a curtain, form lines of intrenchment, of which this is the most common form. Two redans joined, so as to form a mutual defence, are called by French engineers a *Bonnet de Prêtre*. A *lunette, or tenaille*, is a more considerable work than the redan, being composed of two faces and two flanks.

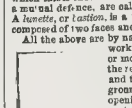


LUNETTE.

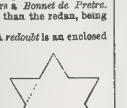


REDAN.

All the above are by nature open in the rear. A *redoubt* is an enclosed work, circular, or of four or more sides, according to the requirements of the case, and the configuration of the ground; and having an opening in the least exposed part of it—across which, in the inside, runs a traverse. A *star redoubt* is one whose sides alternately recede from and approach the centre.



SQUARE REDOUBT.



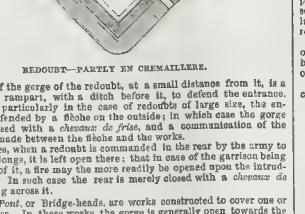
STAR REDOUBT.

The size of field-works is regulated by a consideration of the number of men intended to defend them; the latter being ranged two deep, and a space of two feet, or two feet and a half, being allowed for each file. When, in addition to infantry, cannon are to be placed in a field-work, six paces are allowed for a field-piece, and eight for a 18-pounder. When field-works are larger than required for the number of men allotted to them, they are weakened in consequence, being partially undefended.

In general—from the natural habit of soldiers to fire at right angles from the wall at which they are placed—the angles of a field-work are its weakest parts, and should therefore be placed towards the points least open to attack.

With the exception of star and circular redoubts, there is no necessity for studying regularity of shape. Indeed, on the contrary, it is the spot they are to be constructed on, as well as the lying of the ground near them which should determine their figure. In the case of a height being occupied by a redoubt, it is essential that every line of work should be so disposed that the slopes of the hill all round, to the very bottom, should be commanded. In attaining this, it is very immaterial how many sides the redoubt has, or what form they are placed in.

One very important variety in the structure of redoubts, and field-works generally, is that called *en cremaillère*. Here the inside line of the parapet is broken into angles resembling the teeth of a saw, or *pot-hooks* (whence the name). Part of the redoubt shown in our Engraving is in this form. The advantage gained by this method of construction is, that it gives the garrison of the redoubt a threefold command of a fire; namely, either direct, at right angles to the side of the redoubt, from the extreme angle of the indentation; or, laterally, in either direction from the sides of the indentation. Across

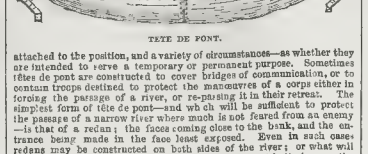


REDOUBT—PARTLY EN CREMAILLERE.

the inside of the gorge of the redoubt, at a small distance from it, is a *traverse* or rampart, with a ditch before it, to defend the entrance. Sometimes, particularly in the case of redoubts of large size, the entrance is defended by a flèche on the outside; in which case the gorge itself is closed with a *chevaux de frise*, and a communication of the same kind made between the flèche and the works.

Sometimes, when a redoubt is commanded in the rear by the army to which it belongs, it is left open there: that in case of the garrison being driven out of it, a fire may the more readily be opened upon the intruding enemy. In such case the rear is merely closed with a *chevaux de frise* running across it.

Têtes de Pont, or Bridge-heads, are works constructed to cover one or more bridges. In these works the gorge is generally open towards the bridge, the faces, or flanks, resting upon the banks of the river. Têtes de pont are usually constructed for the specific object of aiding a retiring army to pass a river in order, and check an enemy pressing on its rear. The magnitude and tracing of these works depend upon the importance



TETE DE PONT.

attached to the position, and a variety of circumstances—as whether they are intended to serve a temporary or permanent purpose. Sometimes têtes de pont are constructed to cover bridges of communication, or to contain troops destined to protect the manœuvres of a corps either in forcing the passage of a river, or re-passing it in their retreat. The simplest form of tête de pont—and which will be sufficient to protect the passage of a narrow river where much is not feared from an enemy—is that of a redan; the faces coming close to the bank, and the entrance being made in the face least exposed. Even in such cases redans may be constructed on both sides of the river; or what will answer the purpose much the same, is to construct batteries on the opposite side of the river covering the faces of the redan, as shown in our Engraving.

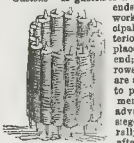
CONSTRUCTION OF FIELD WORKS.

Field-works, whether continuous line of intrenchment, or separate works, as redoubts, redans, &c., are constructed and strengthened in the following manner:—Commencing from the inside of the work, we have first a rampart, for the defence of the troops, with a raised platform, called the *banquette*, upon which the latter stand in working the guns. The height of the *epaulement*, or high wall of the rampart, is generally six feet, that of the banquette a foot and a half, leaving four-and-a-half clear feet for the protection of the men. The body of the rampart is formed out of the earth dug out of the ditch which lies in front; and beyond the ditch is a *glacis*, or sloping ground, intended to conceal the front of the works from the enemy. Between the outer face of the rampart and the ditch is a narrow path, called the *berme*, and here, as shown in our Engraving, a *palisade*, formed of trees, is sometimes laid to give additional strength. The ground beyond the ditch is sometimes further strengthened by an *abattis*, constructed of felled trees, with the addition of small mines, or *fougasses*, underneath, to be exploded under the feet of the enemy.

In proceeding to the construction of such a work, the workmen stand in line upon the inner edge of what is to be the ditch—a space about a foot wide, and which itself is afterwards to become the berme. They then place a row of fascines along the inside line of the intended parapet, fixing them to the ground with small pickets of wood. The earth is then dug out in front of the berme, to make the ditch, and thrown behind the fascines to form the parapet. When the earth is filled in up to the height of the first row of fascines, another row is fixed over it, only a little back-wards, so as to form the slope or *talus* requisite for solidity in works of this kind. Where fascines cannot be had for thus forming the revetment of a parapet, sods of earth may be used instead.

The principal materials used in the construction of batteries and field-works are—

Gabions.—A gabion is a species of cylindrical basket, open at both ends. Gabions vary in size, according to the work for which they are intended. One principal use of them is to line or face the interior slopes of batteries; in which case they are placed in two rows, standing upright, and on end; and should be of such size, that the two rows make the height of the parapet. There are also some gabions about one foot high, used to put at the top of a rampart, to protect men firing over it. *Sap* gabions are used, in advancing upon a place, to cover the besiegers in their approach; and these are generally from three to six feet high. The gabions, after being placed, are filled with earth, and so present a solid resistance to shot.



GABIONS.

Fascines are long faggots, or bundles of wood, intended to be used in the construction of field-works; when they are generally about ten feet in length and one foot in diameter. *Saucissons* are a larger description

FASCINE, AS CONSTRUCTED.

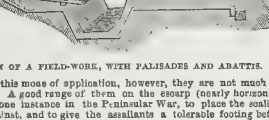
of fascine—being from 16 to 20 feet in length, and from 10 to 12 inches in diameter. They are used in batteries, to cover the interior of an *épaulement*. Our Engraving shows the method of making gabions on a bed of crossed sticks, like a *chevaux de frise*.

Sandbags are used in the construction of batteries in rocky situations, where earth is difficult to be procured. Sometimes they are employed to form the revetment itself, and sometimes are thrown into gabions for the purpose.

Stockade Revetments.—When the earth will not stand at a slope of one-third, the scarps of important works should be made difficult to escalade. For this purpose, trunks of trees, planted vertically and touching each other, their ends sunk three or four feet, are very useful. When pierced for musketry, the structure so formed is called a *stockade*.

The obstacles, or contrivances, usually added to render the approaches to field-works, and the retension of them more difficult to the enemy, are as follows:—

Palisades.—These are formed of the rough stems of young trees, or the halves of larger ones, firmly fixed to a beam four or five feet under ground. They form an excellent resisting medium when covered from cannon. They are often fixed in ditches, and, when inclined, as on the front slope of the ditch, as shown, in our Engraving, they are called



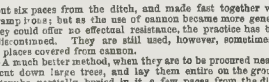
SECTION OF A FIELD-WORK, WITH PALISADES AND ABATTIS.

frotses. In this mode of application, however, they are not much approved of. A good range of them on the escarp (nearly horizontal) served, in one instance in the Peninsular War, to place the scaling-ladders against, and to give the assailants a tolerable footing before reaching over the parapet.

Stockades are strong timber walls, or palisades touching each other, and loopholed for musketry. In India these defences have been much used, and their formidable character are well known to our troops.

Barrier Gates are used to close the entrances of field-works, and of course should be very massive, so as to resist any sudden attack.

Chevaux de Frise were formerly used to surround a work on the plain



CHEVAUX DE FRISE.

ground, about six paces from the ditch, and made fast together with chains or cramp irons; but as the use of cannon became more general, to which they could offer no effectual resistance, the practice has been generally discontinued. They are still used, however, sometimes in ditches and places covered from cannon.

Abattis.—A much better method, when they are to be procured near at hand, is to cut down large trees, and lay them entire on the ground, and their trunks partially buried in it, a few paces from the ditch. This is called an *abattis*. The branches of the trees must be well tangled, and presented towards the enemy, the trunk being next the work. Our Engraving represents an abattis so placed as to be covered from view and fire of the enemy by an advanced glacis. In forcing this abattis the assailant is exposed to the full fire of the parapet in the rear. Well-disposed abattis make formidable obstacles; and can only be effectually destroyed by fire.

Trous de Loup, or trapholes, are rows of pits, broad at the top, and going to a point at the bottom, like inverted hollow cones, made before a work, and with a strong palisade or stake fixed upright in the centre of each. They used to be made about six feet deep and eight or ten feet diameter at top; but upon some occasions during the Peninsular War, bold and active riflemen crept into them, and from them poured a destructive fire upon the defenders. To prevent this, they should be made either too deep, as eight feet; or too shallow, as two feet and a half. Trapholes are usually laid down in two or three rows; they should be arranged chequerwise, so as to prevent an enemy passing over them easily.

Fougasses, or small mines, are also very formidable obstacles; sunk in the proper situations, to be blown up on the approach of the assailant, if outside, or on the garrison leaving it, if within.

In a recent exploration of the ruins of Pompeii, a bath-room of vast dimensions has been discovered, exhibiting numerous ornaments and basso reliefs in a state of admirable preservation. The architecture of the edifice is of the same beautiful order as that of the thermæ discovered at Pompeii nine years ago.

REMINISCENCES OF THE WAR ON THE DANUBE.

(From a Correspondent.)

A MESSENGER from Omer Pacha disturbed our dreams of rest at Turtukai. He asked for beer or porter; on which we gave him a lump of rancid bread and a tin mug of water, observing that this was our only diet beneath the wing of the great Padishah. We said nothing about nine sheep we had that morning taken from the soldiers. It is pleasant to have such keen but careless plunderers as neighbours. The soldiers of the regular army, while out cutting wood, had come across some sheep, which they appropriated to themselves, and drove in triumph through Turtukai to their camp. Two of my servants, indignant at such an insult (for we had had no meat for days), followed them, and, riding among the flock, dispersed them about the town. Many the soldiers drove to collect their spoil: they rushed about, and, somehow right found their way into an outhouse near; the soldiers giving no heed to my fellows for the assistance they gave them for having shut these up. They helped them to collect the rest, and loudly sympathised with them at their loss. The messenger, an aide-de camp of the great Omer, and a Pole, was the bearer of orders to our Pacha, for us to proceed by Silistria and Rassova, to Kara-su; thence patrol the country to Kustendjeh; and report on the force and position of the enemy, and on the general state of the country. The orders were immediately issued to prepare to march on the following morning, and the native officers warned of the duty. At daybreak—or rather hours before—we were up, and our baggage ready. It would have rather astonished the English allies to have seen the whole baggage of 3000 men carried by twenty horses: yet so it was. At last we were off, in the following order:—Shemahie Pacha, accompanied by his staff, preceded by ten or twelve guides, and two chaoushes (or regular cavalry troopers), with carbines unslung and ready. Immediately behind rode a host of grooms, leading chargers; servants, mounted horsemen, pipe-bearers, coffee makers, cooks, waiters, all mounted and armed—in fact, Bashi-bozouks, tamed, and taught to perform these offices. These constituted a body of perhaps seventy or eighty men attached to the staff. Among them rode the Turkish medical assistant, or bleeder (a barber), and suite, as our medical department requires six horses. After this came a Bim-Bashi (or commander of 1000 men), followed by his men and colours; he himself preceded by two men with minutely small drums—our music, and each in trumpets. The men rode in a mass round the colours, no particular order being observed. Next came the small jumpkeasha, or parties, each under a separate chief, varying in numbers from five to 100 men—some with, some without colours: there were here men of all the Moslem nations. Another Bim-Bashi succeeded; and last of all came the Pacha, a Turk, and second in command—Hadjie-Aik-Pacha. He dawdled along as he liked for, in this land, nobility is incompatible with mobility—now stopped to smoke; anon, to take coffee; then, to rest, or pray, or else abuse all motion, and vow he would resign his Pachalic.

We rode through the vineyards east of Turtukai, and picked up the road along the Danube, which here rolls its dirty breadth through banks of black mud. As we left we saw a cloud of smoke—our men had fired our huts as they left them. On the north of the Danube, a flat plain stretched away far as the eye could reach, fat with plenty, and interspersed with villages, conspicuous in which was the church tower: pleasant church tower to us amidst Moslems and minarets; very like (odd) scenes that river as to a promised land. On the south, hills close in the view—rounded hills covered with forest. On the northern side, the bank is low; on the southern, some twelve to twenty feet high, and steep. The river seems to have approached the foot of the hills as near as it may. The day was intensely hot, so we welcomed the shade of the huge oil willows, when our road lay beneath them. At noon we halted at a spring and our cavalcade was soon scattered—the horses feeding, and our men lounging under a hundred trees were soon fast asleep, and each cooked what he had, and then smoking the pipe of contentment, fell asleep. After two hours' rest, the march was resumed; and at last, after eight weary hours of toil (we were not worth the whips, for more forward, causes an angle of the Danube, we caught sight of Silistria, the amphitheatre of hills around it. How much of modern history was begot on the spot before us! Who can yet forsee the effect of that shameful defeat—of that heroic defence? The sky is serene—the air ether; yet it rings with shrieks, with cries of triumph, or groans of agony. We could see the mighty Danube meandering away, floating round green islands, growing into a lake. The trees bloomed, the grape hung ripe on the vine, the minaret shone, the bee hummed, the insects hummed. Can this be Silistria, whose din of war yet echoes through the world? That small, low town—was that the place so disputed? That ragged, shoeless soldier—was he one who defied the whole might and skill of Russia, and her martial hordes? "Know ye not Silistria?" With all that pomp and pride, this half starved Moslem kicks you aside would a street cur. We rode to the gate, and there received orders to leave our men outside, while quarters were assigned us within the town. Our poor fellows! some camp, trees, if there be, in the fosse, is their palace; if not, their abal on the ground, and the sky overhead for all the home they ask. They drive the pickets they carry into the earth, put their saddle bags at their heads, and there they are. We were put in possession of two houses, from whence the poor Christian owners were cleared out. I have one; and am immensely popular, because I have allowed the owners to remain, and allowed them one of the two rooms. My house bears many traces of the siege, though the industrious owner has already patched up the breaches; but he retains a heap of shot in the courtyard, as relics of the fight. In fact, already you may see the difference of races: the Moslems have not repaired one of their houses; the Christians (much less able to afford it) have universally repaired theirs, and both suffered equally. I have said we were billeted in Christian houses: of course we were. When was ever anybody, under any circumstances, allowed to put a Moslem out of his way?

We found Ismail Pacha in command, having about 12,000 troops under him; of whom, perhaps, 4000 were Bashi-bozouks, Arnauts, Zebees from the plains of Troy and adjacent districts, and Turkomans from the Amanus and Western Taurus; also, three regiments of regular cavalry. Ibrahim Pacha is Civil Governor; and a quiet old man he is. Our own Pacha (second in command) did not enter the town, but remained outside, with our Bashi-bozouks, grumbling, drinking, and smoking. Of the infantry, 5000 were Egyptians, and numbered among them the hero of defenders of Arab Tabia.

By a reference to the map, it will be seen that the Danube takes a northerly turn for half a mile, leaving the feet of the southern hills, and then resumes its course. On the plain formed by this bend stands Silistria, a middle-sized town, of a polygon figure, surrounded by bastions, curtains, and a ditch. It has ten small bastions on its enceinte, connected by long, undefended curtains. The lower part is built with stone, or rather faced with stone-work; the upper, loose, crumbling earth. The embrasures are strengthened by gabions filled with earth, or else wattles to keep up the mould. From the uprightness of the wall, and too great steepness of the earthern ramparts, and their being seldom found together nor revetted with turf, as well as the loose nature of the mould, a breach could be immediately effected; and, in fact, in the town itself there is nothing very defensible: three gates, defended by cannonières, gave access; these are closed at sunset. The town, on the river face, is about 400 yards from the bank; and a quiet old man is

HAWKSTONE HOUSE, THE SEAT OF VISCOUNT HILL.

FESTIVITIES AT HAWKSTONE.

The fine ancestral domain of Hawkstone, in Shropshire, has just been the scene of great festivity, in commemoration of the Hon. Rowland Clegg Hill, eldest son of the Right Hon. Viscount Hill, and heir to the family title and estates, attaining his majority. This noble scion of an ancient race was born December 5th, 1833.

The day was ushered in by the ringing of bells in the churches of the various villages in the neighbourhood, and the firing of cannon from various quarters. A large flag floated gaily from the top of the column in Hawkstone Park; and the Hall was also decked with a number of streamers, &c. From the latter place the noble Viscount and the Hon. R. C. Hill, with a select circle of friends, started to visit the various places on the estate where the festive gatherings were held, to receive congratulations. At each of the entrances to Hawkstone Park were large designs in variegated lamps, with the coronet at the top; and immediately under, the word "Welcome," in large letters. On passing under the natural archway near the grotto, other designs in variegated lamps met the eye. In front of the Hall, the band of the North Shropshire Yeomanry were stationed in a tent, and received the visitors with favourite airs.

The Hill family have well deserved this cordial demonstration. Descended from a long and honourable line of ancestry, they have shown the utmost interest in many a good cause. Sir Richard Hill, and the Rev. Rowland Hill, were long known as amongst the most zealous of their day; and the military services of the generation which succeeded those two remarkable men will never be forgotten. The first Lord Hill was the right hand of the Duke of Wellington throughout the Peninsular War, and at the decisive victory of Waterloo where his Lordship and four of his brothers were engaged. His father, the late Sir John Hill, received the congratulations of George IV., at a crowded levee, on having five sons in the war. Lord Hill filled the distinguished post of Commander of the Forces for fourteen years, with honour to himself and satisfaction to the Army. The only one of the five brothers before mentioned now surviving, is Sir Robert Chambre Hill, who was Colonel of the Oxford Blues, in several great victories during the Peninsular War and at Waterloo. The present Viscount Hill is the nephew of the first Lord Hill, and has two sons, the Honourable Rowland Clegg Hill, whose majority was the object of the above festivities; and the Honourable Geoffry Hill, who is just about to enter the regiment of the Blues, in which the name of his family is so well known and honoured.

THE HON. ROWLAND CLEGG HILL.

The present Viscount is Lord-Lieutenant of the county of Salop, and enjoys the unbounded esteem of all classes. This was most unequivocally manifested on the natal day of his son, when the heir and his family and friends made the tour of the Hawkstone domain to receive addresses and congratulations. It was a complete ovation for thirty miles; and the whole population came out to give them a hearty welcome. The whole family were welcomed by triumphal arches; oxen and sheep, prepared for roasting, were exhibited on the route. bands of music preceded the cortège, and the clergy presented congratulatory addresses. The young heir of Hawkstone acquitted himself extremely well in his replies, and spoke with much fluency and self-possession. Lord Hill also returned thanks with much feeling. Hawkstone House was the scene of great festivity on this occasion. Its romantic park is well known as one of the most striking in the kingdom. The company in the mansion, who were entertained on the 5th with a very handsome dinner, previously to a grand ball in the evening, included the following guests:—Lady Powis and two Ladies Herbert, the Earl of Powis, Earl and Countess Vane, Viscount and Viscountess Newport, Lord and Lady Cosmo Russell, Lord Forester, Lord Teignmouth, Colonel Forester, E. Loyd, Esq., jun., the Rev. Edwin Sidney, the Rev. W. Bisckley, the Hon. Hugh and Lady Sarah Cholmondeley, Mr. Gould, &c. More than a thousand persons, including all the rank of the neighbourhood,

ENTRANCE TO HAWKSTONE PARK.

and many from long distances, attended in the evening, and the supper was magnificently served by the celebrated Gunter; and Tinney's band was engaged for the ball. The Earl of Powis, in an able speech, proposed the health of the Hon. Rowland Hill, and Lord and Lady Hill; both of which toasts were received with enthusiasm.

THE BALL.

The pavilion arranged for the *salon de danse* was erected on the terrace adjoining the Hall. The temporary apartment, 116 feet in length by 36 wide, was draped, tent-like, in scarlet and white. It was lighted by a profusion of chaste chandeliers and brackets, and the ball-room was decorated with flags and banners, the *ensemble* having a most picturesque and imposing effect. Messrs. Coote and Tinney's band, assisted by Mr. Walter C. Hay, of Shrewsbury, and a small staff, occupied a raised platform in the centre.

On supper being announced, the drapery at one end of the apartment was drawn aside, and the party proceeded to an adjoining tent, 116 feet by 36. This apartment was also decorated with flags, and lit by 200 wax lights, besides several central chandeliers. Three rows of tables were spread down the entire length of the place, to accommodate 350 guests. The tables were crowded with gold and silver candelabra, épergnes, vases, statuettes, &c.; some of which contained fruits and flowers of the choicest description. In the centre stood a fountain, the basin being also filled with finely-grown camellias, chrysanthemums, &c.

Next evening the tenants and tradesmen and their friends were entertained in the same splendid way, and all passed off without a misadventure. The hounds of Sir Watkin W. Wynn added to the gay scene in the morning, and those who followed them through the unrivalled scenery of the park had a good opportunity of seeing it. The view of the Red Castle, from the summit of the Grotto Rock, is extremely striking. The remains of this ancient Castle, built of red sandstone, form a ruin of great interest. There are many curious legends respecting this castle; but it was destroyed in the Civil Wars, when one of the Hill family was seized by the rebels. The dungeon still remains, and was well designated by Dr. Johnson as "horrible profundity." This is probably the only part in England which contains such a splendid ruin of an ancient baronial castle, and also of a fine Roman encampment.

THE RED CASTLE

Is one of the most attractive ruins in England. The decayed walls

THE [illegible] IN HAWKSTONE PARK.

BALL AT HAWKSTONE, TO COMMEMORATE THE MAJORITY OF THE HON. ROWLAND [illegible] HILL.

and the lawn rocky sides are of great extent. You can reach the interior only through a winding passage blasted in the rock. Out of this tunnel you emerge into a picturesque alley of rock, with smooth high walls over-arched with mountain-ashes. On the side you perceive a cavern. Climbing the rock, you reach the upper part of the ruin—a high roofless tower, in whose walls, fifteen feet thick, many trees have struck their roots, and in the interior of which is a well. The tower, and the rock on which it stands, look down from a giddy height, in a perfectly perpendicular line, upon the valley, in which the huge trees appear like copsewood.

THE GROTTO.

Out of a hanging wood of venerable beech-trees, crowned by a thicket of black firs, rises the celebrated "Grotto Rock," on whose caverns Sir Richard Hill expended much of his ingenuity. Its summit is reached by a long winding path in the steep wood, which conducts to the door of a dark passage in the rock, opening into a vaulted chamber incrusted with shells and minerals.

On Thursday four hundred labourers, and the same number of school children, with some seven or eight hundred women, were entertained with dinner and tea at the Hall; and the day was concluded with a grand display of fireworks. The servants at Hawkstone had a ball and supper on Friday, to which they were permitted to invite their friends.

In the midst of these distinguished entertainments the poor were amply cared for, and the children of the schools were also invited, and each one presented with a Bible by the excellent Viscountess. In short, this has been one of the most remarkable celebrations of a majority, perhaps, ever known and has most unequivocally shown that when a nobleman perpetually consults the welfare of all around him he is sure to reap his high reward. The manifestations of regard on this occasion were unmistakeable, and the cheers which issue from the heart fall far differently on the ear from the mere complimentary sounds of common festive occasions. We sincerely wish this benevolent and distinguished family the happiness they so well deserve and endeavour to extend to all within reach of their influence.

A titled foreigner, according some years ago his impression of Hawkstone, says—"Though I felt yesterday perfectly *blasé* of parks, and thought I could never take any interest in them again I am quite of another mind to day and must in some respects give Hawkstone the preference over all I have seen. It is not art, nor magnificence, nor aristocratic splendour, but nature alone, to which it is indebted for this pre-eminence; and in such a degree that, were I gifted with the power of adding to its beauties, I should ask, What can I add?" From the lofty column erected to the memory of a distinguished ancestor of the Hills, the eye can wander at pleasure over fifteen counties, or rest upon the rocks and woods, mingled with the richest pasturage imme-

diately beneath it. Three sides of this wide panorama rise and fall in a constant change of hill and dale, and are bounded at the horizon by the strangely-formed jagged outline of the Welsh mountains, which at either end descend to fertile plain, shaded by thousands of lofty trees, till, in the obscure distance, its blends with a white misty line—the ocean.—*Shrewsbury Journal.*

MUSIC.

HANDEL'S "Deborah," with which the Sacred Harmonic Society, on Friday last week, commenced their performances of this season, is comparatively little known to the public; having never, at any period, obtained much popularity. It was produced by the society some ten or eleven years ago, and was also, about the same period, performed under the direction of Mr. Hullah; but, it would seem, its sadness was not such as to encourage its repetition, for it has been laid aside from that time to the present.

"Deborah" does not properly belong to the series of sublime works which have rendered their author's name immortal. That series was not begun till Handel, abandoning the Italian Opera, devoted his powers to a more exalted branch of his art. This did not take place till the year 1739; "Saul" being his first and "Israel in Egypt" his second step in his new and lofty career. "Deborah" was produced in 1733, when Handel was immersed in the cares and labours of the Italian Opera-house, and involved in that desperate and calamitous struggle which ruined his circumstances, and for a time threw him into a state of depression approaching insanity. This oratorio, then, was not only written under the most unfavourable circumstances, but belonged to a class of music to which Handel's attention, as yet, had been but slightly drawn. He began by getting an obscure hackney writer named Humphreys to furnish him with a libretto. Handel was unfortunate to the last in his choice of literary assistants. The poem of all his oratorios (except ng those which are made up of passages from Holy Writ) are below mediocrity; but that of "Deborah" is pre-eminently bad. Its dramatic cons ruction is meagre in the extreme, and the flat and prosaic "poetry" is often little better than doggerel. At that time Handel had not the eminent English singers with whom he was afterwards possessed. He wrote the oratorio for performance at his own theatre, the Italian Opera in the Haymarket (there were then, as now, two rival houses, which ruined each other), as an effort to support the failing fortunes of his house. His had no performers but the Italian actors and actresses, and the chorus-singers, belonging to the theatre. In those days there were no Italian tenors, the warriors and heroes of the opera-stage being enacted by *contralti*—men with women's voices. In this oratorio Handel had nothing for it but to adapt the music to the singers. Hence there is no tenor part in the score of "Deborah," the two principal male parts having been written for Signor Senesino and Signor Bertolli, male *contralti*. Such things passed current in those days—at least among the frequenters of the Italian Opera; but the result is ruinous to the modern performance of this oratorio. As the music cannot be altered, the parts written for male *contralti* must now be sung by women; and we have the absurdity of seeing and hearing *Barak* and *Sisera*, the hostile warrior, giving vent to their martial fervour and exchanging amorous defiance, in the gentle persons and sweet voices of Miss Dolby and Miss Haddard—an outrage on all dramatic propriety; for, be it observed, an oratorio, though not acted on the stage, is essentially a musical drama, in which the individuality of every personage must be carefully preserved.

There is, moreover, less sustained strength in the music of "Deborah" than in that of any of Handel's subsequent oratorios. The airs are in the stiff, formal, antiquated style which then prevailed, when it was usual to drag a single syllable into a long string of dry and unmeaning divisions; while the long and numerous recitatives are somewhat heavy and monotonous, showing that Handel was as yet imperfectly acquainted with the accent and emphasis of the English language. At the same time there are many beauties both in the recitatives and airs; in the one phrases of great energy, and in the other passages of graceful and expressive melody. The air, "Tears such as tender fathers shed," has always been a favourite with the lovers of Handel; but no other air in the oratorio approaches it in simplicity and beauty. The strength of "Deborah" lies in the choruses. Handel's genius seems to have imagined the grandeur of which the harmonious union of many voices is capable, before he had the means of giving his conceptions form; some of the choruses in this oratorio—particularly the double chorus with which it opens, "Immortal Lord of earth and skies;" the chorus, "See the proud chief advancing," which opens the second part; and the chorus of the priests and worshippers of Baal—have scarcely been surpassed in any of his later works

However much "Debrah" must suffer from a comparison with "The Messiah," or "Israel in Egypt," or "Samson," still it is an emanation from the same mighty mind, and, as such, must ever be regarded with interest. We are glad, therefore, that it has been revived by the Sacred Harmonic Society, who have done themselves honour by the manner in which they have now performed it. Power and effect in the airs and choruses are always heightened by the additions to the orchestral score which have been made by Mr. Costa, who had already shown his competency to this delicate task by his additional accompaniments to "Samson." In both cases he has followed his model Mozart's treatment of "the Messiah," having most felicitously strengthened and enriched the instrumental effects, without interfering with the original designs of the composer. Under his able direction the whole of the music has evidently been carefully studied and prepared; and the solo parts have been entrusted to performers—Madame Clara Novello, Miss Dolby, Miss Huddart, and Herr Formès—who have done them all possible justice. Though "Deborah," as a whole, is a very defective work, and probably does not possess the elements of general popularity, yet it contains many things which are worthy of its immortal author, and which, thus performed, will always inspire the lovers of Handel with admiration and delight.

On Wednesday Miss Dolby gave a second *soirée musicale*, at her residence in Hinde-street. Like the preceding, it was attended by a crowed and fashionable assemblage. A remarkable feature of this performance was a selection (consisting of an air and two duets) from the celebrated "Stabat Mater" of Pergolesi—a divine specimen of the old Italian school, rarely, unhappily, almost altogether. The exquisite music was admirably sung by Miss Dolby and her sister Miss Amy. Miss Dolby is entitled to the highest praise for the taste and judgment with which she has succeeded in rescuing from oblivion many beautiful compositions of the great old masters.

BEAUMONT INSTITUTION, MILE END.—The first concert this season of the Beaumont Institution took place on last Monday, the 11th inst., under the direction of Mr. D. Francis. The vocalists engaged were Madame Anna Thillon, Miss C. Henderson, Mr. A. Wallworth, and Mr. and Mrs. Weiss. Madame Anna Thillon was much admired in Amour's air, "Une rose bien fleurie:" she also sang with great success Charles Mackay's Tamborine song, "I love my little native isle," set to music by Frank Mori. Mrs. Sims Reeves was much applauded for her artistic interpretation of Weber's beautiful scena from *Freischütz*, "Softly sighs;" and a very pretty ballad, "I cannot mind my wheel, mother," by Linley. Miss Clara Henderson was encored in Nathan's song, "Why are you wandering?" She also sang, with Mr. Wallworth, Barnett's comic duet, "The Singing Lesson." The greatest sensation of the evening, however, was produced by the admirable manner in which Mr. Sims Reeves declaimed Frank Mori's patriotic song, "England and Victory." The audience rose greeting the termination of each verse with a burst of applause rarely heard. He likewise sang a new ballad by Hatton, called "True to love and thee," and a duet with Mrs. Reeves, by Cagnoni; both of which pleased immensely. Mr. C. Hirst gave Döhler's "Carnival di Venise" and Schulhoff's "Carnival de Venise" on the piano most efficiently. The concert commenced with the National Anthem, and terminated most satisfactorily with "Partant pour la Syrie," arranged as a trio by Frank Mori, with Sir Walter Scott's words, "Dundee the bonnie." The room was crowded to suffocation; Mr. Frank Mori presided at the pianoforte.

A new tragedy, called "The Gladiator of Ravenna," not long ago anonymously produced at Vienna, and wh ch was received there with the utmost enthusiasm, proves to owe its parentage to Herr Von Weber, a son of the composer of "Der Freischütz."

The Duke de Richelieu has arrived in town from Paris.

The Duke and Duchess of Bedford are entertaining a succession of visitors at Woburn Abbey, Beds.

Lord and Lady Edward Fitzalan Howard are passing the season at Bonchurch, Isle of Wight. The noble Lord and her Ladyship intend to pass the Christmas holidays with the Duke and Duchess of Norfolk, at Arundel Castle.

A company of negroes at Havana, who clubbed together and purchased a lottery ticket, were fortunate enough to draw a 40,000 dollar prize.

THE THEATRES, &c.

LYCEUM.—A new piece, of very simple construction, but exceedingly whimsical in conception, entitled "Two Heads are Better than One," produced at this theatre, is likely to have great success. It is dependent on a mere mechanical contrivance—an aperture made in a lady's work-table, through which her lover, *Charles Conquest* (Mr. Roxby), thrusts his head, thus setting up dummy for the trimming of cap: while securing a clandestine interview. Ultimately, an accidental pinch of snuff sets it sneezing, and the secret, after causing some alarm, is disclosed: but the lover is, nevertheless, made happy, for he is found to be wealthy, and thus admissible as a husband. To Mr. Roxby's grimaces the farce is indebted for its prosperity. This little drama is by Mr. William Brough.

ADELPHI.—This theatre, on Monday, ventured on a new rustic piece; but this time the subject was not English, but French, taken from one of the stories by Madame George Sand, and adapted from her drama performed at the Odéon under the title of "François le Champi." The version is in two acts and entitled "Pierre the Foundling." Six years ago the husband of *Madeline Blanche* (Madame Celeste) had driven the orphan out of doors, who now returns to the widow room with the earnings of his honest labour. A *Madame Carnot* (Miss Cuthbert) pretends a lien on the farm; and poor *Madeline* is in despair. Things, however, become more hopeful under the management of *Pierre*, who, by the aid of *Madame Carnot*'s nephew, *Julius Bonnet* (Mr. Rouby), gets a reposession of the quittance for the debts for which his aunt still unjustly demands a payment. In return for this service, *Pierre* advances *Gribon*'s love suit to the heroine's sister, *Marie Blanchet* (Miss Woolgar), and, in so doing, finds that the lady prefers *Julius*, and that *Madeline* also prefers him as her brother. Ultimately, *Marie* is content to perform her contract with *Gribon*, and *Pierre* is about to take again his departure, when the long-suppressed declaration of attachment be ween him and the widow is promulgated, and the parties are made happy, after the approved fashion of French romances and melodrames. The interest of the characterisation is divided between Miss Woolgar, Mr. Keeley, and Mr. Webster—with whom the strife of the affections, in all its various forms of coquetry, distraction, and fidelity, progresses through its divers phases of passion, despondency, hope, and triumph. These were all admirably interpreted; and, though serious objections lie to the theme of the piece, by the aid of so much good acting the drama was success ul

ST. JAMES'S.—The performance of "Macbeth," in aid of the Patriotic Fund, on Monday, was attended by a crowded and brilliant audience. *Lady Macbeth* was played by Miss Glyn with her accustomed power. The sublimity of her invocations, and the solemnity of the sleep-walking scene, were finely contrasted, with the part she made happy, after the approved fashion of French romances and melodrames. The interest of the characterisation is divided between Miss Woolgar, Mr. Keeley, and Mr. Webster—with whom the strife of the affections, in all its various forms of coquetry, distraction, and fidelity, progresses through its divers phases of passion, despondency, hope, and triumph. These were all admirably interpreted; and, though serious objections lie to the theme of the piece, by the aid of so much good acting the drama was success ul

ST. JAMES'S.—The performance of "Macbeth," in aid of the Patriotic Fund, on Monday, was attended by a crowded and brilliant audience. *Lady Macbeth* was played by Miss Glyn with her accustomed power. The sublimity of her invocations, and the solemnity of the sleep-walking scene, were finely contrasted, with the part she made of the Kemble school, which has in this actress its now only surviving exponent. Miss Glyn was loudly called for at the end of the tragedy. The other characters were creditably sustained by amateurs.

The Earl of Aberdeen entertained a distinguished circle of Peers—supporters of the present Administration—at dinner, at Argyll-house, on Monday last.

The Earl of Derby had a meeting of Peers—supporters of his Lordship's policy—at his residence in St. James's-square, on Monday.

The Earl of Strathmore arrived in town on Saturday from Florence, from attending the obsequies of his deceased Countess.

Lord Dunkellin arrived at the Marquis of Clanricarde's residence, on Carlton House-terrace, yesterday, from Russia, *viâ* Berlin.

THE Abingdon election terminated on Tuesday, after a very close contest, in the return of Mr. Reed. The numbers were—for Mr. Reed, 125; for Mr. Norris, 117.

A public examination of the gentleman cadets at Addisco mbe took place on Saturday last, in presence of the chairman of the East India Company (Major Oliphant), the Archbishop of Canterbury, his Highness the Maharajah Dhuleep Singh, and a large circle of officers. Prizes were afterwards distributed to the more distinguished of the students.

ACCIDENT AT A RAILWAY STATION IN PARIS.—About half-past six on Friday evening a goods train arrived at the Paris terminus of the Lyons Railway, and was followed in about half an hour by the express train from Lyons, which, from the neglect of the guard, came in with great violence into the former. One of the goods waggons contained several casks of spirits, which burst by the shock, and the fire from the engine coming in contact with the spirits, the whole was immediately in a blaze, and the flames communicating to the carriages near, several large quantities of combustible property were destroyed. A large body of firemen was very promptly on the spot, and got the flames under before they had time to extend to any of the buildings.

ENGLISHMEN AND AMERICANS IN RUSSIA.—A letter from St. Petersburg states that Mr. Baird's iron-foundry in that city is in full work again. He has contracted for five screw engines, four of 300 and one of 400 horse power, and has received from the Russian Government 250,000 roubles depositing any guarantee, an unusual thing with Government contracts. Americans (the same who have had so much to do with the Moscow Railway) are building a locomotive factory for the Czar's use. Colt has been, or is still, there, with his machinery to make revolvers.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

During nearly the whole of the week there has been a comparatively inactive market for Consols, and a fall, equal to about one-half per cent, has taken place in the quotations. This decline is chiefly attributable to the intelligence made by Lord Aberdeen in the House of Lords, that it not likely to take part with the Allies in the Crimea, unless future events show a determine that course of policy. Although we have to report a drooping and an inactive market, we must own that the surprise expressed in most quarters that Consols maintain their present high position, and that there is no want of abundant means on the part of the Government for the war, is very natural. The supply now in the hands of the jobbers is certainly small, and we have the public buying steadily. These are most important features at this period, and another strikes us as especially worthy of notice, the steady premium of gold in the Bank of England. Whether it will continue to increase is now a doubtful matter, unless, indeed, the demand for the Continent should wholly decline. At present there is very little new on passage to this country, and the imports of the present week have been only £57,300 from New York, and £7,500 from Africa. The shipments have been only £64,000, chiefly to the interior of Germany.

There was rather an improved feeling in the English Stock Market on Monday, and prices generally were firm:—Bank Stock was done at 209; the Three per Cents Reduced marked 91¾ ⅞; Consols for Account, 92¾ to 92; the New Three per Cents, 91¾ 92 to 91⅝; Long Annuities, 4 3-16; India Bonds were done at 2s. to 1s.; Exchequer-bills, 3s. to 6s. premium. Exchequer Bonds were sold on Tuesday at the Three per Cents were 92¾ ⅞ to 92¾ ex div., for the 10th of January. The Three per Cents Reduced realised 91¾ ⅞; and the New Three per Cents, 91¾ ⅝. Bank Stock, 209. At the Long Annuities, 4 3-16. Exchequer Bills were quoted at 3s. to 6s.; and India Bonds, 2s. to 1s. prem. Considerable business prevailed on Wednesday. The Three per Cents Reduced sold at 92¾ ⅞ 91; Consols for Account, 92¾ ⅞

AMUSEMENTS, &c.

THEATRE ROYAL HAYMARKET.—MONDAY, DECEMBER 18, and During the Week. Festivals the Last Engagement in England of Signora Piccolomini. Boxes and her Spanish Dancers, as they depart for Madrid on the 24th instead "Present at Court," with Mr Buckstone. "The Irish Lion," with Mr. Harcourt and Mr. Webster. NATIONAL PROVINCIAL LIFE OFFICE, 147, Cheapside, London.—From the establishment of the society the business has rapidly progressed.

During the year ending 31st October, 1854, the Directors received proposals for assurance on lives amounting to the large sum of upwards of £300,000.

The following statement exhibits the number and particulars of the new policies paid up most completed upon five-class lives during the two periods of the existence of the Office, and shows also the satisfactory increase of business as compared with the average of the three previous years:—

Two Months ending.	Number of Policies.	Sum Assured.	Annual Income thereupon
November, 1854	154	£30,507	£1,367 11 7
Average (of three years) of corresponding period	203	33,233	1,004 7 7
Excess of 1854 over average of three previous years	..	4,277	293 4 0

Notwithstanding the high rate of mortality which has recently prevailed, the average mortality among the members of this Society has been less than one-half of the Government Tables.

Forms of proposal for assurance may be obtained on application to any of the agents throughout the country; or to

December 1, 1854. EDMUND CLENCH, Manager.

NATIONAL PROVINCIAL FIRE OFFICE 187, Cheapside, London. Capital, Quarter of a Million Sterling, fully subscribed.

The liberal terms and principles adopted by this Company are daily gaining for it a large amount of patronage and support.

The following statement exhibits the increase in the Company's business during the past two months, as compared with the two corresponding months of the previous year:

New Business.			
Two Months ending	Number of Policies.	Sums Insured.	Premium and Duty
November 1, 1854	474	£112,076	£ 313 13 7
November 1, 1853	324	£123,494	£345 8 8
Excess of 1854 over 1853 in months over corresponding period of the previous year	150	£111,511	£31 5 0

JOHN J. GRIFFIN, F.C.S., Chemist, Mineralogist, and Optician, 10, Finsbury-square, London.

PHOTOGRAPHY.—Just published, an entirely NEW CATALOGUE of APPARATUS and CHEMICALS, suitable for the various processes in PHOTOGRAPHY. It includes Iodized Collodion, Sensitive Paper, Glass, Baths, Cameras, Portrait and Stereoscopic Lenses, Tripod Stands, Printing Frames, Gold Toning Solutions, Fixing Salts, Gilding and Mercurial Solutions, Vignetting Glasses, Porcelain Slides, Varnishes, Engraving Points, Glass Measures, Focussing Glasses, Pneumatic Holders, Glass Funnels, Porcelain Dishes, Glass Rods, Blotting Paper, Gutta Percha Trays, Printing Frames, Glass Baths, Camera Stands

THE SCREW STEAM-SHIP "PRINCE," WRECKED OFF BALACLAVA HARBOUR.

LOSS OF THE STEAM-SHIP "PRINCE."

THE following statement of the loss of this vessel, on the 14th ult., at 9h. 3m. a.m., about three cables' length eastward of the entrance to Balaclava Harbour, has just been received:—

While lying at anchor in 26 fathoms water, with two anchors down, about half a mile from the shore, the wind blowing a terrific hurricane from the southward and westward, No. 16 Transport fouled us, doing us some damage; and we were obliged to cut away all masts. About 9h. a.m. the port cable parted (all hands being on deck at the time); endeavoured to steam ahead; but, on account of some of the wreck being foul of the screw, were unable to do so. About five minutes afterwards the starboard cable parted, and the ship drifted in rapidly towards the rocks.

Captain Goodall, who had been on deck from the commencement of the gale, called all hands aft, and, with Capt-in Baynton R.N., Transport Agent, pulled off their coats, Captain Goodall, at the same time, saying, "Now, my lads, I've done the best I can for you; every man must try and save himself."

About 9 15 a.m., the ship touched the rocks, and, owing to the great force of wind and severe sea setting in at that time, in fifteen minutes after not a vestige of her was to be seen. After thumping about five or six times the ship broke in halves about amidships, and I jumped out of the mizen chains on part of the wreck, and, being about ten minutes in the water, was washed ashore.

I did not see Captain Baynton or Captain Goodall after the ship struck. Every person seemed very cool and collected under such awful circumstances.

After remaining on the rocks about five hours, with six of the crew of the *Prince* we were hauled up by parties from the *Medway Trent*, *Downy*, and *Harbinger* (who had been engaged all day with life-buoys and lines, endeavouring to save lives) over an almost perpendicular cliff, of about 250 feet in height.

Out of upwards of thirty vessels anchored in this place, only three rode the gale out with masts standing, and I believe about ten were lost entirely.

I have omitted to mention the praiseworthy conduct of some men in a life-boat (which I have since learned to be the *Arrow's*, under the charge of Mr. Hammond, second officer of that vessel), who went out in the severe part of the gale to render assistance.

H. G. F. COTGRAVE,
Late midshipman G. S. S. S. Company's steamer, *Prince*.

A letter from Captain T. S. Beal, of the screw steam-ship *Harbinger*, dated November 17th, says:—

I have Mr. Cotgrave and four of the men from the *Prince* now on board; their names are Parker, Pilcher, Hall, and McDonald. The *Harbinger* was fortunately in the harbour, but has suffered very much. Nearly every ship broke adrift, and all are injured more or less. I have lost figure-head, cat-heads, forecastle rails, poop ditto, side ladders, and, indeed, all outside work is much chafed and broken. Our hull and machinery are, however, perfect, as also our masts and yards.

THE WRECK OF THE STEAMER "NILE."

THE *Nile*, iron screw-steamer, of 700 tons and 200-horse power, one of the British and Irish Steam Company's vessels, was lost on the night of Thursday, the 30th ult., in the neighbourhood of Godrevy Point, a head land which forms the eastern boundary of St. Ive's Bay. On her last voyage to London the *Nile* had the misfortune to run down a vessel laden with stone, just off the Breakwater at Plymouth, and the late severe weather had made her trips rather irregular. She left Penzance last on Saturday the 26th, and arrived at Liverpool on Sunday, the 29th ult., whence she departed on her return voyage on Tuesday evening, at six o'clock. Fortunately, as it has transpired, several of her passengers for Penzance and neighbourhood were left behind at the Nelson Docks. On Tuesday night she must have encountered severe weather; but as she was seen on Thursday morning by the *Sylph*, Cork and London steamer, in the North Channel, and in a right course for the Land's End, there is no reason to apprehend that the gale which then blew damaged either her hull or machinery. It is now beyond all doubt, however, that, from causes which as yet are purely conjectural, she was some eighteen or twenty miles out of her reckoning, and that, in a tempestuous sea and thick weather, she ran on a dangerous reef of rocks, called "The Stones," stretching out from Godrevy Point, and soon afterwards sank with all hands. Early on Friday morning some empty porter-barrels and a wine-cask were picked up on the adjacent coast. This caused the Coast-guard force and the inhabitants to be on the look-out, and soon all surmises as to the name of the unfortunate vessel were set at rest by the discovery of a small box at the back of Portreath-quay, containing papers.

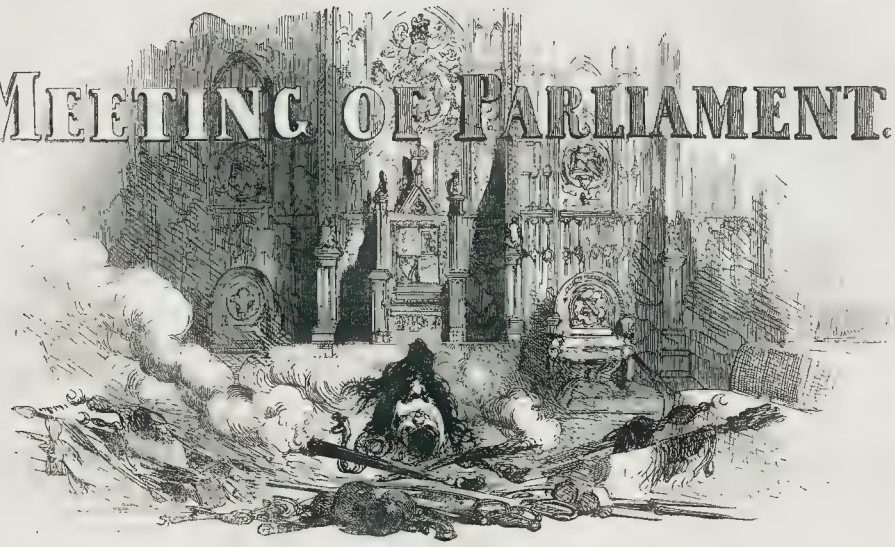
From the direction in which the wreck was drifting on Friday and Saturday, it was thought that the steamer struck on the ridge of rocks at the distance of a mile or more from Godrevy Island, going at the time at her usual speed, and, having been backed off into 12 or 14 fathoms of water, foundered. Even on Saturday, by which time the wind had considerably moderated, no boat durst venture off to the scene of the wreck; so that, had the crew succeeded in taking to their boats, they only prolonged their existence for a brief period.

The *Nile* was built about five years since at Greenock; and Captain Mopkett had the reputation of being a careful and skilful navigator, indefatigable in the discharge of his duties, and most attentive to his passengers. The steamer had on board a heavy and very valuable cargo—the value of this and the boat itself has been roughly estimated at from £40,000 to £50,000.

Among many narrow chances which have been the topic of conversation is that of a young man named Strick, of Newlyn. His luggage was on board the *Nile*, but he quitted her for a few minutes to have "a pint" with a friend. The conversation was prolonged, and on returning to the docks the steamer had sailed. Doubtless the belated voyager imprecated his unlucky stars. He took steamer to Bristol, and thence to Hayle, on arriving at which place the news awaited him that he had lost his luggage, but saved his life.

"THE NILE" SCREW STEAM-SHIP, WRECKED OFF GODREVY POINT.

MEETING OF PARLIAMENT.



No. 718.] SATURDAY, DECEMBER 16, 1854. [VOL. XXV.

OPENING OF PARLIAMENT.

ON Tuesday last her Majesty the Queen opened Parliament in person, and has inaugurated the Session under circumstances more critical and more momentous than any that have occurred since 1815. Those circumstances, however, appear to have given an impetus to the zeal and loyalty of the people, who received the Queen with a degree of enthusiasm which it would be impossible for any language to exaggerate.

The day was extremely fine, and the number of persons who showed themselves eager to catch a glimpse of the Royal procession was quite equal to that of any former occasion. All the places which afforded accommodation for that purpose were occupied at an early hour in the morning.

At a few minutes before two o'clock her Majesty and Prince Albert, with the Prince of Wales, and attended by the Duke of Wellington, the Duchess of Wellington, and Lady Churchill, left Buckingham Palace in the State carriage, drawn by eight splendid cream-coloured horses. There were also in the procession (which was led by the Yeomen of the Guard, and escorted by a body of Life Guards) the carriages of the Marquis of Breadalbane, Earl Spencer, Viscount Sydney, Lord Malgrave, Lord Drumlanrig, Lieut.-Colonel the Hon. C. B. Phipps, Lord Ernest A. C. Bruce, Major-General the Hon. Charles Grey, and Colonel Wemyss.

On leaving the Palace her Majesty was greeted with a true English

THE NEW HOUSES OF PARLIAMENT.—ENTRANCE TO THE STAR-CHAMBER COURT, NEW PALACE-YARD.—(SEE NEXT PAGE.)

cheer, which she courteously acknowledged. From the Palace to the Horse Guards there was a continuous line of people, who vehemently cheered. Indeed, the crowd in the Park was so great that some danger was apprehended lest, in their eagerness to follow her Majesty, the people should break through the Horse Guards into Whitehall and Parliament-street, where thousands had already assembled. By means of barriers, which had been erected at convenient distances from each other, the police were enabled to keep the people back; and no accidents, as far as we could learn, occurred. Her Majesty's Ministers drove rapidly along the line of route, and those of them who were recognised were loudly cheered. In short, every person of distinction who passed received applause, so boundless was the enthusiasm of the people.

At ten minutes past two the Queen reached the House, and her arrival was immediately announced by a discharge of cannon. At the Victoria Tower her Majesty was received by the Lord Chamberlain and other high officers of State, a guard of honour consisting of the Grenadier Guards being with the band of the regiment, drawn up in front of the tower. The National Anthem was then struck up.

At a very early hour the seats in the House of Lords reserved for Peeresses and their friends were partially occupied; some ladies, received on "being in time," came in in parties, and were duly ushered to their seats. Before a single Peer made his appearance, the seats for Peeresses were nearly filled, and the effect was singular and attractive—the back of the House, in its plain carpeting, standing out in dark relief from the masses of colour which ladies' cloaks, scarfs, and dresses gave to the benches at either side. The assembled company was both brilliant and numerous; but, owing to the fact that mourning dresses were more frequent and multitudinous than usual, the general effect was sombre. In the interior of the chamber was scarcely so dazzling or so variegated as usual. There was a large attendance of Peers—rather larger, indeed, than is customary—but some old familiar faces were absent, and the eye sought in vain for the stately and martial figures of the Duke of Cambridge and the Earl of Cardigan. The diplomatic corps, with their usual varieties of costume and uniform, mustered in great strength. It was not a little remarked that the first arrival was the envoy of our new ally, the Austrian Ambassador. The white Austrian military uniform, as worn by one of his Excellency's suite, excited some curiosity and attention. The Turkish Ambassador was the next; he entered into conversation with his brother diplomatist, and the respective costumes of the two sat in strange mingled in a proximity that could not but suggest a more active alliance.

The Queen entered about half past two, led by Prince Albert, and attended by the Duchess of Wellington; the Earl of Aberdeen bearing the Sword of State, the Marquis of Winchester the Cap of Maintenance, and the Marquis of Lansdowne the Crown. On taking her seat on the throne, her Majesty gave directions that the Commons should be summoned. A little delay took place in consequence; but in a few minutes the rushing tramp of "her Majesty's faithful" Commons was heard along the corridors, and the Speaker made his appearance at the bar, attended by the Sergeant-at-Arms, and followed by a disorderly throng of the Members; the Ministers present being Lord J. Russell and Sir William Molesworth. Order having in a few seconds restored, Her Majesty, in a clear voice, which was distinctly heard all over the house, read the following Speech, which was handed to her by the Lord Chancellor:—

THE ROYAL SPEECH.

MY LORDS AND GENTLEMEN,

I have called you together at this unusual period of the year in order that, by your assistance, I may take such measures as will enable me to prosecute the great war in which we are engaged with the utmost vigour and effect. This assistance I know will be readily given; for I cannot doubt that you share my conviction of the necessity of sparing no effort to augment my forces now engaged in the Crimea. The exertions they have made, and the victories they have obtained, are not exceeded in the brightest pages of our history, and have filled me with admiration and gratitude.

The hearty and efficient co-operation of the brave troops of my ally the Emperor of the French, and the glory acquired in common, cannot fail to cement still more closely the union which happily subsists between the two nations.

It is with satisfaction I inform you that, together with the Emperor of the French, I have concluded a Treaty of Alliance with the Emperor of Austria, from which I anticipate important advantages to the common cause.

I have also concluded a Treaty with the United States of America, by which subjects of long and difficult discussion have been equitably adjusted.

These Treaties will be laid before you.

Although the prosecution of the war will naturally engage your chief attention, I trust that other matters of great interest and importance to the general welfare will not be neglected.

I rejoice to observe that the general prosperity of my subjects remains uninterrupted. The state of the revenue affords me entire satisfaction; and I trust that by your wisdom and prudence you will continue to promote the progress of agriculture, commerce, and manufactures.

GENTLEMEN OF THE HOUSE OF COMMONS,

In the estimates which will be presented to you I trust you will find that ample provision has been made for the exigencies of the public service.

MY LORDS AND GENTLEMEN,

I rely with confidence on your patriotism and public spirit. I feel assured that in the momentous contest in which we are engaged you will exhibit to the world the example of a united people. Thus shall we obtain the respect of other nations, and may trust that, by the blessing of God, we shall bring the war to a successful termination.

THE DEBATE.

The Address, in answer to the Royal Speech, was moved by the Duke of Leeds, and seconded by Lord Ashburton, in the unavoidable absence of the Earl of Abingdon. Both noble Lords expressed approval of the sentiments expressed in the Speech, and eulogised the bravery of the Allied troops.

The Earl of DERBY spoke at great length in condemnation of the inefficient manner in which the war has been carried on:—

Throughout the whole of our transactions with regard to Russia, from the very first to the last, there has been in the course pursued by Government a want of previous preparation—a total want of prescience. They appeared to live from day to day providing for each successive exigency after it arose, and not before it arose. "Too late" has been the fatal words applicable to the whole conduct of Government in the course of the war (Hear, hear). We were "too late" in our declaration of war. We were "too late" in deciding that the passage of the Pruth was a *casus belli* in the first instance. We were "too late" in sending our troops to the Black Sea, and we were too complaisant to the Emperor of Russia, who thanked us for refusing to act in concert with our French allies, and send a fleet into the Black Sea at a time when the French thought it desirable. Our co-operation then would have been of immense importance, and our non-compliance, which extorted thanks from the Emperor of Russia, controlled to a great extent the action of our allies. We were "too late" in declaring the war, we were "too late "in entering the Black Sea, and we were too complaisant to the Emperor of Russia to take place (Hear, hear). At that time the Turks were under the pledge of protection from this country, but, in the teeth of a powerful armament, Sinope was taken and destroyed; the Turkish fleet was destroyed in its own waters, and we were standing idly by, not at Sinope, but in the Black Sea; and, for the purpose of co-operation, were either powerless or unwilling to interfere in time, they were "too late" in sending an army to Turkey; and although Ministers had taken credit to themselves for the energy displayed in sending out an army of 30,000 men in three months, which boast was almost a reflection on a great country like this, yet even in this matter they were "too late," for their preparations should have been made three months earlier. But even after this great exertion they neglected to make any provision for reinforcements, and it was admitted that their army of 30,000 men had no reserve whatever. To crown all, they were "too late" in arriving at Sebastopol. That expedition appeared to be a step in the dark, without any knowledge of the strength of the place, except from the warnings which were given against attacking it at all. With regard to the treaty with Austria, their Lordships could express no opinion upon it, as they were wholly ignorant of its provisions. The noble Earl concluded by urging upon the Government the necessity of energetic measures for the prosecution of the war, a course in which he was convinced they would be sustained by the public feeling of the country.

The Duke of NEWCASTLE said he would not attempt to make an "out and out" defence of all that had been done, nor would he deny but that mistakes had been made at the commencement, which would be remedied if they had now to begin again. But he reminded their Lordships that the first object in view was the protection of Constantinople. This being secured, other objects were desired, and an endeavour made to accomplish them. With respect to the Baltic, the noble Duke remarked that, although Cronstadt had not been taken, and although the Russian fleet was intact, yet a great moral effect had been produced by the expedition. The trade of Russia had been destroyed, and the fleet could not proceed to sea—a circumstance which could not fail to be humiliating to the pride of a country like Russia. The best defence of the Government would be the publication of the despatches which had passed between Lord Raglan and himself, were the present a time in which they could be produced without detriment to the public service. The expedition to Sebastopol was not rashly undertaken. Lord Raglan had been instructed to make all necessary inquiries as to the strength of the place and the force necessary for its capture. He then entered into minute details as to the military measures. The original force of the expedition was between 26,000 and 30,000 men (including officers), and of that number 10,000 were sent to Malta to expedite the transport of the whole to Turkey—the whole force having left this country before April. On the 22nd of April Lord Raglan was ordered by the Government at home to move from Gallipoli to Varna, in order to support Silistria. *"From the first the invasion of the Crimea was contemplated."* From the first Lord Raglan was instructed to inquire as to the strength of Sebastopol, and the means of taking it. The order for attacking Sebastopol was given from home, but not against the opinion of the Generals. That order was issued on the 29th of June, seven days after the raising of the siege of Silistria. At the same time the reserve division, under Sir George Cathcart, was ordered out, and to it were added three companies of artillery, two regiments of cavalry, and a second battering train of forty-two guns—one of equal amount with an abundant supply of ammunition, being already out. Never before were two battering trains sent out in so great a state of efficiency, and with so large a supply of ammunition; and directions were issued for doubling the amount. In carrying out the expedition a slight delay arose from the late Marshal St. Arnaud having thought it necessary to order off a portion of the French troops in the direction of the Danube, to co-operate with the Turks. Then great difficulty was experienced in obtaining an adequate supply of flat-bottomed boats and other things required for the embarkation and disembarkation. The third and most serious cause of delay was the breaking out of the cholera. The expeditionary army consisted, on its first landing in the Crimea, of 60,000 men, namely—27,000 English, 24,000 French, and 9,000 Turks. These were all landed at once—an unparalleled undertaking. Then followed the battle of Alma. But, before the news of that battle reached England, a force of between 6000 and 7000 men was under orders to proceed to the Crimea. The *Prince* took out part of this force; and the delay in the transport of the rest arose from want of steam-vessels. Upon the first declaration of war, orders were sent to all our Colonies to withdraw as many regiments as possible, with the view of strengthening the home force, and ten regiments were at that time ordered home, besides several troops of artillery, and at this moment some of the regiments which were a few months ago in the Colonies have been recruited since their arrival here, and are now on their way to reinforce the Army of the Crimea. It was impossible to send at the beginning the reinforcements now forwarded. No Power, not even France or Austria, could command in the commencement of a war the forces that they can wield in time. We, too, made war under novel circumstances—our system of recruitment for both Army and Navy being entirely voluntary. It should be borne in mind that nothing was less successful in the beginning of a war, but that the zeal and energy of the people were aroused when military success was retarded; and in a military point of view this was an inconvenience. The siege of Sebastopol commenced on the 17th of October. In common with eminent men in this country and in France, the Government did, certainly, hope that the fortress would have fallen sooner that it has done; but when they saw that the siege was to be long they sent out reinforcements—even using newly-recruited regiments for the purpose, in comformity with the pressing requests of Lord Raglan. Also, the Government miscalculated, it is admitted, as to the rapidity of the Russian reinforcements; they did not anticipate that an army could be moved so quickly from Odessa to Simpheropol (Forty-two miles travel was on that occasion accomplished by the Russian troops in one day). But we also have sent out reinforcements. Since June we have sent out 20,000 men—12,300 of these within the last two months. This makes the whole army sent to the Crimea up to 53,000 men—a force raised, be it remembered, on a peace establishment. With regard to the provision of ordnance, sixty-two guns were sent out at the commencement of the war. There were also sent out two complete battery-trains of forty-two guns, with an enormous supply of shot and shell, seven nine-pounder batteries, and two troops of Royal Horse Artillery. On no former occasion was such a quantity of ordnance supplied to a British army within so short a period. The whole amount of small ammunition sent to the army was 22,938,000 rounds, of which 18,000,000 rounds were Minie ammunition. And the Government were continually sending more, as ships could be obtained for the purpose. But this by no means represented the force at the disposal of Lord Raglan, even as regarded guns and ammunition; for from Malta there had been sent 42 large guns and mortars, 9000 shells, and 27,000 round-shot, principally of very large size. On the 17th October the first supply of warm clothing arrived in the Crimea; and, if the supply sent out in the *Prince* had reached its destination, there would not have been much reason to complain of the privations of the army, considering the character of the climate and the period of the year when warm clothing becomes necessary in the Crimea. Supplies of warm clothing were sent out in time; and, but for the great calamity which befel the *Prince*, the whole army would have been supplied before any suffering from cold could have arisen. The orders for the supply of the warm clothing were given in the months of July and August, and they were sent out as soon as the orders could be executed and steamers could be provided. Amongst the articles sent out in the *Prince* were 35,700 pairs of woollen socks, 53,000 woollen shirts, 2500 watch-coats to go over the ordinary great-coats, 16,000 blankets, and 3750 rugs. Looking at the total number of articles sent out, the number of pairs of socks amounted to 150,000; of woollen shirts, 4100,000; of pairs of flannel drawers, 90,000; of woollen gloves, 80,000 pairs; besides about 40,000 railway wrappers; 40,000 waterproof capes; 40,000 fur coats; and 12 000 pairs of sealskin boots. And, on hearing of the loss of the *Prince* by telegraphic message, the Government sent off messengers to Glasgow, Nottingham, Leicester, and to the woollen manufacturing districts, to purchase up all the stores which they could lay their hands on, for the purpose of supplying the loss arising from the wreck of the *Prince*, and before authentic intelligence arrived of that disaster a great portion of the goods were on their way to their destination. The vessels with all these stores had not actually sailed, but the greater part of them had done so, and the remainder of them will sail in the course of a very few days. This, however, is not all that the Government has done with the view of securing the health and comfort of the troops by supplies of warm clothing. As soon as it became apparent that the troops would probably winter in the Crimea, orders were issued for the supply of sheepskin coats for the whole army. Only 5000 such coats could be supplied in England, but 10,000 were ordered in France, and 20 000 in the Austrian provinces, and orders were sent to Sir Stratford Canning, at Constantinople, to order 25 000 sheepskin coats in various districts in Turkey. Huts have been ordered for the accommodation of the troops, and independently of those to be sent from Turkey, Malta, and France, 11,500 have already been sent from this country.

After describing what had been done by the Commissariat to maintain the health of the troops in the Crimea, the noble Duke referred, in spirit-stirring terms, to the army and to the heroes who had fallen:—

These men, one and all, fell gloriously in the service of their country (Cheers). It must have given the greatest possible satisfaction to those noble Lords and Sirs in this House, and who devoted their attention to the amelioration of the British soldier, to find the absence of all irreligion, cruelty, and coarseness, so conspicuous in the army of the Crimea. This proves the wisdom of the course recommended and adopted. We now see that the theory that the man who was unfit for any other occasion, that the man without religion made the best soldier, has been confuted. We find that the men who fought as never men fought before have also shown, by their letters and conduct, that they are actuated by the highest feelings, and that they are free from the commission of crimes (Hear, hear). We are told that it is the privilege of the Englishman to grumble; but it is we who indulge in luxury at home who grumble. What has been the conduct of those who have been exposed to the severities of climate and to the ravages of disease? They have borne all with the most enduring patience. Nothing could be more touching than the incident of that stalwart soldier in the hospital who, when Her Majesty's name was mentioned, with tears in his eyes, exclaimed, "This is, indeed, like England now; she is a country which cares for her poor wounded creatures" (Hear, hear). Our army has endured provocations such as no other army ever endured in civilised war. They had not only to contend with a legitimate enemy with weapons in their hands, but they had to bear with brutality, with atrocious villany; they had to see the murder in cold blood of their wounded comrades, who lay helpless (hear) and these atrocities were not committed merely by ignorant Asiatics, but by men who bore the commission of officers (Hear). Our men have had to fight savage and uncivilised Kaffirs, but in no instance have they experienced such barbarism as with the Russian soldiery; and I believe that in no instance have they shown that they are unenlightened by the spirit of Christianity. They have shown themselves as superior as Christians to those whom they were fighting against as they are superior as soldiers. The army has nobly done its duty, and the country is prepared to do its duty (Cheers). I am not afraid that we shall suffer any harsh judgment for our acts. The people are generous and just; and they will only say that I, for one, will rejoice at any amount of pressure which may be applied to me by every party in the country, and by the noble Lord opposite, for I see proofs that there is every disposition and determination to carry on the war with vigour, and all the efforts made on our part will be seconded by the Parliament and the people.

In reply to questions from the Earl of Derby, the Duke stated that about a fortnight or three weeks ago he received her Majesty's command to convey to Lord Raglan her intention to confer the Order of the Bath on General Canrobert; and to convey that determination either to the Ambassador of the Emperor of the French, or to the Emperor himself; and that had been delayed because it was not felt that the compliment would be complete to him if not offered at the same time as to our own gallant soldier. In conclusion, he said:—

I assure your Lordships that we look to prosecute this war—if we continue to possess the confidence of Parliament with firm resolve and unflinching perseverance. I do not understand what is meant by moderate counsels" (Cheers). I say we are prepared to prosecute the war with resolve and unflinching firmness. We will not reject overtures of peace; but we will not consent to any but an honourable peace. We have the fullest confidence in our army and in our noble people, and in the firmness and friendship of our powerful and generous ally, and we do not fear the least for the result. We have full confidence in the Ruler of the destinies of nations, and we have the highest hope of bringing the contest to a satisfactory issue. It is not for us to determine the time when it will be possible to bring such a war to a close; but we will bring it to that close in a way to secure the permanent peace and security to those nations of Europe which have been thrown into confusion by the act of one aggressive Sovereign (Cheers).

Earl GREY cordially supported the Address, but objected to the delays that had taken place. There was a want of a general scheme of the war. Why were not the "navvies" sent out at the first to make the railway?

The Duke of ARGYLL pointed out that the railway could not be foreseen until the march on Balaclava had taken place. In reply to a comment on Austria, the Duke called attention to the fact that Austria had undertaken to occupy the Principalities before the Russian attack on Silistria had failed.

The Earl of CARLISLE said a few words against "the swaggering" tone adopted by some public men; and suggested that, if peace could be procured, "extreme terms" should not be demanded. He felt sure that the war (though perhaps not exactly "necessary" in the beginning) would be pushed with vigour.

The Earl of ABERDEEN then rose and said:—

My Lords, I should be sorry to detain your Lordships at this late hour for any length of time, but I feel bound to make a few observations in reply to the complaint of the noble Earl opposite. He said that this war was undertaken in defence of the liberty of the Turkish Empire; but, he added, you have changed the whole character of the war, and this expedition to Sebastopol has removed you from the possibility of obtaining what you desire. Now, I humbly beg to remind the noble Earl that, if there be one point more than another more vital to the safety and independence of the Turkish Empire, and more clearly injurious to the power of Russia, it is the destruction of the fort of Sebastopol (Hear, hear). Having driven the Russians out of the Principalities, the next direct object of the war, which everybody must have had in view from its very commencement, and which we could only have been restrained in by a doubt of its practicability, was the attack and destruction of Sebastopol (Hear, hear). Notwithstanding the eager desire and expectation with which the country viewed the first landing in the Crimea, and its immediate consequences—mistaken as they have been—a mistake in which all Europe shared at the time—still I think that there are good grounds to hope that success will attend our efforts (Hear, hear); and I totally disagree with the noble Earl in thinking that the prospect of peace will be diminished by that success. Quite the contrary. I feel satisfied that nothing could contribute so much to the probability of obtaining those terms of peace which are the friend near me has alluded to as the signal of the success which I should hope we may achieve in this undertaking. The noble Earl also referred to the mention of the treaty with Austria in the Speech, and said that he was unwilling to express satisfaction at a treaty of the contents of which he was ignorant, and which might bind us to terms of a high y objectionable nature, such as would not be sanctioned by the people of this country; and he talked of our supporting Austria in Italy, Poland, and Hungary, and denounced any such object as a part of that engagement. The noble Earl may make himself perfectly easy upon that score, as no engagement of such a description either exists or ever entered into our minds. It is unnecessary, however, to say this, as I presume that your Lordships do not think it possible that we should have made such an engagement: but the noble Earl who spoke early in the evening (the Earl of Derby) did not. I think, correctly understand the import of the sentence in the Address. We do not propose that the House should express any satisfaction at the treaty. We propose, only, that the House should learn with satisfaction that her Majesty has made a treaty from which she anticipates important advantages. That is all the satisfaction. It is not that we are satisfied until we know what it is, but that we learn with satisfaction that the Queen has entered into a treaty from which she anticipates advantage. Now, my Lords, I think that you may safely express as much satisfaction as that, without committing yourselves to a particle of satisfaction with the treaty itself (Hear, hear).

The Earl of DERBY—The phrase, as interpreted, then is, that we are exceedingly glad that her Majesty and her Majesty's advisers approve the treaty which they have made (A laugh).

The Address was then agreed to, and the House adjourned at twelve o'clock.

HOUSE OF COMMONS.—TUESDAY.

The Speaker and a few of the members assembled between one and two o'clock, and after proceeding to the House of Lords, to hear her Majesty's Speech, adjourned until a quarter to four, when the House again met.

NEW MEMBERS.

Sir B. Hall, Lord Duncan, Mr. Mowatt, Mr. Watson, Q.C., Mr. Peacocke, and other honourable members, elected during the recess, were sworn in.

NEW WRITS.

Mr. HAYTER moved for new writs for Marylebone, vice Lord Dudley Stuart, deceased; for Limerick, vice W. Gould, Esq., deceased; for Ayrshire, vice Col. Blair, deceased. New writs were also moved for Antrim, vice Lieut.-Colonel Pakenham, deceased; for Fermanagh, vice Sir Arthur Brooke, deceased; and for East Gloucestershire, vice Sir Michael Hicks Beach, deceased.

THE MILITIA ON FOREIGN SERVICE.

MR. HAYTER said that, on the part of the Home Secretary, he would move for leave to bring in a bill to enable her Majesty to accept the services of militia regiments who might offer for service in places out of the United Kingdom.

OUR TRADE WITH RUSSIA.

MR. COLLIER gave notice that on Thursday next he would call attention to the state of our trade with Russia.

THANKS OF PARLIAMENT TO THE ARMY AND NAVY

LORD J. RUSSELL gave notice that on Friday he would propose a vote of thanks from that House to her Majesty's army and navy for their operations in the Black Sea, and also a vote of thanks from the House to the forces of our ally the Emperor of the French.

THE ADDRESS.

The SPEAKER having read her Majesty's Speech.

MR H. A. HERBERT proposed a humble Address to her Majesty, and took a glance at some of the more prominent events of the war. He thought the country, while it did not underrate the great merit of the army, had reason to congratulate itself on the important results of the war, and especially upon the splendid successes in the Crimea (Hear, hear) He lamented the great loss families had sustained by the deaths of so many who were dear and dear to them; but there was every reason to hope that those sacrifices would not be in vain (Loud cheers) Notwithstanding the victories gained, much had yet to be accomplished; and he (the hon. Member) hoped that, however they might in that House differ as to matters of detail, they would render themselves worthy of the British people; and that, putting aside party feeling, they would support the Government in this great and important struggle. The hon. gentleman concluded by reading the Address, which was, as usual, merely an echo of the Speech from the Throne.

MR. F. L. GOWER, in seconding the Address, said he did not pretend to lay down the law on military matters, but he believed that in the main features of it the policy of the Government had been energetic and bold. If an accusation of any kind could be brought against the Government, it was not that of rashness (Laughter from the Opposition) He urged upon hon. gentlemen not to indulge in petty criticism, for every word of the debate would be read with avidity, not only in St. Petersburg, but throughout Europe; and that any appearance of dissent would have a very damaging influence upon wavering and neutral States (Cheers).

SIR J. FARNINGTON, in the name of the great Conservative party, both in that House and in the country, would say that they would not yield to the gentlemen who had framed that Address in the spirit to resolve to extend to her Majesty that support she required to carry on the war. Nor did he object to that part of the Address which asked for an augmentation of the Army. On the contrary, he blamed the Government for their delay in augmenting the Army (Loud cheers from the Opposition) He maintained that the crippled state of our armaments was to be traced to the financial arrangements of her Majesty's Government during the last session, and to that attempt of the Chancellor of the Exchequer—against which the Opposition had repeatedly warned him—to pay the war expenses entirely from the revenue of the country. The Right Hon. Baronet proceeded to pay a tribute of respect to the memory of Colonel Blair, and expressed a hope that they might soon again see amongst them in that House, in renewed health and vigour, the hon. and gallant member for Westminster (Loud cheers). In the same terms he felt bound to speak of our gallant allies the FRENCH. Another part of the Speech in which he fully concurred was the importance of the treaty with Austria, and he trusted that the Government would very soon lay it on the table before the House. This country had viewed with suspicion the conduct of the Austrian Government; and, under those circumstances, the Austrian treaty was a matter of no common interest and importance. He had no intention of resisting the Address which had been moved, but he thought that any differences which might exist would only be as to the best manner of supporting her Majesty in the great struggle in which the country was at present engaged. At the same time he felt himself at perfect liberty freely to criticise the proceedings of the Government, who had not shown the prudence, foresight, and wisdom which would have conduced to the attainment of the great object they all had in view. The army had been sent forth inadequate in number, without reinforcements, and without the means of transport. Much other points explanation was due, and upon the validity of the explanation would depend the question whether the future conduct of affairs should continue to rest in the hands of the existing Administration or not.

SIR R. PEEL defended the conduct of his late colleagues.

MR. SIDNEY HERBERT replied to Sir John Pakington in a speech entirely a general defence of our war policy. Everything had been done in concert with our ally of France. It was not true to say that there was no military plan. There was a plan, and it comprised three parts—first to defend Constantinople; second, to defend the lines of the Balkan; and third, to strike a blow at the power of Russia in the Black Sea. In the carrying out of these intentions, it might be a question how far it was judicious to attach so much importance to the siege of Silistria. It certainly was attended with a considerable loss of time. The siege having been raised, the third portion of the plan namely, to strike a blow at the power of Russia in the Black Sea—came into play. A few days after the siege had been raised, directions were given to Lord Raglan to inform himself as to the state of Sebastopol, and the force that might be necessary to reduce it. Every confidence was placed in the officers to whom these points were referred. Such confidence was absolutely necessary, for time did not allow of correspondence with the home authorities. After information had been obtained a council of war was held, and it was resolved, and he believed correctly, to strike a blow at Sebastopol. Infinite credit was due to those who had the preparation of the expedition. Unfortunately the cholera continued its ravages, and that necessarily retarded the sailing of the force. Russia made great use of the time so afforded in completing her measures of defence. It had been asserted that the Government had undervalued the power of Russia. No such thing. It was the public opinion of England which committed that mistake. A lesson upon that point, however, had been given, and it must not be thrown away. It was not true that reinforcements had not been sent to the Crimea. But why, it may be asked, were they not sent more numerous? The answer was, that for many years past the policy of Parliament had been to keep down at the lowest possible point the military resources of the country. When the hour of need came, it was found to be impossible to raise an army, and to use it on the spot for work. With regard to the army actually available for the purposes of the Crimea, he could state that after the troops now on their way, and those ready to sail, had arrived, no fewer than 54,736 effective men would, from first to last, have passed under the command of Lord Raglan. Mr. Herbert proceeded to show that every pains had been taken, and with success, to organise the commissariat and medical departments. With regard to the hospitals, the statements were so conflicting that it was impossible to form an opinion as to the justice or injustice of the complaints which had been made. Every effort would be made to remove just grounds of complaint. The nurses despatched had proved eminently successful. The devoted person had shown wonderful energy, tact, and tenderness. It had been asked why did you go to Sebastopol? His answer was, that the Allies went there because it was the great fortress of Russian power in the South. Next year it would be impossible to hope for success. If not taken and destroyed now, it would never be taken or destroyed. There was great risk, but that was a necessary accompaniment of every great enterprise. Mr. Herbert thus concluded his speech:—

In previous wars we had alliances with countries who took our money, but the Government of which sometimes arrested us. We are now in alliance with two of the greatest nations in Europe, and we see the opinion of Europe day by day coming nearer and nearer to us, while Russia is placed in a state of isolation. Her hostile army is intrenched in her own chief arsenal, and her fleet has been sunk by her own act, while her forts on the Caucasus have also been destroyed by her own hand. These are the effects of the first campaign. I ask, where can you find, in the history of England, a campaign of not more than a few months' duration attended with such results? But still I hope our army considerably increased; and if you, the House of Commons, think it ought to be, tell us so (Hear, hear). I tell you that the country is determined, at all hazard and at all cost, that the army of Lord Raglan shall be supported (Loud cheers). If the House does not answer to that feeling of the country, then the House of Commons must take the consequence (Hear, hear); for, depend upon it, there is but one feeling upon this subject. We are engaged in a war which was entered upon with reluctance; we must carry it on vigorously to obtain that which is the object of all war, namely—peace, for peace, to be obtained, must be conquered (Cheers). Let no exertions be spared which will enable us by vigorous operations to gain that end (Cheers) I say further, if you think the Government worthy to be trusted with the superintendence of that struggle; but I would sooner a thousand times risk even Governments of other than any other policy should be adopted (Hear, hear) I care not in whose hands the war is placed, provided it be carried out; and provided the people and representatives of the people honestly and truly carry out the determined will of the nation, that the noblest of armies shall be assured of the means—so far as human means can avail—to obtain a perfect triumph (Loud and long-continued cheering).

MR. LAYARD condemned the conduct of Government in the management of the war. Granting that Sebastopol was taken, one step only would be gained. This country may be called upon to choose between an inglorious peace, or to persevere in a struggle never equalled in the history of the world. After what had passed in relation to this matter, he could not feel that confidence which he wished he could feel in the Government. All the evil had arisen from the want of a definite policy as regarded the prosecution of the war. This, indeed, was inevitable in a Cabinet composed of men who entertained opposing principles. He blamed the Government for placing themselves in the hands of Austria. He believed that that treaty would prove to be worse than useless. It was wrong to spare Odessa; and as to the operations in the Baltic, there had been no sufficient demonstration made There was only one means of overcoming Russia, and that was to meet her in Europe, and to erect Poland into a kingdom

Colonel DUNNE contended that the war had not been conducted with skill and energy.

MR. DISRAELI expressed his surprise that no members of the Government had attempted to reply to the charges of incapacity brought forward. He found fault with all that Ministers had done from first to last. Everything was a blunder or a mishap of some description or other:—

You have attacked Sebastopol. It might have been a questionable proceeding at any period of the year; but you have chosen the very worst period—a winter campaign in a country in which all others a winter campaign ought to be avoided. You have commenced this, the greatest of blunders, without having provided for the next blunder. Your bulls will arrive in the middle of January, and they will find, you will agree with me—hon. gentlemen, I am sure, will agree with me—that such a position should not have been arrived at, such a decision should not have been come to without deep thought. But in the possession of the most ample knowledge (Hear, hear), these statesmen, who arrogate to themselves all the experience and all the ability of this House, could hardly have been expected to so play their cards, when they decided on trying this great issue, that they should enter on a campaign under the most unfavourable circumstances, and incur so great a risk under the most fearful odds (Hear, hear).

It was the same with the way in which they had carried on the negotiations before war was declared:—

It is now two years since you have dallied with Russia. In your diplomatic overtures you may possibly have supposed that your negotiations would terminate in peace. I believe you did; and that a majority of you conceived that your negotiations would end in peace because I know that when a body of men consult together—a body of different opinions—whatever those opinions may be, and however various, they always take refuge in the conciliatory conviction that they will not be called on to act (Hear, hear). I believe that this Cabinet of coalition flattered themselves, and were credulous in their flattery that the tremendous issue which they have had to encounter, and which must make their days and nights anxious, which have been part of their lives, would not have occurred (Hear, hear). They could never dream, for instance, that it would be the real influence of the career of a noble Lord to carry on war with Russia, of whom the noble Lord had been the cherished and almost the spoiled child (Hear, hear) that noble Lord full of the most generous emotions on the subject, and inclined, in the abstraction of his intellect, to dream of what is called Liberalism; and he may have felt that it was not homogeneous, especially in the company he is keeping, that the latter days of his eminent career should have been employed by him with Russia (Hear, hear). That this is the truth was acknowledged by the Chancellor of the Exchequer in this House and by his budgets in the House. It has been clearly shown that two of you are never of the same opinion. You were candid enough to declare this, and it is probable that no three of you ever supposed the result would be what it has been found to be. I said that two years ago you ought to have formed your policy on this question. You do not appear to have embraced any definite object, or to have been ready to pursue any definite policy. If you had, you would not have told us that you are obliged to enter into a winter campaign in the Crimea, for another month would have rendered it impregnable.

The strange sudden way in which Parliament had been called together was another evidence of the disunion of Ministers, of their want of any definite common principle of action. Nothing was done according to any system. The only thing which sustained the country under such a deplorable state of affairs was the unparalleled heroism of our troops. With regard to the Austrian alliance, he maintained that the duty of the Government was to give a frank explanation of what it was intended to secure:—

If they will not be frank with their opponents, whether they sit on this side the House or the other, I should venture to say this was the very time to be frank with the people of this country. The people of the country are not so blind to questions of this character as they were a few years ago. They are now beginning to comprehend the enormous issue that is at stake, and if they find that Parliament is called together, with our affairs in no satisfactory state, and this old ghost of the Austrian alliance haunting the chambers of their representatives, then I think that it is not at all unlikely that they will feel considerable disrelish for the operation. I think it would be wise in the Government if they told us the drift of the Austrian alliance. Does Austria mean to join us? Is she merely to watch the game, and profit by it at the right opportunity? Is it an offensive and defensive alliance? Will she engage her troops? Is she to be an ally in spirit and in blood, as our ally of France? England has a right to demand that from the Government that has had the management of this treaty. Perhaps we shall hear on that point to-night. If we do not hear it to-night, I am convinced that this meeting of Parliament, and this commission from her Majesty, will not have that effect upon the mind of the country which I for one earnestly desire. I earnestly desire that the country generally may accept it as the House of Commons has accepted it, subject to the conditions I have mentioned, as an unequivocal appeal by their Sovereign, engaged in a great war, and, therefore, have a right to assume, a war for great objects; and that we are determined, with our whole means and power, to support her Majesty in this great and difficult position. But if we are to have allies who only interfere to hinder, to mystify, to endanger, when they ought to act, to stop in the course of national conduct when the country is slow to enlist in a great question of this kind, I say, "No Austrian alliance; no foreign auxiliaries," but let France and England together solve this great question, and establish and secure the civilisation of Europe (Hear, hear).

Lord J. RUSSELL contra ted the very great difference between the tone in which Mr. Disraeli had addressed the House, and that which characterised Sir John Pakington's criticism. The speech of the latter was one of remarkable ability, and, at the same time, great fairness. That of the honourable member for Buckinghamshire was spoken in a totally different spirit. Its object was to destroy public confidence in Ministers, and weaken the Anglo-French alliance; indeed, from beginning to end, it was impossible to discover one gleam of patriotism in anything which that gentleman had said. The noble Lord then replied at some length to the criticisms of Mr. Layard on the conduct of the war, and justified the course which Government had taken since the commencement of the campaign With regard to the treaty with Austria, to which reference had been made, he went on to say:—

I do not pretend to give the House an accurate statement of the terms of that treaty, but I am quite ready to say what I think has been the position, and what the position of Austria in regard to this country I was never satisfied that Russia had pursued that course which her duty to Europe should have [illegible] (Hear, hear). I think that in this case, which concerns all Europe, and with which the independence of Europe was intimately concerned, Austria, as a great European Power, ought to have earlier joined the Maritime Powers (Hear, hear). I think, besides, that Austria was more nearly affected, and that her danger was greater than that of England and France; but, on the other hand, a cautious Power like Austria saw that the danger to her of a war with Russia was greater than it could be to England and France. The military establishment of Austria was low, and had been reduced very lately, and her first step was to increase her military force. It was only at the end of July last that her preparations were nearly completed, and I remember perfectly well at the end of the session that I stated, in answer to a question from the hon. member for Montrose (whose absence this evening I lament)—that I said, that though Austria was pledged not to make any arrangement with Russia, except on certain bases that had been laid down, she was by no means pledged to undertake a war in connection with the Maritime Powers (Hear, hear). She has now gone a step further, but has not gone as far as she is expected to go, if peace is not restored at the end of the year (Hear, hear). She has agreed with us that, if she should be at war with Russia, a treaty offensive and defensive should *ipso facto* exist between Austria, England, and France (Hear, hear). She has likewise agreed that, before the end of the year, she will take into further consideration what steps she will be prepared to take with respect to the terms of peace with Russia (Hear). Now, I understand the meaning of that article, certainly, as not containing anything very precise ("Hear, hear," from the Opposition). I understand, however, the meaning of that article to be, that if England and France shall propose conditions of peace which are in conformity with the four bases, and which seem to Austria to come within the terms of those bases, and if Russia shall refuse her assent to such treaty of peace, then Austria will no longer hesitate, but take part in the alliance, and that an offensive and defensive alliance will take place (Hear, hear). I do not wish to overstate the engagement in any way; and I admit that Austria might still, at the last moment, say that the terms would reduce Russia too much, and diminish too greatly her weight in Europe, and that she could never be expected to agree to them. Such might be her language. She leaves herself at liberty to say this without any breach of faith; and one of the last things I should wish to do would be to impute to Austria a breach of faith, if ultimately she did not form part of the Alliance; but my explanation is that she does concur with us in respect to the bases that are absolutely necessary for the security of Turkey; and that, if Russia does not consent to a treaty of peace on those bases, then that in the next campaign the forces of Austria will be joined with those of England and France (Hear). It may be said that we should have got far better terms; but we could not enforce terms on an independent Power; and it is better to have such a treaty with Austria rather than leave Austria unconnected with us, and without any interest to bind her to us (Hear) That was the belief of her Majesty's Government, and still more strongly the persuasion of the Government of the Emperor of the French (Hear, hear).

According to some critics, the four points proposed were not sufficient to secure an honourable peace, but he thought differently. After such bravery as had been displayed on the heights of Inkerman, he felt persuaded that the nation of Europe would pay rather more respect to the military prowess of the country than they had been in the habit of doing for some time past.—

While this country has such deeds of heroism to boast of, you may depend upon it that the nations of Europe will dread our enmity, and be anxious to secure our friendship (Cheers). With this persuasion, I shall ask the House to vote its thanks to those gallant men, and to our gallant Allies, the French army, who fought by the side of our troops at Alma and Inkerman, and assisted them to defeat the enemy (Cheers). With such an all ance, with such prudent conduct in regard to other Powers, and with the determination in this country, which I believe is strong, that the war in which her Majesty is at present engaged must be brought to a just and honourable and glorious termination, I feel full of hope for the result of the contest (Loud cheers).

The Address was agreed to, and the House adjourned at half-past two o'clock.

HOUSE OF COMMONS.—WEDNESDAY.

SIR B. HALL gave notice that, on an early day, he would bring in two bills with regard to the suppression of nuisances.

THE REPORT ON THE ADDRESS.

On the report on the Address being brought up by MR. Herbert and MR. I. Gower, the mover and seconder, Admiral WALCOT recommended that a generous confidence should be reposed in our naval chiefs

MR. A. PELLATT congratulated the House on the cordial alliance now established with France, which was first begun, he said, by the Peace Conference, and he recommended the Government to cement that alliance by a reduction of the wine duties.

SIR H. WILLOUGHBY criticised the policy of the attack on Sebastopol, which he considered that the treaty with Austria should be laid on the table

MR ALCOCK considered that the expeditions both to the Baltic and to the Black Sea were characterised by an accession of blunders.

Colonel SIBTHORP had no sympathy with German alliances. He would trust to the army alone, for he believed it would take ninety-nine foreigners to make a thorough Englishman.

MR. HUME totally differed from the views expressed by MR Alcock.

The CHANCELLOR of the EXCHEQUER hoped this discussion would not be further prolonged; but there were one or two questions which he thought it respectful to the House to answer. He would not go into the questions of military criticism; he did not lay claim to impeccability on the part of the Government, but he altogether denied the statements of some hon. gentlemen, that nothing whatever had been done. As regarded the invasion of the Crimea, it had been said that it was absurd to think of making any impression on Russia with an army of 50,000 men. But who ever supposed that Russia could be invaded by an army of that strength? That 50,000 men only represented the number which could be carried at once from Varna to the Crimea, and a very great operation it was, and one that reflected the highest credit both upon the military authorities and the fleet. The British force which had been sent to the East was now close upon 56,000 men; and he was fully justified, from the official information in his possession, in stating that the French force which had been dispatched to the seat of war up to this moment was very little short of 100,000 men—certainly it was not less than from 90,000 to 95,000. With respect to the production of the Austrian treaty, he regretted that it was not in the power of the Government at the present moment to lay the treaty before the House. It would be produced as soon as the ratifications had been exchanged, and in the meantime the House was not committed by the Address to an approbation of it

MR. WHITESIDE applauded the reticence of the Government with regard to their military operations. He wished that course had been followed last year, when every intention of Ministers was known and talked of for months beforehand. He condemned the policy of relying upon Austria, which, he believed would, as in the partition of Poland, get all she wanted in the war without losing a man or spending a florin.

MR. H. SEYMOUR reviewed the debate of the previous night, and complained of Ministers for not giving more information.

SIR J. TROLLOPE, having no confidence in Austria, thought all reference to the treaty should be omitted from the Address.

The report was then agreed to.

EMPLOYMENT OF THE MILITIA.

LORD PALMERSTON, in moving for leave to bring in a bill to enable her Majesty to accept offers of service by militia regiments in places out of the United Kingdom, said the Government had been accused of entering into war without having a reserve; but he begged to say the reserve they counted on was the British nation. The object the Government had in view by this bill was, not to send the militia to the Crimea, but to send them to do garrison duty in Malta, Gibraltar, and Corfu, and thereby to set free the regiments now serving there. Circumstances might also occur in which her Majesty would send them to the North American colonies; but at present that was not contemplated. He entertained no doubt that the militia regiments would volunteer, and he was satisfied from the reports of competent military authorities that the militia regiments would be as efficient for garrison duty as the regiments in the line. He would not detain the House further, as he did not anticipate any opposition to the motion.

MR. NEWDEGATE asked whether this measure was subsidiary to the formation of an army of reserve to be within the Lord Raglan's reach, or was the army in the Crimea to be still without an available reserve? Nothing had occurred to induce confidence in Austria, as against Russia.

MR. S. HERBERT said, the Government had felt strongly the necessity of forming with as much rapidity as possible, an efficient reserve for Lord Raglan's army. The principal difficulty was the great distance of this country from the seat of war. The intention, therefore, was to form additional companies to every regiment commanded by Lord Raglan, and to place those companies, as soon as they had passed through their preliminary drill, in that position which would render them most convenient for him to send for. The intention was to place those additional companies in reserve at Malta, which, it was thought, would offer the most convenient access to Lord Raglan.

After some further discussion the bill was introduced and read a first time. The House then adjourned.

(*Continued in Number, page 590.*)

PARLIAMENTARY PORTRAITS.

THE DUKE OF LEEDS.

FRANCIS-GODOLPHIN-D'ARCY D'ARCY-OSBORNE, Duke of Leeds, &c., &c., the proposer of the Address in the House of Lords, was born on the 21st May, 1798, and succeeded to his titles in 1838. His Grace curiously represents several noble families; amongst the earliest being the Osbornes of Ashford, Kent, there being accounts of them as far back as the early part of the reign of Henry VI. After various noble alliances we come to Sir Thomas Osborne, Lord High Treasurer (in the "Cabal"), who was elevated to the peerage in 1673, as Baron Osborne of Kiveton, Yorkshire, and Viscount Latimer of Danby—the latter honour being in right of his mother, who was grand-daughter of Baron Latimer. The Earldom of Danby was conferred during the following year, and the Marquisate of Carmarthen in April, 1689. In May, 1694, he was further honoured by being created Duke of Leeds. The second Duke obtained the additional title of Viscount Dumblane, in the peerage of Scotland.

The present Duke is eldest representative of the celebrated Duke of Marlborough; and, consequently, inherits the Princedom of the Empire, being the sole heir of Henrietta, Duchess of Marlborough, the eldest daughter of the Great Duke; whilst the present Duke of Marlborough represents the second daughter, Anne, Countess of Sunderland. His Grace, who also represents the celebrated Minister, Sidney, Lord Godolphin, is Colonel of the North York Militia. He is a thorough specimen of the English gentleman, devoted to hunting, and to all manly exercises. He is celebrated in the north as a "deer-stalker."

HIS GRACE THE DUKE OF LEEDS, MOVER OF THE ADDRESS TO HER MAJESTY, IN THE HOUSE OF LORDS.
FROM A FAMILY PAINTING.

LORD ASHBURTON.

WILLIAM BINGHAM BARING, Lord Ashburton, who seconded the Address in the House of Lords, is the son and representative of the first and celebrated Lord Ashburton, who gained so great a reputation for having effected the Oregon treaty. The first Baron married the daughter of William Bingham, a distinguished Senator of the United States. His son, the present Lord, was born in 1799, and married, in 1833, the daughter of the Earl of Sandwich. He has held a prominent position, having been for some time Paymaster of the Forces, and subsequently Secretary to the Board of Control. He is also Deputy Lieutenant for the county of Hants. He is, of course, head of the great Baring family.

It is understood that Lord Ashburton was unexpectedly called upon on Tuesday. The Address was to have been seconded by the Earl of Abingdon, who has been recently called to the House, but who "was unfortunately prevented by indisposition."

MR. H. A. HERBERT, M.P.

MR. HENRY ARTHUR HERBERT, M.P. for Kerry, mover of the Address to her Majesty in the House of Commons, was, from birth and position, eminently entitled to perform so gratifying an office. The honourable gentleman represents a line of ancestors whose loyalty was recognised as early as the time of Henry V.; Sir William Herbert, the representative of the family at that period, having been knighted by that monarch, who, though thoughtless and indiscreet in his youthful attachments, when delegated with his high functions rewarded only real merit and friendship. Mr. Herbert was born in the early part of the present century at Muckross, Killarney, Ireland, the family estate; but, the "mater" of the customary Trinity College, Dublin, being apparently not sufficiently "alma," he was educated at Trinity College, Cambridge. He married, in 1837, the daughter of James Balfour, Esq., of Whittingham, county Berwick. Mr. Herbert was elected member for Kerry without opposition in 1847, since which time he has represented that county. In addition to serving his country in Parliament, he has been for some time actively and honourably engaged in the various duties which devolve on the owners of large properties. He is a magistrate of Kerry, and, in 1853, was appointed Lord-Lieutenant of that county. Recently, when the war so forcibly called for the development of the military resources of the country, Mr. Herbert devoted himself greatly to the raising of the Militia, more particularly to that of his native county, Kerry; and on the formation of the regiment for Kerry he was appointed Colonel. Without having taken much part in debate, Mr. Herbert has earned considerable respect for his attention to duty and devotion to his principles. In politics he might be described as a moderate Conservative; but his opinions have always resulted from the circumstances of the time being, rather than from the consistency of party alliance. Thus he is eminently qualified to represent and give voice to the sentiments of the supporters of a coalition Government.

In his early political life Mr. Herbert was an adherent to Free-trade; but in 1850 his opinions underwent a change, and he was in favour of agricultural protection. He has since attached himself to the policy of the late Sir Robert Peel; but is desirous of relieving the land from any undue pressure of taxation.

The Muckross estate is situated in the most beautiful part of Ireland, Killarney.

Kerry is becoming most constitutional and loyal; for it will be remembered that, on the last occasion of the opening of Parliament, the Address was moved by Viscount Castlerosse, joint member with Mr. Herbert. The present step may be looked upon as a movement towards higher honours, to which Mr. Herbert is well entitled, as much from his position and splendid fortune, as from the manner in which the one is supported and the other is employed.

THE HON. E. F. LEVESON-GOWER, M.P.

THE Address to her Majesty in the House of Commons, proposed by Mr. Herbert, was seconded by the Hon. Edward Frederic Leveson-Gower, M.P. for Stoke-upon-Trent. This gentleman, is the second surviving son of the first Earl Granville, consequently brother to the present Earl, and a member of the Sutherland and Stafford families, names which have ever been distinguished—suggesting chivalry, and commanding consideration.

The Hon. Mr. Gower was born May 3rd, 1819, the year in which so many distinguished personages first saw the light—the list including her Majesty and Prince Albert, the Duke of Cambridge, and the King of Hanover. His mother, the first Countess, being the daughter of the late Duke of Devonshire, Mr. Gower was consequently nearly related to that celebrated Duchess of Devonshire whose virtues occasioned the composition of the noblest ode of Coleridge, and the description of whose beauty forms an admirable climax to one of the most brilliant passages in Macaulay. Mr. Gower was sent, we believe, at an earlier age than is customary to Christchurch, Oxford, where he took the degree of Bachelor of Arts in 1840, and that of Master of Arts in 1844. He became a member of the Inner Temple, and was called to the Bar by that Society in 1845. His attention was next turned to political life; and, in 1847, on the occasion of Lord Duncannon (member for Derby) succeeding to the Earldom of Bessborough, he was returned for that borough without opposition. He was again returned for the same place in the general election of the same year, but was subsequently unseated. At the general election of 1852 he successfully contested Stoke-upon-Trent, which seat he still retains.

Mr. Gower married, in June, 1853, Lady Margaret Compton, sister to the Marquis of Northampton.

Mr. Gower is of decidedly Liberal principles, a friend of reform, a consistent supporter of progress, and an uncompromising Free-trader.

It is believed that on Tuesday he made his maiden speech, though he has been so long a member of the House; and he was somewhat rewarded for his patient study of the arena by his success on this occasion. He spoke exceedingly well; and the compliment paid to him by Mr. Disraeli was universally regarded as well deserved.

FRENCH MILITARY HOSPITALS IN TURKEY.—At the Great Military Hospital at the Grand Champ (from the 12th of July to the 22nd November) there were 4232 sick and wounded entered, and only 382 deaths; at Dolmabaghdshé (since the opening), 213 entries, and 37 deaths; at Gulhané (which had been only open eight days on the 27th November) out of more than 600 received, there were only 5 deaths; at Rami-Tchiflick, 3869 entries, and 28 deaths; at Cauldge (since the opening of that hospital at the end of September), about 400 entries and 40 deaths.

CONSTERNATION AMONG THE VIENNA RUSSIANS.—A private letter from Vienna says that it was at a dinner-party given by M. de Bourqueney, on the evening of the 2nd, the day the treaty was signed, that the secret was disclosed. During coffee, and in presence of a large society, among whom were most, if not all, of the diplomatic body, the French Minister, in the politest manner possible, informed his guests of what had been done a few hours previously. The letter adds that the effect produced upon the company was most ludicrous. Nothing could give an idea of the stupefaction depicted on the countenances of many of those present—some horrified at the probability of the war continuing, others in the most melancholy condition of mind at the terrible blow aimed at Russia, while the fewer part of the company endeavoured in vain to stifle their laughter at the pitiful and woe-begone aspect of disappointed statesmen and baffled partisans of Russia.

FRENCH SAPPERS IN ENGLAND.—A small detachment of French Sappers and Miners (seven men and one sergeant, under charge of Lieutenant Latrette, officer of the Legion of Honour) traversed the streets of London on Friday in heavy marching order. They landed at London Wharf at half-past twelve from Calais, and marched through Cheapside, Holborn, Oxford street, Edgware-road, to the Great Western Railway terminus, *en route* for Gloucester, to take charge of a number of wooden huts constructed there for the French army in the Crimea. The Lieutenant and his men were sumptuously entertained in the Great Western Hotel, free of charge; and, by the kindness of Captain Buckley, were forwarded to their destination by the express-train at ordinary fares

MR. H. A. HERBERT, M.P., MOVER OF THE ADDRESS TO HER MAJESTY, IN THE HOUSE OF COMMONS.
FROM A PORTRAIT BY SIR W. C. ROSS, R.A.

THE HON. F. LEVESON-GOWER, M.P., SECONDER OF THE ADDRESS TO HER MAJESTY, IN THE HOUSE OF COMMONS.—FROM A DRAWING BY BAUGNIET.

SPAHI (ALGERIAN TROOPS), FRENCH BATTERY ON THE HEIGHTS OF BALACLAVA.—FROM A SKETCH BY LIEUTENANT MONTAGU O'REILLY.

SPAHIS AT THE FRENCH BATTERY.

The Spahis of whom we read in Turkish history were a body of cavalry organised by Amurath I., who was also the founder of the Janissaries. At one time they were the most formidable body of soldiers in the service of the Sultan; but their want of discipline (which seems to have been quite as bad as that of the Bashi-bozouks) gave rise to many complaints against them, and they were ultimately disbanded by the last Sultan Mahmoud.

The Spahis represented in the Engraving are Algerian troops in the French service, by whom they have been found most valuable auxiliaries. They wear their native costume; and their vigilance, and power of enduring fatigue, as well as their training to warfare in a hill country, render them peculiarly well fitted for the Crimean campaign.

The accompanying spirited Sketch, by Lieut. Montagu O'Reilly, shows the French Battery on the heights of Balaclava; and the Russian encampment in the distance.

BALACLAVA.

We have been favoured by a Correspondent with the accompanying View of our late Encampment, looking towards the small harbour of Balaclava; it is sketched from the spot where the successful cavalry charge took place at the recent battle. Our Correspondent writes:—

On the 25th October the Russians attacked the right of our position at break of day; the Turks, to whom the security of that portion of our lines was entrusted, ran away like a pack of cowards. The Russians took possession of the batteries held by them; and, thinking that none but Turks were opposed to them, made a dash across the plain intervening, with the 2nd Regiment of cavalry (2000 men), expecting to obtain possession of the town and harbour of Balaclava; but were astonished to find that, instead of Turks, they had the 93rd Highlanders to contend with; upon which they retired, and were charged by our Heavy Cavalry, in a splendid manner, and totally routed; leaving about forty men dead on the field, besides many wounded: our own loss at this charge being only some five or six killed, and about twenty wounded. Thus far, although the Russians had carried and held possession of some strong points of our position (previously garrisoned by the Turks), still the advantage as regards loss of life was much on our side. After this, however, an unfortunate charge of the Light Cavalry took place, up a valley at the rear of the position, on the range of the hills abandoned by the Turks; up this the whole strength of the Russian army was stationed; and our Light Cavalry was exposed to a most deadly cross-fire from three heavy field batteries; and although they certainly succeeded in capturing thirteen guns, and killing all the gunners, &c., they were unable to retain them (either from want of support, or in consequence of the terrific fire to which they were exposed), and had to retire, after having suffered enormous loss—11 officers killed, 2 (badly wounded) taken prisoners, and 22 others wounded; many of them severely. Our loss amounted to something about 600 placed *hors de combat*.

BALACLAVA, THE SCENE OF THE SUCCESSFUL CAVALRY CHARGE.

THE SIEGE OF SEBASTOPOL.

(From our Special Correspondent.)

BEFORE SEBASTOPOL, NOV. 24, 1854.

THE siege of the town continues to offer the same kind of incidents as before; and were it not for a spirited action of the 1st Battalion of the Rifle Brigade, on the 21st, there would be no novelty to record in this letter. The enemy had discovered a position in front of our advanced *place d'armes*, from which they could fire into the English covering parties without fear of a return. So securely had they ensconced themselves in holes, surrounded by heavy stones drawn from a quarry, that they were entirely hidden from sight at no greater distance than 200 yards, and were enabled to keep up a murderous fire at that range. Not a soldier could show himself without being instantly shot. The position was the more painful for our men as the shelter of the parapet was of little use from the enemy's fire, which partially enfiladed our work. It was determined to make the assault on the 21st; and on the evening of that day 200 men of the 1st Battalion Rifle Brigade were told off under the command of Lieut. Tryon, and marched in the darkness to the attack. Dividing his men judiciously, Lieut. Tryon advanced slowly with 50 of them from the body of our work, and crept stealthily along the broken ground, which first led down a slight inclination and up again towards the enemy. The Russians were completely surprised by the rapidity of the attack, and ran from their hiding-places as fast as their fear could urge them. Our men stumbled over many of them, half-awake, and still covered with their blankets. Having gained possession of this small stronghold, the Rifles rushed forward in pursuit, and, encountering the supports of the Russians, attacked them with the bayonet under a sharp fire, and drove them away. They then took up their position in the place from which the enemy had been startled, and commenced turning the breastwork of the shotholes to face the Russians. They were not long left unmolested. The Russians advanced in two columns to retake the place, but they were kept at bay for a considerable time. The ammunition of our men fell short at last, and they charged with fixed bayonets, driving the enemy before them. A third time the Russians came up to the charge, but they were again driven back, the supports of the Rifles having come up with ammunition. Lieut. Tryon, after leading his men gallantly for a few hours, was shot through the temple, and carried off the field. The Rifles held the position during the night; and the Russians, up to this time, have not had the courage again to attack it. In Lieut. Tryon, the Rifle Brigade has lost one of its ablest officers, and a man who was loved and admired by all above and under him. The loss of the night was 8 killed and 15 wounded.

The total loss of ships by the late gale is given at thirty-four. The Cossacks brutally fired at the wrecked crews at the Katcha, and knocked many of them into the water. No attempts were made to save any of our men. Captain Franklin and four men, who were taken prisoners, made their escape, by taking to the water, and swimming to a man-of-war's boat in the offing, near Sebastopol. The cruelty of the Cossacks shows the real nature of the Russian. The politic kindness of the Czar in liberating Lord Dunkellin does not cover the brutality of the national character.

THE STORM IN THE CRIMEA.

(From our Special Correspondent.)

BALACLAVA, NOV. 18, 1854.

A HURRICANE of a violence which must be rare even in these seas burst upon the coast at Balaclava, Katcha, and Eupatoria on the 14th instant. Its violence was such that, in the sheltered inlet of Balaclava, the houses were unroofed; whole rows of poplar-trees were thrown down; and the elements appeared to sport with the most solid work of men's hands.

I have sought, on more than one occasion, to describe the grand and precipitous character of the scenery round Balaclava. I have endeavoured to depict the beauties of the bay; the vivid colours of its wooded cliffs; the depth of the sea at the base of the frowning rocks which dip their sides in it; and the deep blue tinge of the waters which gently balance on their bosom the brightly burnished man-of-war, the fast steamer, and the graceful ships whose sails are lazily reflected in the ripples. Grand as is the sight of Balaclava Bay in pure weather, there are other and more terrible phases in which it assumes an awful aspect: and nothing can be conceived more terrific or more awful than it was in the gale of the 14th. The barometer, which had been falling on the previous evening, dropped so rapidly towards daybreak, that the hurricane was, as it were, foretold in all its suddenness and weight. Unfortunately for many a brave and hearty man who rose on that eventful morning there were upwards of thirty ships outside the harbour of Balaclava at the moment that the gale burst out in all its fury. Sad experience showed that the Admiralty agents here had been sadly lacking in knowledge or discretion to permit so many valuable vessels to remain exposed to the chances of the weather in so unsafe an anchorage. Admiral Lyons, whose ship (the *Agamemnon*) had been lying at anchor outside of Balaclava, sailed out at dusk on the evening of the 13th, foreseeing the fearful nature of the coming gale. The *Retribution*, the *Vulcan*, the *Niger*, and the *Vesuvius*—having perhaps the discretion, but not the order, to move—remained at anchor outside, in company of the *Melbourne*, *Avon*, *City of London*, *Prince*, and the *Hope*, steamers; the *Wild Wave*, the *Mercia*, the *Rip Van Winkle*, the *Resolute*, the *Progress*, the *Panola*, the *Wanderer*, the *Coduccus*, *Lady Sale*, and other transports. At daybreak, the weather being extremely dark, the wind began to rise in heavy squalls from the south-west, and in about three hours blew a perfect hurricane. The sea, which seemed to gather in a dark mass under the heavy clouds which covered the sky at dawn, was gradually lashed into the whiteness of a boiling cauldron. As each sea was heaved high into the air by the violence of the gale, its crests were swept away in thick foam over the space, and obscured the atmosphere.

Ship *Coduccis*. Ship *Progress*. Maltese Brig. Steamer *Melbourne*. H.M.S. *Avon*. H.M.S. *Vesuvius*. *Wild Wave*. Ship *Mercia*.

STORM IN BALACLAVA BAY.

All idea of level, all regularity of wave appeared to be lost in the seething and boiling mass which broke with a noise of thunder on the rocks which confined and defied it. The surf, which rose to an awful height, burst every instant with a terrific roar upon the rocks, and rolled its heavy crests of spray right over into the land hundreds of feet above the surface of the ocean. In the midst of this awful cauldron lay about thirty ships. The *Progress*, an American, was the first that parted from her anchors. She drifted almost instantly on to the rocks, where she disappeared after two or three bumps. A few miserable objects, much mangled and bruised, were thrown up alive by the waves: they were six in number, and part of the crew. The *Resolute*, which had lain at anchor at no great distance from the *Progress*, was the next to perish; and she did so almost on the very spot where the *Progress* had struck. This ship, which had a valuable Government cargo, was commanded by Captain Lewis, an excellent seaman. For a long time his ship had been lying safely inside of Balaclava harbour; but, in consequence, probably, of some hostile Russian movements in front, it was thought fit by the Admiralty Agent, Captain Christie, to order her and several other transports out of harbour in order that the *Diamond*, *Sanspareil*, and other vessels of war might use their guns with greater facility. Knowing the treacherous nature of the ground in the bay, the enormous depth of the anchorage and the violence of ordinary south-west gales in the Black Sea, Captain Lewis had no sooner taken up his berth outside in forty fathoms, than he repaired to the shore, and there exposed to the principal agent for transports the danger of his ship, lying in her present exposed position. His protest was not listened to, and he was reprimanded for making it. Notwithstanding this repulse, Captain Lewis renewed his protest both verbally and in writing. At the first symptoms of the coming gale indicated by the barometer on the evening of the 13th, all the light spars in the ship were struck; and, early on the morning of the 14th, the port anchor was let go, and cable veered to the utmost possible length. There were hopes that the two anchors and chains would suffice to keep the ship in her place. The weather thickened, however, so fast, the wind came on with such terrific squalls, and the sea rose with such rapidity, that it was thought advisable to lighten the ship. The mainmast was cut away. The waves, however, threw her bodily out of the water, and buried her again as she fell. The remedy was ineffectual, and almost immediately afterwards the mast fell the starboard anchor was lost by the breaking of the chain. There was still hope left. The port anchor held; but even this might not remain long if the ship were not further lightened. So the mizen and foremast were cut away; but the mainmast and the mizen had fallen on deck, and were rolling to and fro over the wreck, maiming the sailors and breaking the bones of all they came in contact with. Numbers were disabled in this manner before the final moment, when every one was to trust to himself for a last effort to save life. That moment, unhappily, was not far distant. The port-chain parted in one of the heaviest seas, and all hope of saving the ship was gone. The crew—at least as many of them as were not disabled—assembled together on the poop, where they waited till the ship should strike. But such was the violence of the wind, two poor fellows were blown away when they came aft. The first bump which the *Resolute* gave on the rocks pitched off four men, who never reappeared, the united force of the water and the wind smashing them on the rocks. The second bump broke the unfortunate ship to pieces, and precipitated the miserable crew upon the roaring water. Poor Captain Lewis was crushed between the ship and the shore as he hung down from a line fast to the poop. The only men who were saved were those who fell into the sea and were washed up, some of them in good condition, others bruised and injured. The third officer of the ship—a young fellow, named Owen—was amongst the first who succeeded in creeping out of the breakers.

The *Resolute* was followed on shore by the *Wanderer*, an American vessel, which went to pieces immediately: not a soul on board was saved. Then came the *Kenilworth*. She also had lost her masts, and was holding on with her anchor, when she was fouled by the West India Mail steamer, *Avon*, and immediately drove on shore. The crew all perished, with the exception of seven hands, on the very spot where the *Resolute* and *Wanderer* went down. The breakers were beginning to have other dangers added to those naturally incident to them, and large pieces of mast and wreck were to be seen floating about, with biscuit and rum casks, and bales of hay, chests of goods, all knocking together, and rendering the chances of life in the midst worthless.

The *Prince*, a splendid new screw steamer, on her first voyage, shared the fate of her consorts, and was drifting on shore as the *Kenilworth* broke to pieces. She had been lying in twenty-five fathoms, with her anchors down, when the fury of the gale burst upon her. Captain Goodall, and Captain Baynton, the Admiralty agent, took the most energetic measures at once, and the masts were all cut away. Unfortunately, this was done in such a way that the rigging of the mizen-mast was entangled in the screw. Steam was turned on, and in an instant the machinery was inextricably involved; and the ship's steam power was gone. The port chain, in the meanwhile, had broken; and the starboard anchor not holding, the ship began drifting on shore. It was evident from that moment that the fate of the unfortunate vessel was sealed. Captain Goodall and Captain Baynton called all hands together, and having stripped off their heavier clothing, told the crew that they had done all they could to save the ship, and now every one must try and save himself. It was a quarter-past nine o'clock in the morning when the ship struck; and so tremendous was the sea at that moment, that, a quarter of an hour later, not a vestige of the ship was to be seen. She thumped five or six times, then broke across the middle, and was torn to fragments; six men and a midshipman, named Cotgrave, escaping out of 150 souls who were on board. The *Rip Van Winkle* and the *Panola* soon followed the fate of the rest, and were lost with all hands. In the meantime several other ships were lying dismasted, and in very critical positions. The *Retribution*, which was furthest in the bay, had lost all power over her steam by the loss of her rudder. The *Vesuvius* had cut away her mainmast, and was holding on with her anchors. The *Niger* was steaming at her anchors, and so held her ground with all masts standing; and the *Vulcan*, which was full of Russian prisoners, was holding on in the same way. The *Melbourne* lay dismasted, with the

exception of a stump of her main still standing; and, like the *Prince*, had her screw disabled by her rigging. The *City of London* had slipped from her anchor and made a good offing, after incredible escapes. The *Avon*, which followed the same course as the *City of London*, was not so fortunate—she slipped her cable early in the morning, and steamed out to sea. She made good way for a time, but before she had got any considerable distance her head fell off before the wind, and although every means was resorted to, to check her, by putting tarpaulin in the mizen rigging, the ship wore round in spite of everything. The engines were now stopped, and the ship began drifting at tremendous speed. She came, in this way, athwart the unfortunate *Kenilworth*, and the two vessels did each other material damage. The starboard bower had been let go, and the *Avon* slowly came up before the wind, after receiving the *Kenilworth's* buffet on her starboard bow. This was a favourable moment, the wind was steady, and the *Avon* slipped her cable and steamed again to sea. Some distance was gained in this way, when the ship's head again fell off, and the same means as those used before to keep her straight proved ineffectual. The engines at that moment were driving at full speed, with four pounds added to the steam valve. The ship falling off, therefore, placed her and the crew in imminent peril, as it was feared that neither points of the bay could be weathered with success. The ship would not answer her helm, and was otherwise unmanageable. It was determined to ease her then by cutting away the mainmast, and this was done, involving the loss of the mail boat and dingy. An attempt to hoist the fore-staysail comple tely failed, and the canvas split to shivers. The *Avon* continued drifting on those fearful seas, which washed over her fore and aft, and blinded all on board with its crests of foam. In this awful dilemma, knowing that the ship must be lost on the rocks, yet doubtful whether it would be possible to wear, the Captain resolved to make for Balaclava harbour, the mouth of which, almost invisible from the spray which dashed into it, might be dimly seen receiving the whole fury of the seas. Reversing its engines, at full speed the *Avon's* stern was brought to the wind. Moving, then, ahead as hard as the steam power would allow, she darted in the direction of the opening, which loomed in the fog in front. The drift of the ship had meanwhile taken the *Avon* close to the *Vesuvius* and *Melbourne*, which were at anchor at no great distance from each other. It was impossible to pass both without doing some damage. The *Melbourne* was cleared by a few feet, and the *Vesuvius* lost her jib-boom. The *Avon* then dashed at the entrance, and a providential puf of wind shifting her about three points, enabled her to clear the rocks, and steer safely through the narrow opening into the harbour.

The aspect of the port was hardly less remarkable than that of the shore outside. The ships being either made fast to each other, or with warps to the rocks, began drifting up the harbour from the first moment of the tempest breaking out; and although anchor after anchor was let go, and warp after warp paid out and fastened, the latter might be seen in all directions cracking like packthread, and the former visibly drove over the bad holding ground at the bottom. The result was, that most of the ships which were lying nearest the wharfs, or which, from their size, were overlapped by larger vessels, suffered extremely from the external pressure exerted against them, and were mauled to a considerable extent. The *Sanspareil*, which was anchored stern on to the wharf, drove broadside on the shore; and, in doing so, pushed and crushed together a number of smaller craft. The *Bride* was driven on to the *Wild Irish Girl*, which she stove in at the stern, whilst the mainmast parted with a crack. The *Trent*, which had commenced overnight to haul into a new berth for coaling, was caught by the full fury of the wind, rushing, as down a funnel, into the port. The *South-Western* engulfed itself in the paddle-wheel, and carried the paddle-box boat away on to the bridge; the warps flew about in all directions; and, the ship drifting, the cat-head and figure-head struck against the *Gertrude*, and made her look very ragged about the bows. The *Gertrude*, at the same time, crashed against the *Tonning* whose stern made a deep impression in the side of the *Minna*. The *Medway* also suffered from coming in contact with the *Edendale* and the *Star of the South*; and the *Harbinger* drifted down to her without doing much damage. The *Brenda* broke adrift from her moorings, and was observed almost flying across the harbour, with her port paddle-box blown off, and sponson broken. H.M.S. *Ardent*, which, in the morning, lay near the mouth of the harbour, lost her rudder in the early part of the gale, and drove in, followed by the *John Masterman*, which had been started from her moorings by an Austrian brig. This brig, having lost her anchors outside, had driven on to the rocks to the left of the harbour, canted round and sunk, her masts just appearing above water. The *Avon* coming into harbour, drifted against the *Victoria*; and half an hour afterwards the latter broke from her anchors, and, heeling on shore, broke her rudder and damaged her screw. The *John Masterman*, before driving out, fell foul of the *Sovereign*, and seriously injured her. Such is a slight history of the action of the gale on the shipping in the harbour, during the 14th.

At one o'clock in the afternoon the wind moderated slightly, but the disasters of the day were not over. The *Wild Wave*, which had been holding her ground outside for a long time, began to drift at two, and her crew left her in a life-boat; the Captain, mate, and a boy, alone refusing to go. The anchors slowly dragged until nearly three o'clock, when the ship struck. It was a melancholy and fearful sight to witness. The vessel was perfectly preserved until that moment, notwithstanding the seas which dashed her high into the air, and then buried her. She was so strong, yet so light, that her masts remained firm in her, and one boom only was swinging in the wind. The three unfortunate hands might be seen on the poop holding life-buoys in their hands, and watching the opportunity for escape as the ship struck, whilst, all around them, the sea was lashed into a grey foam, and covered with the fragments of the previous wrecks. The *Wild Wave* did not, however, break, like her predecessors. Her anchor chains not having parted, she was dragged back to sea by their pressure after she had struck, and it was not till she had bumped about a dozen times, that she seemed to come so close on, that the crew could jump on the face of the rocks. One man was

Capt. Frain saving the sole survivor from the *Wild Wave*. *Pride of Ocean*. H.M.S. *Retribution*. *Medora*. *Lady Valiant*. H.M.S. *Vulcan*. *Mercia*.

STORM IN BALACLAVA BAY.

now observed to jump clear; he scrambled away like a wild cat. The second followed almost instantly, but with less agility, and the surf caught him, literally crushing him on the rocks. The third poor fellow fell between the ship and the shore, and was killed almost instantly. The waves then made a clear sweep over the deck of the wretched vessel. Masses of barrels were seen rushing from under the sides, and in a few moments there was not a trace left of the *Wild Wave*. In the distance it was gratifying to see the *City of London* holding well out to sea, the *Vulcan* rolling safely in the trough of the seas, whilst the *Vesuvius* having slipped from her chain, was entering in safety the harbour of Balaclava. The *Retribution* continued to ride at her anchor, as well as the *Melbourne*, the *Caduceus*, the *Murcia*, the *Sir Robert Sale*, the *Lady Valiant*, the *Pride of the Ocean*. The unfortunate survivors of the wrecks were hauled up by ropes from their dangerous position at the foot of the precipices, by crews from the *Trent*, *Tonning*, *Avon*, and other ships; and well attended to.

The number of lives lost has been immense, and at present cannot be calculated. It is difficult to say, likewise, what has been the destruction of property. I hear that thirteen ships have gone ashore at Eupatoria, and that a Turkish man-of-war, and eleven vessels have been wrecked at the Katcha. This is a fearful catalogue of disasters. In the Camps the gales was severely felt. There were few of the tents that were not blown down; and much sickness has been caused by the exposure of the troops to the fury of the elements. How the Russians have fared without cover of any kind, I cannot pretend to say. Hostilities, of course, have been very slackly carried on from both sides, but the positions which we must now hold through the winter, are strongly secured, and there is no doubt that, with the reinforcements, we shall be able to take the offensive early. There are rumours of the Emperor's arrival at Sebastopol, but I need not say they are not believed.

General Sir de Lacy Evans, has gone on board H.M.S. *Britannia*, and resigns his command, in consequence of continued ill-health. His loss will be severely felt. The Duke of Cambridge also returns to England, in bad health.

THE SANDBAG BATTERY.

The view which we have given of the Sandbag Battery represents that celebrated spot the morning after the Battle of Inkerman. The Battery—a very small affair, as will be seen from the Cut—had been established a short time previous in consequence of the Russians having begun the erection of some threatening works in the direction of Inkerman. When the Russians discontinued their works the two 18-pounders which we had placed in the redoubt were taken away, and the Battery left without guns. As the position was a commanding one, the Russians made a determined effort to gain possession of it on the 5th of November, and they would have succeeded but for the brave resistance maintained by the Guards. Although the Russians were about six to one they were unable to overcome the stubborn resistance of the Guards. Four times were the latter driven from the Battery, and four times they repulsed the enemy and regained their position. More than one-half of the Guards who entered the action fell dead or wounded in the vicinity of the Sandbag Battery, but not without committing the most frightful slaughter among the enemy. Without speaking of the number wounded, in the neighbourhood of this redoubt no less than 1500 Russian corpses were counted—a larger number than has fallen in many a celebrated battle The brave Guards were, at last, fairly surrounded by the Russian troops, and were about to force their way through the dense mass of infuriated drunken serfs, at the point of the bayonet, when a party of the Fourth Division came to their assistance. They were now about 1600 Englishmen to 9000 Russians; and the latter were bringing up fresh battalions every instant, with the evident intention of forcing their way by dint of numbers. Before that happened, however, the arrival of a party of Zouaves, followed by a column of French infantry, turned the tide of battle so decidedly against the Russians that they were forced to give way.

Russian Deserters.—In the last few days we have had ten deserters—nine privates and one officer. The officer has given detailed and very satisfactory information; and if he is a *bond fide* deserter, and not a spy sent over to mislead us, we have reason to hope that the Crimean campaign will much sooner be ended than we had a right to expect. He states that the Russian army suffers dreadfully; that from 200 to 300 die every night; that cold and hunger kills them; that the battle of the 5th demoralised them, and caused them utterly to despond; that the generals have in vain tried to pursuade the men and officers to fight another battle; that they frequently march them out in the plain, but that the temper of the troops is not of the kind to justify the commanders in bringing them "up to the scratch." This last part of the officer's story is certainly correct. The Russians are continually turning us out, by showing large columns in the plain, and they do as regularly withdraw those columns after an hour or two. The officer says, further, that a grand combined attack upon three points of our position—the extreme right of Sebastopol, the extreme left and the extreme right of Balaclava—has been resolved upon in the Russian camp; and that the fortunes of the campaign are to be staked on this attack. If it succeed, there is hope for Sebastopol; if not, the fortress must surrender, and the Russian army retire. The same officer showed us a draft of a despatch which Prince Menschikoff had sent to the Czar. This despatch informs the Czar of the commencement of the siege. The Prince further states that 300 men were killed on the first day. Our own loss on that day amounted to ten; so that we killed thirty Russians for every man they killed of ours. The officer states further that the attack on our lines is to come off on the 17th of November (old style), by which time it is hoped the Russian troops will be in a condition to face our batteries. The Russian 17th of November answers, I believe, to our 29th of November; so that the twelfth day from this would decide the fate of the Crimea. Perhaps all this is a snare for the unwary—the appointing a distant day for a near attack. We have to deal with a cunning and crafty enemy; but we all trust General Canrobert, who has fought the Algerines, is a match for the craftiest Russian; and, as the fresh troops are so handy, and General Canrobert is a man of ready action, it is just possible that he will take the matter in hand, and season the new-comers in battle before they have time to get seedy.—*Letter from Balaclava*, Nov. 17.

The Queen's New Steam-Yacht.—The middle of January has now been definitively fixed as the period of launching her Majesty's new steam-yacht, the *Windsor Castle*, now building at Pembroke. The 16th is the probable day, the tides then suiting. A report is current that her Majesty will honour Pembroke with a Royal visit, and that the vessel will be named by her Majesty, or some member of the Royal family.

The French Troops in Rome.—Several foreign journals have announced that the French Government had decided to recall the Corps of Occupation which it maintains in the States of the Holy See. The *Moniteur* gives the following explanation:—"The Pontifical Government proceeds successfully with the reorganization of its army, and, in order to give place to Roman troops, a gradual diminution of our force may possibly take place. At the same time, our soldiers will not abandon the garrisons of Rome and Civita Vecchia until the Government of the Emperor, and that of the Holy See, agree in thinking that their withdrawal may take place without risk to public tranquillity.

THE NEW HOUSES OF PARLIAMENT.

The re-assembling of the Legislature suggests the return to our Illustration of the artistic progress of the New Houses of Parliament. The details we now present to the public are principally in sculptural decoration. We commence, however, with

THE VENTILATING SHAFT.

Our Illustration represents the New Louvre, or Ventilating Shaft, just completed for the exit of the vitiated air and smoke from the Libraries, and the whole of the Committee-rooms situated on the river front of the New Palace. The lantern is quadrangular in form, divided into three stages—the two lower ones surmounted by a brattishing ornament, in unison with the cresting, along the whole line of roofing. At each angle, and in the centre of the flat side, is a light buttress, surmounted by crocketed finials. This buttress projects about a foot from the main body of the turret, and produces a light and pleasing effect. The top is carried into the air by a slight shaft, finished by a ball-cross. At the base of this shaft is a cluster of four smaller flying buttresses. The total height is about 68 feet.

The lower set of louvres is used for the passage of the vitiated air; the square space within being divided from the air exit by an inner fannel, if it may be so termed, for the ascent of the smoke, which, rising above the first set of louvres, makes its way out through the second set, or stage. The louvres are ingeniously contrived to open or shut, as the wind may play against—that is, when the wind is beating against one side, or at the angle—for though quadrangular at the base, it assumes the form of an octagon, just at the commencement of the louvres, thus presenting eight sides or fronts to the wind, so that should the wind be fanning any one side, or angle, the opposite apertures remain open; thus the foul air readily finds egress. It might be expected that a contrivance of this kind would be an unsightly object—particularly in iron—of which material so little is done to please the taste; but, in this case, this turret, with its light crocketed buttresses, form a pleasing addition to the river front. Much has been said of the ventilation of this vast pile of building—much has been done, and much left undone; but, from a recent visit, we cannot but lament the alterations which have been introduced in that magnificent room, the House of Lords. The alterations we complain of are the opening of some of the beautiful stained glass windows, which are made to turn upon hinges, allowing, when opened, a gush of cold light into the room; ill contrasting with the rich warmth of colour the decoration affords, and making it look more like a commonplace building than is due to its regal character.

We now proceed to detail a portion of the artistic decoration of the Prince's Chamber with a series of historic bas-reliefs, the able work of Mr. Theed, the sculptor:—

MARY, QUEEN OF SCOTS, LEAVING LOCHLEVEN.—SEBASTIAN CABOT.—QUEEN CATHERINE BEFORE HENRY VIII.

These very interesting subjects are executed in bronze, and are part of the series of historic pictures designed to fill up the panels, of which there are twelve, in the Prince's Chamber, formerly called the Victoria Lobby. The handling of each of the groups is very masterly, and the conception good. When the entire set is completed and placed in the panels destined for it, this chamber will, indeed, be rich in decoration.

VENTILATING SHAFT, RIVER FRONT.

HOUSE OF COMMONS' STAIRCASE.

The Staircase for the use of the Members of the House of Commons, and which may be called "the Members' Private Staircase," as the public are not admitted to it, is on the north side of the fine old cloisters of St. Stephen's Chapel: it is entered from the lower cloister, and also from the Star-chamber Court. This staircase rises from the lower to the upper cloister, and in design and embellishment is truly beautiful. Clustered columns in the centre, and on each side, support a stone roof, most elaborately groined; the intersections of the groining having bosses of infinite variety of character and detail. The windows, three in number on the north side, are filled with gorgeous stained glass; and, at night, the Staircase is lighted by lanterns pendent from the centres of the intersecting arches of the roof. On the east and west sides, arches, filled with tracery, enrich the walls; the entrance to the upper cloister is on the south side. Panelling and quatrefoils fill the walls on the sides of the stairs; and, in every part, the details are full of variety and elaborate beauty. The landings are laid with encaustic tiles of different designs, surrounded by alleys of black marble. Though not of large dimensions, we think there are few portions of the New Palace of Westminster more beautiful than this Staircase.

ENTRANCE-DOOR TO THE SERJEANT-AT-ARMS' RESIDENCE.

This doorway is seen on the north side of the Speaker's Court, and forms a pleasing object, whether seen directly on entering the Court, or viewed from the further courts, through whose arched openings it is shown as a rich finish to the vista. The Residence, to which this is the Entrance, will shortly be completed. The fittings-up, both in the master's and servants' hall, are being studied with scrupulous care, so as to carry out the character of the architecture of the building.

STATUES OF SELDEN AND WALPOLE.

We have also engraved two of the series of portrait statues which have been prepared for St. Stephen's Hall. That of John Selden, by Foley, is full of dignified simplicity; the head is finely expressive; the costume is that of Selden's time. The statue of Walpole is a finely characteristic figure of the statesman; the drapery (the costume of the period) is well managed, the hanging in bold ample folds; and the work maintains the fame of the sculptor, Mr. Bell.

We add a few other details of the artistic embellishments.

The series of eight fresco paintings in the Upper Waiting hall is now completed. As experimental works, they will show what are the external qualities generally essential in fresco painting, and especially so under given local circumstances. It will be for artists to consider, in witnessing the effect of these works, to what extent the great requisite of distinctness, as resulting, in its perfection, from intelligible forms, perspicuous arrangement, and the judicious distribution of light and dark masses, has or has not been kept in view; subject to the local conditions of light, the size of the apartment, and the dimensions of the paintings; and subject to the general technical conditions of fresco painting—a method requiring from its comparatively limited resources, an especial attention to simplicity and significance in representation.

In the House of Lords, eleven of the eighteen metal statues of Barons

ESCAPE OF MARY QUEEN OF SCOTS FROM LOCHLEVEN.—BRONZE BAS-RELIEF, BY THEED, IN THE PRINCE'S CHAMBER.

SEBASTIAN CABOT BEFORE HENRY VII.

QUEEN CATHERINE BEFORE HENRY VIII.

BRONZE BAS-RELIEFS, BY THEED, IN THE PRINCE'S CHAMBER.

THE NEW HOUSES OF PARLIAMENT.

and Prelates are now in the niches intended to receive them. The seven remaining statues are the only works now to be completed for this chamber.

In St. Stephen's-hall, without as yet contemplating the execution of the frescoes intended for that locality, it is proposed that the series of twelve marble statues of eminent Statesmen should be gradually completed, and the commissions have been given to five artists to execute each a statue of one of such personages.

The Prince's Chamber will be decorated with statues, bas-reliefs, and other works. Mr. John Gibson, R.A., has been commissioned to execute a statue of her Majesty, with figures of Justice and Clemency, and with bas-reliefs on the pedestal.

Of the frescoes intended for her Majesty's Robing Room—undertaken by Mr. Dyce, R.A., and illustrative of the legend of King Arthur—four have been completed, and altogether satisfactorily, whether regarded in their general treatment, or as examples of the method of fresco painting.

Mr J.R. Herbert, R.A., is preparing a series of designs for frescoes to be executed in the Peers' Robing Room.

The decoration of principal corridors connecting the Central Hall with the two Houses of Parliament has been entrusted to Mr. E. M. Ward, A.R.A., who will execute the various pictures in oil.

Mr. Maclise, R.A., is painting in fresco, for the Painted Chamber, or Conference Hall, the subject of "The Marriage of Strongbow and Eva."

Upon the front page of the present sheet we have engraved

THE NORTH-WEST ANGLE, NEW PALACE-YARD.

This beautiful front is a portion of that between Westminster Hall and the magnificent clock-tower, which is nearing completion.

In our View are seen the carriage-ways for entrance and exit: on the right is the entrance for Members on foot, leading to a colonnade, by which, when the entrance is completed, the Staircase, here represented, is reached. At present the Members enter by a door in the centre of the Star-chamber Court, and which stands on the precise spot of the old Star-chamber. The angle is filled up by a handsome tower, under which is the gate of the reporters' entrance to the House of Commons and the Strangers' Gallery. Between this and the Clock Tower are situated the rooms appropriated to the Librarian of the House. The buttresses are all enriched with canopies, under which are placed figures of kings and queens and distinguished historical persons. Twenty-one of these statues are placed—namely, from William I. to Edward VI. These statues are of stone, and are from the chisel of Mr. John Thomas, the able sculptor of all the stone statues, both of the interior and exterior of the New Palace. This part of the building is very charming; and, when the tower shall be finished, and the old Hall newly fronted, this angle will only be surpassed by the front facing Abingdon-street, now fast approaching to a finish.

THE EARL OF ELDON'S WILL.—We understand that the executors and trustees of the will of the late Earl of Eldon are his brothers, Mr. James Farrer, M.P. for South Durham, and Mr. Oliver W Farrer, with Mr. Alfred Bell. The personal estate subject to probate duty is under £130,000 in the province of Canterbury; and we believe there is about £8000 of personalty in the province of York. Guardians are appointed, and legacies are given to members of his family by the noble Lord's will. The real estates are chiefly situated in Dorsetshire, Durham, and Gloucestershire; and such parts of them as Lord Eldon had in his own power are settled upon his infant son for life, and his sons in tail.

THE Lords of the Admiralty have presented to Captain M'Clure a handsome gold watch, with a suitable inscription, as a token of their entire approbation of his conduct during his absence on the perilous enterprise which he has been so fortunate as to carry out successfully.

THE ATTACK ON PETROPAULOVSKI.

[Extract from a Letter received from an Officer of one of her Majesty's Ships engaged in the late Attack on the Russian Settlement of Petropaulovski, in Kamschatka.]

September 9th, 1854.

We arrived off Petropaulovski Kamschatka, on the 28th August, after a very tedious passage from Honoluiu. We were becalmed very frequently, and the rain poured down without ceasing for eight or ten days. Our squadron comprised her Majesty's ships *President*, *Pique*, and *Virago*; the French flag-ship *La Forte*, *Eurydice*, and *Obligado*; the whole forming a very imposing force. All the ships were painted entirely black, to render their strength more exhibit on the Russians.

On making the high land of Kamschatka, our excitement was very great, having little or no idea of the position and strength of the batteries we were about to attack. About two p.m. on the 29th the Admiral Price and the Secretary went on board the *Virago*, and proceeded to Awatska Bay to reconnoitre. We were kept in suspense till about midnight, when the Admiral returned: and we then got but a faint notion of the strength of our enemy. On the following morning all the squadron made their way to Awatska Bay, the approach to which is very grand—high mountains (volcanoes) appearing on either side, covered with snow, and looking magnificent amongst the clouds. On one side of the bay, on a hill about 700 or 800 feet high, we perceived a lighthouse; in front of which, and commanding the entrance, is a large gun, which, as we neared the land, was fired, to give the alarm to the batteries and town, situated out of sight of the entrance and about eight miles up the bay. We passed this point in great style, the *President* with the Admiral's flag flying) leading the way. We anchored out of gun-shot of the batteries, which were all manned and ready to receive us.

The Admiral then ordered the *Virago* to proceed towards a battery of five guns, and have some long-range fire (about 3000 yards) at it. The battery opened fire at once, and I think the *Virago*'s guns did not do much execution on this day. After opening the ball, she took up her position amongst the squadron. I am afraid I can convey but a very vague idea of the strength and admirable position of Petropaulovski. The Russians have certainly done their best to render it impregnable, and they have, in our operations against them, proved good soldiers and brave men. Awatska Bay, in which this hornet's nest is situated, is of great magnitude, large enough to enable fifty sail to manœuvre in it with ease and safety. The place is situated at the base of a mountain, about 12,000 or 14,000 feet high—a volcano covered entirely

Inner Battery, 5 guns. 5. Path Battery 5 guns. 6. Snake-in-Grass Battery, 11 guns. 7. Parker's Battery, 3 guns. 8. Garden Battery, 8 guns. Citadel Battery, number of guns unknown.

with snow: we had the pleasure of witnessing it in action, which was worth seeing. The town lies in a hollow, and another huge mountain is behind it. The shape of the harbour is something like a horse-shoe, and at the entrance to the port, on one side, is a battery of three heavy guns; and a little further in, towards the town, is another long battery of eleven guns, well built, with embrasures; and, from its peculiar position on a spit of land, running nearly across the harbour, rendered it very formidable, as behind it lay the Russian frigate *Aurora* and corvette *Dvina*, with their broadsides facing the entrance to the harbour. We called this lot "The Snake in the Grass."

There appeared to be an anchor when we arrived, in addition to the two ships above named, two merchant vessels—one bearing the Hamburg, and the other American colours. Opposite these two batteries, and on the other side, is a circular battery of five guns (heavy ones too), which commands the entrance entirely. Around the hill on which this battery is placed, and in a hollow, is a battery of seven guns, commanding the bay, and a little further in, on the same side of the hill, is a low battery of five brass guns, which also commands the bay. In addition to these there are three other batteries in and about the town, making a total of eight batteries and the citadel—the whole mounting probably fifty guns. On the 29th, the day after our arrival, an unfortunate and awful calamity occurred, which for a time clouded every one in the squadron: our beloved old Admiral Price fell mortally wounded, and to relate, from a pistol bullet fired by his own hand. As early as six a.m., he was on deck, and even ascended the rigging of the *President* as high as the main-top, to obtain a better view of the enemy's position—during the forenoon he visited the French Admiral and returned to his own ship quite cheerful. We were all getting under way to commence operations, when the Admiral went below and passed in to the quarter gallery. At that minute the report of a pistol was heard by all on board the *President*, and it was soon known that the poor old Admiral had shot himself. This was about half-past ten a.m. The medical officers were immediately with him, and as soon as the poor old gentleman recovered from the shock of his wound he became quite calm and composed—much more so than all who were with him; he appeared to know all who approached him, and spoke in the most kindly terms of his officers and men. The *Pique* was moving in to open fire when the distressing event took place; she was signalled to anchor, and her captain (Sir F. Nicolson) went on board the *President*; soon afterwards the French Admiral (who is a very aged and infirm officer) arrived on board the ship; he was greatly overcome, and, I am told, was so agitated as to be obliged to leave the cabin to compose himself. Admiral Price desired Sir F. Nicolson to take charge of her Majesty's ships, and to follow out the previously-arranged measures for taking the place, expressing himself confident of our success. The chaplain of the *President* was with the Admiral in his last moments. On this and day of course nothing was done: but on the next operations commenced in real earnest, the battery called the "Snake in the Grass" fell to all of us, as also the Little Battery and the Circular one—all of these facing the harbour. The ships engaged on this day were—*President*, *La Forte*, *Pique*, and *Virago*. The Little Battery was soon silenced, and a party of our marines and seamen landed and spiked the guns. The ships' guns effectually silenced those of the Circular Battery for that day, and we all turned our attention to the "Snake," which proved a very troublesome and ugly customer: a rapid shower of shell and shot soon cleared it, and we then piped to dinner. After dinner we had another go at our friend, who opened fire on *La Forte* with great precision, and several shot-holes in her hull attest the accuracy of their aim. *La Forte* had one man killed this day. *President* soon came within range, and betwen her and *La Forte* the battery was soon completely done up. To show the perseverance of the Russians, there was a sentinel whom all our shots could not drive away: he appeared to walk his post quite unconcerned, and there he stuck throughout: luckily for him, I believe, he received no injury. The *Virago*, on steaming out, received a shot in her "counter," which damaged the ship, but wounded no one. We all hauled out of range towards evening, satisfied with our first attempt.

On 2nd September the body of our lamented Admiral (Price) was put on board the *Virago* and conveyed to an unfrequented part of the bay, and there consigned to the earth. The officers of the *President* only attended the funeral. The place of burial is marked at present with the letters D.P. cut on a tree by the Admiral's servant.

After some debate between Sir F. Nicolson and the French Admiral, it was resolved to attempt the place again on 4th September, by landing a party of seamen and marines from the French and English ships. They were to be guided by two Americans acquainted with the place, who had been fallen in with by the party. The command of the party was to be given to the captain of the *President*, to afford information about the place. On Sunday, 3rd September, all arrangements were made for the landing: the men all properly equipped, and instructed as to what was before them the next day. All were confident of the success of their hazardous expedition. At half-past one on Monday morning the hands were called—the intention being to make the attack at day-break. After breakfast, preparations were made to go on board the *Virago*. The landing-party sent to her amounted nearly to 700: of whom half were French. They were all well armed, and ready for anything. A vast number of officers also paraded to the party. By six o'clock all were on board the *Virago*. Taking in tow *La Forte* and the *President*, she steamed in towards the batteries. The plan of attack was, that the French should engage a battery of seven guns, called the "Saddle Battery;" and *La Forte* to do the same with a battery of five guns, called the "Gorge;" the *Virago* to effect the disembarkation of the party. The *President* was first dropped by the steamer, about 600 yards from the Saddle Battery. At first her firing was not very good; but, after a little practice, she got the correct range, and her guns soon cleared the battery, doing great injury to the guns therein. Again one Russian alone could be seen by the battery, and he kept up on the alert, as we thought he might point one of the guns and fire when an opportunity offered. It was amusing to see him dodge behind the earthworks when a gun was fired, and then stand up and observe our movements with a telescope. In the early part of this engagement serious damage was done to the *President*; a shot entering a port on the main deck, killed two of a gun's crew, and wounded all the rest. The ship was in close quarters with the battery, and had a benefit: several shots entered her side on the lower deck, and one passed through a chest belonging to a junior officer of the ship, leaving, strange to say, his clothes uninjured, which remains in the same state, and affords a source of amusement to him and his mess-mates. *La Forte* silenced her battery without sustaining any loss of life; and, as soon as this was done, the landing party was disembarked.

Sad to relate, their subsequent proceedings led to the most fatal consequences. It had been arranged that the party was to form in military array, on the beach, before proceeding into the bush. Instead of this, immediately on landing, each division took their own course, and, instead of entering the town together in a body, found themselves ascending a hill at the back of the town, amongst tangled and thick brushwood, in which it was impossible to distinguish an enemy from a friend. In the severe and random firing which was kept up, there is little doubt but that many French and English met their deaths with out Russian interference. Our loss was most serious, and I believe the French lost quite as many men as we did, and more officers. Captain Parker, of the Marines, under whose management the party landed, but whose commands were not attended to, was shot dead soon after landing. Two Lieutenants of the *President* received severe wounds. After an ineffectual struggle against their unseen enemy, a retreat was sounded. All the party had to descend a high hill. From the ships our men appeared to be falling down the sides of the hill, as if shot—over headlong, some rolling, and all in the greatest confusion. When the landing-party returned on board, which they did by 10.45 a.m., the ships hauled out of the range of the batteries to attend to the wounded, and repair damages. The melancholy result of this attempt is as follows, as regards the English ships:—

H.M.S. *Pique*: Lieut. A. Bland, Mate G. Robinson, Midshipman L. Chichester, Lieutenant McCallum, and Captain Clements, R.M., severely wounded. Eight seamen and 4 marines, killed; 7 seamen and 2 marines, dangerously wounded; 5 seamen and 5 marines, severely wounded; 4 seamen and 1 marine, slightly wounded. Total killed and wounded, 36.

H.M.S. *President*: Captain Parker, R.M., killed; Lieutenants Howard and G. Palmer, R.N, severely wounded; Lieutenant W. G. Morgan, slightly wounded. Five seamen and 11 marines, killed; 3 seamen and 1 marine, severely wounded; 15 seamen and 11 marines, severely wounded; 4 seamen and 4 marines, slightly wounded. Total killed and wounded, 60.

H.M.S. *Virago*: Mr. Whitelock's boats—1 seaman, 2 marines, killed; 3 marines, dangerously wounded; 1 seaman and 3 marines, severely wounded; 7 seamen and 1 marine, slightly wounded. Total killed and wounded, 18. Total English killed and wounded, 107.

Since this day we have made no further attempt on the town. It is doubtless a very strong place, and will at any time afford hot work for our ships. Our disappointment has been great, as we have come upwards of 5000 miles from Valparaiso to obtain what may almost be termed a repulse. We left Petropaulovski on the morning of the 6th, and, about two hours after getting outside, had the good fortune to discover two strange sail in sight—one a schooner, and the other a large ship; the last we took for the *Pallas* or *Diana* Russian frigates. The *Virago* was dispatched after the smaller craft. She turned out to be a Russian merchant-vessel, bound to Petropaulovski with provisions, &c. The *President*, being the fastest sailor of the squadron, went in chase of the larger vessel. The weather was thick, and the Russian tried to escape; but, after a few hours, and owing to the skilful manœuvring of Captain Burridge, the *President* was close alongside. The stranger proved to be the *Sitka*, of 700 tons, carrying ten guns, one of the ships of the Russian American company, last from a place called Agan, in the sea Ochotsh, bound to Petropaulovski, with the winter store of provisions, ammunitions, &c., for the garrison. She had on board a Colonel and Russian officers, with twenty-three Russians, passengers to Petropaulovski; also her crew, twenty-eight in number, who are with us now. They appear good-tempered fellows; their conduct is intelligent enough. Some of the crew are Russians, but Germans, Swedes, and Dutch. We have also a little fellow of fourteen, a midshipman, as prisoner. They are all well treated, and allowed to do just as they please. We are now running 10 knots in a gale of wind, with the *Virago* in tow. A prize crew is on board the *Sitka*. I fear the prize money will be but small: we junior officers might get about 30s. each.

Until another Admiral's flag is hoisted on the station, we shall be under the orders of Captain Frederick, of the *Amphitrite*, who becomes a Commodore of the first class *pro tem*. We find it hard times in the messing line—nothing to drink and less to eat—no fresh meat since the middle of July. The French squadron are going to San Francisco, while our ships go to Vancouver's Island to complete our water, which is running so short that six pints have to suffice each of us for breakfast, dinner, tea, and washing.

P.S. I send you a Sketch of the position of the Fleet and Batteries.

WAR OBITUARY.

(*Continued from page 567.*)

AINSLIE (Lieutenant-Colonel Frederic George), of the 21st R.N.B. Fusiliers, died on the 14th ult., when on his passage between the Crimea and Scutari, on board the steam-ship *Andes*, of a wound received at the head of his regiment in action at Inkerman. Colonel Ainslie was younger son of the late Lieutenant-General George Robert Ainslie, by Sophia Charlotte, his wife, daughter of Christopher Neville, Esq., of Wellingore, and grandson of Sir Philip Ainslie, of Pilton, county Edinburgh, by Eliza, his wife, daughter of John, Lord Gray. The Ainslies are an ancient Scottish family, of which the late Sir Philip Ainslie, of Pilton, was the sixteenth chief of the name in a direct male line. His youngest brother (grand-uncle, consequently, of the gallant soldier whose death we record) was Sir Robert Ainslie, Bart., who filled for several years the important station of Ambassador to Turkey. Lieut.-Col. Ainslie's father, Lieut.-General Ainslie, served in all the campaigns where the British troops were engaged under the command of his Royal Highness the Duke of York, in Flanders, Holland, and the Expedition to the Helder, from 1794 to the Peace of Amiens. He was afterwards Governor of Grenada and Dominica. The son whose death we here record, Lieut.-Colonel F. Ainslie, entered the Army at the early age of seventeen, as Lieutenant in the 21st N. B. Fusiliers, and served in Van Diemen's Land and India during eleven years. Having passed through the regular gradations of rank, he became, in 1852, Lieut.-Colonel, and in command of the 21st Regiment, which, under his system, was in the highest state of efficiency, as appears from a letter written by the orders of the Duke of Wellington to Colonel Ainslie, expressing his Grace's special approbation of the order, discipline, and efficiency of the 21st Regiment under his command.

ARMSTRONG (Arthur Savory), Lieutenant and Adjutant of the 49th Regiment, was killed in the early morning of the memorable 5th November, at Inkerman. He had only just completed his 23rd year. His father, the late James Armstrong, Esq., was of the Bengal Civil Service.

BLAND (Captain James Franklin), of the 57th Regiment, died in the Camp, on the 8th ult., from wounds received at the battle of Inkerman, in the twenty-fourth year of his age. Perhaps in no part of that desperate and glorious struggle was more execution done than by the gallant 57th of the 57th Regiment, out of which only 60 escaped unhurt. Captain Bland was seen dealing death around him, supported by his determined band, when he was felled by a wound in the head. Captain Bland was the second son of James F. Bland, Esq., Derrygulin Castle, Kerry, a Deputy-Lieutenant and J.P. of his county, descended from the ancient and respectable family of Blands of Yorkshire. His ancestors settled in Kerry in the reign of Queen Elizabeth, where ever since the family has maintained a very influential position, and are highly connected both in England and Ireland.

CARPENTER (Lieutenant-Colonel George). This lamented officer, who fell while gallantly commanding the 41st Regiment at the battle of Inkerman, on the 5th of November, was the only son of General Carpenter, of Great Cumberland-place, Hyde-park. He was in his fifty-fourth year, and had seen considerable service, especially in India, and was twice shipwrecked while in command of troops. Colonel Carpenter met with so severe an accident by a fall from his horse, previous to the starting of the expedition to the Crimea, as might have fairly invalided a less determined soldier. He was able, however, to be the first of his division to cross the Alma, and gallantly to lead his regiment up the heights. At this battle he escaped without a wound, although his horse was shot in two places. He, however, found at the close that his only son, Lieutenant Carpenter, of the 7th Fusiliers, had fallen severely wounded, and had only time to see him taken on board one of the steamers, when the forced march on Balaclava began. Colonel Carpenter subsequently distinguished himself against the first sortie from Sebastopol, and finally, in the energetic and bold defence of the position at Inkerman (the brunt of which fell on the Second Division, to which Colonel Carpenter was attached, and the Guards), closed his services by a soldier's death: "an honour"—as the correspondent of one of our contemporaries says—to his country and his family, "but a deep disgrace to the Russians;" for we fear it is but too true that this brave man, when put *hors de combat*, was remorselessly assailed again and again by an enemy who pretend to civilisation. The Carpenter family was ennobled in one of its branches, and in the person of a successful soldier, by the revived title of Tyrconnel—of the branch from which the subject of this brief memoir descends. It is remarkable that, for several generations, it has consisted of individuals who have all been only sons, all George Carpenters, and all, more or less, have suffered and distinguished themselves in the service of their country.

CARTWRIGHT (Captain Aubrey Agar), 1st Battalion of the Rifle Brigade, fell at Inkerman, pierced with balls, whilst bravely encouraging the young soldiers of his company to stand firm under a murderous fire. He had not completed his 29th year. His first commission bears date 15th October, 1841; his last, 22nd December, 1848. He served with his gallant corps under Sir Harry Smith at the Cape of Good Hope, and took part in the action at Boem Plaats, 29th August, 1845, when the rebel Boers were defeated. His father, Colonel William Cartwright, of Ayno, Chairman of Quarter Sessions for Northamptonshire, served in the 61st Foot, in the Peninsula, having the campaigns of 1813 and 1814, and as Lieutenant in the 10th Hussars at Waterloo. The Cartwrights of Northamptonshire hold a prominent place amongst the landed gentry of England, and have constantly represented their native county in Parliament. The late William Ralph Cartwright, Esq., of Aynho (the grandfather of the young officer whose death we record), was Knight of that shire for upwards of fifty years.

CHILDERS (Captain Spencer Philip John), R.A., was born at Edinburgh, on 2nd December, 1823, the eldest son of William Childers, Esq., then a Captain in the 42nd Highlanders; and grandson of Colonel Childers, of the 11th Light Dragoons, who was Aide-de-Camp to his Royal Highness the Duke of York in Holland. Spencer Childers entered the Royal Artillery in 1846; and, after a short stay at home, accompanied his company to Canada in March, 1849, where he remained until August, 1854, when, owing to the Brevet, he became a Second Captain in the Royal Artillery, and on arrival at home found that his company had just left for the seat of war. After a very short stay in London, he proceeded to Constantinople, viâ Marseilles, arriving there on the 26th September, whence he immediately proceeded to Balaclava in the *Polson* steamer. He arrived there at the siege train was on its way to the front, and was employed putting the guns in position; his company, under the command of Major Fresse, being in the left attack in the trenches, under Lieut.-Colonel Gambier. On the afternoon of the 1st October he was killed by a shell whilst striking him on the head, whilst viewing the effect of his guns on the enemy's forts and works at Sebastopol. He was in his twenty-sixth year, and, as stated in Lord Raglan's despatch, "a very promising officer." Mr. Wildman Childers, the late Member for Hastings, was his uncle, and resides at the family estate, Cartley Hall, near Doncaster.

CLEVELAND (Cornet Archibald), of the 17th Lancers, died on the 6th November, from a wound received at Inkerman. He was only twenty-one years of age, and had just come into possession of his family estate, Tapley-park, in Devonshire. He had participated in the glorious charge of the Light Cavalry at Balaclava, and, though attacked by three Cossacks, had escaped the carnage of that memorable day. At Inkerman he was wounded by a piece of a shell, and survived only till the morning after the battle. He was an only son, and leaves a widowed mother to mourn his early death.

COWELL (Lieut.-Colonel James Charles Murray), of the 1st Battalion of Coldstream Guards, entered the Army as Ensign 25th September, 1840, and became Lieutenant and Captain June 11, 1847. He was son of Lieut.-Colonel Stepney Cowell, K.H., and grandson of the late General Cowell, of the Coldstream Guards. His own career began at the early age of twelve, as Page of Honour to his Sovereign. He had returned to England from the camp at Varna, on his promotion, and on being ordered again to the East, and finding no means of passage immediately ready, he had gone out at his own charge, eager to rejoin his brothers in arms. On the day of the battle of the 5th of November his duties placed him on picket in the trenches, but, finding his regiment hard pressed, and that his services might be available, he unhesitatingly joined his gallant comrades, and led that portion of the Coldstreams he commanded repeatedly against the enemy, and was mortally wounded while conducting the assault upon a redoubt, which the Russians had taken. Immediately on receiving the fatal wound he was supported to the Camp; and, making light of his hurt, he asked a wounded brother officer to go on board ship with him. The injury, however, proved much more serious than he was aware of, or would admit, and he was taken to the hospital, where he expired a few hours after the extraction of the ball. Nearly his last words were—"I hope I have done my duty; at least, I die a soldier's death."

CURTOIS (Lieutenant George Charles Widdrington), of the 63rd Regiment, was one of the three officers of his gallant regiment who fell in the heroic struggle at Inkerman, wherein Sir George Cathcart was slain. Lieutenant Curtois, a most promising officer, and most amiable man, is deeply deplored. He had only reached his 25th year. He was the elder son of the late Rev. Rowland Curtois, D.D., who was formerly Chaplain at Gibraltar, and subsequently Chaplain to the Forces and Garrison at Chatham; his mother was daughter of the late Lieut.-Gen. Sir David Latimer Dinling Widdrington, and a near relative of Lady Thesiger, wife of Sir Frederick Thesiger, Q.C. Just before his death, Lieut. Curtois's promotion to a company was gazetted; but the news had not reached the Crimea.

DARCIE (Lieutenant-Colonel Richard James), Royal Artillery, was the eldest son of the late Vice-Admiral Sir Richard Darcie, G.C.H. He entered the Artillery in the year 1817; and was appointed to the command of the Royal Artillery in the Crimea on the decease of Brigadier-General FOX Drangwaya.

DALTON (Major Thomas Norcliffe), of the 49th Regiment, was killed at Inkerman, whilst gallantly leading his men into action, aged thirty-five. His loss is deeply deplored. The gallant officer was son of John Dalton, Esq., of Sprinsfford Park, co. York, late a Captain in the Army; and grandson of Lieutenant-Colonel John Dalton, of Sprinsfford, whose father, John Dalton, Esq., acquired a very high reputation in the East India Company's service. The immediate ancestor of the family, John Dalton, of Hawkeswell, who served as Lieutenant-Colonel to his brother-in-law, the Lord Darcy, in the great Civil War, was mortally wounded on passing the bridge of Burton-on-Trent, while conducting the Queen from Burlington to Oxford. Major Dalton served in the 61st Regiment in the Punjaub campaign of 1848-9; and was present at the passage of the Chenab, and in the battles of Sadoolapore, Chillianwallah, and Goozerat; and with the field force in pursuit of the enemy to the Khyber Pass—for which he obtained a medal and two clasps. From the 61st he exchanged into the 49th, at the Dépôt in Cork, in 1853, and served with that gallant regiment ever since its arrival in the East. At the conflict of the Alma, Major Dalton, whilst leading his men up the hill, had his horse shot under him; and in the hard-fought affair of Balaclava also took a prominent part.

DASHWOOD (Lieutenant Walpole George), of the 50th Regiment, was killed by the bursting of a shell, in the trenches before Sebastopol, on the 8th November. He was in his twenty-fifth year, and had been four years in the Army.

DAVIES (Lieutenant Francis Byam), of the Grenadier Guards, died on the 10th ult., on board H.M.S. *Simoon*, off Sebastopol, of a wound received in the trenches, 19th October. He was nineteen years of age—the eldest son of Major-General Davies, of Danehurst, Sussex; grandson of Thomas Davies, Esq., Advocate-General to the East India Company; and nephew of the late Colonel Thomas H. Hastings Davies, of Elmley Park, M.P. for Worcester.

GIBSON (Lieutenant Alured), of the 30th Regiment, was second son of Wood Gibson, Esq., of Bodlondeb, near Conway, North Wales, and Cross-street, Manchester. In a letter written by one of the Majors of his regiment to a relative of this young officer, speaking of him, he says, "I was not near him when he fell (at Inkerman), but I hear that, though previously wounded, he was still gallantly leading on his men when he received his death-wound. He joined us, poor fellow, before he was quite recovered from a fever, so great was his anxiety to do his duty with his regiment. On the 26th, when we repulsed the enemy, almost unaided, with great loss, he behaved most gallantly; and on the 5th his conduct was equally conspicuous. The regiment has lost in him a most valuable officer, and his brother officers a sterling friend." Lieutenant Gibson, although engaged in the thickest of the struggle, escaped through the battle of the Alma without a wound. He was in his twenty-fourth year.

GOLDIE (Brigadier-General Thomas Leigh), who fell at the head of his brigade at the battle of Inkerman, was second son of the late General Alexander John Goldie, of the Nunnery, Isle of Man; grandson of Lieutenant-General Thomas Goldie, of Goldie Leigh, county Dumfries; and nephew of the present Lieutenant-General George Leigh Goldie. By his mother he was descended from the family of Taubman, one of great antiquity in the Isle of Man. Brigadier-General Goldie, when Major of the 66th, acted as Military and Private Secretary to Sir John Colborne (now Lord Seaton), and for the ability and zeal he displayed during the disturbances in Canada received his Lieutenant-Colonelcy. He was just forty-seven years of age, twenty-nine of which he had passed in the Army.

GREVILLE (Lieutenant Cavendish Hubert), of the 1st Battalion Coldstream Guards, was killed in the heroic struggle at Inkerman of his regiment with the overwhelming force of the enemy. When the brigade was impelled back from their redoubts, Mr. Greville was wounded and unable to retire; and in the recovery of the position his dead body was found, pierced with innumerable wounds.

HAGUE (lieutenant George Udny), of the 57th Regiment, wounded at Inkerman, survived until the 12th November, when he died on board the steam-ship *Andes*. He was youngest son of Barnard Hague, Esq., of York. His first commission bears date 23rd March, 1849.

HALKETT (Major Douglas), of the 42d Royal Highlanders, killed in the cavalry action at Balaclava, was eldest son of John Halkett, Esq., some time Governor of the Bahamas, by the Lady Katherine Douglas, his wife, daughter of Dunbar, Earl of Selkirk; and grandson of Sir John (Wedderburne) Halkett, Bart., of Pitfirrane, county Fife, by Mary, his second wife, daughter of the Hon. John Hamilton. It will thus be seen that the deceased officer was sprung, by female descent, from the illustrious families of Hamilton and Douglas—

> The Douglases were heroes every age;

and was, by paternal ancestry, a descendant of the Halketts of Pitfirrane. Sir Peter Halkett, second Baronet, was taken prisoner by the Chevalier's troops at Sir John Cope's defeat at Gladsmuir, and dismissed on parole; subsequently, in February, 1746, true to his engagement, he refused to rejoin his regiment on the Duke of Cumberland's command and left off defending his estate. His reply, "that his Royal Highness was master of his commission, but not of his honour," was approved by Government. In 1754 Sir Peter embarked for America, in command of the 44th, and was slain, together with his son, James, in General Braddock's defeat. The following anecdote of the last thoughts of Major Douglas Halkett is well worth recording. The gallant and true-hearted soldier was seen to fall wounded in the retreat after the heroic charge under Lord Cardigan; and, as the shattered remnant of his regiment passed, he was heard to call to one of his men—"Come here and take my money; it is for the married women at home." It was, alas! impossible to comply with the request, the fire was at the moment hotter than at Alma; the pursuing Russians soon swept over the spot; and no more is known.

HURT (Lieutenant Henry Francis Eden), of the 21st, was the only officer of that regiment killed at Inkerman. He was second son of Francis Hurt, Esq., of Alderwasley, county Derby, by Cecilia Norman, his wife, niece of the Duke of Rutland. The young officer had only reached his 21st year.

MADAN (Charles), Midshipman, R.N., whose death we have already referred to, was great-grandson of Dr. Madan, Bishop of Peterborough, by his first wife, Lady Charlotte Cornwallis, sister of the first Marquis Cornwallis.

MAULE (Lieutenant and Adjutant Arthur Dillon), of the 88th Connaught Rangers, died 14th ult., at Scutari, of wounds received on the 25th Oct., before Sebastopol. He was son of the late Lieutenant Colonel Maule; was only twenty-three; and had served in the Army six years.

MONTGOMERY (Corsat Hugh), of the 13th Light Dragoons, who fell at Balaclava, was eldest son of Hugh Montgomery, Esq., of Ballydrain, county Antrim.

NEVILLE (the Hon. Grey), of the 4th Dragoon Guards, severely wounded at Balaclava, has since died. He was youngest son of the present Lord Braybrooke; grandson, maternally, of the second Marquis Cornwallis; and brother of the Hon. Captain Henry Aldworth Neville, who fell at Inkerman. These two gallant brothers, who have thus sacrificed their lives in their country's cause, were direct descendants of Sir Edward Neville, Lord Bergavenny, uncle of Richard Neville, Earl of Warwick, "The King Maker."

NICHOLSON (Captain), of the 77th Regiment, was killed, whilst leading his company in a gallant charge. He was son of the late John Nicholson, Esq., of Brigg, county Lincoln, and had completed his twenty-seventh year.

ROOPER (Major Edward), late of the Rifle Brigade, who died on the 10th ult., on board the *Golden Fleece* steamer, of a gun-shot wound received at the battle of Inkerman, was youngest son of the Rev. Thomas Rooper, of Wick Hill, Brighton, and formerly Rector of Abbots Ripton, Huntingdonshire, where the family have a seat. Major Rooper was appointed to a Second Lieutenancy in the Rifle Brigade at the early age of sixteen. He served with the 1st Battalion in both the Kaffir wars. In the interval between them he held the office of Civil Magistrate of the district of East London, and ably discharged its duties, as shown by a very flattering testimonial from the principal inhabitants. At the conclusion of the second Kaffir war, the Governor, Sir George Cathcart, appointed Major Rooper one of the Commissioners for investigating the claims of settlers for losses sustained during the war. Major Rooper subsequently returned to England with his regiment, and accompanied it to the Crimea. He was present, but not engaged, at the Battle of Alma; and was continually employed in the trenches and skirmishing before Sebastopol, until the 5th of November, when he received his death-wound, together with his former Commander and kind friend Sir George Cathcart and so many others, whose services their country can ill spare. Major Rooper was an accomplished artist. His portfolio contains numerous finished drawings of the most characteristic scenery of South Africa, to which our own Journal has been indebted. He was also a diligent and successful collector of plants and flowers; several new and rare specimens of which are now in cultivation at the Royal Gardens at Kew, and in private collections

ROSS-LEWIN (Lieut. John Dillon), of the 30th Regiment, who died on 7th Nov., at Balaclava, of a wound received at the close of the battle of Inkerman, was youngest son of the late Major Ross-Lewin, of Ross Hill, county Clare—a Peninsular and Waterloo officer, who was in seven general actions and sieges, and was severely wounded at Salamanca. Lieut. Ross-Lewin commanded a company of the 30th Regiment at the battle of the Alma; and on the 26th October, when the Russians attacked the right of the position of the Allies. On the latter occasion his company formed one of the advanced pickets, whose conduct was so highly eulogised by Lieut.-General Sir De Lacy Evans, in his report dated "Heights of the Tchernaya, 27th Oct., 1854." The Ross-Lewin family has given many officers to the British service. Lieut. Ross-Lewin's grandfather was an officer in the 14th Dragoons. His uncle, Thomas Ross-Lewin, Esq., of the 32nd Regiment, now on half-pay, was with the Duke of Wellington's army, for which he has received the medal with eight clasps. He was promoted for his services at Pampeluna and Waterloo. And his cousin, Lieut. Edward Ross-Lewin, 9th Regiment, was killed at the storming of St. Sebastian.

RUTHVEN (Lieutenant Cavendish Bradstreet), R.N., who fell in the Naval Brigade, was the youngest son of the Baroness Ruthven, the representative of a name long distinguished in Scottish history. Lieutenant Ruthven was not the first of his family who had freely shed his blood in the service of his country. His brother Walter had previously perished at Ferozshah, in the service of the Hon. East India Company. The present inheritors of the name thus prove themselves well entitled to their ancient motto, "Deeds show."

SEYMOUR (Lieut.-Col. Charles Francis), Scots Fusilier Guards, Assistant Adjutant-General, Fourth Division (whose services and heroic death we recounted last week), was a direct descendant of the celebrated Lord Protector Somerset, of the reign of Edward VI; being elder son of the late Colonel Sir Horace Beauchamp Seymour, K.C.H., M.P.; nephew of Vice-Admiral Sir George Francis Seymour, G.C.H.; and grandson of Admiral Lord Hugh Seymour, fifth son of the first Marquis of Hertford, Lord Lieutenant of Ireland, in 1765. Colonel Seymour was cousin of Sir George Hamilton Seymour, lately the able British Ambassador at St. Petersburg, and great-grand-nephew of the famous General Seymour Conway, who commanded with high reputation the British forces in Germany, in 1761, during the absence of the Marquis of Granby.

STANLEY (Edward), Senior Captain of the 57th Regiment, is deeply lamented. His death on the field of Inkerman, nobly sustaining the high reputation of his country, was a fit termination of a life devoted to military enterprise. Captain Stanley, who claimed descent from the illustrious House of Derby, was son of John Bacon Stanley, Esq., of Dublin; and nephew of Sir Edward Stanley, High Sheriff of that city, who was knighted at Dublin Castle, on the occasion of the Jubilee of the 50th year of the reign of George III. When very young, being fond of a military life, he entered the service of the Queen of Portugal, and distinguished himself in action at Oporto, in July, 1833, where he received a severe wound in the arm. He continued to serve in Portugal and Spain until 1838, when the order of the Tower and Sword (of Portugal) was conferred on him as a reward for his gallantry. The following anecdote connected with his appointment to the British Army is authentic:—Prince William Henry, when a midshipman, was present at a ball at Halifax, Nova Scotia, and, being struck with the charms of a young lady present, selected her for his partner in a country dance, at the conclusion of which he laughingly told her that if he should ever attain power, she need only send him a copy of the music of that dance, accompanied by a request, and that he would, if possible, attend to any demand so singularly founded. Years rolled on. The lady married, became a widow, and a grandmother. Prince William Henry became King William IV. And on the return of Mr. Stanley from Spain, in 1838, he expressed a wish to enter the British Army, on which his grandmother forwarded a copy of the music to his Majesty, accompanied by a letter reminding him of his promise, and concluding by asking for an Ensigncy, without purchase, for her grandson. In a very few days she received from an autograph letter from the King, stating his perfect remembrance of the dance and its circumstances referred to, and his intention to accede to her wish with respect to the nomination of her grandson to an Ensigncy, which accordingly took place in May, 1838. Captain Stanley joined the 57th Regiment, at Madras, the same year, and served with it ever since. Had he survived the battle of Inkerman, he would have succeeded to a Majority without purchase. He married, 22nd April, 1851, Jeannette-Edmeston, fifth daughter of William Balfour, Esq., Capt. R.N., of Trenaby, Orkney.

STIRLING (Lieutenant John), of the 41st Regiment—who had only attained his eighteenth year, when he found a soldier's grave at Inkerman—was youngest son of the late John Stirling, Esq., of St. Andrew's.

SWABY (Lieutenant John William), of the 41st Regiment, fell at Inkerman. "His body (we quote the narrative of Captain Goodwin) was brought into the Camp three hours after the engagement, pierced with nine wounds. The men of his company who last saw him called to him, saying that they were surrounded, and begged him to retire; when he answered, 'No, I will not; I'll fight to the last.' He was then seen to discharge his revolver several times, and use his sword. A Russian officer was afterwards found close to him, with a sword-cut on the head." Lieutenant Swaby was interred the next morning—the whole of his regiment attending, and the Chaplain of Division reading the burial service. He leaves a brother in the Army—Lieutenant George Swaby, of the 38th.

SWINY (Lieutenant-Colonel Exham-Schomberg-Turner), 63rd Regiment, fell at Inkerman, whilst gallantly charging at the head of his regiment—deeply and deservedly lamented. This distinguished officer entered the Army as Ensign, 1st October, 1829; obtained his company 8th August, 1838; and became Major 22nd October, 1847.

TOWNSEND (Major Samuel-Philip), of the Royal Artillery, killed at Inkerman, was eldest son of the Rev. William Robinson Townsend, Rector of Aghnadi, and grandson, maternally, of Major-General Brooke Young, R.A. His great-grandfather, the Rev. Horatio Townsend, Rector of Donoughmore, county Cork, was ninth son of Bryan Townsend, Esq., of Castle Townsend, whose father was the famous Parliamentary Officer, Colonel Richard Townsend.

TRYON (Lieutenant Henry), of the Rifle Brigade, was killed on the night of the 20th of November, near Sebastopol, on a special service, in which he highly distinguished himself. He was the second son of Thomas Tryon, Esq., of Bulwick-park.

WEBB (Captain Augustus Frederick Cavendish), of the 17th Lancers, aged twenty-two, the youngest son of the late Frederick Webb, Esq., of Westwick, Durham, and Hamptworth, Hants, died at Scutari, two days after the amputation of his leg, in consequence of a wound received at the battle of Balaclava.

WYNNE (Major Heneage Griffith), of the 68th Light Infantry, was second son of Charles W. G. Wynne (formerly Finch), Esq., of Voelas, county Denbigh; and grandson of the Hon. Charles Finch, whose father was Heneage, third Earl of Aylesford, and whose mother was daughter of Charles, sixth Duke of Somerset. Major Wynne was born 13th September, 1816, and entered the Army 10th July, 1835. He fell at Inkerman, in the desperate struggle in the ravine where Sir George Cathcart, Colonel Swyny, and Lieutenant Dowling, were also slain.

*** In addition to the information already given respecting the late valiant brothers, the Butlers, it may be mentioned that Captain H. T. BUTLER, Deputy-Assistant-Adjutant-General, was married to Elizabeth, eldest daughter of the late Rev. Wm. Tomas, Chaplain to the Forces in the Madras Presidency; and niece to the Ven. J. W. Forster, Archdeacon of Aghadoe, Killarney. The defender of Silistria, Captain JAMES BUTLER, of the Ceylon Rifles, was unmarried. Captain CHARLES BUTLER is the second son of General Butler, and was married to Miss Prosser. He is in the Army; and is the only one of that family remaining in the service: his sole surviving brother is in holy orders.

CHESS.

TO CORRESPONDENTS.

ALMA.—Where the combatants are of a high class of players, to give the Pawn and two moves is a task of infinitely more difficulty than giving the odds of the "Exchange." We doubt, indeed, if the latter odds are at all equal even to those of the Pawn and two moves. To give the Pawn and two moves to a really skilful opponent, demands, independent of a profound theory in the game, a combination of patience, nerve, and resource which very few players possess.

W. B. C., St. John's Wood.—You have evidently too little knowledge of Chess at present to undertake the solution of difficult Problems. Procure some easy rudimentary book on the game, and study the moves and openings for a few months.

C. W., Sudbury.—Upon re-examination, the Solutions are right and some other of our Correspondents forwarded, turns out to be false. Black can take the Rook at his second move, and defy you to mate.

ROBERSON, T. M. B., and OLIAS.—GRAND CHESS TOURNOI IN PARIS DURING THE EXPOSITION OF 1855.—We have reason to believe that some of the most distinguished amateurs of Chess in France are now engaged in organising a Committee for the purpose of carrying into effect the long-projected undertaking.

E. B. C., Ilsbeham.—Your letter dated Sept. 14 was answered immediately; and we have been expecting the communications promised for some time.

G. B. F., Dundee.—Your Variations on the Evans' Gambit are at present under examination. We shall report on them ere long.

C. B., Brugge.—1. The mistakes are your own imagining. No. 561 admits of but one Solution. When you send us another Solution's simply a variation on the author's, and a palpably wrong one too. 2. Of the two Problems composed by yourself, neither is by any means up to our mark.

W. G., York.—Received with thanks

M. P., of C. I.—BLACK AND WHITE.—They shall be examined.

SOLUTION OF ENIGMAS by Sirlehenda, G. T., M. P., Percy, Phiz, S. T. V., St. George, G. T., Subscriber, Amateur, are correct. All others are wrong.

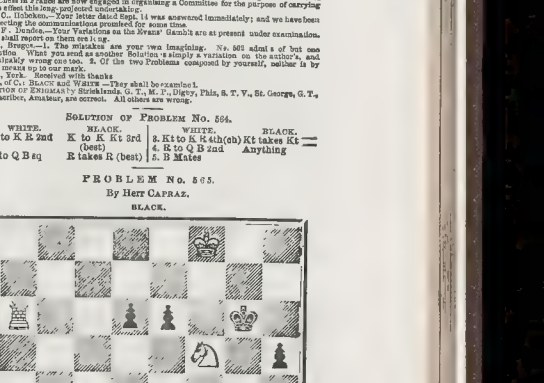
SOLUTION OF PROBLEM No. 564.

WHITE.	BLACK.	WHITE.	BLACK.
1. R to K B 2nd	K to K Kt 3rd (best)	3. Kt to K B 4th (ch)	Kt takes Kt
2. R to Q B sq	R takes R (best)	4. R to Q B 2nd	Anything
		5. B Mates	

PROBLEM No. 565.

By HERR CAPRAZ.

BLACK.



WHITE.

White, playing first, to mate in three moves.

CHESS IN THE METROPOLIS.

The following very lively affair occurred in a Match now pending between Mr. BIRCH and Herr JAWSBERG.

(Q B Pawn's Game in the Kt opening.)

WHITE (Herr J.)	BLACK (Mr. B.)	WHITE (Herr J.)	BLACK (Mr. B.)
1. P to K 4th	P to K 4th	13. Q B to K 3rd	Q B to Q Kt 2nd
2. K Kt to K B 3rd	Q Kt to Q B 3rd	14. Q takes P	P to Q B 4th (*f*)
3. P to Q B 3rd	P to Q 4th	15. Q to her 3rd (*g*)	Q to K Kt 5th (ch)
4. Q to her R 4th (*a*)	P takes P (*b*)	16. P to K B 3rd	Q to K Kt 4th
5. K Kt takes P	Q to her 4th	17. P to K B 4th	Q to K Kt 5th
6. K Kt takes Q Kt P	takes Kt	18. R R sq (*h*)	Q to her 3rd (ch)
7. K B to Q B 4th	Q to her 2nd	19. K Kt to K B sq	Q to K 7th
8. Castles	K B to Q 3rd	20. B to K B 3rd	Kt to K B 4th.
9. K B to Q Kt 5th	P takes B (*c*)	21. Q R to K Kt 3rd	Q takes K Kt P (*i*)
10. Q takes K P (ch)	K Kt to K 2nd	22. Kt to Q B 3rd	Q to K Kt 5th
11. Q takes Q R	P to Q B 3rd (*d*)	23. B to K Kt 2nd	Kt takes B
12. P to Q 3rd (*e*)	Castles	24. P takes Kt	Q takes P

And White speedily surrendered.

(a) The usual course here is to play K B to Q Kt5th, but Mr. Jaunsen's deviation as bold as it is original, seems calculated to secure the opening player, at least, as much attack as the old move, and to involve his adversary in a more arduous and dangerous line of defence. Whether it will stand the test of rigid analysis as well as K B to Q Kt 5th, has yet to be proved.

(b) Among the few players who have looked with attention at the opening as newly shaped; the second that we, for 3rd be to second play at the moment that we are playing the K Pawn

(c) It is so dangerous, that one is grieved to find it turn out badly, and to discover that the best reply is the taking of it to K sq, would have answered for us.

(d) Now comes the pinch, for which White hadevidently not provided, when he manœuvred so cleverly to win the exchange. The Queen is in peril. Here is she to be saved? And, if preserved, how can she again be brought into play, again with the rest of the forces? White is very fertile of these Problems and situations. He saves his Queen. But the second he betook himself, and she runs as isolated and helpless for as rest of the battle.

(e) If he had suggested sider wards at that it his safest course saved his Queen equally, by playing P to Q B 4th.

(f) And . . . compelling White to sacrifice his Queen for a minor piece, or to consign her to ruinous inactivity.

(g) Desperate, or Black would have won her by moving his Rook to Q R sq.

(h) Black appears to have overlooked the sure, and at the same time most expeditious, mode of winning. He should, if we mistake not, have taken the K Kt P at once. For example—

	Q B takes K Kt P
16. K takes B	
(If he does not take the Bishop his game is equally lost.)	
17. K to K sq	Q to K 8th (ch)
18. K to B sq	Q to K 7th (ch)
And White has no resource	

(i) Very prettily played. The youngster must observe that, if White take this Bishop, he subjects himself to immediate Mate.

CHESS IN THE PROVINCES.

An interesting specimen of the "Great Gambit," usually called Allgaier's, recently occurred between the respective champions of Liverpool and Manchester, Messrs. SPRECKLEY and KUPPING.

WHITE (Mr. K.)	BLACK (Mr. S.)	WHITE (Mr. K.)	BLACK (Mr. S.)
1. P to K 4th	P to K 4th	17. Q to Q 4th (*c*)	Q to Q 5th
2. P to K 4th	P takes P	18. Q to Q Kt 3rd	Q to K 6th (ch)
3. K Kt to K B 3rd	P to K Kt 4th	19. Q R to Q 2nd	Kt to Q 5th
4. P to K 4th	P to K Kt 5th	20. Q to Q Kt 4th	P takes P (*d*)
5. Kt to K 5th	P to K R 4th	21. Q to Q 5th (*e*)	Kt to K R 3rd
6. P to Q 4th (*a*)	P to Q 3rd	22. Q to Q B 7th	Kt to K 3rd
7. K Kt to Q 3rd	B to K 2nd	23. R to K sq	Q takes P
8. Q takes P	B takes P (ch)	24. Kt to K 4th	Q to K Kt 5th
9. P to K Kt 3rd	B to K Kt 4th	25. Q takes K P	Q to K 3rd
10. K to K 2nd	P to Q B 3rd	26. Kt to Q 6th (ch)	K to K 2nd
11. Q Kt to Q B 3rd	Q K Kt to Q 2nd	27. Q to Q Kt 3rd	Q to K B 3rd
12. Q to Q 2nd	P to K B 3rd (*b*)	28. Kt takes R	Kt takes R (ch)
13. Castles on Q side	Q Kt to Q B 2nd	29. Q R takes Kt	R takes Kt
14. P to K 5th	Q P takes P	30. Q to Q 8th (ch)	K to Q 2nd
15. P takes P	B takes B	31. Kt to Q 8th (ch)	K to K 2nd
16. P takes B	Q Kt to K 3rd	And Black gave in.	

(a) The move generally played at this moment is K B to Q 6th, which certainly maintains the attack more vigorously than advancing the Q Pawn does.

(b) If Mr. Spreckley exhibits in the present game less of that energy and spirit which distinguished his play in old times, the deficiency is excusable. Five years' absence in a country where there are no Chess-players, is not calculated to keep up one's knowledge of openings, or improve one's sight of the board.

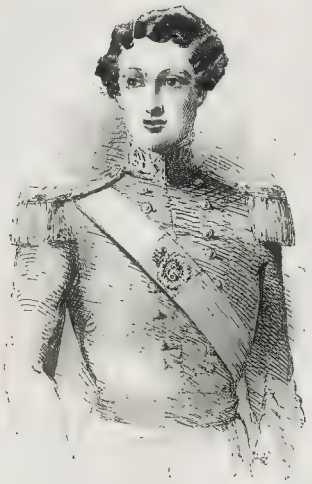
(c) Q to K 4th looks much stronger. The move in the text is merely defensive and loses precious time.

(d) Better, perhaps, to have played P to K B 4th. In any case, however, Black must have an uncomfortable up-hill game. His attack is premature, for the Queen and Knights alone are powerless for mischief, and the rest of his forces are too distant to support them.

(e) We believe he might safely have taken the K Kt Pawn with his Bishop. The variations consequent on this bold stroke are too lengthy for our columns; but, so far as we can see, White must afterwards have gained a piece in return for that sacrificed, and have secured an irresistible position.

ENSIGN JAMES HULTON CLUTTERBUCK.

THIS gallant young officer, who fell at Inkerman, was the second (eldest surviving) son of Robert Clutterbuck, Esq., of Watford House, Herts (the eldest son of the historian of Hertfordshire), by Elizabeth Anne, youngest daughter of the late Henry Hulton, Esq., of Bevis Mount,



THE LATE ENSIGN CLUTTERBUCK.

Southampton. He was born on the 28th April, 1835, and was consequently only in his twentieth year. He received his education at Harrow, and was gazetted 15th July, 1853, to an Ensigncy in the 63rd (West Suffolk) Regiment, then in garrison in Dublin. He landed in the Crimea with his regiment, which was in the Fourth Division of the Army of the East, and formed part of the Reserve at the battle of the Alma. He was present with his regiment at the battle of Balaclava, and at the battle of Inkerman carried the Queen's colour of the 63rd Regiment. During the murderous melée of the Fourth Division, under Sir George Cathcart, with the Russian column, he fell mortally wounded, almost at the same moment that the Colonel of his regiment (Swyny) was killed.* Ensign Clutterbuck was a young man of more than ordinary promise; and, by his engaging manners and intelligence, had won for himself, during his short career, a large amount of affectionate interest and regard.

* The letter of G. Evans, a private of the 63rd Regiment, and a native of Watford, published in the *Times* of the 29th of November, contains this passage:—"In the thick of it fell poor Mr. Clutterbuck, who was carrying the Queen's colour and cheering the men on. I think that the last words he said were, 'Come on, 63rd!' when he received a shot right through the neck, and died instantly. I never saw a braver man than him in the field that day. He fought and died bravely, with the Queen's colour of the 63rd Regiment in his hand."

SEWING BY STEAM.

SOME time ago we called the attention of our readers to the invention of Sewing-machines, and gave an illustration of them. Since then a very general impression has sprung up that the invention is a failure—many of the large clothes manufacturers having tried them and thrown them aside again as useless and impracticable. It seems, however, that, like most scientific inventions, it required a somewhat scientific management to bring it to practical use—this it found in Mr George Holloway, of the firm of "Holloway, Crowe, and Holloway," wholesale clothes manufacturers, Stroud, Gloucestershire, who, by dint of close application and study, has brought machine-sewing to great perfection, and patented several important alterations and improvements in sewing-machines.

The view we now give is a portion of the machine-room in Messrs. Holloway and Co.'s factory. Here are twenty machines in work, "the whole driven by steam power," affording an agreeable and extremely interesting sight. Each machine is attended by a young woman, who has both hands to guide the cloth, whilst the foot starts or stops the machine with the simplest exercise, by means of a lever connected with the crank that runs underneath. The occupation of these young women is not laborious, as in hand-sewing, but is at once healthful, amusing, and performed with the greatest ease. It is marvellous with what rapidity garments are thus produced. The machines, which are the invention of Mr. C. T. Judkins, of Manchester, and bear his patent, display first-rate engineering talent and a high class of workmanship. They work at the rate of 800 stitches per minute—each machine, with its attendant basters and finishers, will produce about 150 pairs of men's trousers per week.

We believe Messrs. Holloway and Co. were the first in the world to "sew by steam," and they have established a system of manufacturing clothes that bids fair to revolutionise the entire trade—the main feature, apart from machine-sewing, being the factory principle of division of labour; thus, a pair of trousers gives sixteen departments in making, each class of hands being totally distinct and of various talent, according to the nature of the work. This system of dividing labour has the happiest effect, inasmuch as it not only secures to skilled hands the best work, but it opens an occupation for the plainest sewer, and enables all to earn good wages. This has been brought to perfection mainly by Messrs. Holloway and Co.'s foreman to the works, who is a first-class practical tailor; and to illustrate it's effects, it is necessary to draw a comparison between it and the old system of making clothes by the wholesale sloppers. The general public are but little aware of the evils of the ready-made clothes trade. Those, however, who may have read the details by Mr. Mayhew, in his "London Labour and London Poor," may recollect the miseries of the poor needlewoman, "Stitch, stitch, stitch, in poverty, hunger, and dirt," telling on from early morning to late night, in loathsome hovels, garrets, and cellars, to earn a half-sufficiency of the coarsest food. The sufferings of this class it is impossible to overrate. Death from starvation has been the lot of many poor creatures, whose sixteen, eighteen, and twenty hours of incessant work has earned but sixpence for the day's requirement of food, lodging, and fire. These horrors cannot, however, be laid at the doors of the wholesale clothes manufacturers, but are the result of a vicious system, that gives office to "the sweater," who lives in laziness and luxury from the very life's blood of the poor sempstresses.

The change introduced by Messrs. Holloway and Company, from its success, bids fair to bring about a happier state of things. Here the factory principle is fully carried out. The hands work but ten hours a day in comfortable, warm, healthy buildings: they earn first-rate wages, and form a happy contrast to the poor wretches who toil under the old slop system.

BRIGADIER-GENERAL WILLIAM BURTON TYLDEN,

COMMANDING ENGINEER.

THIS distinguished officer, whose first commission bore date November 19th, 1806, took part in the military exploits of his country from that year to the time of his death—a period of nearly fifty years. From 1807 to 1814 he served at Gibraltar and in Sicily, and was Commanding Engineer at the siege and capture of Port Santa Maria, and in the action before Genoa, under Lord William Bentinck, for which eminent services he received Brevet promotion. During the campaign of 1815, in Belgium and France, he commanded the Pontoon Train; was present at the taking of Paris, and was with the Army of Occupation. Brigadier-General Tylden was brother of the present Major-General Sir John Maxwell Tylden, of Milsted Manor, Kent; and second son of the late Richard Tylden, Esq., of Milsted, by Jane, his second wife, sister of the late Lieutenant-General Sir Samuel Auchmuty, G.C.B. He married Lecilina, eldest daughter of William Baldwin, Esq., of Steed Hall, Kent; and leaves issue. The family of Tylden, one of great antiquity, has been seated in Kent for several centuries. Of the three distinct branches into which it separated, the eldest became possessed of Milsted; the second removed to Sussex; one of its members emigrating, founded the numerous Tildens of America; and the youngest settled at Ifield. So far back as the reign of Edward III., William Tylden paid aid for lands in Kent, when the Black Prince was Knighted. Brigadier-General Tylden, who was Commanding Engineer at the battle of the Alma, and was much commended in Lord Raglan's despatch, died a few days after that

THE LATE BRIGADIER-GENERAL TYLDEN.

brilliant victory from an attack of cholera. So highly did Sir John Burgoyne estimate the energy and ability of General Tylden, that, though his superior officer, he would not take the command out of his hands. "No better man than Tylden," said Sir John, "could possibly occupy the post.

THE HOSPITALS AT SCUTARI.

UNDER the management of Miss Nightingale, the Government nurses at Scutari appear to be doing an immense deal of good; although there are still great complains of the want of wine, and other restoratives for the convalescent. The following letter, dated Nov. 11, from one of the nurses who went out with Miss Nightingale, will show what is wanted:—"I have come out here as one of the Government nurses, and the position in which we are placed induces me to write and ask you at once to send us out a few dozens of wine, or, in short, anything which may be useful for the wounded or dying, hundreds of whom are now around us, under this roof, filling up even the passages to the very rooms we occupy. Government is liberal, and for one moment I would not complain of their desire to meet all our wants; but, with such a number of wounded coming in from Sebastopol, it does appear absolutely impossible to meet the wants of those who are dying of dysentery and exhaustion: out of four wards committed to my care, eleven men have died in the night, simply from exhaustion, which, humanly speaking, might have been stopped could I have laid my hands at once on such nourishment as I know they ought to have had. There are fifty nurses, most of them exceedingly skilful, and we find our efforts so appreciated by the soldiers as well as by the medical officers, that there is every

STEAM SEWING-MACHINES.

THE NEW BARRACK-HOSPITAL, AT SCUTARI.

hope that the experiment on the part of the English of sending women out to do the part which God so evidently assigned to them will be blessed. It is necessary to be as near the scene of war as we are to know the horrors which we have seen and heard of, and I know not which sight is most heart-rending—to witness fine strong men and youths worn down by exhaustion, and sinking under it; or others coming in, as many hundreds did yesterday, fearfully wounded. The whole of yesterday one could only forget one's own existence, for it was spent, first, in sewing the men's mattresses together, and then in washing them, and assisting the surgeons, when we could, in dressing their ghastly wounds, and seeing the poor fellows made as easy as their circumstances would admit of, after their five days' confinement on board ship, during which space their wounds were not dressed. The best plan I can think of is to write this letter, requesting you to send us a box of things for the use of the sick. This work may be for one year—it may be for ten People on the spot are exceedingly kind, and make every exertion to help us. Miss Nightingale, under whom we work, is well fitted in every way to fill her arduous post, the whole object of her life having hitherto been the superintendence of hospitals abroad. Wine and bottles of chicken broth, preserved meat for soup, &c., will be most acceptable. You must be told again, that we do not complain of remissness of the authorities to do what they can; but even the necessary delay is fatal to the men, reduced as they are to the last stage of exhaustion. I expect to find two more dead on going round this morning; that will be a proportion of 11 to 80 in two days. Wine would be of immense service to some of the nurses just before going into the wards. We have not seen a drop of milk, and the bread is extremely sour, the butter most filthy It is Irish butter in a state of decomposition; and the meat is more like moist leather than food. Potatoes we are waiting for till they arrive from France. Flannel and anything that would serve as pocket-handkerchiefs for the men (so many of them having lost their bags), chocolate in cakes, gelatine, and brandy, would be most desirable. Warm clothing too of all descriptions, for the convalescents, now the winter is so fast advancing, would be thankfully received."

FRENCH AMBULANCES.

Whether it arises from the natural disposition of John Bull to grumble at everything, or from whatever cause, nearly all English accounts from the Crimea represent the French medical arrangements as much superior to those of our army. In the *Service des Ambulances Françaises*, for example, we are told that the plan adopted by the French is much simpler and more commodious than that of the English army; and certainly, as regards simplicity, the French Ambulances could not easily be surpassed. They are of two sorts, as will be seen from the accompanying Engraving Those for invalids who are seriously ill, or severely wounded, are in the form of a cradle, covered with a white canopy. Two of these are slung across the mule's back, one on each side, with the patients stretched at full length in them. The other sort have two chairs placed so that two invalids can sit comfortably in them. The soldiers who accompany the mules belong to a particular corps called the *Service des Ambulances Françaises*. They are dressed and armed the same as the infantry.

FRENCH AMBULANCES, BEFORE SEBASTOPOL.

THE BANE AND THE ANTIDOTE.

MR. BRIGHT ON THE WAR; AND MR. ABSOLOM WATKIN ON MR. BRIGHT.

We have not hitherto been able to make room for Mr. Bright's mischievous letter, on behalf of his friend the Czar; but we now produce it, with Mr. Watkin's reply, so that our readers may have the bane and antidote both before them.

JOHN BRIGHT, ESQ., M.P., TO ABSOLOM WATKIN, ESQ.

IN REPLY TO AN INVITATION TO ATTEND THE MANCHESTER MEETING, TO AID THE PATRIOTIC FUND.

RHYL, NORTH WALES, Oct. 29.

My dear Sir,—I think, on further consideration, you will perceive that the meeting on Thursday next would be a most improper occasion for a discussion as to the justice of the war. Just or unjust, the war is a fact, and the men whose lives are miserably thrown away in it have clearly a claim upon the country, and especially upon those who, by the suppression of opinions favourable to the war have made themselves responsible for it. I cannot, therefore, for a moment appear to discourage the liberality of those who believe the war to be just, and whose utmost generosity, in my opinion, will make but a wretched return for the ruin they have brought upon hundreds of families.

With regard to the war itself, I am not surprised at the difference between your opinion and mine, if you decide a question of this nature by an appeal to Vattel. The "law of nations" is not my law, and at best it is a code full of inhuman barbarisms, having its foundation on custom, and not on a higher morality; and on custom which has always been determined by the will of the strongest. It may be a question of some interest whether the writers on international law who have attempted to show that private assassinat on and the poisoning of wells were justifiable in war; and perhaps it would be a difficult task to demonstrate wherein these horrors differ from some of the practices which are now in vogue. I will no ask you to mould your opinion on these points by such writers, nor shall I submit my judgment to that of Vattel.

The question of this present war is in two parts—first, was it necessary for us to interfere by arms in a dispute between the Russians and the Turks; and, secondly, having determined on that interference, under certain circumstances, was not the whole question terminated when Russia accepted the Vienna Note? The seat of war is 3000 miles away from us. We had not been attacked, nor even insulted in any way. Two independent Governments had a dispute, and we thrust ourselves into the quarrel. That there was some ground for the dispute is admitted by the Four Powers in the preamble of the Vienna Note. But, for the English Minister at Constantinople and the Cabinet at home, the dispute would have settled itself, and the last note of Prince Mensch koff would have been accepted; and the human being now pouring material difference between that note and the Vienna note, afterwards agreed upon and recommended by the Governments of England, France, Austria, and Prussia. Either our ground was not for the dispute to be settled by Lord Stratford de Redcliffe held private interviews with the Sultan, and his utmost to alarm him, insisted on his rejection of all terms of accommodation with Russia, and promised him the armed assistance of England if war should arise.

The Turks rejected the Russian note, and the Russians crossed the Pruth, couching the first "aggression as a "material guarantee" to not defend this act of Russia; it has always appeared to me to me be impolitic and immoral; but I think it likely it could be well defended out of Vattel, and it is by Vattel's latitude as the conduct of Lord John Russell and Lord Palmerston in 1850, when they sent ten or twelve ships of war to the Piræus, menacing the town with a bombardment if the dishonest pecuniary claim made by Don Pacifico were not at once satisfied.

But the passage of the Pruth was declared by England, and France, and Turkey, not to be a casus belli. Negotiations were commenced at Vienna, and the celebrated Vienna note was drawn up. This note had its origin in Paris, was agreed to by the Conference of Vienna, ratified and approved by the Cabinet of London, and announced by all these authorities to be such as would satisfy the honour of Russia, and at the same time be compatible with the "independence and integrity of the Sultan and the honor of the Sultan." Russia accepted this note at once—accepted it, I believe, by telegraph, even before the precise words of it had been received in St. Petersburg. Everybody supposed the question now settled. A Cabinet Minister assured me we should never hear another word about it; "the whole thing is at an end," he said, and so it appeared for a moment. But the Turk received the note when it had been drawn up by his own arbitrators, and which Russia had accepted. And what did the Ministers say then, and what did their organ, the *Times* say? They said it was merely a difference about words, and that the Turk was in the right to stand by it; but it would soon be settled. But it was not settled, and why not? It is said that the Russian Government put an improper construction on the note. But it is impossible for those who say this, that the Turks placed precisely the same construction upon it; and further, it is upon record that the French Government advised the Turkish Government to accept it on the ground that "its general sense differed in nothing from the sense of the proposition of Prince Menschikoff." It is, however, easy to see why the Russian Government doubted, before the Turks refused the award of their own arbitrators, re-state its original claim, that it might not be damaged by whatever concession it had made in accepting the award, and this is evidently the explanation of the document issued by Count Nesselrode, and about which so much has been said. But, after this, the Emperor of Russia, in communication with Lord Westmoreland on the subject at Olmutz, expressed his readiness to accept the Vienna note, with any clause which the Conference might add to it, explaining and restricting its meaning; and it has been said that he urged that this should be done at once, as he was anxious that his revenue should receive the Pruth before winter. It was in this very week that the Turks summoned a grand council, and, contrary to the advice of their own colleagues, resolved to go to war.

Now, observe the course taken by our Government. They agreed to the Vienna note; more than five members of this Cabinet have filled the office of Foreign Secretary, and, therefore, may be supposed capable of comprehending its meaning; it was a note drawn up by the friends of Turkey, and by them accepted on behalf of Turkey; they urged its acceptance on the Russian Government, and the Russian Government accepted it. There was then a dispute about its precise meaning, which Russia gave, even proposed, that the arbitrators at Vienna should amend it by explaining it, and limiting its meaning, so that no question of its intention should henceforth exist. But the Turks have rejected it, our Government turned round, and declared the Vienna note, their own note, entirely inadmissible, and defended the conduct of the Turks in having rejected it. The Turks declared war against the advice of the English and French Governments—so, at least, it appears from the Blue Books: but, the moment war was declared by Turkey, our Government openly applauded it. Ground, then, was promoted to the war. She had promised armed assistance to Turkey in country without government, and whose administration was at the mercy of contending factions; and, instead of fixing a time for herself, she allowed herself to be dragged on by the current of events at Constantinople. She "drifted," as Lord Clarendon said exactly describing his own [illegible] into the war sought deceive herself into war. They warned the Turk not for armed assistance on conditions, or without conditions. They, in concert with France, Austria, and Prussia, took the original dispute out of the hands of Russia and Turkey, and pronounced many solemn decisions that war was the object of at least a section of the Cabinet. A distinguished member of the House of Commons said to a friend of mine, immediately after the accession of the present Government, "Now, you have a war Ministry, and you will have a war." But I leave this question to point out the disgraceful feebleness of the Cabinet, if I am to absolve them from the guilt of having sought deceive to

NEW BOOKS, &c.

13, Great Marlborough street.

SANDBAG BATTERY DEFENDED BY THE GUARDS.—SKETCHED ON THE MORNING AFTER THE BATTLE OF INKERMAN.—(see page 623.)

HIS IMPERIAL MAJESTY NAPOLEON III. EMPEROR OF THE FRENCH.

HIS IMPERIAL MAJESTY NAPOLEON III.

It appears that the intended visit to England of the Emperor of the French (of whom we publish a characteristic equestrian portrait on the preceding page) has been postponed. We do not believe that the idea has been altogether abandoned; but, that early in the ensuing spring, and before the opening of the Great Parisian Exhibition in the Palais de l'Industrie in May next, the Emperor, accompanied by the Empress, will visit her Majesty at Windsor Castle. We are certain, from the whole tone of public feeling, that his reception in this country will be worthy of, and tend to strengthen, the firm alliance which already subsists between France and Great Britain—an alliance that may well repay the whole cost of the war, in the blessings for both nations which may be expected to flow from it. While France and England remain united, the guilty ambition of such men as the Emperor of Russia will always be held in check. The two nations have always respected, they will now love, each other. The names of Alma, Balaclava, and Inkerman, inscribed on the banners of each proving their community of danger and of glory—will be talismans to all future time, to maintain their friendship unimpaired, and to dare all future aggressors to disturb the peace of Europe. Napoleon III. was not only born great, not only inherited an illustrious name, but he achieved greatness for himself, and realised the object for which Napoleon I. sighed in vain, and in vain attempted to accomplish—a true and lasting alliance with this nation. To have done this, would be, alone, a passport to immortal fame; and, leaving out of view the domestic government of the Emperor—which has pleased the French, if, at one time, it did not please the English—it cannot be denied that, if for this, and this only, Napoleon III. won'd be entitled, not only to the gratitude of his own people but of every man of every country who prefers the Right to the Wrong—Independence to Serfdom, and Civilisation to Barbarism. Should the Emperor, as we hope and believe he will, show himself once more amongst us in London—he may be assured of a hearty reception—a hearty from the Queen and Court, and, if possible, still more hearty and enthusiastic from the people. The English nation respects rank and title, but it respects personal merit still more. The Duke of Wellington was worth to them all the other Dukes in the realm, because he won his rank by his personal qualities, and wore it worthily. The same feeling will inspire their plaudits of Louis Napoleon. The homage they will render will be to the far-seeing and sagacious statesman, as well as to the powerful Sovereign of a great people; and will be elevated by the wish that the auspicious friendship, which is due to his courage, his zeal, and his sound judgment, may serve to perpetuate his dynasty, to increase the happiness of both nations, and consolidate the peace of the world.

SIR JOHN MAXWELL, of Polloc, Baronet, has, in addition to the liberal subscription to the Patriotic Fund, both in Glasgow and Paisley, intimated his intention to send out from four to five hundred tons of coals to the Crimea, to alleviate the sufferings of our soldiers from cold.

SUPPLIES FOR THE CRIMEA.—Lord Blantyre has chartered the barque *Anne Maclean*, of 540 tons, now at Glasgow, for immediate dispatch to Balaclava, with supplies to our brave countrymen wintering in the Crimea. Besides commissioning Dr. Simpson, of Edinburgh, to obtain a valuable box of useful medicines and appliances, Lord Blantyre says he cannot think of anything more acceptable to Scotch and Irish soldiers than oatmeal, porridge-pots, with table-beer to use with it in place of milk and he has ordered fifty tons of oatmeal, twenty tons of mixed barley and wheatmeal, for scones, or bread; fifty tons of potatoes and carrots, and a large quantity of salt butter, cheese, fish of various kinds, hams, groceries, wines, spirits, ales, coke, coal, and stoves, wood for bui ding, &c. He is anxious that hair mattresses and pillows—the latter to be filled by 2 Sepoys—might be sent, which would be a great re'ief to the wounded. He says—"Perhaps some of the upholsterers would take this up, and send them for sale or gift to the Crimea. If so, I shall be delighted." He adds that the goods will be all sold there—the purser charges attending to the owners' wishes.

AN EASTERN PRINCE.—"Prince Maharajah Murrender-Sing-Mahinder Bahadur, of Puttiala, in India, whose expected arrival at London was recently announced, and who was preceded by a letter opening a credit of 12,000,000l. at different banks in England, has marked his entrance himself by throwing, from the window of coach No. 1 of the morning train for Boulogne, a handful of sovereigns, which, as had been expected, he has commenced his peregrinations in the west by the city of Bordeaux, where he disembarked three days ago from a steamer, which had brought him from Malta. The opulent Nabob, instead of going to a hotel, purchased a house in the Rue Tombe l'Oly, to which a garden is attached, and he has, at considerable expense, caused it to be furnished in his own peculiar taste. Yesterday he went to the shop of a noted cap-maker, Rue de Palement Ste. Catherine, and bought a whole carriage-full of caps. He then drove about the town, and amused himself by throwing, from the window of the vehicle, caps to everybody who wore hats. It was raining hard at the time. The caps, which are waterproof, were received by the public with hurrahs of satisfaction."—*Memorial de Bordeaux.*

HOSPITAL CARRIAGES.—The Messrs. Holmes, of Derby, have just completed, for the use of the army in the East, two light four-wheeled hospital carriages for the comfort and convenience of the sick and wounded, and which are to be used between the beach and the hospitals. They are called "the one-horse four-wheel ambulance." Their low, long, wagon-like bodies are divided to hold two invalids each, receiving on flat elastic stretchers with pillows, the sides being furnished with sliding ventilators, and the top covered with broad solid boarding. The hind part of this boarding is fitted with rollers and partitions to receive three more persons lying on stretchers, with enclosed sides and ends, and in the front part arrangements are made for three others to sit whose wounds do not require that they should be moved in a recumbent posture. Turpentine iron hoops protect them from the rain and cold, and long easy steel springs, controlled by leather braces and indiarubber buffers, support the whole. The weight of each vehicle is under 10 cwt., and the shafts are arranged sailor-fashion

THE HEROES OF THE CRIMEA.

The Poetry by Charles Mackay. The Music by Frank Mori.

JOYOUSLY AND WITH ENERGY.

1st *Verse.* Ring the joy-bells, chime on chime!
3d *Verse.* Ring the joy-bells, light the blaze! And

Sound the peal from shore to shore! Stead-fast, daunt-less, and sub-lime, Eng-land
let the deep-voiced can-non roar! Join all hands in prayer and praise, Eng-land

con-quers as of yore; And let the peo-ple's voice O'er all the land re-joice, And let the
con-quers as of yore; Our Eng-land and our France In free-dom's cause ad-vance, Our Eng-land

peo-ple's voice O'er all the land re-joice, That in-the great im-mor-tal fight, The glo-rious
and our France In Free-dom's cause ad-vance, And fight-for truth and hu-man-kind! Their an-cient

liv-ing and the dead, For Free-dom arm'd, For Jus-tice bled, And con-quer'd, and con-quer'd in the
glo-ries are sur-pass'd; Long may, Long may their gen-'rous friend-ship last, To brave a world com-

London: CLARKE and BETTON, Fleet-street; and all Booksellers.

DIATONIC FLUTE—By Royal Letters Patent.—The Instrument is played by Mr. Richardson, Pianist to the Queen, and other eminent Performers. Full particulars to war ed free.
Manufactory, 135, Fleet-street.—A. SICCAMA, Patentee.

THE ONLY PRIZE FLUTES.—These beautiful toned instruments may be seen and heard daily, from Twelve till Two at the Factory and Wholesale Warehouse, HUDAULT, ROSE, DARTE, and Co.'s, 198, New Bond street; where Mr. Carte will be in attendance to explain their peculiar excellencies. Every kind of Flute upon the new and o d systems. Carte's "Sketch of the Flute," 1s. 6d., gives a full description.—Manufactory, 90, Charing cross.

RUDD and CO.'S FIRST-CLASS 61 ROSEWOOD PIANOS, 50 Guineas, carriage free, containing all the modern improvements. Warranted. Packed for 2 Guineas per quarter. Tunings, 2s. 6d.—7, Dean-street, Soho.

TOLKIEN'S COLONIAL PIANOFORTE.—The patient instrument is specially adapted for extreme climates. The woodwork is prepared with a solution impervious to water and fret-cutive to insects; also a metallic binding-plate the length of the strings, which can be detached for tuning-pins, and prevents the possibility of any part being affected by heat or damp.—TOLKIEN, 87, 88, and 89, King William-street, London-bridge.

TOLKIEN'S 25-GUINEA Royal MINUTO PIANOFORTES.—H. T., the original maker of a 35-Guinea Pianoforte, has, by the same he has devoted to all branches of the manufacture, obtained the highest reputation throughout the universe for his instrument, unequalled in durability and delicacy of touch, more especially for their excellency as standing a time in the various climates of the world. The Minuto, therefore, reserved, and make many. Cases packed for abroad for £2 10s. extra.—H. Tolkien's Manufactory, 87, 88, and 89, King William-street, London-bridge.

PIANOFORTES.—The Desiderata—the lowest price, combined with the best in Quality.—THOMAS OETTMANN and CO.'s Patent Pianoforte Manufactory, 32, Wigmore-street, Cavendish-square, offer greater advantages to Purchasers and Hirers of Pianofortes than any other house in London. Elegant New Pianofortes, 6½-octave, warranted for any climate, 42 guineas; for Hire, 14s. a month. Ditto, 7-octave, 50 guineas; for Hire, 18s. a month. Numerously new prices. New Music half-price. Tuning, per annum, 10s. Country orders to Thomas Oettmann and Co., 32, Wigmore-street, Cavendish-square.

HARMONIUMS at CHAPPELL'S, 50, New Bond-street.—The HARMONIUM by ALEXANDRE, of Paris, is the only instrument which possesses the real quality of tone, and, from the simplicity of its construction, is not liable to get out of order. Prices from 20 guineas to 100 guineas. Also elected for the Church, Chapel, School, or drawing-room.
The following are the most effective models now in use:—
No. 1. In oak case, with expression stop, price 20 guineas.
No. 2. In mahogany case, with expression stop, 24 gs.
No. 3. In oak or rosewood case, with twelve stops, 30 gs.
No. 4. In oak case, with five stops and knee swell, 35 gs.
No. 5. In oak or rosewood case, with two rows of keys, 45 gs.
No. 6. In mahogany or rosewood case, with two rows of keys and nine stops, 48 gs.
No. 7. In rosewood case, with percussion and twelve stops, 48 gs.
No. 8. Ditto, in elegant rosewood case, 45 gs.
No. 10. In rosewood case, with two rows of keys, expression à la Main, 70 guineas. Harmoniums that may be ranks, 15 stops, elegant rosewood cases, 80 guineas.
Full descriptive lists sent on application. 50, New Bond-street.

CHAPPELL'S FOREIGN MODEL PIANOFORTE.—The Instrument has real tone throughout. These Pianos are of the full Grand compass, 6 octaves. It is strengthened by every possible means to bear a great amount of water, and to stand perfectly in any climate. Price of a Model in Rosewood case, with trichord, in round full, and rich, and the power equal to that of a Second Grand. The case is of the most elegant construction in rosewood, the touch elastic, and the repetition very rapid. Every possible precaution has been taken to insure its standing well in Hand. Mr. Chappell especially invites the attention of the public, the profession, and dealers, to the Foreign Model, feeling assured that as Pianoforte, in all respects comparable, has hitherto been made in England at the same price. Every instrument will be warranted, and (if desired) exchanged within twelve months of the purchase.—50, New Bond-street, London.

RECREATION for LEISURE HOURS. MUSIC MADE EASY.—The GERMAN CONCERTINA with Simpson's Figured Book, is easier to play on than any other instrument. By SIMPSON'S EASY BOOK, price 6d., any lady or gentleman may learn, without a master, to play in one evening, although unacquainted with music. Those who have no time to learn notes will find the Simple Instrument and Book across many leisure hours. German Concertinas, from 7s. 6d. to 8l. Books of Figured Tunes, 6d. each.
Sold at SIMPSON'S, 206, Regent-street, near Oxford-st.

MUSICAL-BOX REPOSITORY, 32, Ludgate-street, gate-street opposite Ewerington's), London.—WALES and MCCULLOCH, Makers to the Queen, Manufacturers of the Patent MUSICAL-BOXES, playing, with unrivalled brilliancy of tone the best Operatic Airs, Sacred Music, Dance Music, Songs, &c., &c., &c.,

PRESENT BOOKS for YOUNG PERSONS.

1.

HOLIDAYS at LYNMERE; or, Conversations on the Miracles of Our Lord. By A LADY. Edited by the Rev. CHAS P. MACKENZIE, M.A., Fellow of Caius College, Cambridge. Illustrated. Cloth. 3s. 6d.

2.

LEILA at HOME. A Continuation to "Leila in England." By ANN FRASER TYTLER. Tniled Edition. Fcap 8vo. Cloth, 6s.

By the same Author,

LEILA in ENGLAND. A Continuation of "Leila, or, The Island." Fourth Edition. Fcap. Cloth, 5s.

3.

MARY and FLORENCE; or, Grave and Gay. Ninth Edition. Fcap. Cloth, 5s.

4.

MARY and FLORENCE at SIXTEEN. Fifth Edition. Fcap. Cloth, 5s.

"These works are excellent. Miss Tytler's writings are especially valuable for their religious merit. She has taken a high position between the Rationalism of the last generation and the Puritanism of the present, while the perfect simplicity and true art with which she sketches from juvenile life, show powers which might be more ambitiously displayed, but cannot be better tested."—Quarterly Review.

5.

The WOODEN WALLS of OLD ENGLAND. Containing Lives of Admiral Lords Anson, Rodney, St. Vincent, Collingwood, Exmouth, and Sir Sidney Smith. By M. FRASER TYTLER. Fcap. Cloth, 5s.

6.

By the Same,

TALES of the GREAT and BRAVE; containing Memoirs of Wallace, Bruce, the Black Prince, Joan of Arc, Richard Coeur de Lion, Prince Charles Stuart, and Napoleon Bonaparte. Fcap Cloth, 5s.

7.

CONSISTENCY. By CHARLOTTE ELIZABETH. Ninth Edition. Imp. 8vo. Boards, 8s. 6d.

8.

The GERMAN TREE. A Moral for the Young. By the Rev. T GOODWIN HATCHARD, M.A., Rector of Havant; Domestic Chaplain to the Marquis Conyngham. 1s.

9.

By the Same Author,

FEED MY LAMBS. A Lecture for Children, in Words of One Syllable. Seventh Thousand. Sm. 8d.; or 6s. 6d. per dozen.

10.

EARLSWOOD; a Tale for All Time. By CHARLOTTE ANLEY, Author of "Miriam," "Influence," &c.

London: T. HATCHARD, 187, Piccadilly.

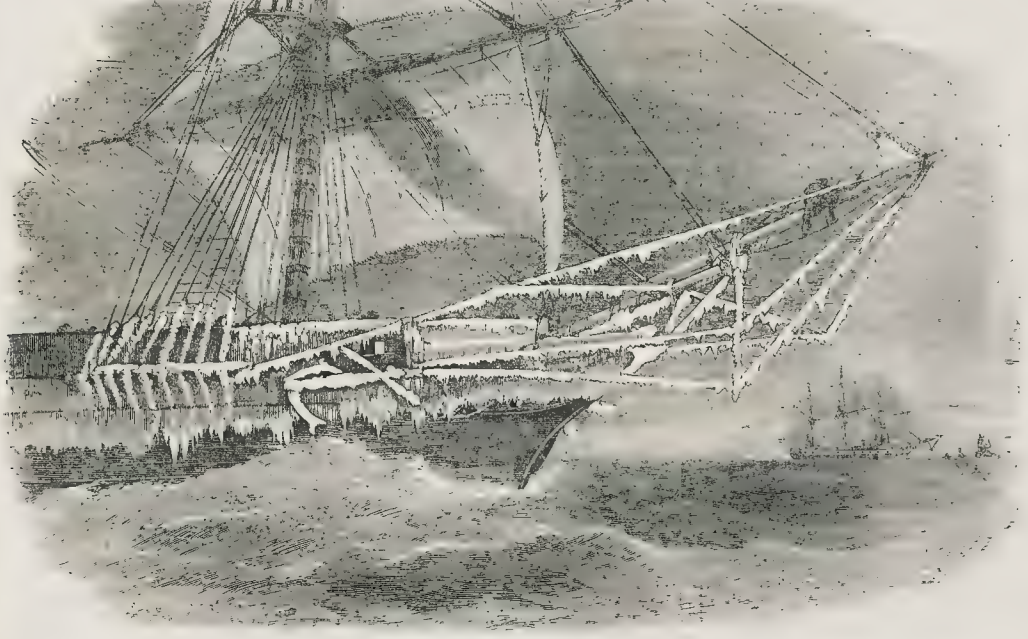
THE ILLUSTRATED LONDON NEWS.

No. 719.—VOL. XXV.] SATURDAY, DECEMBER 23, 1854. [WITH TWO SUPPLEMENTS, 1s.

THE FOREIGN SOLDIERS BILL.

THE Ministerial bill for the levy of foreign soldiers took the country by surprise. A bombshell suddenly falling in Palace-yard would scarcely have excited more astonishment. So well had the secret been kept, that no one, except the Ministers themselves, had the least idea of the measure until it was actually propounded to Parliament. It cannot be denied that the effect was unfavourable. It aroused not only prejudice, but antipathy. It excited distrust and alarm. It impaired confidence in the Ministry, and cooled the popular enthusiasm. Not the least embarrassing part of the measure was its apparent inutility. If, as the Secretary at War and other members of the Ministry asserted, the number of recruits which offered was daily augmenting, why Foreign Soldiers? If, again, British troops could achieve such prodigies of heroism as were wrought at Alma and at Inkerman, and which had, on the very same evening that this suspicious-looking bill had been brought forward, received the unanimous and cordial thanks of both Houses, why Foreign Soldiers? If the national spirit were fairly roused, if men could be had for the asking—or even without the asking—why Foreign Soldiers? If our great and true-hearted allies, the French, had an unlimited supply of first-rate soldiers at command, and only required transports to convey them to the Crimea, what need could there be for Great Britain to send to neutral States to buy up the services of "free lances" and mercenaries? If Austria—as the treaty recently signed led all the world to believe—would, in a very few days, and in a contingency almost certain to occur, be ready to give Great Britain and France the aid of half a million of men, why should a British Ministry run the risk of offending the British people, by raising a Foreign Legion? And, again, if Prussia and the German Confederation would, in all probability, be compelled by the policy of Austria to follow, in a few weeks, or even days, in the same track, and complete the European alliance against the Czar, why should great Britain go to Switzerland, to Brunswick, to Hanover, or to Saxe-Coburg-Gotha, to beat up for scanty battalions? The question was surrounded with difficulties. It was impossible to look at it from any side without a misgiving that the Government had made a mistake; or that there was some danger ahead, upon which it did not choose to be communicative. Its friends and its foes were alike puzzled, and a storm of opposition arose, which, for the first time since the existence of the Administration, threatened the country with the calamity of a change in its councils, aggravated by the too possible substitution of a Derby and a Disraeli or an Aberdeen and a Russell. But the Ministry were firm to their purpose. Seeing the opposition by which they were met, instead of withdrawing the obnoxious measure, they staked their existence upon it, made it a question of confidence, and in this manner carried by storm the support of many adherents who would much rather have voted against them. No doubt they acted from a high sense of duty; but, although by their firmness they have saved the country from the very serious evils that would have been occasioned by a change of Ministers, they have, to a considerable extent, impaired their popularity.

For, now that the bill has become law, and safely passed through the ordeal of Parliament, and the searching scrutiny to which friends and foes subjected it, few people can discover the necessity for it. Not that there is any particular damage or danger to be feared, or that it can possibly work any such mischief as its foes allege. The constitutional objection raised by Lord Ellenborough dwindles away to nothing when examined. The danger to the popular liberties which some apprehend is evidently null, for the troops when raised would be too few to coerce the British people, i. such useless and stupid treason were meditated; and are not to replace the militia or do any military service whatsoever in this country. The alleged inferiority of foreign to British soldiers is a part of the matter on which it is needless to dwell. Englishmen and Germans have each their peculiar merits. If we trust Englishmen more, it is natural that we should do so but that is no reason why we should distrust Germans, or deny them the soldier's virtues. The possible treachery of mercenaries as we suppose they must be called must be treated as a baseless libel against men of an honourable profession. To a certain extent all men are mercenaries; and the old proverb o. "*point d'argent—point de Suisse*," is of as much application to our own as to any other army. The Swiss soldiers of Charles X. remained true to his cause when his own army deserted him; and the point of honour is quite as strong with the soldier of fortune as with any other, or Omer Pacha and General Guyon would not be safe leaders for the armies of the Sultan. On the other side, the justification of the measure by the precedents of history was as baseless and unsubstantial as the dangers to be apprehended from it to the liberties of the country. If we once, or twice, or fifty times before, when we were sorely pressed, and in urgent need of soldiers and of allies, employed foreign troops, the fact is no justification in itself. The necessity and not the precedent is the lever by which a wise Government would operate in such a case. The having done a certain thing once before is not unfrequently the best of all reasons for not doing it again. The arguments derived from the wars o. William III., Queen Anne, and George III. are therefore irrelevant, unless the necessity and the urgency be proved. Consequently, the only argument that seemed at all conclusive was that employed by Mr. Sidney Herbert in the debate on the second reading. At the present moment Lord Raglan stood in need of trained



WEATHER IN THE BALTIC.—BOWS OF H.M. CORVETTE "CRUISER."—(SEE NEXT PAGE.)

men; and England, with all her enthusiasm and all her resources, was not, and would not for many months be able to send him other than untrained boys. Such was the manner in which the right honourable gentleman put the case; and there is no denying that it was forcible and conclusive. These "boys" are no doubt the stuff of which the most admirable soldiers can in due time be made; but as they are not yet admirable soldiers, not yet the soldiers whom Lord Raglan is anxious to obtain, there is no alternative but to give him the material he wants; and, as we cannot procure it at home, we must purchase it abroad in the small States of Germany, for instance, where men trained to the use of arms, and of the ripe and vigorous age of thirty, are to be had in the quantity we require. Yet even this does not exactly cut away the ground of opposition; for, it may be asked, if England can only send Lord Raglan boys, whether France cannot send him men to any amount, if Great Britain will only supply ships to send them in? And, further than this, it may be asked whether Great Britain could not supply both boys and men, if Government, contrary to its present expectation, should be unable to procure soldiers from Switzerland or Saxe-Coburg-Gotha? Were the career of the soldier thrown open to merit—were sergeants of the mature age of thirty-five and forty promotable not merely to Ensigncies and Cornetcies among boys, but by a succession of rapid strides to Captaincies among men; were the highest possible inducements held out to the gallant spirit, to the ambition, and to the patriotism of men of all ranks and classes in the community—is it not possible and probable—nay, is it not certain that this country could procure as many first-rate soldiers as she desires? It is the fashion to allege that Great Britain is not a military nation; but the statement is only partially true. We are not a military nation, if it be meant by the phrase that we love to play at soldiers in time of peace, and to keep up a large standing army, to the detriment of our business, and to the draining of our resources. But we are a military nation in every essential respect whenever we find it necessary to become so. In point of fact, we are pre-eminently a military nation. Our soldiers are as fine as any in the world; and the spirit of our people is such that, whenever war becomes our business, we do it, like any other business, in first-rate style—with our whole hearts, and minds, and energies; with indomitable "pluck," and with a courage and determination never surpassed, if ever they have been equalled, by any nation in the world.

But the Government has got its bill, and will forthwith proceed to carry its provisions into effect. The country will submit to the measure; but we much doubt whether it will ever be cordially reconciled to it. Let us hope, now that the present need has been supplied, that a similar necessity will not again arise, and that Great Britain will be able to fight her own battles, with the aid of her own allies. It is enthusiasm and patriotism that make heroes; and we cannot expect nurses of either quality from auxiliaries whose only bond of alliance is their daily pay; who have not that sympathy for the flag which inspires to gallant actions, and that love of England which is first in the Englishman's breast, but which we may presume will be second to the love of Germany in the bosom of a German.

RETURN OF THE BALTIC FLEET.

SIR CHARLES NAPIER arrived in his flag-ship, *Duke of Wellington*, 131, screw, at Spithead, on Sunday night, and next morning landed at Portsmouth from the *Fire Queen* steam-yacht, which had been sent out to Spithead to bring him on shore. He landed at ten minutes past nine, when he was met by several of his naval friends. Victoria Pier was decorated with a large number of flags and banners in honour of the occasion; and a number of people had assembled to see Sir Charles on his return to England. He appeared in very good health and spirits, the only alteration in him since he left that port in the spring being a weakness in his legs. This in a great measure, however, may be attributed to confinement on board ship and consequent want of exercise. Sir Charles at once proceeded to the residence of the Commander-in-Chief, Vice-Admiral Sir L. Coel rane, in the Dockyard, and breakfasted with that officer. He afterwards took a walk over the Dockyard, inspecting the new wooden huts for the troops in the Crimea, and subsequently proceeded to the George Hotel, where he met Lady Napier, who had arrived in the course of the morning to meet him. Sir C. Napier left the George Hotel in the afternoon, and proceeded to London by the 4.20 train.

The squadron, consisting of the *Duke of Wellington*, 131, screw; *Nile*, 91, screw; *Royal George*, 120, screw; *Hogue*, 60, screw; *Blenheim*, 60, screw; *Bulldog*, 6, paddle, *Arrow*, 6, paddle; and *Locust*, 3, paddle, left Kiel Bay on the 7th inst. The *Rosamond*, 6, paddle, was fallen in with shortly after getting through the Belt. She was sent back with the pilots that had brought the ships down. On the 10th the Admiral made signals for parting company, each ship to make its best way to the port for which it had orders. Sir Charles accompanied the signal by another—"I wish you all a pleasant passage, and hope you will soon be with your wives and friends." These and the vessels answered this signal with another, expressing their thanks for the wish. The *Blenheim* and *Hogue* were ordered to Portsmouth, the *Nile* to Plymouth, *Royal George* to Sheerness; *Bulldog* to Sheerness, and *Arrow* and *Locust* to Portsmouth. Rear-Admiral Chads in the *Edinburgh*, 60, remained at Kiel, with the *Euryalus*, 50, screw. She had suffered some damage in a collision. The *Cruiser* and other ships forming the flying squadron were daily expected down from the Baltic (some of them, by more recent information, had arrived).

The Correspondent to whom we are indebted for the Sketch engraved upon the preceding page writes from Elsinore:—"On the approaching arrival of the fleet from the Baltic, it may be interesting to your readers to see an illustration of the kind of weather the twelve ships constituting the detached squadron had to contend with whilst blockading the Gulf of Finland during the past month. I, therefore, send you a Sketch of the boats of the *Cruiser*, with the *Amphion* in the distance. The whole ship's sides were one sheet of ice from bow to stern, with the exception of about six or eight feet from the water-line, where the wash of the sea prevented it from forming. From the constant sprays, the anchors and projecting parts assumed shapeless masses; solid ice encircled the ropes to three or four times in extent of their original size, so that, before performing any evolution, they were, of necessity, beaten with hammers, to break off the ice, before they could be rendered through the blocks."

ST. PETERSBURG GOSSIP.—There is much talk in the aristocratic circles here of a circumstance which occurred recently. The Grand Duke Constantine, who has never liked Count Nesselrode, met him the other day in the drawing-room of the Princess P——. M. de Nesselrode bowed, but the Grand Duke passed on as if he had not seen him. The Czar, who was present, noticed this, and called M. de Nesselrode to him, and at the same time desired the Grand Duke join them. The Czar then opened a confidential conversation on the topics of the day, in which he was very gracious in his manner towards the Count, and in which the Grand Duke was compelled to take part. All those who know the Grand Duke will comprehend that his feelings towards the Count will not be improved by his circumstance. The influence of Count de Nesselrode has much increased of late; and a proof of this is that the Czar has just made him a present of a fine estate in Finland. It is generally thought that, now this landing (the great preparations which are still being made, feelings are not so warlike as formerly. Much confidence is placed in the experience of Count Nesselrode; and it is hoped that the old Chancellor will find some means of extricating Russia honourably from the present crisis.—*Letter from St. Petersburg.*

FOREIGN AND COLONIAL INTELLIGENCE.

FRANCE.

(*From our own Correspondent.*)

PARIS, Thursday.

The Court is decidedly quitting a retirement, the effect of which was beginning to produce an effect on commerce which the Emperor and Empress could not allow to extend. On the 17th a grand dinner took place at the Tuileries, at which the Queen Maria Christina was present. On New year's-day the Emperor is to receive in the morning the *corps diplomatique* and the *corps constitués*; on the 2nd, their Majesties are to receive in the evening the wives of the diplomatic Ministers, and the ladies who have already been presented, in full Court costume. The gentlemen present are to be in uniform and Court dress.

The visit of the band of the Horse Guards is anxiously expected here, and every disposition to receive them with the most cordial demonstrations is manifested.

M. de Morny is having the apartments of the President of the Legislative Body newly arranged and decorated, in anticipation of the magnificent fêtes which it is the intention of the Government shall be given in the course of the winter.

Last week took place at the Invalides, in the Church of St. Louis, a grand mass, commemorative of the arrival of the ashes of the Emperor from St. Helena. The Prince Jerome, the Staff of the Invalides, a crowd of the chief dignitaries of the officers of the Army and Navy and Garde Nationale, and a large number of the survivors of the campaigns of the Empire, with many of the *invalides*, attended this imposing ceremony; after which the assembly visited the tomb of the Emperor.

Preparations are being made in all the churches for the celebration of the fête of the Immaculate Conception, which is to take place shortly, and to be conducted with the utmost magnificence. At Notre Dame and the Madeleine it will probably be peculiarly effective; though, from the totally different style of architecture, taste, and decoration of the two churches, the character of the coup-d'œil will be totally different.

The discovery of such considerable quantities of gold in the sands of the rivers in the department of Ariège has been made, that M. Pradier has demanded, and obtained, from the Minister of Agriculture and Commerce an authorization to pursue his researches, which he expects will produce a valuable result.

The death of M. Léon Faucher has produced a marked sensation M. Faucher, whose health has long been in a highly precarious state, was on his way to the Ile d'Hyères, to pass the winter there, when he was attacked, at Marseilles, with typhus fever, which in a few days terminated fatally. This malady is one of those at present most prevalent in Paris, as well as in the provinces, and many deaths have resulted from its attacks.

The Emperor has accorded a pension of two thousand francs from his private purse to the mother of Armand Marrast—left, since the death of her son, in a most precarious situation: he at the same time signified to her in flattering terms that this offering was presented as a souvenir of regard for the memory of a man he had held in high esteem.

The Emperor has, also from his private purse, doubled the national pension of 20,000 f. accorded to Mdme. St. Armand.

M. Achille Marrast, brother of the late President of the Assemblée Constituante, has obtained an important post in an insurance company against railway accidents, entitled La Consolation.

The concession accorded to M. de Lesseps by the Viceroy of Egypt for cutting through the Isthmus of Suez has excited much interest in Paris. It is, considered as only the first step towards a revolution in that country, the effects of which are to produce events of incalculable importance, by the introduction of our customs, ideas, and judicial and financial systems.

A report—which has not yet, however, been confirmed—states that a portion of the Imperial Guard is to be dispatched from France to take service with the Russians.

A national subscription of thirty million of francs, projected for the widows and the wounded of the troops engaged in the war, has been deferred, by order of the Emperor.

Much regret has been excited in literary and artistic circles, by the premature death of the young wife of M. Arsène Houssaye, manager of the Théâtre Français, and author of some of the most popular specimens of the literature of the day. Mdme. Houssaye—whose youth, personal and mental advantages, and amiability of character and manners, rendered her universally beloved—fell a victim to disease of the heart, from which she had long been a sufferer.

A large clock is about to be placed on the terrace of the Galerie d'Orléans, opposite the garden of the Palais Royal. This improvement has long been required.

Madame Stoltz, whose late return to the Opera was such a subject of general congratulation, manifests so strongly an intention of again retiring, that there seems but little likelihood of retaining her. The Grand Opera will then remain without a prima donna worthy to hold such a position, Madame Ugalde remaining at the Opéra Comique. On Saturday appeared at the Gymnase the new piece by Madame Emile de Girardin, "Le Chapeau de l'Horloger." That the authoress of "La Joie fait Peur," "Cleopatra," and the tragedies, romances, and poems so well known to the public, should have produced a piece like the present, where, from the moment that Lescuer, the valet *à la main malheureuse*, makes his appearance, till that in which the actors and actresses bestow their final salute, the audience made the house resound with peals of genuine laughter, is, indeed, a marvellous instance of versatility of talent. "Le Chapeau de l'Horloger" is considered by the best judges to be the most sparkling comic piece of the day.

THE COURT.

The Queen has received company at Windsor Castle during the week. On Saturday the Marquis of Breadalbane, Viscount and Viscountess Palmerston, and Major General Barnard arrived on a visit.

On Monday morning the Duke of Somerset left Windsor by a special train on the South-Western Railway, for the purpose of presiding at a meeting of the Royal Commission for the Patriotic Fund, at the New Palace at Westminster. His Royal Highness returned to the Castle at three o'clock.

On Tuesday her Majesty and Prince Albert left Windsor by a special train on the South-Western Railway, at three o'clock, to pay a visit to her Royal Highness the Duchess of Cambridge; returning to Windsor at half-past five o'clock. In the evening the Queen and the Prince dined with her Royal Highness the Duchess of Kent, at Frogmore House.

On Wednesday the Prince Consort went to London to preside at a meeting of the Committee of Governors of the Wellington College, held at the New Palace of Westminster, returning to the Castle at three o'clock. The Marquis of Lansdowne, the Earl of Aberdeen, and Major-General Bentinck and Mrs. Bentinck arrived on a visit in the afternoon.

Viscountess Canning has succeeded Lady Churchill as Lady in Waiting. Lord Camoys and the Hon. Mortimer Sackville West have succeeded the Earl Somers and Lieut.-Colonel the Hon. A. N. Hood as the Lord and Groom in Waiting.

The Duke of Somerset has had a relapse, and has not been so well since Monday last.

The Earl and Countess of Derby and Lady Emma Stanley left town yesterday (Friday) for Knowsley Park, where the noble Earl and Countess will welcome a large party of distinguished friends during the holidays.

Major-Gen. Lord Rokeby will leave town, to take the command of the division to which he has been appointed in the Crimea, on Wednesday next.

The Lady Louisa Monciieffe gave birth to a son and heir at Moncrieffe House, N.B., on Tuesday last.

THE WAR IN THE CRIMEA.

The news from Sebastopol this week is very meagre. The letters from the Camp are filled with complaints of the wretched condition of the English troops, who had, up to that time, made very insufficient provision against the inclemency of the weather. The French were said to be much more comfortable; and our troops will, no doubt, be in a much better condition by this time, as the wood for huts and no small portion of the winter stores must have arrived. According to the French papers their army is now supplied with four months' provisions, and is in every other respect prepared to spend the winter with some degree of comfort. Independently of the provisions and articles of equipment of every description provided for the troops, three transports had arrived with forty or fifty tons of tobacco, and as many more of flannel waistcoats and drawers, which the Emperor has sent as presents to the soldiers and non-commissioned officers. The remainder of the cargoes of these vessels, consisting of wine and eatables, was placed at the disposal of the officers.

The sufferings endured by the Russians are much greater than those to which the Allies were exposed during several days after the hurricane of the 14th ult. The greater part of the unfortunate Muscovites sleep in caves or in the open air, are decimated by illness, and cannot procure provisions. In confirmation of this last fact, it is stated that along the coast of the Sea of Azof there are enormous quantities of flour and other provisions lying exposed to wind and rain, which they have no means of conveying to the Crimea, the roads being rendered impassable by the mud, which forms extensive lakes. A letter in the *Post Ampé Canette* says:—

The Russian army of Sebastopol is threatened by a danger which becomes every day more and more formidable—scarcity of provisions. It is positively stated that a complete famine prevails in Southern Russia; and that the victualling of the Russian armies is so badly managed, that only the corps which are stationed the nearest to the depôts receive any provisions, while those at a greater distance are left to their fate. The garrison of Sebastopol already feels the effect of this serious state of things; and the strength of the soldiers becomes exhausted in the works, without being renewed by sufficient food. The want of meat is replaced by a profuse allowance of spirituous liquors, which, however, cannot last long; and the use, instead of causing enthusiasm, only causes a kind of lethargy. The measures adopted by the Allies to procure supplies are well carried out. Large quantities are sent from Austria, on account of the French and English Commissariat, the result of which will be to secure the army of the Crimea against any scarcity of provisions.

As regards the siege, active operations had been almost suspended in consequence of the inclemency of the weather. Several sorties had been made by the garrison, which had always been gallantly repulsed; but up to the 12th inst. nothing important had taken place. As the weather had improved, however, it was expected that something would be done. Large reinforcements had been received by the Allies. Letters from Odessa state, that from the 12th to the 30th of November two Russian divisions had arrived at Sebastopol, consisting of from 26,000 to 30 000 men. Since then it is reported that 20,000 Russians, utterly exhausted by privation, had marched to Simferopol to escape extinction by the sickness which was decimating the army in the trenches they occupied in their first position.

The *Constitutionnel* publishes the following, dated "Before Sebastopol, the 1st," and guarantees its authenticity:—

On the 28th ult. the French had 140 new pieces of cannon or mortars ready to open fire on Sebastopol. In this number seventy were of large calibre from the navy. The English had nearly as many, and were disembarking others. The order to reopen the fire was expected every moment, and it was supposed that it would soon be followed by an assault. But the assault must be simultaneous; that is to say, that, in order to avoid being taken in the rear, the English must penetrate to the right of the Admiralty port, whilst the French, carrying the Flagstaff fortress, shall possess themselves of the left. The communications with the town by the bridge of the Tchernaya are completely cut off by two redoubts which command the bridge at a short distance, and which do not allow the bank to be reached. One of these redoubts was armed by the French by the 28th. The other, a little further from the Tchernaya, was constructed in common, and by the 30th the English had armed it. In advance of these redoubts are two batteries destined to attack the vessels and the town; they were constructed some days ago, and armed by the 30th. Opposite the telegraph, at the bottom of the port, the Russians have a battery of five pieces, placed at 1500 metres from the French redoubt. This point being very abrupt, the Russians have not been able to place on it a larger number of cannon; but they were constructing behind it another battery of nearly the same force. The prolongation of the lines of the Allies obliges the Russians to make long and difficult detours, in order to go by the valley of Balaclava, and to send assistance into the place. All the reports agree in representing the Russian soldiers as greatly discouraged. They have sustained enormous losses. To form an idea of them, it may be stated that out of 16,000 sailors, who were disembarked to reinforce the garrison of Sebastopol, only 6000 remained, and that the effective of the regiment of Saldeski is only 200 men. The number of wounded is considerable, and the cholera makes great ravages in the enemy's ranks. The town is, besides, rendered uninhabitable by the fire of shells and bals. As for the Allies, placed out of the range of cannon, they sustain no other losses than those of the trenches, which are almost insignificant, since they do not amount to 15 killed and wounded per day.

The liberty of action left to Omer Pacha in consequence of the treaty of the 2nd is considered to be of the greatest advantage to us. The Ottoman General will, it is expected, land his troops at Eupatoria, and occupy the country between the coast and the main road from Perekop to Simferopol, by which the Russian contingents, munitions of war, and provisions arrive. Sebastopol, which supplies food for the Russian army, must be pretty well exhausted by this. Almost all recent accounts concur in describing the situation of the Russians as deplorable. The difficulty of the communications has already reduced them to very great straits; and, if Omer Pacha's soldiers prove themselves not to have degenerated since Oltenitza and Silistria, we may judge of the effect of an army of 36,000 men interrupting the convoys from the north and menacing the reinforcements of Prince Menschikoff.

Letters from Odessa state that the Russians feel great uneasiness at the operations which may be directed from Eupatoria. It is said that Prince Menschikoff has pointed out to the Government of St. Petersburg the dangers which threaten his army and the fortress from that point, and he has declared that he is not in a state to resist any considerable offensive operation directed from Eupatoria against Simferopol. General Osten-Sacken has been in consequence charged to fix his head-quarters at Perekop, and to defend the isthmus with the troops under his command.

HOSTILE SYMPTOMS IN THE PRINCIPALITIES.

Immediately after the conclusion of the treaty of alliance with England and France, an order was issued from Vienna increasing the Austrian army in the Principalities by two brigades, in order to replace the Ottoman troops sent to the Crimea. The state of things on the Russian frontier is said to be far from ominous. A despatch dated Galatz, December 15, states that the following occurrence had created a great sensation:—"A Cossack detachment crossed the Pruth, and, in presence of the Austrian troops, destroyed the supplies of straw and hay which had been prepared for the Austrian army in Moldavia." This occurrence is possibly exaggerated, but it is well known that there have been outrages by the Cossack troops on the frontier, which take more the character of brigandage than military movements; and these outrages have fallen severely on the poor Moldavian villagers. Redress is at hand, however. A letter from Vienna, of Saturday, says:—"The Austrian troops quartered at Jassey, and in other parts of Moldavia, are proceeding towards the Pruth, to put an end to the brigandage of the Cossacks, who cross the river by night, and burn and pillage the Moldavian villages. It is not impossible, consequently, that the first musket-shots between the Austrians and the Russians will be exchanged on the Pruth."

THE AMERICAN PRESIDENT'S MESSAGE.

By the *Canada* steam-ship (which arrived at Liverpool on Sunday) the President's Message has been received. On the 4th inst., both Houses of Congress assembled at noon—37 Senators and 197 Representatives being present in their respective chambers. His annual Address begins by noticing the character of the past year—a period marked, in portions of the country, by great loss to husbandmen, pestilence, and unparalleled casualties by land and sea; yet America has experienced a year of peace, of regained celebrity, and the harvest for the most part bountiful. He then passes to the international relations and foreign policy of the United States. With reference to the war in Europe, he says it has been his earnest endeavour to maintain peace and friendly intercourse with all nations. The theory of the American Government, of avoiding all entangling alliances, has hitherto exempted it from many complications in which it would otherwise have become involved. Still, however, he remarks, that any attempt on the part of

any European Government to interfere with the independent action of the United States must be carefully guarded against:—

Leaving the Transatlantic nations to adjust their political system in the way they may think best for their common welfare, the independent Powers of this continent may well assert the right to be exempt from all annoying interference on their part. Systematic abstinence from intimate political connection with distant foreign nations does not conflict with giving the widest range to our foreign commerce. This distinction, so clearly marked in history, seems to have been overlooked, or disregarded, by some leading foreign States. Our refusal to be brought within and subjected to their peculiar system, has, I fear, created a jealous distrust of our conduct, and induced, on their part, occasional acts of disturbing effect upon our foreign relations. Our present attitude and past course give assurances, which should not be questioned, that our purposes are not aggressive, nor threatening to the safety and welfare of other nations. Our military establishment, in time of peace, is adapted to maintain exterior defences, and to preserve order among the aboriginal tribes within the limits of the Union. Our naval force is intended only for the protection of our citizens abroad, and of our commerce, diffused, as it is, over all the seas of the globe. The Government of the United States, being essentially pacific in policy, stands prepared to repel invasion by the voluntary service of a patriotic people, and provides no permanent means of foreign aggression. These considerations should allay all apprehension that we are disposed to encroach on the rights, or endanger the security, of other States.

With reference to the war, President Pierce announces that the partial recognition at the commencement of the present Russian war by the British and French Governments of the principle that "free bottoms make free goods" induced his Government to make application to the various Governments of Europe for a full and final recognition of that doctrine; which appeal, however, has (at least as yet) been fully responded to by Russia alone. In the case of Prussia, the only stumbling-block to a convention on this point was that Power insisting on an additional clause against privateering. The right of chartering privateers, the United States, as represented by President Pierce and his Cabinet, consider too valuable to be renounced by a Power not professedly a great naval Power, except in the event of a general international recognition of immunity to private property on the ocean.

The relations of the United States with Spain are unchanged, but the President expresses the hope that the new Ministers at Madrid and Madrid will be more favourably inclined than their predecessors to do justice to American claims

Negotiations are pending with Denmark for the discontinuance of the Sound dues. The Washington Cabinet believes it can claim exemption as a right, and gives notice to that of Copenhagen to terminate the treaty of 1826.

Respecting the destruction of Greytown, the President makes an elaborate statement. He alleges that the common canal across its isthmus, and the unarmed boats, freighted with millions of property, were in danger from the inhabitants.

As to the domestic position, little can be said but that they refer to the almost unchecked prosperity and development of the great Republic. The revenue still exceeds the expenditure by several millions of dollars, and, to bring the public accounts more nearly to a balance, the President recommends a further reduction of import duties. Various suggestions for the improvement of administrative affairs, the Message winds up with a general opinion on the position and prospects of the United States as a nation in the world.

MR. BRIGHT AND HIS CONSTITUENTS.

On Monday a meeting—which for uproar and determined boisterousness has seldom been equalled in Manchester—took place at the Town-hall, King-street. Every thing indicated a storm; and when the doors were thrown open, notwithstanding the efforts of the police to keep some order, the rush was fearful. In a few minutes the hall was densely filled by partisans of the Bright party, and what others who were favourable to the object of the requisition. Outside the room no immense crowd collected, decidedly hostile to Mr. Bright. For more than an hour the Mayor endeavoured to get order, but every and gave way to that of "Outside!" The friends of Mr. Bright seem strongly opposed to any outside; and, ultimately, proceedings were opened by Mr. W. R. Wood, who moved the following resolution

That this meeting, having learned that the letter of Mr. Bright, M.P., on the war, has been translated and circulated in Russia, desires publicly to declare that the citizens of Manchester do not concur in the views expressed by Mr. Bright; but, on the contrary, being convinced that the war is just and necessary, do earnestly desire it may be carried on with energy until the war be terminated by secure and honourable peace.

The resolution was seconded by Mr. Absolom Watkin, who was loudly cheered; but the noise made by the friends of Mr. Bright prevented his being well heard. Mr. Alderman Watkins moved an amendment declaring that Mr. Bright had exercised an undubbed right in expressing his opinion on the war; and that, although that opinion might differ from that of his constituents, it would not be right, would be unfair, tyrannical, and unjust to censure him for the honest and manly avowal of his sentiments." The amendment was seconded by Mr. Henry, late M.P. for South Lancashire; but the meeting was not disposed to listen to any speeches. Even Mr. Bright, who was present, vainly attempted to obtain a hearing. After standing nearly a quarter of an hour, he succeeded in uttering two or three sentences, which were heard only by those near to him. The motion and amendment having been put to the vote, the Mayor, who was in the chair, said it was impossible to say which had been carried, and the meeting broke up in confusion. Mr. Bright and his friends afterwards addressed the Council-room, Newall's buildings, accompanied by a large crowd, by whom he was groaned at and hooted in rather an unpleasant manner. Mr. George Wilson having taken the chair, Mr. Bright addressed the small assembly of his followers who had rallied round him, in condemnation of the war. Among other things, he told them that the Ministry would soon get tired of the war. "They have been driven into it," said Mr. Bright, "partly by the English press, and that press which is prolific by the war more than anything in the country, is still sounding the Government on to conduct the war to the last extremity." A vote of thanks having been given to the hon. member for his attendance on the occasion, the meeting broke up.

NORWICH ELECTION.—Mr. Peto, M.P., of the firm of Messrs. Peto and Brassey, the eminent contractors, has just issued an address to the electors of Norwich, resigning his seat for that city, in consequence of having accepted the contract for the construction of the railway from Balaclava to the trenches in front of Sebastopol. After stating that the firm, in devoting to the contract their best energies, are acting simply as agents on behalf of the Government, and without the slightest pecuniary profit or benefit to themselves, the address proceeds thus:—"In carrying out this arrangement, and during its continuance, I find that, by a strict interpretation of the Act which disqualifies a Parliament from being concerned in any contract or commission on behalf of the Government, I may have brought myself within the operation of its clauses, although I have not in any way infringed upon the true spirit or meaning of that law. If I absented myself from the House I should avoid any legal inconvenience, but I feel that while such important questions are under consideration I should be wanting in duty to you were I to continue, and therefore feel constrained in returning to you the trust you have reposed in me, and this becomes the more imperative from the indefinite time in which I shall be engaged in carrying out those duties I have voluntarily undertaken."

WICK-HALL COLLEGIATE SCHOOL, HACKNEY.—On Wednesday last, at the public distribution of prizes of this institution, the youngest son of the Rev. Dr. Crosby, of St. Stephen's, Walbrook, obtained the Silver Medal for English Composition.

THE NEW BANK OF ENGLAND NOTE.—At the ordinary meeting of the Society of Arts, held on Wednesday evening a paper was read by Mr. Alfred Smee upon the Bank of England Note. Mr. S. nee stated that the authorities of the Bank had determined to modify and improve the bank note; and that, under the direction of the late Governor, Mr. Hankey, a new form of Bank of England note had been designed.—(Next week we shall illustrate Mr. Smee's very interesting paper.)

BOOKS FOR THE ARMY IN THE CRIMEA.—Mr. Arthur Smith's appeal has exceeded the most sanguine expectations of the projectors. In ten days from its first issue upwards of 12,000 volumes (exclusive of newspapers, periodicals, and reviews) were sent to the Egyptian Hall. Of these, thirteen large cases have been shipped to the hospitals at Scutari; and ten cases to the Crimea, through the kind co-operation of the Crimean Army Fund. A large number of books, still lying at the Egyptian Hall, will be forwarded by the earliest available opportunities. Several kind contributors, enlarging on the original intention of the circular, have forwarded various parcels of linen, woollen clothing, stationery, tea, coffee, arrowroot, with other comforts and hospital accessories—all which have also been dispatched. A list of articles most likely to be practically useful to the troops under the present circumstances may be obtained at the Egyptian Hall, Piccadilly. No more books or old linen can be received. No parcel specially addressed to any parties at individual will be forwarded.

REMINISCENCES OF THE WAR ON THE DANUBE.

(*Continued from page* 607.)

OUR quiet at Silistria did not long continue uninterrupted. The bridge at Rustchuk had been completed, and the troops had crossed the Danube; the Russians had struck their tents and retired; and reports said they had left Bucharest behind them, and were in full retreat on the Sereth. The Turks waited some days at Slobodzie, which they had encompassed by their fortified camp, and then a reconnaissance was sent out; of course, numerous Englishmen were among the number. This, however, only advanced a short distance; but Iskander Bey pushed on with about a dozen troopers, and entered the town, which he found deserted, save by about one hundred Russians, a Cossack picket, and deserters. The Cossacks, fancying the Turks were on them, galloped off and left Iskander master of the town and some prisoners, more numerous than his whole force. The Turks then advanced, and marched through Bucharest with flying colours, encamped on the western side of the town. The centre of the Principalities being the clear of the enemy, and spies having reported that they had also retired from the neighbourhood of Kalarasch, Ismail Pacha Ferik, in command at Silistria, probably acting under the orders of Omer Pacha, resolved to throw troops across. This was done in large boats sent down from Rustchuk; and seven thousand men of all arms were passed over. A Polish Aide-de-Camp of Ismail's was sent on a reconnoissance towards Ibraila, with two regiments of regular cavalry; the rest encamped on the flat plain before Silistria in front of Kalarasch. At this moment some money arrived, and each Bashi-bozouk was paid about one hundred and thirty piasters, half in money, half in paper—then at a discount of about forty-five per cent on receiving this they mounted, and, of course, went. The Czar Constantine-General went on before, and selected a range of heights east of the large village of Altona about six hours and a half from Silistria, as the site of the camp. Though the spot was chosen at night, and in haste, a better one could not have been selected. Altona is a large and flourishing Christian village, on the border of a fresh-water lake. These lakes abound near the lower waters of the Danube, and fish, what, but for their level, would be large valleys. They are formed by the land being higher nearer the river than in the distance, so the streams and mountain drains collect and form lakes They abound in fish, and in that most unhealthy country produce great miasma. Around the lake were bold hills, surrounding it on all but the river side, where a long strip of grass ground separated the water. Many of the hills were covered with brushwood. Those selected for the camp were of a short clean grass. The glens around abounded in fodder The camp was pitched, and there, for a time, the head quarters were established; while strong parties were extended as far as Hassova. In a few days I received orders to push on, and visit Hadje Ali Pasha, the second in command. Very, Omer Pacha (Serdare Ackrem, or Grand Marshal) is a great hero, and the further one gets from him the better one knows it. While near him our rations had been regularly received; and were pretty ample; as we got further off they became scantifully less, until at Altona, we bade fair to be starved: for ourselves we had wherewith to eat, but our men had literally nothing, as their entrance failed, and they left us, going on to Hadjee Ali. There, however, they found the rations on the same scale—so fairly left, and were reported to have gone to Schumla No words can do justice to the patient endurance of these fellows. There were villages near—ay, and Christian, or, as they would have called them, gaours, villages—where the people ate and had plenty. Yet, save a few beads of Indian corn, our men neither plundered nor robbed. Thus, of all our army, only about fifteen or so finished cases remained. It was at this juncture I started one day for Hadjee Ali's camp, accompanied only by two mounted servants. Our road was bad, over bold hills and through deep dales. We passed several lakes and villages, here and there meeting parties of Bashi-bozouks grazing their horses on the abounding grass. They stood one of their affairs, which I could only sympathise with, not redress. At last I came on a range of hills all on fire—grass, brush, and trees were blazing and crackling, and I had some difficulty in forcing my horse through the blackened mass. It was the Bashis' camp, which, according to custom, they had fired on leaving, and I heard from a horseman the Pacha had gone on a few hours' ride further. I put spurs to the flanks of my pretty Arabian, of white fleece, horse, and pressed on. We found Hadjee Ali at a village called Yenikoi, very pretty situated in a gorge that led down to the river. Of course, as I knew he would be in the best house, so rode to it, and called for his servants. Not one came, but a shrill voice from above bade me come up; and, mounting a staircase, I found the Pacha squatted on two bare boards, where a divan ought to have been. There was no furniture in the room, but on the floor was spread his one carpet, a pillow, and a coat. Hadjee Ali, as I appeared, burst out with "Don't come here. I have nothing; I do not want you. I have nothing to give you; you have come in peace, go in peace. Tell Osmun Pacha (the Aide-de-Camp under whose orders I was) I have nothing—neither clothes, money, nor forage." And he continued shouting in the strain, till he had exhausted himself. As he had been utterly wanting in all courtesy to me, I resolved to give him a small short lesson in manners, so, without saluting, or noticing him, strode up to the divan, stepping deliberately on his pillow on my way, and sat down with my huge sword across my knees. This settled him. I then said, "Are England and Turkey at war, or what?" I came from your commanding officer with messages of courtesy and welcome, and will not fail to acquaint him with my reception." Here he cooled and looked foolish, offering me his pipe, and ordering coffee. I now read him a small lecture, smoked his pipe, and drank his coffee. He said he had but two hundred men left, and if he gave them an order they would desert too. I complimented him on the efficient state of his troops. He said he had but one servant, no money, his clothes were worn out, and that his two orderlies were the only men he could depend upon. Of Russians, Gaours, Feyaouks, he knew nothing; so, having praised his discipline, and the evident *esprit* he had infused among his men, and their personal attachment to himself, I left. His tone greeted by him, for he had learnt to be civil, and I dare say thought of his pillow and my boots. With him was a Lieutenant-Colonel, whom we had seen before in our camp, and whom we had all agreed was a Russian spy. He was apparently on the best terms with the Pasha. The man was far too intelligent in appearance for a Turk, and was unlike any other Mussulman. Whether our suspicions were correct or not we shall see. I rode along back to our camp, galloping and trotting, except when some Bashi-bozouks joined company to converse with me. At one large village I halted to make coffee and refresh my horses. Here I found about sixty of our men, and their leader, a Kourdish Aga. He received me most civilly; and we talked of his country and home, which I happened to know, having visited them in former wanderings. From this topic we soon turned to one of more immediate interest to him and his men—their privations. "They have literally," he said, "had nothing but berries and some heads of Indian corn to eat for many days." This I partly knew to be true. Their Aga had money, but could not, or could not more probably, buy food; yet food there must have been, for we were sitting in a village full of inhabitants. I admitted the hardship they were undergoing; and explained how little we could remedy them, and told him that farther on there seemed no more to eat than he had here. The men, who had clustered round us, inveighed strongly against the Government of the Porte, which had so deceived them. "It remains," they said, "for us but to eat pork—this unclean beast, sank the country, or go over to the Russians. *Ek Wallah!* we must: we will not starve. The Porte brought us here: they must provide for us, or we must for ourselves. If we are thus left during the summer, what shall we do when the winter comes on?" I felt the justice of all this, but dared not admit it; and so rode on, and reached the camp at sunset, where I found my comrades deep in letters and newspapers, a large bag of which had just been received. Dear friends! did you but know the value your letters have, how often would you write. If you knew the more than pleasure with which your pages are received, you would hardly begrudge a few moments devoted to the task. Best physic, best antidote—letters, letters! I felt not fatigue, I felt not hunger, nor thirst, nor disease, as I threw myself on a mat in my tent, and, surveying my packet: seals broken, to open—they were devoured in a moment. Then I gloated over the treasure as I inhaled my pipe—I revelled in ecstasy as I sipped my coffee. Now calmly and coolly I commence anew to read them, weighed each sentence, and feeling each separate thought, the whole meaning engraved in my heart, I resigned myself to *kief*.

I was jogging along back to Silistria early on the following afternoon, and sunset saw my one little tent pitched in the old ground above the town. My baggage was of the lightest, and, as my stomach testified, my commissariat of the worst. At three we were off, and a small black spot alone marked our resting-place. I this time took the upper road to Jurtukai, as shorter and as it was new. We passed over Vesh-plains, varied occasionally with forest or cornland; several villages lay in our route, where men and women, chiefly Ryahs, were busy with their harvest. In one place I saw them thrashing corn, or rather, treading it out with loose horses, exactly as it is done in South America. All the people were hard at work, but I noticed few young men; they were away, employed in driving their arabas or carts, which had been imp essed for the transport of the stores and provisions for the army. Women and boys supplied their places, and were garnering in their stores of grain. The villages seem wealthy, and there was a great air of comfort about the farmer, but the war has doubtless pressed heavily upon the people Of one village my impression is most pleasing, for my servant effected the purchase of a cabbage and a fowl, not, however, without difficulty, for the people would sell nothing. At last, as eve drew on, we reached Jurtukai, our old residence: here all was, indeed, changed. No longer deserted, the whole place was teeming with population. Cocks crowed; children played. Christians bustled, repaired, and restored; old Turks sat idly smoking their pipes, as if they had never moved. I rode to my former house, but was peremptorily refused admittance, so camped down on a flat piece of ground in the centre of the place. I found a great activity amongst the soldiers, who swarmed about, and was told that there were seven thousand here, or on the other side, and that they were crossing over as fast as they could. Hadjee Redsch d Pacha, who was in command, had already crossed, and was at Osnitza. The cholera was also alive, and carrying off numbers daily. On my doubting the mortality, a soldier led me to a new burying-ground, and said, "There, look at those heaps; beneath each is a martyr."

At earliest dawn we were off for Rustchuk. I did as I had done the day before—took the upper inland road, to vary it from my former route—plains, villages, forest-scrub, corn-land, hill, and dell. We halted seven to rest the animals: and glad to leave poor Nawab, my faithful follower. His illness far transcended my skill, so I left him money, coverd, horse, and water, and sincere sympathy pressing on, for my journey admitted of no delay. Poor Nawab! laughing, merry, faithful Nawab! I have never had to find fault with thee, but ever to be pleased with thee, since the day thou kissed my hand, and said thou were my slave; and now I have to mourn for the shadow that has fallen on thy pathway. But, brave lad, I shall see thee again, so may lament over thee in Eastern strain,* and say, "Lean grew the kabobs, the lance, and the pushkawa (different dishes) that were set before thee; down sank the pilauf, terrified at thee; became small the water-melon; disappeared the pilaw, sugar and coffee melted before thy fire were thou, or would ie, if victuals had their rights." But no, though I shall see thee, I will not joke till I do, for I regret thee much, my brave and faithful follower —"Meshallah."

The ride appeared sadly long, for the horses were suffering from the keen night air, and had none of their usual spirit. The days were still exceedingly hot; but the nights so chill, that the camp fire proved most attractive; and no covering had been provided for the poor beasts. We reached Rustchuk at sunset, and settled down in the same khan I had lodged in before. Colonel Graugh, the Prussian officer, had died that same day of the cholera. Poor man! He had escaped the fire of the Russians at Silistria, to fall by that abominable, all-pervading pest. Many have scoured the poor Colonel for not having taken a leading part in the defence. This he could not do on principle. His consenting to the surrender of Arab Tabia was le s pallable

At daylight, with no regret, I abandoned the stench of the khan, and descended to the banks of the Danube, at the new bridge of boats. I was riding a fine old German charger, whom a long course of drill and discipline has rendered steady and imperturbable to a fault. As I rode on to the bridge the sentry, without a word of warning or apology, kicked my heels. I turned the animal with my knee, the sentry fell, and we walked on, the horse treading on his arm as we passed. The officer of the guard rushed out, followed by his men, and was very voluble, till a few truths stopped his mouth, and we made him caution his men against such summary acts for the future.

The bridge stretched over to the island of Ramadan, and was composed of planks and beams, resting on some sixty large country boats. Eight pontoons, sent up from the fleet, had made it; but already two lazy Turks had allowed the cables to break, or the anchors to come home, and the strain now is principally on the beams. The island was the scene of the fight in July. It was terrible as I rode over it, to see the fatal preparations about, and to think on their errand. We crossed, also, horrors of every sort: there a skull grinning foul; there a dead horse, cut, torn, and putrid; there a half-closed trench—arms, legs, horses, men, in one foul mingled mass. A short ride from Ramadan connects the island with the farther main. Past this we found ourselves in the *tête de pont*, now only feebly guarded. Two intrenched camp that covers the bridge-head, and which is of vast size, is admirably placed. It enclosed the small village of Slobozzie, and its lines run along the crest of low hills, stretching over the space of some miles behind, and consequently within, the ground falls away, thus affording most admirable cover for the men, scores, &c., inside. What with admiring the works, and talking to the Commandant, it was nearly night before we were clear off, and on the high road to Bucharest. We left Giurgevo on the right, and followed a broad, dusty track, which led on into the vast level, unenclosed, uncultivated plain. This had been the theatre of war too much to be under plough or crop—village deserted, post-houses gone, khans burnt, churches in similetery cleared out. At noon I reached a village, with a fine church, and whose imposing appearance had led me to speculate on hotel or hotels, and attendant luxuries. I neared it, so hungry. We entered, we passed through, we left it—not a soul to be seen. Oh, or very! though we were. We now saw on the far plain a large hamlet, clustering round a perfect gem of a country house; Hampstead might have owned it, and not been ashamed. As we came up to it, I fancied I knew it, and, while admiring, kept turning over how or where. I passed the gate. Visions of breakfast on the table, the family fresh down, girls in fresh morning-gowns—so pure, so nice—rose before me. Ye powers, if he should ask me! but I passed on. A servant, meanwhile, had ridden round, and, seeing nobody, had entered the house—it was deserted, gutted, destroyed. I strolled over it. Mirrors were broken in ten thousand pieces; chairs smashed; books half burnt, and letters all scattered and destroyed. Some large official envelopes said who had last occupied it; and then I recollected that we owned our English ideas of Prince Gortschakoff's head-quarters to the ILLUSTRATED LONDON NEWS. I pushed on again, for flies swarmed and nearly devoured my horses. It was also remarked by us, that, wherever the Russians had encamped, a peculiar fly swarmed; these I had sorted up, and my next two hours' ride was rendered watched for us and our poor fidgetty horses At sunset we reached a magnificent monastery, where we halted for the night—not for war's sweet or sour—but of sheer unadulterated laziness, we had it all to ourselves. From this the country improved: villages, people, industry. Our road, a broad track, ran through plains of Indian corn, or cereal crops—peace around, industry on every side. None could have believed that 500,000 men were encamping and retreating, had passed along this road within the last month. The appearance, also, of the houses improved—windows, curtains, paint, gardens, pigs. The inhabitants did not seem alarmed at the approach of my armed party; but, apparently, were resolved to remain neutral; for they would neither answer nor speak, neither sell nor give. The men, on our meeting them, stood, and doffed their hats, in a fine manly manner. I found, too, that the first union of the fez and hat of the East and West produces the wide-awake. There does seem a far cap first brought forth, but that is the transition state; the first fair result is the genuine wide-awake, universally worn in Wallachia. I began to despair of getting anything to eat, and half believed I should, like King Charles' fool starve in the midst of plenty, when Abdallah accidentally knocked over a young turkey with his stick. I was vexed at the act as unjust, so told him to pay for it. The owner accepted the money, and we halted; finding he had abundance, we took freely, and, save toughness and want of cooking, the turkey was not bad. Our host—if I can call such a thing a host, who neither welcomed nor spoke, moved, nor signed—accepted our reward, and evidently felt he had not done badly. My men and servants, talking him a Russian. "Ah, well, the Russians," he answered, "called me a Turk, the Turk calls me a Russian—I am as my Lord is." The road was varied by passing through forests of dwarf oaks. At last I was delighted to hear we were close to Bucharest, and pushed on to arrive early, for I was tired of road, heat, dust, fatigue, bad food, and mother earth to rest upon.

* This is much the style of lament used by Eastern women over a departed relation; in fact, these are the expressions they make use of on such occasions.

DEPARTMENT OF SCIENCE AND ART.—The annual exhibition of the elementary works of students of the provincial and metropolitan schools of art was opened on Thursday at Gore House. The specimens exhibited consist, as heretofore, of drawings of the human figure, fruit, flowers, and architectural decoration from approved models; and though the collection is less numerous than that of last year, it affords upon the whole, gratifying evidence of the progress made by the pupils.

THE LATE LORD FREDERICK FITZCLARENCE, G.C.H.

The Overland Mail brings the announcement of Lord Frederick Fitzclarence's death. His Lordship, Commander-in-Chief at Bombay, and Colonel of the 86th Regiment, was brother of the late Earl of Munster, and second son of King William IV., by Mrs. Jordan. He was born 9th Dec., 1792; and entered the Army in 1814. The rank of Lieutenant-General, and the Colonelcy of the 86th Regiment, he obtained in 1851; and was appointed in the following year to the command at Bombay. Although he had never seen active service, Lord Frederick Fitzclarence always took a warm interest in his profession; and by his military administration largely benefited the Portsmouth district and the Bombay Presidency. He married, in 1821, Lady Augusta Boyle, daughter of George, Earl of Glasgow; and leaves one daughter, Augusta Georgiana Frederica.

Lord Frederick Fitzclarence was distinguished through life for his frank and generous disposition. In his youth he was remarkable for his tender and affectionate attention to his mother. Some of his letters, written to her when she was ill and in difficulties at Boulogne, are still extant, and display the acutest and kindest feelings, expressed with much elegance of style. His Lordship, when Commander of the Garrison at Portsmouth, was considered one of the most intelligent, smart, and active officers in the service. There he devoted himself with much earnestness to the moral and intellectual improvement of the troops, he himself delivering lectures for their instruction as an example to the officers under him—a system he wished but was unable to carry out in India.

THE LATE LORD FREDERICK FITZCLARENCE.—FROM A DAGUERREOTYPE BY CLAUDET.

DEPARTURE OF THE EX-GOVERNOR FROM FREETOWN, SIERRA LEONE.

The following order was issued by the Indian Government on the melancholy occasion of his Lordship's death:—

With sentiments of the deepest regret, the Right Hon. the Governor in Council announces to the army the demise of his Excellency Lieutenant-General the Right Honourable Lord Frederick Fitzclarence, G.C.H., Commander-in-Chief at this Presidency; which event took place at the Hill Fort of Poorundhur, at half-past two o'clock on the morning of the 30th instant. On this melancholy occasion the flag of the Castle will be hoisted half-mast high, and continue so until sunset; and seventeen minute-guns, corresponding with the rank of the late Commander-in-Chief, will be fired at each of the principal military stations under this Government. The Governor in Council further directs that the officers of her Majesty's and the Honourable Company's army will wear mourning for a fortnight from this date

Lord Fitzclarence was attended in his last hours by the Rev W. K. Fletcher, of Poonah. His body was taken into Poonah on Monday afternoon, the 30th October, without any pomp or ceremony; and is to be forwarded to England, to be there interred in the family vault.

FREETOWN, SIERRA LEONE.

We are indebted to a Correspondent for the accompanying Sketch of the departure of the ex-Governor of the colony, which took place on the 13th of October, from the public wharf at Freetown, in the *Forerunner* steamer.

Mr. Kennedy assumed the government of the colony on the 12th October, 1852, so that, at the period of his departure, he had just completed a period of two years of his administration. The firmness and vigour with which his Excellency was wont to suppress crime raised up for him some enemies; but the great gathering which assembled on the public wharf, and thronged all approaches, in order to bid adieu to his Excellency, testifies to the high respect in which he was held by the community at large.

WRECKS OF THE "MELBOURNE" (STEAMER) AND THE "CADUCEUS."

On the 21st ult. the steam-propeller *Melbourne* towed the sailing-vesse *Caduceus* (both wrecked in the late tremendous storm at the Crimea) down the Bosphorus and up the Golden Horn, to the Arsenal, where they both lie at anchor now. The *Melbourne* had two masts carried away, and the *Caduceus* lost her three; but their hulls seem not much injured. On the same day that these two vessels came in, the *Friedland* (French line-of-battle ship) was towed down the Bosphorus, minus her helm, which she lost in the same storm which has caused so much damage to the vessels of the Allies. Not having a rudder, it was very difficult for the steamer to tow her, and she swayed now towards one shore, and then towards the other, like a drunken man.

WRECKS OF THE "CADUCEUS" AND THE STEAMER "MELBOURNE."

CAPTAIN WILLIAM HUTCHESON HALL, R.N.

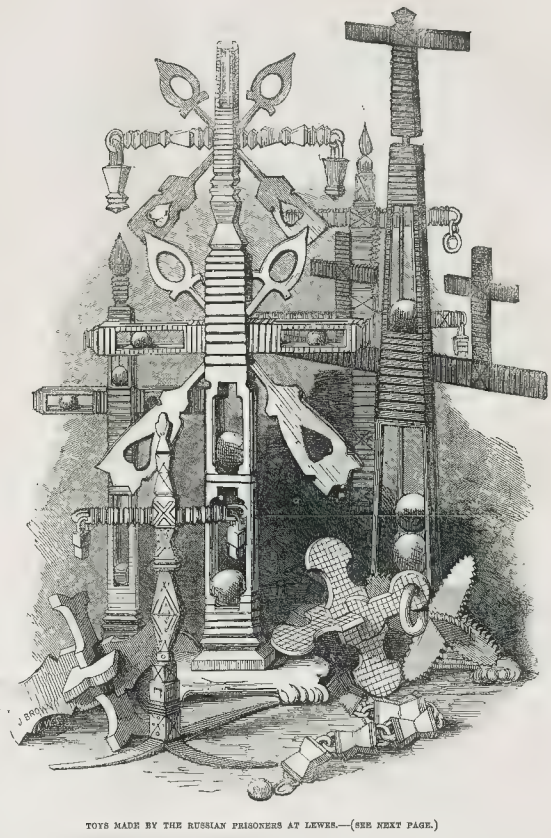
Captain William Hutcheson Hall, who so recently distinguished himself by his bravery in the expedition to the Baltic, entered the Royal Navy in 1811, on board the *Warrior*, Captains Byng and Hodel. He afterwards successively joined the *Lyra*, *Dwarf*, *Iphigenia*, and *Morgiana*, where his services were varied and successful. He was next, in 1825, appointed to the *Parthian*, from which vessel, in 1824, he nearly lost his life, in his efforts to save a drowning shipmate, who had unfortunately fallen overboard. The *Parthian* being paid off, he served under Lord Byron in the *Blonde*; then in the *Briton*, *Herald*, *Alfred*, and *St. Vincent*—in which latter vessel he remained upwards of two years. Having thus served as Master (warrant bearing date 1829), Mr. Hall began diligently to study steam navigation; and was appointed to the command of the H.E.I.C.'s war-steamer *Nemesis*. The services rendered by Captain Hall on board this vessel in the China seas are matter of notoriety, and not only obtained for him in the Navy the name of "*Nemesis* Hall," but the more solid honours and benefits of promotion. An Order in Council enabled him to take the rank of Lieutenant, which was at once conferred upon him; and, as some of his time in the *Nemesis* counted as though serving on board a Queen's ship, he was promoted in 1841 to the rank of Commander; and, as a further mark of favour,

CAPTAIN HALL, R.N., F.R.S.

in 1844 was posted. At the commencement of the present war, Capt. Hall commissioned the *Hecla* steam-sloop, and joined the Baltic Fleet. This little vessel was soon called into active service, when her commander and her crew gave proof—as others doubtless would have done, had opportunity been afforded them—that, from the Captain to the cabin-boy, British sailors may still be depended upon when called to face the enemy. The *Hecla* has returned to Portsmouth, bearing many unmistakable marks of the severe fire to which she was exposed from some of the Russian forts in the Baltic. Capt. Hall is now appointed to the *Blenheim*; and in the meantime is Second Captain to the flag ship *Victory*. The iron bilge-tanks, now in use in the Royal Navy, and the patent anchor bearing his name, are of his invention.

In 1847 Captain Hall was elected a Fellow of the Royal Society. He was married on the 30th April, 1846, to the Hon. Hilare Caroline, daughter of the late and sister of the present Viscount Torrington.

As chairman and managing director of the Sailors' Homes Institu-



TOYS MADE BY THE RUSSIAN PRISONERS AT LEWES.—(SEE NEXT PAGE.)

RUSSIAN PONY AND SHEEP FROM ROMARSUND, BROUGHT BY CAPTAIN HALL, H.M.S. "HECLA."

tions, the active exertions of Capt. Hall for the formation of Sailors' Homes, prove that endeavours to aid to the comforts and to ameliorate the condition of Jack ashore, is perfectly consistent with the best discipline and the bravest actions of Jack afloat.

The accompanying Portrait is a correct likeness of Captain W. Hall, from a portrait presented to the Dover Sailors' Home, in the prosperity of which Captain Hall was much interested.

PONY AND SHEEP BROUGHT FROM BOMARSUND.

Captain Hall has brought from Finland the two animals which our Artist has illustrated upon the preceding pages. The pony and sheep are both remarkably quiet, and will allow themselves to be fondled like dogs. The sheep is very small, with a coat, like a negro's head, of very short, curly wool. It generally resembles a Welsh sheep; is broad across the eyes, and has small black horns; has no tail apparent to be naturally short, for it does not feel as if it had been cut. The animal has round its neck a brass collar, with the words, "Little Hecla, Bomarsund." The pony is also black, with a star in the forehead, a white stripe on the bridge of the nose, and a white mark between the nostrils. It is two years old (off), and stands thirteen hands, has good points; a very good head, and neck, and mane; good shoulders; very nice, clean legs, but rather long pastern; good loins, and full body put on. The tail looks as if it had been cut, and the mane has the same appearance. The feet are in good order, of course they have not yet been shod. The foals are English, bred on the premises.

In the illustration, behind the sheep is a piece of granite taken from the fortress of Bomarsund; and on the top of it is a shell also from that place. There are two pieces of granite, both of the same size. Captain Hall has also a Russian rifle and two swords, and a Russian sledge.

TOYS MADE BY RUSSIAN PRISONERS OF WAR, EXHIBITED IN THE GERMAN FAIR.

These ingenious little puppets attract the attention of many curious observers, who are generally struck with wonder at the skill of hand and patience bestowed upon them—qualities which few have given our fair Teutonic opponents credit for. These Toys—which are so contrived that they can be taken to pieces and put together again—are of varied forms, and are peculiar in artistic design: the greater portion are made of common wood. The little chain in the foreground of the engraving, with all the rings and blocks, is carved out of the solid; in many of the shafts, &c., of the steamer, round balls of wood have been cunningly left. So great is the demand for these curiosities that it is difficult to supply it.

Few persons, we think, old or young, could fail to derive both pleasure and amusement (particularly at this season of the year) from a visit to the varied collection which has been gathered together in this place. Many of the objects are entirely new in this country. Amongst the novelties are a number of toys well called "Surprises:" these are imitations of various objects, such as grotesque figures, ash (very natural), fruit, balls of twine, cannon balls, pieces of rusty iron, bootjacks, a dozen black-lead pencils, bits of burnt stick, and a hundred other things. The "surprise" in these ash are filled with sweets and other toothsome materials, which will, no doubt, both please and astonish the small boys this Christmas.

The department containing children's arms—guns, cannons, drums, banners, &c.—is very complete. These are manufactured at Sonneburg, a town near the birthplace of Prince Albert.

Another portion of the Fair is also well worthy of examination. This is a complete set of small models of every object of use in Germany, in both domestic and agricultural affairs—tables, chairs, paste-boards, rolling-pins, fences, in fact everything as in use at the present day. These models (seventeen hundred in all) are to be lectured on at the Polytechnic Institution during the Christmas holidays. Our manufacturers will get many a hint from a careful inspection of these so-called toys. They will also be valuable in after years in showing by the contrast the amount of improvement which has taken place in taste and science.

The transparent lanterns, marked each with different letters, which, in the large hall, are formed into various devices, have a pleasant effect. These can be packed into a small space, and have already been called into use in many distant parts of the country at times of rejoicing.

Europe, however, obliges us at present to pass over the shops, with real diamonds, scissors, counters &c., houses filled with suitable furniture for the cottage, printing-presses and tool-boxes for boys; spinning-wheel; games from all parts of the world; mechanical toys, and other things too numerous to mention. We think that a British visitor to the German Fair will notice the skilful arrangement of colour and the picturesque effect of many of these foreign toys; some, of much beauty, have been made amongst the mountains of the Tyrol.

The Russian toys are of a very considerable amount of amusement in consequence of the difficulty of finding out their construction, they, in fact, being bolted together in combinated and various ways. It is necessary to discover the last insertion of the woodwork, then the next, and so on, in order that these toys may be gradually dissected without resort to violence, which would break some part—the toy being separated into a dozen or more parts, and these being shapen together, it is equally difficult to get them again into the original form. These toys are particularly useful in learning children dexterity of hand and quickness of invention.

CALENDAR FOR THE WEEK.

Sunday, Dec. 24.—4th Sunday in Advent. Christmas-eve.
Monday, 25.—Christmas-day. Nativity of our Saviour.
Tuesday, 26. St. Stephen. John Wilkes died, 1797.
Wednesday, 27.—St. John the Evangelist.
Thursday, 28. Innocents' Day. Mallius died, 1834.
Friday, 29.—Lord Stafford beheaded, 1680.
Saturday, 30.—Royal society established, 1660. Coleridge born, 1772

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 23, 1854.

The treaty of the 2nd of December, by which Austria binds herself to the policy of Great Britain and France against Russia, has been differently interpreted by different persons. Lord John Russell sees little in it—the Emperor of the French sees a great deal. Judging from the antecedents of Austria, and from her obvious interest, we are inclined to think that Napoleon III. is more accurate than Lord John Russell in his anticipation of the advantages to be gained by the treaty. The document is not a vague one, and expresses a meaning which we think the Emperor of Russia must have already discovered, or he lacks perspicacity. Austria has not yet declared war against Russia—has not yet entered into an alliance, offensive and defensive, against the Czar; but, if she have not, the negative result is certainly more due to the forbearance of Russia than to the non-hostility of the attitude assumed by the Emperor Francis Joseph. If the Czar were not in a very serious dilemma, and if it were possible for him to carry things with as high a hand towards Austria as he did towards Turkey, when he sent Prince Menschikoff to bully the Sultan, there can be little doubt that the Austrian Treaty of the 2nd of December would have been immediately followed by a declaration of war on the part of Russia.

But the Czar cannot afford to declare war, and he will either yield to the dictation of Vienna or allow that Court to take the initiative in hostilities. The treaty of the 2nd of December has at least one great advantage, even should it in other respects be as ambiguous as those who perticaciously deny the good faith of Austria still assert it to be. It fixes a short term for the deliberations of Russia. In eight days from the present time it provides for its own supersession, either by peace or by war. On the 1st of January, 1855, if Russia have by that date refused the bases of peace which Austria has put forward as the minimum that she and the Allies will accept, or if the Czar have neglected to notify his acquiescence, Austria has bound herself to enter into a new treaty with Great Britain, France, and Turkey, and to declare war against Russia. There is a limit to all things, even to German diplomacy. Austria has herself fixed the limit of her future forbearance, and has thereby rendered good service to the cause of Europe.

No hopes are entertained either at Berlin or at Vienna that the Czar will yield; so that the perplexities of Prussia have been largely increased by the bold movement of his rival for the supremacy in Germany. There is something painful yet ludicrous in the position in which the King has placed himself. Afraid of Russia—jealous, and still more afraid, of Austria—anxious to stand well with France and Great Britain—and insecure with regard to the allegiance of his own subjects—he is unable to make up his mind amid so many perplexities and bewilderments. He has, in fact, no mind to make up; and is a wretched trimmer, who cannot see that to be honest is to be bold, and that to be bold is to be honest. He is not of the number of those who say, "*Fiat justitia ruat cælum.*" He fears the crumbling of the heavens, and he dreads justice; lest justice, peradventure, should involve his own downfall in the inevitable crash of falsehood and wrong. As a last resource, to stave off, if even for a few weeks, or a few days, the painful necessity of taking a part, he has, it appears, resolved to dispatch special Ambassadors to London and Paris, to argue a few points that appear to be debateable. His emissaries will no doubt be courteously received. What they have to say will be listened to; but in the meantime events will march. The year 1854 will expire, and Austria will make a new movement; the reinforcements of Great Britain and France will continue to pour into the Crimea; and the siege of Sebastopol will be prosecuted with all possible vigour and determination; while Prussia, self-isolated, will remain in a state of neutrality, disgraceful to her character, and fatal to her claim to rank as a leading Power in Europe—or will by that very neutrality, and its obvious advantage to Russia, bring herself into collision with those who have both the will and the power to fight out the war to the last extremity. Yet it may be anticipated that, if the wickedness of the Czar's cause do not produce its effect, its hopelessness will not be unavailing in bringing the King of Prussia to the rightful and the stronger side. But, whatever happens, it is only Prussia herself that can suffer, by the duplicity or irresolution of the Prussian Cabinet. The cause of the Allies, though it might be aided by a Prussian alliance, cannot be weakened by Prussian defection.

The Baltic Fleet has reached Portsmouth, and Sir Charles Napier is once again on his native shore—his great battle unfought, his immortal laurels unwon, and much of the work expected at his hands remaining undone. But his countrymen will not be unjust to the gallant Admiral; and will inquire whether he has not done all that could reasonably have been anticipated; and much that required the union of great talents, true courage, and sound discretion, to accomplish. Though the Baltic fleet was the most magnificent armament that ever left our shores; and though nothing less than the capture of Sveaborg, Helsingfors, Revel, Cronstadt, if not St. Petersburg itself, were among the achievements which the nation expected to result from its presence in the Baltic;—and though not one of these things has been done, or even attempted, there is no disposition to cast blame upon the Commander of the Expedition for these or any other failures. The nation knows that it expected too much, and that it underrated the resources of Russia, and was alike ignorant of the Baltic, and of the kind of ships of war that could successfully be employed in it. In addition to this, it is now acknowledged that the fleet was never fully manned, and that it never was in any respect so powerful as it seemed to the enthusiastic eyes of those who witnessed its departure, and predicted its future triumphs. What Sir Charles Napier and the Baltic fleet have not done is so well known, that it is needless to run over the list of uncaptured towns and undemolished fortresses. But the country, we yet, is not to the same extent aware of the feats which have been done, and of the objects which the armament has in reality accomplished. A little impartial consideration of the subject will show that the fleet was neither idle nor uselessly employed; and that the nation has to thank Sir Charles Napier for the delicate handling of a business that, otherwise conducted, might have entailed upon us not only loss, but humiliation. The capture and destruction of Bomarsund, which many have treated as a matter of small importance, was in the opinion of every inhabitant of the countries on both sides of the Baltic, and doubtless in that of the Emperor of Russia also, an achievement of high political significancy. It destroyed the prestige of Russia in those seas, and adjourned to the Greek kalends the reconstruction of a fortress which, had it not been for Sir Charles Napier, might by this time have been as strong or stronger than Sebastopol. This of itself is a result by no means to be depreciated in England, and which we may be quite certain has caused no little annoyance and derangement of plans, as well as pecuniary loss, to the Czar. Neither can the blockade of the Russian ports, the annihilation of Russian trade, and the ignominious imprisonment of the Russian fleets behind the walls of Cronstadt and Sveaborg, be considered as valueless to the cause of the Allies, or as matters of gratulation or triumph for which the Czar can sing *Te Deums*. He may order his priests to offer thanksgivings for the storm of the 14th of November, which wrecked the British transports in the Black Sea; but he cannot, for shame's sake, compel the lamentations of his people for the departure of Sir Charles Napier from the Baltic. Whether Sir Charles will ever revisit that sea, to complete the work which he has begun, neither we nor any one else can tell; but the public can, at all events, recognise the value of the services he has already performed; although those services may not in every respect have been as brilliant as were expected. An able defender—whom his pen betrays to be himself a Napier—sums up the services of the veteran commander by stating that "he has caused the thirty sail composing the powerful Russian fleet to shrink like rats into their holes; that he has taken Bomarsund, caused Hango to be blown up, interrupted the Russian commerce; and for six months has kept in a state of inaction certainly 80,000 or 90,000 good troops—viz., 20,000 at Helsingfors, 15,000 at Abo, and 40,000 at Cronstadt, besides smaller corps protecting Revel and other places. He has restored and enlarged the knowledge of the Finland Gulf to navigation; has ascertained what large vessels can do there, and what they cannot do; when they can act alone, when with troops, and when gun-boats can be used with effect. He carried out an ill manned, undisciplined fleet; and he brought back, unharmed, a well organised, well disciplined one, with crews exercised in gunnery and seamanship—in fine, a fleet now really what it was falsely called when it started, that is to say, one of the most irresistible that ever floated on the ocean for all legitimate purposes of naval warfare." To have done all this, even without having captured Cronstadt, is to have deserved well of his country, and of Europe. To this praise Sir Charles Napier is justly entitled; and the country will not be slow to acknowledge its obligations.

LATEST INTELLIGENCE.

THE WAR IN THE CRIMEA.

The following despatch from Admiral Hamelin to the French Minister of Marine, was received yesterday:—

"Bay of Kamiesch, Dec. 12.

"Four thousand three hundred men arrived on the 10th, with ammunition. A brisk cannonade has been kept up for the last two days. The enemy has made some vigorous sorties on our own and on the English lines. They were driven back by our musketry, and in some instances at the point of the bayonet, after a feeble resistance."

The report lately circulated in some journals that 60,000 men had passed Perecop to join the Russian army in the Crimea is entirely untrue. From 15,000 to 16,000 men is said to be the greatest number that the Russians can receive for some weeks.

THE PRUSSIAN DIPLOMATIC MISSION.

It is said in Berlin that the Prussian Government has addressed communications to the Cabinets of London and Paris, representing that the Russian declarations of the 28th ultimo are proofs of her anxiety for peace, and show clearly that she has no neutral reserves as to the proper interpretation of the four points.

The Berlin correspondent of the *Cologne Gazette* hints that the object of a Special Mission of a Prussian diplomatist to London is to obtain in advance a mild interpretation of the Czar's notes, and a promise not to press Russia for an indemnification on account of the costs of the war; and that these points conceded, Prussia will accede to the alliance.

Baron Von Usedom, who arrived in London on Thursday, is the bearer of an autograph letter from King Frederick William to the Queen.

THE FOREIGN LEGION.

The Berlin correspondent of the *Morning Chronicle* says, the intention of the British Government to raise a foreign legion has produced a great sensation among the public, and has set all the Russian sympathisers to work in order to counteract the project by every means in their power. Their fears are not so much awakened by the amount of men to be enrolled as by apprehensions of the effect of the moral link and example. It is on this side also, perhaps, that the project will be most beneficial. Meantime not a doubt can exist that the authorities of this country, and, indeed, of the greater part of the German Governments, will strain every nerve to hinder their subjects of all classes from enrolment. It is even said that orders have already been issued to this effect; and that, in case individuals known or supposed to be employed on the recruiting service should take up their residence in any given place, they are to be objected (*augestossen*), unless entitled by law to domicile in such places. Notwithstanding this, there is little doubt that, if the British Government be strict in its selection, and forbid the enrolment of deserters and bad subjects, there will be no lack of good and trustworthy men who will flock to our standard.

TREATY BETWEEN SARDINIA AND THE WESTERN POWERS.

A telegraphic despatch from Turin, of the 20th inst. says:—"The rumour of a treaty of alliance between Sardinia and the Western Powers assumes the form of a certainty. Though the precise terms are not agreed on, it is said that negotiations are opened with this view."

London Institution.—On Wednesday evening the first conversazione of the season 1854-55 was held at the London Institution. The attendance was very numerous, and included many of the scientific and other celebrities of the day. Various works of art, optical and other novelties, were distributed about the rooms. Among the more interesting were a series of exquisite stereoscopic portraits, showing the relief and remarkable accuracy attained by the adaption of the daguerreotype to the invention of Professor Wheatstone. Much interest was also excited by some other pictures exhibited by Mr. Mayall. These were photographic portraits by the collodian process. Some were full life size, and exhibited a facility of style that bespeaks a new era in the art. The collodion pictures attracted special interest from the fact of a struggle having only just terminated in the Court of Common Pleas, which had resulted in a decision entirely freeing the process from the restrictions of the law of patents.

Asylum for Female Orphans, Westminster-road.—This institution, founded in 1758, has long enjoyed the munificent patronage of the Royal Family, and for more than fifty years, that of the illustrious House of Cambridge in particular. Through the liberality of the Duchess of Cambridge and the Princess Mary, a quantity of worsted is being supplied to the 160 orphan girls connected with the establishment, who are competing, free of charge, and with the sanction of the committee, at the rate of twelve dozen pairs of warm socks per month for the Guards in the Crimea. At the recent election, although the vacancies were but three in number, the guardians selected ten candidates from a list of 41, and authorised the committee to place at the disposal of his Royal Highness the Duke of Cambridge five free nominations for orphans of soldiers and sailors who have fallen in the Russian war.

"Knighting the Sir-Loin."—We have received two communications from Correspondents anxious to remind us that it was King Charles II. who knighted the Sir-Loin at Hoghton Tower, near Preston, in 1617; and not Charles II., as inferred from our announcement of last week. We are aware of the version of the Knighting, or rather Baronetcy, as narrated in Roby's "Traditions of Lancashire," 1st Series, Vol. II.; but the more generally-received tradition is, that the honour was conferred by Charles II., in Essex. It is certainly more characteristic of the "Merry Monarch" than of James. And at Friday-hill House, near Chingford, was long shown the table upon which the Sir-Loin received the honour from Charles, whom our Artist has accordingly, portrayed in the Christmas Supplement published with the present number.

TOWN AND TABLE TALK, ON LITERATURE, ART, &c

ENGLISH artists have been busy during the past week, no: with palettes on their thumbs, or with pencil, or with chalk, but busy canvassing for no less a personage than Mr. Jacob Bell, now the rejected candidate for the Parliamentary borough of Marylebone. For Mr. Jacob Bell artists quitted their studios to attend vestry and other parochial meetings; for Mr. Jacob Bell artists (always indifferent speakers) have attended tavern meetings to move and second propositions in his favour. For Mr. Jacob Bell artists became wild political enthusiasts—forsceing the revival of the Italian Lorenzo, and the English Charles, in the admission to Parliament of Mr. Bell, and the triumph of Russia in the rejection of the respectable chemist and druggist of Oxford-street. Why all this fervour and ferment in favour of Mr. Bell? In the infancy of painting in Colours our great painters were glad to associate with chemists. They would have run after Doctor Dee, as Dee ran after the philosopher's stone. Chemists had then something to tell that was really of use to an artist. Why, then, all this eager enthusiasm about Mr. Bell? In what way (we have been asked) has he been of use to artists? Has his chemical knowledge added five hundred years' additional endurance to the triumphs of Landseer's pencil? Have the frescoes in our new Houses of Parliament acquired additional beauty of colour from the discoveries in his laboratory? We believe not. But much is to be said in favour of Mr. Bell, and in favour of the artists who have been so eager in his behalf. He has been of modest and useful service to many artists, has a taste for art himself, buys pictures from a liberal purse, and is a knowing hand at making a good bargain for an artist with a publisher. Such has been the secret of Mr. Jacob Bell's influence over the minds of artists who are rate-payers in Marylebone. Though Mr Bell has been unsuccessful, Art will not be thrown fifty years behind because the Marylebone vestry is not to be painted in fresco.

A Correspondent (wholly unknown to us), who appears to take an interest in our weekly column of Talk, has sent us one of the two epitaphs in verse by Mr. Lockhart to which we have already alluded. "I would gladly send you both," our Correspondent writes, "for Lockhart evidently wished that they should have an extended circulation, and was only prevented from publishing what he had printed privately by an unwillingness to wound the feelings of a surviving relative; but, unfortunately, there is one slight allusion in the one I omit to send that renders it, I fear, somewhat unfit for your paper." "Here, however," he continues, "is the epitaph on Maginn:—

WALTON-ON-THAMES, Aug., 1842.

Here, early to bed, lies kind William Maginn,
Who, with genius, wit, learning, Life's trophies to win,
Has neither great Lord nor rich cit of his kin,
For discretion to set himself up as to in,
No, his portion soon spent (like the poor heir of Lynn),
He turn'd author, ere yet there was board on his chin—
And, whoever was out, or whoever was in,
For your Tories his fine Irish brains he would spin,
Who receiving prose and rhyme with a promising grin -
"Go ahead, you queer fish, and more power to your fin!"
But to save from starvation surred never a pin.
Light for long was his heart, though his breeches were thin,
Else his acting, for certain, was equal to Dun;
But at last he was beat, and sought help of the bin
(All the same to the Doctor from claret to gin),
Which led swiftly to peel, with consumption therein.
It was much, when the bones rattled loose in the skin,
He got leave to die here—out of Babylon's din.
Barring drink and the cards, I never heard of a sin -
Many worse, better few, than bright, broken Maginn.

"The epitaph on Hook," our Correspondent observes—and we agree with him—" is not so kind."

Considerable amusement has been excited during the week, at the expense of Lord Derby; who, albeit he was once Secretary of State for the Colonial Department, has fallen into the error of calling Demerara "an island." Of all men, an ex-Colonial Secretary ought to have known better. But though Lord Derby admits that he was born in a pre-scientific age, that fact is no excuse for his ignorance of geography.

Mr. Leslie, the celebrated painter, was the eye of public thing. "The Handbook for Young Painters"—announced as in preparation (in this paper) now some six months ago. We have seen a copy of the work, and can express the sincere pleasure we have received from a cursory perusal of the whole, and a very attentive perusal of parts. Mr. Leslie is thoroughly an English painter; and, we are now glad to find, a thoroughly English writer as well. Five-and-twenty years ago and he would have been heartily ridiculed by his thirty-nine brethren for daring to speak of Hogarth as an artist; but now, in 1854, he will have the hearty sympathy of the larger and better portion of the thirty-nine for the manly way in which he speaks of Hogarth and Raphael in the same breath. Indeed, throughout his work there is a lively and acute appreciation of almost every style of excellence in art.

"The fault of Mr. Leslie, in his Handbook," said an artist by whom the volume was placed in our hands, "is a most undue appreciation of Constable as a landscape-painter, and a most unbounded admiration of the Royal Academy as a body. Then, sir, he appeals so frequently to Wes and Fuseli as authori ies in art—much the same thing, I take it, as appealing to Blackmore or Ned Howard as authorities in poetry. Then, sir, only turn to page 164, and see what he says in one of the few notes in his work. Here it is:—'It should be known to the public that all the charges in the Autobiography of Mr. Haydon unfavourable to the Royal Academy are unfounded.' This is sweeping enough, and, I will add, unfounded enough. But the same note contains an anecdote that sufficiently atones for the par-graph I have quoted. It relates to Wilkie and to the election of Sir Martin Shee as President:—'It is curious that the election of Shee to the presidential chair was hurried through without the usual forms, in the fear that a command might be received from the King to elect Wilkie. It is perfectly well known that George IV. would have bestowed the honour upon Wilkie, and equally known that the King would never interfere with any election of that body unless he thought it right to exercise the privilege of a veto.' To this we will add what should be as well known (though we believe we are the first to mention it in print), that the feeling of the Academy was with Wilkie until they found him hesitating on a point of Academical discipline when many of his friends thought no hesitation was needed. This indecision turned the election against him.

Some of his anecdotes are admirably suited to our column. Here is one also. Hogarth's mahl-stick:—

Sir George Beaumont, who had possessed himself of Hogarth's mahl stick, determined to keep it till a painter should appear worthy to receive it; and he kept it till he saw "The Village Politicians" of Wilkie.

Here is a bright bit about Etty:—

Before Etty was an Academician he was asked if, in the event of his election, he would discontinue his habits of study in the life school; and he answered to the effect that he would not, and that, if the members of the Academy considered such habits improper in an Academician, he would rather remain a student than become one.

Mr. Leslie renders full justice to Haydon. Here is a passage that should be read by the Chancellor of the Exchequer and the trustees of the National Gallery:—

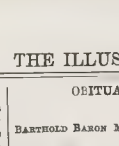
Had Haydon's "Judgment of Solomon" been produced in France, it would have been placed in the Louvre immediately on the death of the painter. But the trustees of our National Gallery missed the opportunity of securing it for a nominal sum, while they were spending the public money on doubtful, or damaged, or second-rate pictures by the old masters.

One more anecdote, and we have done:—

"I was a rule with Sir George Beaumont that in every landscape there should be at least one brown tree; and that every picture should have a first, second, and third light. "I see," he said, looking at a picture by Constable,—"I see your first and your second lights, but I cannot make out which is your third." Constable told this to Turner, who said, "You should have asked him how many lights Rubens introduced."

OBITUARY OF EMINENT PERSONS.

BARON MACKAY.

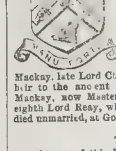


BARTHOLD BARON MACKAY died on the 26th ult., at his Château of Oosbeemt, in Guelderland, Holland, at the advanced age of eighty-one years. The Baron was the descendant of General Hugh Mackay, of Scourey, who commanded the Williamites at Killiecrankie, and fell at the battle of Steinkirk in 1692, second Lord Reay's second son, the Hon. Æneas Mackay, was Colonel of the Mackay Dutch Regiment, and his family have since resided at the Hague, where they have obtained considerable possessions, and formed alliances with several noble families. Their representative, Baron Mackay, the subject of this notice, married the Baroness Van Renesse Van Wilp, and died at a patriarchal age, surrounded by his family, after a life of great piety and usefulness.

By his death, his eldest son, the Baron Æneas Mackay, late Lord Chamberlain to the King of Holland, becomes next heir to the ancient Scottish Peerage of Reay, after the Hon. Eric Mackay, now Master of Reay, only son of Alexander, present and eighth Lord Reay, who succeeded his brother Eric, late Lord Reay, who died unmarried, at Goldings, in Herts, in June, 1847.

THOMAS WINDUS, F.S.A.

THE decease of this highly-respected gentleman took place at his residence, Gothic Hall, Stamford-hill, on the 13th inst.



He was one of the oldest Fellows of the Society of Antiquaries, and had been for many years a collector of rare and valuable antiques and works of art, that have rendered his museum a curious and interesting private collection.

He furnished many papers, chiefly on archæological subjects, to the *Gentleman's Magazine* and other periodicals. One favourite subject of his was the Shakspearian Poet's Head, Leathersop, and the anecdotes connected with it: he had in his possession the relic itself—the sign of the Boar's Head. In 1844 he published his elucidation of the Portland Vase, which was fully noticed in our pages.

In 1845 Mr. Windus presented a cast of the sarcophagus in which the Portland Vase was discovered to the British Museum. This sarcophagus was cast at Rome from the original, in the museum of the Capitol, in the Vatican, and brought to England at considerable expense. Mr. Windus was the eldest son of an old family in the county of Hertford. He was nephew of Peter Moore, Esq., M.P. for Tewkesbury, lord of the manor of Radley, and a lineal descendant of the great Chancellor, Sir Thomas More.

In early life Mr. Windus was in business, and was well and creditably known in the city of London and in the Common Council. He, however, retired into private life about twenty years since.

LORD RUTHERFURD.

THE death of this able lawyer and judge has deprived the Scottish College of Justice of one of its best senators. Lord Rutherfurd's demise occurred at his residence, 9, St. Colme street, Edinburgh, on the 13th inst. The Right Hon. Andrew Rutherfurd, P.C., and a Lord of Session as Lord Rutherfurd, was born in 1791; he passed Advocate in 1812; he succeeded the late Lord Cunninghame as Solicitor-General in 1837, and Lord Murray as Lord Advocate in 1839, and remained so till the fall of the Melbourne Ministry in 1841; he resumed the office on the dissolution of the Peel Administration in 1846. He was presented to the bench of the Court of Session in 1851; he then ceased to represent the Leith burghs in Parliament; and in the same year was sworn a member of the Privy Council.

Lord Rutherfurd married Sophia, third and youngest daughter of the late Sir James Stewart, Bart., of Fort Stewart, in the county of Donegal, M.P., and by her leaves issue. The death of this lady, in 1852, had a fatal effect on her husband's health and spirits. The monument which, in his grief, he raised to her memory was meant also to serve for himself, and he was not long in sharing her tomb. By the Scottish Reform Act, the Extent Act, and other measures of forensic reform, have received, and will doubtless long retain, his name. In these Lord Rutherfurd has left some public memorials, however inadequate, of his vigorous and comprehensive mind, and of his profound attainments in the science of legislation. His many and varied personal accomplishments survive in the affectionate regard of his friends.

On the day of the announcement of Lord Rutherfurd's death the Lord Justice-General thus addressed the bar in the Court of Session:—

The Court will not advise the cases before us to-day. Our deliberations have been disturbed last night and this morning by a calamity which has befallen the Court, whereby it has been deprived of one of its brightest ornaments. I allude to an event of which barristers are usually aware—the death of a distinguished member of the Court, one of the greatest advocates that ever practised at the bar, and one of the most learned and able judges that ever adorned the bench. I am certain that every member of the bar will join with us in deploring this calamity. By us, in this division, who have had the immediate aid of his high judicial qualities, the deprivation will be felt more than we can describe.

The Court then rose.

MAJOR-GENERAL CHARLES O'NEILL PRENDERGAST.

THIS distinguished General, late of the Scots Fusilier Guards, and an old Peninsular officer, died at Dublin on the 4th inst. Few of the Anglo-Norman families in Ireland have held a more honourable and enduring position than that of Prendergast, seated for centuries at Newcastle, in the county of Tipperary. One of the descendants (Sir Thomas Prendergast, Bart.) was an eminent soldier, of the reign of Queen Anne, and a participator in the victories of Marlborough. The mysterious warning that foretold his death forms a most singular and well authenticated anecdote in family romance. The late General Charles O'Neill Prendergast was the male heir of the time-honoured race; and proved, at Salamanca and Victoria, that he was no unworthy scion of the martial race from which he sprang.

AMBROSE GODDARD, ESQ., OF THE LAWN, SWINDON, WILTS.

THIS gentleman, formerly M.P. for Cricklade, a magistrate and Deputy Lieutenant for the county of Wilts, in early life a Captain in the 10th Hussars, died (after a short illness) in Bath, on the 8th inst. He was the son of Ambrose Goddard, Esq., who represented the county of Wilts in Parliament from the year 1773 to 1806. He was born 12th October, 1779, and married, 1st August, 1818, Jesse Dorothea, eldest daughter of Sir Thomas Buckler Lethbridge, Bart., by his first wife; of this marriage, the second son, John Hesketh Goddard, Major, 14th Light Dragoons, died 1854 (in India), and the eldest son, Ambrose Lethbridge Goddard, Esq., M.P. for the borough and hundreds of Cricklade, succeeds to the Swindon estates.

Mr. Goddard the subject of this notice, and the scion of a most ancient family, which for many centuries has represented in Parliament the county of Wilts, or some of its boroughs, constituted the position of a country gentleman with singular popularity and respect, and has now quitted it with universal regret.

DOUGLAS BAIRD, ESQ., OF CLOSEBURN, CO. DUMFRIES.

MR. DOUGLAS BAIRD died on the 7th inst., at his seat, Closeburn-hall. It is remarkable that within the last two years three of the most important family estates in North Britain should have been purchased by the brothers Baird, partners of the same wealthy firm—viz., Closeburn, in Dumfriesshire; Elie, in Fifeshire; and Urie, in Kincardineshire. The brothers Baird have risen within the last thirty years from an humble position, near the town of Airdrie, in Lanarkshire, to that of the richest commoners in Scotland. Their success has been owing to a rare combination of good fortune, with judgment and frugality. The father and mother of these prosperous men were the late Alexander Baird of Lockwood, and Jane Moffat, his wife. At present, James Baird, Esq., of Cambusdoon, co. Ayr, one of the brothers, sits in Parliament for the county of Dumfries; and three several grandnephews of them, William Baird, Esq., was member for the same constituency.

WILLS AND BEQUESTS.—Mr. John Mitchell, of Birmingham, the well-known steel pen manufacturer, died possessed of personalty amounting to £20,000.—Henry Shephard, of Clifton, Bristol, effects £30,000, has bequeathed £200 to the Frome Selwood Charity, £100 to the British and Foreign Bible, and £100 to the Church Missionary Society. —Mr. Mignese da Costa, of Feltham-crescent, Brompton, effects £20,000, has left small bequests to the following institutions of his persuasion:—the Spanish and Portuguese Synagogues, in Bevis Marks, and in Paris; the Orphan school, and the Spanish and Jews' Hospital, Mile-end.

THE NATIONAL GALLERY.

NEW PICTURES.

WE this week produce Engravings after two of the newest additions to the National Collection, belonging respect vely to the Spanish and the German schools—schools very dissimilar in th emselves, and presenting much of indisputable merit and decided interest; but which, nevertheless, up to a comparatively recent peri d, have been almost unknown in this country, and in Europe generally—so feeble have hitherto been the sympathies of art, so powerless against the boundaries and prejudices of nationalities, and the force of accidental circumstances.

Beginning with the Spanard Velasquez—one of the most original and comprehensive geniuses art ever produced, and yet so little appreciated by those who probably only knew him by name, and only knew art by that which came from Rome, that Fuseli, in his lecture on "Art of the Moderns," dismisses him and the whole school to which he belonged in two brief paragraphs, in one of which he laments "the absence of national pride," which, perhaps more than the neglect of Government, or the force of superstition, confined the labours of the Spanish school, from its obscure origin at Seville to its brightest period, within the narrow limits of individual imitation," and then goes on with the very faint concession—" but the degree of perfection attained by Diego Velasquez, Joseph Ribera, and Murillo, in pursuing the same object by means as different as successful, impresses us with deep respect for the variety of their powers." This is a sample of the old prejudice against Murillo and Velasquez, in common with Rembrandt, also; for that they preferred working out their own gifts in their own way, guided only by the lights and example of nature, to submitting themselves to the drudgery of the schools of Italy, as a time, be it remembered—the beginning of the seventeenth century—when art in Italy, after a rapid decline, had sunk into the grave, and only its ghost, re-animated by the Eclectics, remained to speak of its departed glories, and to warn others by its fate.

So true is it that although Murillo is supposed to have been partly influenced at second-hand by the works of Vandyke (great man himself, but not one to form or improve a school), and Velasquez visited Italy for a year and a half when thirty years of age, and after his manner had been completely formed, and his fame firmly established, yet that in all that these art sts did they were strictly original in their style, as they were wonderfully creative in the conception and motives of their works. So keenly prized were the latter, however, by the Kings and nobles of their proud nation, that but few, until lately—after the Peninsular war—found their way into the other states of Europe; and Murillo was known chiefly in this country by his vulgar beggar-boys (Mr. Hawke's immense contribution to the Dulwich Gallery), and some engravings of similar works; and Velasquez not at all. In 1847, in the height of the season, at Christie's rooms, in the presence of all the connoisseurship and artistical metropolis, a fine historical portrait by this "strange" artist, that of the "Infanta Margarita Mariana of Austria," one of the most interesting portraits historically, and one of the most masterly in point of arttreatment, was knocked down for the sum of thirteen guineas. Two years afterwards it was exhibited at the British Institution, where, at entire having been drawn to it by the anonymous critics in the public journals, it attracted a full share of fashionable homage.

The sale of Louis Philippe's collection of Spanish pictures in 1853, themselves obtained by him, through agents, at the time of the confiscation of conventual property in Spain some years previous, was the means of introducing a considerable number of valuable pictures of this school into England, some of which were purchased for the National Gallery, and amongst them the work now engraved by us.

"The Adoration of the Shepherds" is one of Velasquez's earlier works, painted before his brie visit to Italy. "Naturalism" was his principle, and Caravaggio and Ribera his only models in point of style. This picture is remarkable for its bold and vigorous (but still harsh) treatment; for the wonderful individuality of character; the variety and life of all the motives; the intense speaking truth in the expression of each particular face contained in it; and, above all, for the genuine, harmonious, but admirably broken colour. The Virgin Mary is represented as a simple, innocent country woman, proud of her high destiny, but conquering thought of self with devotional feeling towards the divine infant before whom she kneels. She partakes in the act of homage with the rude peasant and rude-featured group who surround her, not pretending to express to herself any share of their attention By this means the whole interest is centred in the Infant Christ, who, though painted in a purely naturalesque and undeveloped manner, is an admirable study, free from vulgarity, and almost suggestive by his expression of childish sense of a future important mission. Velasquez was celebrated for his accurate painting of animals, fruit, &c; and in this picture we have the talent in this respect displayed to great advantage, and with propriety. This picture was formerly in the possession of Count de Aquila, of Seville; it afterwards came into the hands of the late King of the French, by whom it was exhibited as part of the Spanish Gallery at the Louvre. The British nation can boast of possessing it as one of the most remarkable works of a most admirable artist.

German any disputes with Italy the merit of first lending to religion the help of art, and adorning churches and monasteries with images of the Madonna and saints. But the history of art in the two countries (of Germany can be called a nation, being rather an assemblage of heterogeneous races) has been very different, and widely different have been the results. Italian art, instructed and inspired by the examples of classic art coming from Greece, began, in the early part of the fourteenth century, to reject the hard, lifeless types and figures of Byzantine art, and to adopt nature herself as a model. In the many, for centuries (the "dark ages," lasted much longer in Central Europe than in the South and West), the same weak and feeble models, modified by a rude Gothicism of character and detail, continued to be followed for many ages after that period; and, when the reflected light of the "revival" fell over the "Fatherland," the revival itself among the more politic nations of the South and West had fulfilled its mission and had become extinct.

Nevertheless, there is much to interest and instruct in the works of the genuine German school, and the Government have done well in procuring some examples of it for exhibition in the National Gallery. The artists whose works are thus represented are (we take the inscription on the frames for voucher) Meister Von Liesborn (so is described an unknown artist, who painted in the once existing convent of that name), and some followers of his "school," working somewhere in the fifteenth century; Lambert Lombard (middle of the sixteenth century); Vander Meeren, Ludger zum Ring, Master Van Werden, and "an artist of the middle of the sixteenth century" (name unknown); to the last of whom the picture of the "Coronation of the Virgin," which we engrave, is attributed. All these pictures, forming part of a large collection, lately belonged to Herr Krüger, of Minden, from whom they have been purchased for this country, on the recommendation of Mr. Dyce. The style of this picture, as we have already suggested, is eminently Byzantine, with an admixture of Gothic naturalism. The artist has endeavoured to give a grace, which might be almost described as coquettish, to the Virgin; and the features of the two persons of the Trinity, though true, perhaps, to the physique exhibited in a German monastery, are utterly void of Divine character The various details of the picture are highly curious and minutely executed, and enriched with gilding in various parts.

What strikes us most, however, after all, is the contrast which German art in this example presents to the contemporaneous art of other parts of Europe. Would it be believed, except upon such positive assurance of the fact, that this quaint performance was produced in Germany nearly half a century after the magnificent days of Raphael, and at the very moment of the decline of art in Italy—at the rise and progress of which, as of the mighty spirit of its genius, Germany had all the time remained profoundly ignorant?

THE ART-UNION OF GLASGOW.—This society has, it appears, increased the number of its subscribers more rapidly than any of a similar nature. In the years 1847-8 it had only 818 subscribers, while for the year just passed the number exceeded 10,000; the increase last year came being nearly 2000. This rapidly-advancing prosperity affords a proof both of the ability with which the business of the society is conducted and of its claims to public patronage. Last year, in addition to 1000 prints of a chromo-lithograph, after a fine picture of Cattermole's drawing, "Columbus at the Convent of La Rabrida," and 100 groups and statuettes in bronze and parian, there were distributed 119 paintings—one rising of the value of £200, three £150 each, one £120, one £100, and eight £100 each, nine from £85 to £60, fifteen from £57 15s. to £40, twenty-three from £35 to £25, twenty-six from £22 to £15, and fifteen a. £10 and under; making altogether 818 prizes, costing £5000. It is anticipated that year, from the merits of the engraving and the popularity of its subject, that the subscription list will again be largely augmented.

The proposal made by the Russian Minister of Finance to raise the price of salt from 28 to 44 copecs has been accepted by the Czar as a profitable financial measure.

There are at present in Spain 73 Dukes, 597 Marquises, 493 Counts, 53 Viscounts, and 83 Barons.

THE NATIONAL GALLERY.—NEW PICTURES

"THE CORONATION OF THE VIRGIN"
BY A GERMAN ARTIST OF THE SIXTEENTH CENTURY.

"THE ADORATION OF THE SHEPHERDS."
BY VELASQUES. (SEE PRECEDING PAGE.)

THE CHRISTMAS-TREE AT THE CRYSTAL PALACE.

The superintendents of the succession of attractions at the Crystal Palace have ingeniously turned this ungenial season of the year to account by adding a Christmas-Tree of gigantic proportions, to correspond with the stupendous Palace of Glass. A Christmas-Tree upon friend Tomkins's loo-table may be sufficient to delight the small circle who may fill his parlour; but it is a very bouquet-like affair in comparison with the gigantic Tree in the vast area of the Crystal Palace, where it forms a nucleus for a gay assemblage of decorations for a Christmas fête. The holy season breathes love and peace; but the Tree is made to bear "the very age and body of the time," by combining it with a group of glittering emblems of war.

The stupendous festive trophy occupies the centre of the Great Transept. The general design has been very cleverly carried out by Mr. Hurwitz. The central platform has three stages, and the upper one is occupied by the great Christmas-Tree—the father, evidently, of the numerous family of little beauties clustered around him. "May his shadow never be less." This monster Tree is loaded with a variety of brilliant ornaments and nicknacks, a profusion of large and small elegant Chinese lamps, and a number of flags and banners of all nations—the Turkish, supported by the French and English flag, occupying the top of the Tree. The square platform on which the great Tree rests is formed of large mirrors, and these reflect the decorations and multiply the trees and other ornaments, giving much lightness and brilliancy to the arrangement. On the terraces are the smaller Christmas-Trees, forming two complete circles round the great Tree, one above the other. They all vary in their form and decorations. Between the trees are baskets filled with fruit, and surrounded by moss; and pots and bouquets of flowers fill up the intervals and give the whole a rich variety of colouring and ornamentation. Massive yule-logs are placed at the four corners, and are covered with holly and ivy. From the top of the great Tree four wreaths of laurel and evergreen extend to the four corners of the intersecting Nave and Transept, where they terminate at the first-floor galleries. But during the progress of the works the idea was started of wreathing the whole of the front of the galleries and pillars in the Central Transept by suspending festoons of a similar character; and Mr. Bulshaw, having obtained a whole cargo, by special train, from various points on the Brighton line, of holly, ivy, and laurel, set a number of hands at work, and the whole of this part of the building was soon clothed in a livery of green, the effect being much improved by the suspension of banners at intervals all round the Transept at the point where the festoons are united.

At the four corners of the Central Trophy are emblematic groups of the four Seasons, prepared under the superintendence of Mr. Bartlett, the taxidermist, who has charge of the Natural History Department of the Palace.

One of these groups contains two hares, two wood-pigeons, a brace of snipe, a pair of black grouse, a bittern, a sheldrake, and a pair of teal. Another has a turkey, two wild ducks, two golden plovers, two white hares, three red grouse, and two larks; a third displays a goose, three pheasants, a pair of red-legged partridges, a capercailzie, and a pewit; and the fourth, a swan, a pair of partridges, a pair of woodcocks, a pair of curlews, a guinea-fowl, two rabbits, and a pheasant of a new breed, known to naturalists as the *Phasianus torquatus*, a native of Japan. It was introduced into this country by Mr. D. W. Mitchell, secretary to the Zoological Society. The first specimens were shot a few days ago, and forwarded to her Majesty; and the one now at the Crystal Palace is the only other specimen of this rare bird which has ever been seen in this country. The effect of these groups, with the arms, &c., accompanying them, is very good, and in perfect keeping with the other details of the trophy. On the upper terrace has been introduced a novel system of illumination, by which trees and shrubs, animals, and other objects, can be so constructed as to throw out a soft and subdued light. In the present case we have the stems of trees, from which fruit depends, coloured artificially, and, by means of gas introduced into the interior of the fruit, the light is thrown out in a variety of beautiful colours. The fruit and flowers are made of opal glass, which is found best adapted for the purpose. Bunches of grapes, roses, and lilies of this material, are here shown as fine illustrations of the effect produced; and it can be applied to statuary and other is for out-of-door purposes. Mr. F Bartlett has patented the invention in England and abroad. Among other curiosities which collect large crowds are a whole regiment of Cossacks, in chocolate, a regiment of Zouaves, and a regiment of our gallant and picturesque Highlanders.

GIGANTIC CHRISTMAS-TREE, AT THE CRYSTAL PALACE, SYDENHAM.

In the Christmas Supplement published with the present Number we have illustrated the great metropolitan display of Christmas-Trees in Covent-garden market at this season; and, as the erection of a Christmas-Tree has now become a general fashion in England, a few words on its origin and significance may be acceptable.

The birthplace of the Christmas-Tree is Egypt, and its origin dates from a period long antecedent to the Christian era. The palm-tree is known to put forth a shoot every month; and a spray of this tree, with twelve shoots on it, was used in Egypt at the time of the winter solstice as a symbol of the year completed. The palm-tree spray of Egypt, on reaching Italy became a branch of any other tree (the tip of the fir was found most suitable, from its pyramidal or conical shape), and was decorated with burning tapers lit in honour of Saturn, whose *saturnalia* were celebrated from the 17th to the 21st of December, the period of the winter solstice; the lighted tapers, the presents given (*saturnalitia*), and the entertainment of the domestics on a footing of equality, date from this age. After the *saturnalia* came the days called the *sigillaria*, when presents were made of impressions stamped on wax, which still form part of the furniture of a Christmas-Tree. To the *sigillaria* succeeded one day called the *juvenalia*, on which everybody, even adults, indulged in childish sports, and hence the romping close of our Christmas festivities.

With the Germans the greatest Christmas festival is our Christmas-eve, the *heilige abend*, which has the more propriety, as, whatever doubt attaches to the date of His birth it is certain that our Lord was born in the night-time. The festival itself is called *weihnacht*, or night dedicated to the commemoration. As Christmas eve always falls on the evening of Adam and Eve's day, an orthodox Christmas-Tree will have the figures of our first parents at its foot, and the serpent twining himself round its stem. By a bold stretch of theological fancy, the Tree, with its branches and tapers, is, with the above-mentioned accessories, understood to typify the genealogy of our Lord, closing in the most luminous apex the sun of light and life, "the seed of the woman that should crush the serpent's head." The Romans had already affixed as the summit of their Trees a representation of a radiant sun in honour of Phœbus Apollo, to whom the three last days of December were dedicated. In connection with this god, sheep were sometimes exhibited prostrate under the Tree, or Apollo himself took charge of the herd, or tongue the shepherds the use of the pipe This was skilfully construed by the Christian clergy to be emblematic of the good shepherd, &c.; the *sigillaria* of the Romans were impressed with the images of saints and holy persons; the lighted tapers, also borrowed from the *saturnalia*, were retained here, as elsewhere, as portion of the religious ceremony. The giving of presents, another portion of the *saturnalia*, was understood to be expressive of Christian brotherly love; while the apples, nuts, and gingerbread—equally unmistakeable remnants of the Northern heathen mythology—have been kept in the service of the Christian festival, as accessories that sufficiently recommended themselves without typifying anything particularly holy.

IMPERIAL PARLIAMENT.

(Continued from page 671.)

HOUSE OF COMMONS.—WEDNESDAY.

SAVINGS BANKS.

In Committee on the Consolidated Fund Acts, the CHANCELLOR of the EXCHEQUER moved a resolution, upon which he intended to found a bill, for the purpose of placing the deposits in savings banks on better footing. The resolution was agreed to.

ENLISTMENT OF FOREIGNERS BILL.

On the question that the House go into Committee on the Enlistment of Foreigners Bill,

Mr. LIDDELL (Liverpool) expressed his disapproval of the bill, and anticipated its utter failure as regarded the object in view

Mr RICH had a great objection to the employment of mere mercenaries. Looking, however, at the question as one of confidence in the Ministry, he would vote for the bill

Mr. FRUMMOND thought it would be an act of charity for some one to protect Ministers from their friends. Too concealment and mystery connected with the bill had excited the greatest jealousy in the country. To make use of a sporting phrase, the people deemed it a "dark horse."

Sir W VERNER and Mr OTWAY opposed the bill.

Mr. WHITESIDE contended that the proposed measure was unconstitutional. The employment of foreign mercenaries was demoralising to those who employed them, and rarely useful except to quell the liberties of the nation the Government of which employed them. The principle involved in the measure was dangerous, immoral, unjust, and degrading.

Mr SIDNEY HERBERT controverted Mr. Whiteside's constitutional doctrines, and gave a general answer to his arguments and assertions against the bill. It was not true to say that the present was the only occasion on which Ministers had for carrying on the war. It was only one of several He was quite willing to abide by the fiat of public opinion on the question under discussion.

Mr NAPIER opposed the bill

Mr COBDEN thought the expedition to the Crimea about the most ill-advised, and that was saying a good deal Still it was the duty of the nation to succour the men who were now suffering on the heights of Balaclava; but, if these suffering men were asked what kind of aid they would prefer, he was convinced they would say, let it be by our own countrymen, and not by mendicant Germans. By the press at this England was, in the face of the world, holding out a flag of distress. There was no scarcity even that foreign soldiers would be procured On merely grounds the measure could not be maintained. He would not then enter into the question of the war, or the DESPATCH which it was conducted, but on the bringing up of the report he would advert to those points, with the view of eliciting the opinion of the House on the subject of certain negotiations going on.

Lord J RUSSELL intimated that, when Mr Cobden made his promised statement, Ministers would be quite ready to meet him.

Lord C. HAMILTON opposed the bill.

Mr DANBY SEYMOUR voted for the second reading, but he declared that he never gave a vote with greater reluctance. He was told by Ministers that the measure was necessary for the relief of the troops at Sebastopol, and he did not think it was his duty to refuse the slightest chance of relief being so given. Matters were in a critical state at that fortress, all owing, as he believed, to the mismanagement of Ministers. Mr. Seymour assured the House that, in spite of our large fleet, Russian provisions found the means of transport in the Black Sea, and in this way Russia was supplied with monetary aid in carrying on the war.

Mr PHILIPPS could not see how he could consistently refuse to support the bill, seeing that he had given his sanction to the declaration of war.

Mr ALCOCK complained that the standard of height had not been sufficiently reduced, or the bounty sufficiently increased.

Admiral WALCOTT and Mr. CONOLLY both opposed the bill.

The debate was adjourned till the following day.

In the course of the sitting Lord EBRINGTON took the oaths and his seat for Marylebone.

HOUSE OF LORDS.—THURSDAY.

Lord DERBY took the oaths and his seat.

Lord WENSLEYDALE put a question to the Secretary at War with respect to the occupation of the barracks at Dorchester by convicts, to the prejudice of the militia.

The Duke of NEWCASTLE said that it was in consequence of cholera having broken out among the convicts at Millbank prison that the Home Secretary had given directions to have them removed to the barracks at Dorchester; but the necessity for their continuance there having now passed away, all, with the exception of a few invalids, would be sent back, and the barracks would be immediately evacuated.

The Duke of NEWCASTLE moved the second reading of the above bill, and, subsequently, the suspension of Standing Orders, with a view to its being passed through all stages.

After considerable discussion the bill was read a second time, and afterwards passed through Committee. It was ordered to be read a third time on Friday.

The Earl of CLARENDON (in reply to the Earl of Hardwicke) repeated the answer given by Sir J. Graham on a previous evening in the House of Commons, in regard to the exchange of the *Theiis* brigade for two Prussian gun-boats.

The Earl of HARDWICKE, in reference to the recent hurricane in the Black Sea and the disastrous results to a great number of our ships, complained of the utter absence of all precautionary measures by which such a catastrophe might have been averted.

The Duke of NEWCASTLE admitted the want of proper management in not placing the ships in a position where they might have been saved from the casualties that occurred.

HOUSE OF COMMONS.—THURSDAY.

In reply to Mr. J. O'CONNELL, Mr. F. PEEL said that some correspondence had taken place between the Government of Washington and her Majesty's Ministers, with the object of ascertaining in what state mail-steamers generally arrived at the United States. It was the intention of her Majesty's Government to introduce a bill founded upon the recommendation of the Committee which had sat upon the subject.

ENLISTMENT OF FOREIGNERS BILL.

The adjourned debate upon the order of the day for going into Committee was then opened by Mr. CONOLLY, who proceeded to a review of the arguments urged by the members of the Government in support of the measure; and contended that it was unworthy of the Government and the country, and well calculated to degrade the British nation in the eyes of the world.

Mr. COLLIER, in supporting the bill, said that he had heard no fact to show that the assistance asked was unnecessary.

Mr. Newdegate and Mr. Murrough severally opposed the measure.

Mr. I. BUSSELL disclaimed any intention on the part of the Opposition to protract unnecessarily the debate. He was prepared to go into Committee, and to take the third reading on Friday.

Lord J. RUSSELL expressed his concurrence in this course.

After some remarks from Mr. PEACOCK as to the propriety of fixing a definite limit to the duration of the measure,

The Speaker left the chair, and the House went into Committee upon the bill.

On clause 1 being proposed, Mr. L. KING urged the propriety of introducing a proviso declaring that there shall be no half-pay or pension given to those foreign soldiers (except to officers disabled by wounds) after the expiration of one year from the ratification of a treaty of peace.

Mr. S. HERBERT concurred in the spirit of such a proviso, and would take it into consideration.

Mr. HUME urged the necessity of arrangements being made for the support of the wives and children of the foreign soldiers, without the burden being placed upon the existing poor rates.

After some further discussion, clause 1, as well as the remaining clauses, was agreed to.

HOUSE OF LORDS.—FRIDAY.

THE MILITIA BILL.

This bill was read a third time and passed.

Their Lordships adjourned until to-morrow (Saturday) for the Royal Commission.

HOUSE OF COMMONS.—FRIDAY.

The CHANCELLOR of the EXCHEQUER brought in the Savings-banks Bill, which was read a first time.

TEA-DUTIES.

The right hon gentleman then gave notice of the intention of the Government, in the event of the continuance of the war, to propose, when the time arrived for making the Financial Statement for 1855, that the duty of tea, instead of falling progressively, as originally proposed, shall continue at the present rate of is 6d in the pound

Sir W. CLAY gave notice of his intention, on an early day, to ask leave to introduce a Bill for the Abolition of Church Rates.

Sir J. PAKINGTON gave notice of his intention, soon after the Christmas recess to ask leave to introduce a bill for the introduction of a better system of education in England and Wales.

Mr S HERBERT, in reply to Mr. Ewart, said that the new pattern uniform for the Army will do away with the distinction between officers and privates.

Mr. S HERBERT, in answer to Mr. Whiteside, stated that the last returns he had received from the hospitals in the East were dated the 25th November and the 5th December. The last accounts from Balaclava gave the numbers in the field and general hospitals 2895, and in the hospitals at Scutari 3459; making a total of 6354 He was, however, afraid that the next accounts received would give a considerable addition to those numbers.

The same right hon. gentleman (in reply to Major Reed) stated that it was the intention of the Government to arm the whole of the army in the Crimea with Minie rifles.

Mr. DISRAELI asked the First Lord of the Admiralty whether the Government had received any official account of the blockade of Memel by Russian gun-boats?

Sir J GRAHAM said that, so far as his information went, he believed that no such blockade had been established.

Lord J RUSSELL gave notice that, in the event of the Hon e meeting re-meeting, it would move that the House at its rising do adjourn to Monday, January 22nd.

ENLISTMENT OF FOREIGNERS BILL.

Lord J. RUSSELL moved the third reading of this bill.

Sir E. DERING moved, as an amendment, that it be read a third time upon that day (to-morrow). He disclaimed all factious motives, and was not desirous of impeding the efforts of the Government to whom on many occasions he had given an independent support.

Mr. COBDEN took a review of the several points in connection, and contended that it was most unwise and unjustifiable to take up arms on behalf of a Power like Turkey, that was failing into decay by its own vices. He then drew a pathetic picture of the number of lives that had been sacrificed, and of the large sum that the amount of our army that still survived in the Crimea; and submitted that, as the object for which we had gone to war had been attained, by the evacuation of the Danubian Principalities by Russia, whether it would not be more favourable to enter into a treaty of peace than to continue a slaughter which was not necessarily lead to still more fearful sacrifices, and which would prolong the war for probably many years to come?

After a long debate, it was decided, when the numbers were—For the third reading, 171; against it, 135; making a majority in favour of the Government, 36. The bill was then read a third time and passed.

The House then adjourned until to-morrow (Saturday).

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS, TAKEN DURING THE WEEK ENDING THURSDAY, DECEMBER 21

Month and Day.	Corrected Readings of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.
	Inches	°	°	°	°			Inches.

" 21	30·188	42·5	28·0	35·5	— 2·2	96	S.W.	0.20

Note. -The sign + denotes above the average, and the sign — below the average.

The reading of the barometer increased from 29·38 inches at the beginning of the week, to 30·02 inches by the 15th; decreased to 29·69 inches by the 16th; increased to 30·09 inches by the 17th; and by the morning of the 18th had decreased to 28·93 inches; increased to 29·73 inches by the 19th, decreased to 29·39 inches by the 20th; increased to 30·09 inches by the 21st; and decreased to 29·81 by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29·714 inches

The mean daily temperatures have varied from 10½° above to 4° below their average values.

The mean temperature of the week was 40·7°, being 1·4° above the average of thirty-eight years.

The range of temperature during the week was 36°.

The mean daily range of temperature during the week was 11·9°.

Rain fell during the week to the depth of eight-tenths of an inch

The weather during the week has been changeable, and rain has fallen frequently. The wind blew strongly from the West quarter on the 15th and 16th, and during the afternoon of the 18th it blew a gale from the North; the greatest pressure on the square foot being 12 pounds

JAMES GLAISHER.

Lewisham, Dec. 24, 1854.

HEALTH OF LONDON.—During the week ending last Saturday the births of 1289 children were registered within the metropolitan districts, exceeding the averages of the same corresponding weeks of the nine preceding years by 177; of these 659 were boys and 817 were girls, exceeding their averages by 56 and 121 respectively. The number of deaths during the week were 1306, being a small decrease on the mortality of the previous weeks.

MARYLEBONE ELECTION.—The nomination took place on Monday. Mr. Bretingham proposed, and Dr. Garrod Dilon seconded, Mr Jacob Bell as a fit and proper person. Lord Ebrington was proposed by Mr. Collier, M.P., and seconded by Dr. Key. The show of hands was so nearly equal that the returning officer said he could not undertake to decide. It was, after some consideration, arranged, with the consent of Lord Ebrington, that the show of hands should be taken in favour of Mr. Bell, and then a poll should be demanded. On Tuesday the polling began at eight o'clock. From the first hour the majority was in favour of Lord Ebrington. At the close the numbers were—Lord Ebrington, 6919, Mr. Bell, 4166.

THE EMPRESS OF RUSSIA AND THE WAR.—A private letter from St. Petersburg states that, from the moment when the news of the battle of Inkerman arrived, the Empress's health became worse. It is said that Prince Menschikoff's despatch was brought to the Czar in his wife's bed-room. On reading it an angry exclamation escaped him, which frightened the Czarine. She fancied that some misfortune had happened to her sons, and fainted away. It was very long before she recovered her senses, and ever since that time she has suffered from constantly-increasing fever. Even in Court circles her death was spoken of as an event to be expected from one moment to another. The fêtes usually given to celebrate the anniversary of the Emperor's accession were reduced this year to a religious service. The Court is furious against Austria since the receipt of Prince Gortschakoff's last despatch. A lady of high rank declared aloud in a drawing-room the other day—"We will never forget Austria's perfidy. I will furnish a hundred serfs to the new regiment of Chasseurs." Three days afterwards this lady's daughter was appointed Maid of Honour to the Empress. But the Emperor, at the same time, caused it to be notified to her mother that he did not approve of talking politics in the presence of Austrian *attachés*.

FOOD CONTRACTS.—During the past week the food contracts for many of the unions in Devonshire have been taken (from Christmas to Lady-day) at prices by no means so exorbitantly high as many persons recently would be glad to get during war time. The contract for bread at the Tiverton Union has been accepted at 7½d. to 7¾d. per 4lb. loaf; flour, 57s. per sack; mutton, 5d. per lb. For the Totnes Union contracts for bread have been taken at 7½d. to 8¼d. per 4lb. loaf; seconds flour, 55s. 6d. per 280lbs.; beef, 5d. to 6¼d.; mutton, 5¼d.; and pork, 6¼d. per lb.; fresh butter, 1s. 4d. ditto.

ANECDOTE OF VIVIER.—This gifted *artiste* was engaged to play one *morceau* at the palace, on the occasion of the late *fêtes* given in honour of the marriage of the Prince of Prussia. He performed his solo, accompanied by Meyerbeer on the piano, and was rewarded with the nearest approach to applause permitted by Court etiquette, and a request was made him, in the name of the Queen and Princesses, to play Schubert's "Sérénade." Vivier readily assented, but he had no music with him, and so arduous a task as accompanying Schubert from memory demayed Meyerbeer himself. The Court would thus have been doomed to disappointment, had not Prince George of Prussia stepped forward and volunteered his services which were accepted, and the performance went off à merveille.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Lord John Russell has purchased Bare Homage, the seat of Sir John Lister, near Christchurch, in Hampshire.

The Viennese Court gossips state that, since the beginning of last week, the Emperor Francis Joseph has ceased to wear any Russian decoration.

The King of Prussia attended the full-dress gala opera last week; but, as Baron von Manteuffel was directed to state his Majesty, who retired after the second act, was presented by command to foreigners from holding a circle for the diplomatic corps between the acts.

Lord and Lady Tsdolm, lately Prussian Minister at Rome, who left Berlin on Tuesday, on a special mission, to sound the English Cabinet with reference to Prussia joining the treaty of December 2, arrived in London on Saturday.

Viscount and Viscountess Palmerston returned to their residence in Piccadilly on Tuesday, from a visit to the Queen at Windsor Castle.

Prince Alexander Schoenberg has left Vienna, the bearer of the grand cordon of the Order of St Stephen, and an autograph letter of the Emperor Francis Joseph, which Baron Hobder is instructed to present to the Emperor Napoleon.

The Sultan has sent the decoration of the Medjidie of the first class to Generals Canrobert, Bosquet, and Forey. The Minister of War, it is added, in transmitting the decorations wrote a most flattering letter to the General-in-Chief

The Queen has appointed the Marquis of Normanby to be her Majesty's Envoy Extraordinary and Minister Plenipotentiary to the Grand Duke of Tuscany.

The Queen of Spain is about to present the Pope with a magnificent new tiara, ornamented with three crowns of brilliants, and with a great many pearls, rubies, emeralds, and sapphires. The estimated value of the tiara is about 2,000,000 reals (£20,000), and the Royal present is to be placed in a box of sculptured silver.

The Chevalier Bunsen continues to reside in retirement at Heidelberg, and has just sent to a publisher at Berlin an historical work, the fruit of his leisure

The Hon. C. A. Murray, formerly Consul-General in Egypt, and now appointed Minister in Persia, arrived at Alexandria by the last English steamer, on his way to his post.

The children of Schiller are endeavouring to obtain from the Prussian Chamber an extension of the copyright which they at present enjoy in the works of their illustrious parent. According to the present law the last of the heirs to whom the property in Schiller's works is secured will, in 1858, and they pray that the term may be extended twenty years.

M. Sainte Beuve, of the French Academy, has been appointed Professor of Latin Poetry at the College of France in the room of M. Tissot, deceased; and M. Havet to be Professor of Latin Eloquence at the same college, in the room of M Rem, appointed to other functions

The Earl of Elgin gave at Quebec, on the 1st instant, a farewell ball, at which 700 persons were present He delivered an address which is described as having been deeply affecting

The King of Prussia has received and been pleased to accept a gold medal, ordered some time ago by the Emperor, to be prepared by the Warsaw engraver Mimchelmer, in honour of Prince Paskiewitsch having completed his fiftieth year (October, 1851). Specimens of this medal in silver have been struck at the Prussian mint, for distribution at Berlin.

The Prussian Minister of War has ordered telegraphic wires to be laid down to connect all the principal fortresses with Berlin; also the military stations placed on the coast.

The Austrian authorities have ordered that in future the German language shall be used in all proceedings before the tribunals of Hungary.

Vast quantities of herrings have recently been taken on the Devonshire coast In three days the fishermen of Torquay, in Torbay, succeeded in securing no less than 900,000. Of this number about 400,000 were taken at one haul.

The Belgian Chamber has voted the sum of 270,000f. for the extension of the electric telegraph

A young gentleman of Louisville has been tendered a colonel's commission in the Russian army, and it is said that he will leave about the 1st of February, in company with several other Kentuckians, for St. Petersburg.

In curing for a well at Pencott lately, a stratum of excellent coal, and also one of iron-tone, were discovered. The Dean and Chapter of Westminster are the fortunate owners of the property.

The returns of the Bank of France for the past month show that the specie drain of the last two preceding returns has continued with increased intensity, the falling off on this occasion being £1,700,000.

According to Mr. Sidney Herbert, the British Army in the East consists of about two-thirds Protestants and one-third Roman Catholics.

Disturbances have taken place at Carrara, and it is asserted that several political assassinations have been committed. A military cordon had been established on the frontiers of the duchy of Massa, and a state of siege proclaimed.

South Wales coal is selling at 49s. per ton at Constantinople. There are eighty-two ships in port with cargoes of coal for sale on private account, independent of the supplies at Government depôts formed by the Allies.

From a return published by the municipality of Madrid it appears that the number of persons killed in the revolution of July, and buried at its expense, was 72, and of wounded in the same affair, who were attended at its expense, 376. In addition to these numbers, there were a great many persons killed or wounded who cost nothing to the municipality.

Mr. George Mansfield, of Lyme Regis, has had £5000 awarded to him, as salvage, for recovering 60,000 sovereigns from the ship *Sourabaya*, wrecked at Port Phillip on the 28th of April last. He had a crew, six in number, who were also awarded—one £2000, and the others £1500 each; making a total of £14,000.

The coal produce of the world, in the year 1853, is estimated at 75,000,000 tons; of which amount 40,000,000 were produced by Great Britain, and 9,000,000 by the United States.

Professor Zahn, who has passed not fewer than fifteen years in investigating the ruins of Herculaneum and Pompeii, is preparing for publication the results of his researches and last part of his great work on the monuments discovered in those towns. This work is one of the most expensive ever published in Germany, each copy costing 300 thalers, about £45.

An experiment has shown that six sappers can erect one of the wooden huts for the Crimea in two hours.

A *Te Deum* was celebrated on Saturday at Brussels, in the Church of Sainte Marie aux Galets, in honour of the anniversary of King Leopold. In the evening the grand diplomatic dinner was given in honour of the day, at the hotel of the Minister of Foreign Affairs.

The Emperor Napoleon has just granted an annual pension of 600 francs, on his privy purse, to an old man, aged seventy-three, named Noel Payan, who was formerly private gamekeeper at the château of Navarre, the residence of the Empress Josephine. He is now the only survivor of all those who formed the household of the Empress and has frequently seen Louis Napoleon playing in the gardens of that château.

The Rev. Theodore Parker has been arraigned in the Circuit Court of Roxbury, on a charge of feloniously aiding and abetting the attempt to rescue the fugitive Burns in that city. The case will come on for trial in March next.

Madame Tedesco is said to have met with immense success at the Italian Opera at St. Petersburg. On leaving the theatre he was cheered by a vast crowd outside who had awaited her exit, notwithstanding the excessive cold—ten degrees centigrade below freezing point.

An institution of inquiry has been formed for the purpose of examining the grounds upon which Dr. Jacob attacked the management of Christ's Hospital.

The Vicar-General, by commission from the Archbishop of Canterbury, has formally prorogued Convocation until Tuesday, the 6th of February next.

An order has been received by a commission-house in Berlin for making up 20,000 woollen jackets for our Crimean army. They are to be got up and delivered with the utmost dispatch.

Military law is in such full force and severity in Finland that it passes almost into military lawlessness. A labouring man who interfered to screen a young country woman from the too urgent addresses of a Russian soldier, was adjudged by a Court of Law to pay a fine of ten thalers, to which the Military Governor added ten couple of blows with the stick.

The amount of capital invested in French railways is three thousand million of francs; of which, two thousand millions have been paid by companies, and one thousand by the State.

The screw steam-ship *Malta* recently made the run from Liverpool to Malta in eight days and a half, the shortest run from that port on record.

Mr. John L. Norton, a resident of New York, reported to be worth half a million of dollars, was knocked down and killed by a car a few days ago. The body, not being recognised, received a pauper's burial. The mistake was not discovered for some time, when the remains were disinterred and received a more appropriate funeral.

NOTES ON SIEGE OPERATIONS AND FIELD FORTIFICATIONS.

(*Continued from page 606.*)

THE PHILOSOPHY OF SIEGE OPERATIONS.

In pursuing our remarks upon this interesting subject, we will remind the reader of an article which appeared in the ILLUSTRATED LONDON NEWS, November 25, 1854, entitled "The Past and the Future of the Siege," in which we extracted passages of some length from Mr. Ottley's recently-published *brochure* of "Remarkable Sieges," enforcing the importance of complete investment, and the superiority of the scientific mode of attack by regular approaches, over that of breaching from distant batteries, followed by assault. We showed also, how, in the brilliant achievements of Wellington in the Peninsula, the latter system was adopted, with what signal success, but with what terrible loss of life, at the same time that there was no saving, but rather a waste, in point of time; we showed how the weight of scientific authority condemned those operations in the abstract, and how, in the opinion of those who have defended the Duke of Wellington in this matter, his excuse rests upon the plea of force of circumstance, which left him no other alternative but to take the places in this way or not at all. We cannot omit adding that, in the case of Sebastopol, a similarly erroneous plan of attack has been adopted without the same excuse—the place being as far from being taken as on the first day of opening trenches, and without probability of being taken until the besieging army is strengthened to a number at least double that which it mustered when the expedition first set out.

Innumerable instances might be cited, showing the superiority of the regular mode of attack. One is recorded as very striking. At the siege of Candia, by the Venetians, contrary to the advice of Vauban, stormed a ravelin, and failed, with a loss of forty officers, and four hundred men; two days afterwards Vauban took it by sap, and lost only three men. Again, as certainty is the great object in siege operations—which may be made matter of certainty with proper provision—how much cannot be said in deprecation of the fatal error of commencing an attack with less than the force adequate to the occasion, both as regards investing, crippling, and reducing the place besieged, and as ensuring the position of the besieging army, and its constant and ready command of supplies.

General Monk has left several papers upon this and other subjects, from which we cannot do better than cite a few passages. The following is but too applicable to the present occasion:—"In the besieging of an town, a Commander must be careful that his enemy be not able to cut off his provisions or his retreat, and that he besiege no town but such as he is able to outlast relief from the besieged. A Commander in-Chief ought likewise to be careful how he ventures upon winter sieges and long services, or long sieges at any time, unless the consequence of the place require it, and that he be sure to take it in the end. Long sieges ruin armies, empty the purse, and most commonly it falls out so, that it hinders armies from better employments; and, after a long siege, though things fall out according to a Commander's desire, he will have little reason to brag of his victory, when he views his experience, time, and his army. The malice of a great army is broken, and the force of it spent in a great siege." Again, in another place, he writes:—"Every Commander knows that man's flesh is the best foundation that belongs to a town; and where a town is well manned, the best way of taking it is by starving: and when a town is weakly manned, the best way of taking it is by battery and assaults, or by approaches, mining, battery, and assaults. One thing more I would advise a Commander-in-Chief to be careful of, and that is, not to gainsay town or place without great probability of obtaining that which he desires; and never to assault a town but when he may assault it at divers places at once. There is nothing so suddenly ruins armies as assaults without they miscarry. For a general is certain to have his best men killed and spoiled upon such designs, and the rest so much discouraged that it would prove very dangerous unto an army if they should suddenly after fight."

THE NUMBER OF MEN REQUIRED TO CARRY ON A SIEGE WITH VIGOUR.

The number of men required to carry on a siege with vigour is quite a matter of calculation, based upon certain principles, varied only by contingencies. The following, according to Sir John Jones, seems to be "the minimum of the calculation."

Guard of the trenches, three-fourths of the strength of the garrison. This duty may be taken for a short service with three reliefs. The workmen, however, cannot do with less than four reliefs. Their numbers depend upon the time of the work to be attacked; but, for the purpose of calculation, let the opera tion against a common front of 120 toises, with a ravelin, be assumed; then the length of the first parallel, and one line of approach to it—which should always be opened on the second night—will measure 8800 yards; which, at four feet apart, require 2640 men to line them; and that number will, consequently, be the strength of the first night's working party. The second night and the same number of workmen will be required; and what with the service of the artillery and the transport of materials, a small deduction can be made from their strength till the completion of the second parallel, when the remainder of the siege much fewer will suffice therefore, by arrangement and a little fatigue on the first days of the attack, the working parties may be averaged at one-third less than the party of the first night, or in round numbers 2000 men.

For engineers and camp duties, pockets, escorts with stores, and provisions, &c., the proportion of the army required will vary according to the hostility of the people in whose country the siege is carried on; and it is one of the contingencies to be regulated by a vigorous commanding; but being fixed, their reliefs must be equally regular with the others. For the sake of calculation, it shall here be stated at one-tenth of the whole army.

On these data, the amount of an army required for the vigorous siege of a place with a garrison of 8000 men would be—

Guard of the trenches 3750, at three reliefs	1,250
Working parties 2000, as four reliefs	8,000
Duties of the army one tenth, at four reliefs	19,250
	7,750
Total, independent of sick, and casualties	2,9,0

From this calculation, it is evident, *ceteris paribus*, that the more numerous the garrison, the smaller will the besieging army be, in proportion to it: for the attack on a similar front or fronts of fortification is little different, if the place contain a garrison of 8000 or a garrison of 10,000 men; the guard of the trenches, and the other duties increase proportionately, but the work does not.

The calculation for the attack of a garrison of 10,000 men would be—

Guard of the trenches, 7500, at three reliefs	22,500
Working parties, 2,00 men, at four reliefs	8,000
Duties of the army, one-tenth, at four reliefs	30,500
	12,2 0
Total (independent of sick, and casualties)	42,700

The former being nearly in the proportion of 3 to 1; and the latter, of 4 to 1. Hence it is that the most celebrated commanders and engineers are agreed, as a general principle, that the besieging army should carry on its operations in the proportion to the strength of the garrison according to the numbers of the garrison: and, as an approximation, have fixed that proportion at 3 to 1 when the garrison consists of 15 000 men, 4 to 1 when of 10,000 men, 7 to 2 when of 8000 men, 3 to 1 when of 5000 men, and in still greater proportion when it consists of a less number.

As the writer observes in the course of the above passage, the calculation of the strength of the besieging army required, varies according to special circumstances, as the greater or less extent over which the lines go, which depend upon local conditions, and the hostility of the people in whose country the siege is carried on. In the case of Sebastopol, both these conditions are in the extreme against the besiegers; the extent of lines, even in the half-investment now formed, is no less than fourteen miles, and the besieging army has been constantly subject to attacks from without by hostile armies in the field. At the rate of five to one, and taking the strength of the garrison at only 70,000 men, the besieging army in this case ought to be 350,000 strong, but, taking into consideration the feasible facilities for the place to blockade and in such case the amount of force necessary merely to keep the ground—the sea-front being guarded by the fleet—it would perhaps be a fair estimate to set down 200,000 men as the force requisite for efficiently carrying on the siege of this place.

No special calculation is made, in the above, of the cavalry required for supporting the guards of the trenches; upon which Sir John Jones observes, that if there is any of this arm in the place besieged, that of the besiegers ought to be in such numbers, that the cavalry guard on each flank ought to be sufficient to oppose all the cavalry in the garrison. In the case of Sebastopol, however, the besiegers, being on height, are comparatively free from danger of attack from cavalry.

THE INTRENCHMENT OF A BESIEGING ARMY.

Upon this important subject General Monk writes:—"When you come to besiege a town before which you intend to intrench your army, you ought to place your line of circumvallation so near the town, that you may be able to quarter your army with safety, and out of the reach of your enemy's shot; allowing 150 feet for an alarm-place between the breastwork and the front of the quarters. The trench without your breastwork must be 12 feet in breadth, 6 feet in depth, and 3 feet in breadth at the bottom. And as the earth that is dug out of the trench will raise you a breastwork or rampart of 12 feet in breadth at the bottom, 6 feet in height, and 3 feet in breadth at the top, with one foot bank. Upon your line of circumvallation, at the distance of every 200 paces, you ought to have a sjuare upon your line of bank it. And before the quarters of every regiment upon your line of circumvallation you must leave a small avenue, that one single man, and no more, may be able to pass through at a time. You must likewise have in your line of circumvallation four great avenues for carriages to pass through; and upon the great avenues you must set up turnpikes, and without every turnpike there must be a half-moon (lunette). More note, your army must be divided into as many quarters as you intend to have approaches against the town. And you must raise some batteries close with a the line of circumvallation, there where you think the most advantageous places may be for the same, for the annoying of any enemy that may come to trouble you."

CHESS.

TO CORRESPONDENTS.

W. B. A.—We do not undertake to decide wagers upon Chess or any other subject, and in such cases we strongly recommend our selection of the umpire you propose. With regard to the Problem in question we gave he no answer to warded by the author and his friends, preserved as then were by a Chariton we can a safely depend on. The Solutions were received, and the moment they were found to be so, their deficiencies were noted without.

BETA.—1. Black delivers the mate by playing at most three moves Q to Q 3rd. A Year Since, in Problem No 564 is strongest.

N. S. J. F., DERBY, and others.—Upon re-examination of Problem No. 564 you will find, we believe that the key to which is that given in our last Number; and that mate cannot possibly be effected in five moves, as you propose. White play for he first move it takes K to P

CHESSICUS, RUSH.—If Black for his 3rd move play Kt to Q B 3rd, your stratagem is again in, racticable. Independently of this fact, it is very ins gnant and ill-considered, and of a rather undeserving of any further notice.

R. B. C., Melbourne, U. P.—We are still without a reply and fear your packet has miscarried.

B. W. LOVELY, Dublin, and others. THE PARIS MEETS TOURNAMENT in 1855.—By a communication for just received from the Secretary of the Paris *Cercle des Echecs*, we are glad to learn that the first and most important step towards the realisation of this project has been made, by the appointment of a provisional Committee of Management. The following is the List of the COMITE DE DIRECTION:—President, M. le Baron de Carnall Vice-Presidents, MM. Dufaure and St. Amand, Le Roche, de la Chanoudie, Jaccard, Donnay, Brooke Greville, Segan, Saburan, De Rotschonoff. Secretaries, MM. De Kergorlay and Lavalard.

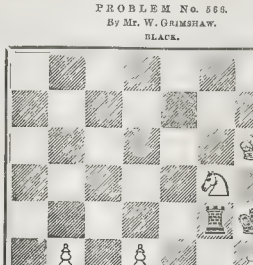
SOLUTIONS OF PROBLEM No 563 by P. F., Greenock, W. Dennys, J. C. G., C. F., Newcastle; Beta, Hastings, and others.

*** The greater part of our Chess Notices are unavoidably deferred until next week.

PROBLEM No. 566.

By Mr. W. GRIMSHAW.

BLACK.



WHITE.

White to play, and mate in five moves.

CHESS IN THE PROVINCES.

Mr. STAUNTON gives the odds of his Q Kt to a promising Amateur.

(*Remove White's Q Knight from the board.*)

(*Evans' Gambit.*)

WHITE (Mr. S.)	BLACK (Mr. H.)	WHITE (Mr. S.)	BLACK (Mr. H.)
1. P to K 4th	P to K 4th	25. Q takes K P	R to Q 3rd
2. K Kt to K B 3rd	Q Kt to Q B 3rd	26. Q to Q Kt 3rd	B to Q Kt 4th

22. Q takes K B P	Q to K 2nd (*e*)	46. Q takes Q (ch)	K takes Q
23. Q to Q 8 h (ch)	Q to K B sq	47. P to K 5th	
24. Q takes Q B P	Kt takes B		

And, after a long struggle, the Pawns won the battle.

(*a*) The was played apparently with the intention of advancing he Q Kt P next move; but as that would only have driven the adverse Bishop to take up a better position, play ng forward to Q B P was a loss of time.

(*b*) He should have done this on the previous move

(*c*) This was not pla, ed without discretion, and we believe it will be found to be preferable to pursuing the Queen to her square. At the same time, with the White raked too much in leaving the Bishop.

(*d*) Had he taken the Bishop. White would certainly have got a fine attack. Whether sufficient to justify him for his next we will not venture to decide.

(*e*) To have taken the Bishop now would have been a mistake.

(*f*) Threatening to win off hand, by R to K B 5th (ch), Q to K R 3rd. (ch) &c.

(*g*) Better, perhaps, to have gone with the King to Q Kt 3rd or 2nd.

(*h*) Black's manœuvres and counterattacks with his back pieces are to have advanced his own game much, but never, indeed, to have promised a subversary's

(*i*) This was evidently indispos able, or R 5th might have taken the Pawn, checking, and have won the game easily.

THE GIRL I LEFT BEHIND ME.

[MR. SAMUEL LOVER, whose songs are so well known in every circle where tenderness and humour are appreciated, has just published a new song under this title, to the old English air of the same name, with which every one is familiar.]

THE hour was sad I left the maid,
A lingering farewell taking;
Her sighs and tears my steps delay'd.
I thought her heart was breaking.
In hurried words her pa-s on I bless'd—
I breath'd the vows that bind me;
And to my heart in anguish press'd
The girl I left behind me.

Then to the East we bore away,
To win a name in story;
And there, where dawns the sun of day,
There dawned our sun of glory:
Both blazed in noon on Alma's height;
Where, in the post assign'd me,
I shar'd the glory of that fight,—
Sweet girl I left behi.d me.

Full many a name our banners bore
Of former deeds of daring;
But they were of the days of yore,
In which we had no sharing.
But now, our laurels, freshly won,
With the old ones shall entwin'd be;
Still worthy of our sires each son,—
Sweet girl I left behind me.

The hope of final victory,
Within my bosom burning,
Is mingling with sweet thoughts of thee,
And of my fond returning:
But should we never meet again,
Still wor.h thy love thou'lt find me—
Dishonour's be'ach shall never stain
The name I'll leave behind me!

MUSIC.

DURING the last and this week there have been in London no less than four great performances of "The Messiah:" two by the Sacred Harmonic Society, one by the London Sacred Harmonic Society, and one at Mr. Hullah. Performances which have been so often repeated do not call for criticism; but the fact of so many having been given within so short a space is remarkable and interest ng, as showing how deeply-rooted this oratorio—the most sublime emanation that ever proceeded from the mind of a mortal—is in the affections of the people of England. Its freshness is perennial—growing instead of withering, with age. Every year it attracts greater and greater multitudes, and is listened to with deeper veneration and more exalted enthusiasm. In regard to these Christmas performances, as they may be called, which have now taken place, they have all been worthy of the work and the occasion; but we may observe that Mr. Hullah's is entitled to especial notice, as being the result of his own zeal and unaided labours—the magnificent band of choristers consisting wholly of the pupils of his own school, educated and trained entirely by himself, and brought to a degree of excellence which (in this country at least) has never been surpassed.

At Mr. Hullah's next Sacred Performance in St. Martin's-hall a new oratorio is to be produced, entitled "The Nativity," by Mrs. Mounsey Bartholomew. This is the first oratorio that we have ever heard of from a female pen; for, though music is an art peculiarly adapted to the fair sex, they have not hitherto cultivated its more severe and lofty branches. This effort, therefore, of Mrs. Bartholomew, whose musical attainments are known to be of a very high order, will excite both curiosity and interest.

A SERIES of Grand Military Concerts, on a large scale, has been got up at the Crystal Palace. Three have already taken place, and have proved attractive, as they have been entirely of that character. Besides the fine band belonging to the Crystal Palace, there have been also the bands of three regiments of Guards, and of the Royal Artillery. The first part of each concert has consisted of performances by the bands separately, under the direction of their own masters; in the second part all the bands have been united, under the direction of Herr Sol allen. The programmes have been composed of very good selections of pieces adapted for military instruments—overtures, fantas as, and airs from favourite operas; choruses arranged for instruments; marches, quadrilles, and waltzes. These concerts have considerably increased the influx of visitors to the Crystal Palace, and we hope they will continue to do so. Others are announced for the Christmas week. At the first, the music is to be entirely from Handel; at the second, from Beethoven; and at the third, from Mendelssohn. Of Mendelssohn, by the way, Mr. Charles Bacon has just completed a bronze statue, at the foundry in Lower Belgrave place, Pimlico.

THE Rev. Sir Frederick Gore Ouseley, Bart., has received the degree of Doctor of Music from the University of Oxford. Sir Frederick has been distinguished, almost from his infancy, for his precocious and singular musical attainments, and is now one of the most deeply-learned musicians in England. His academical exercise on this occasion, a short oratorio on the subject of the martyrdom of St. Polycarp, was performed in the theatre by a large vocal and instrumental orchestra, composed of the most eminent London performers, and excited the admiration of a crowded audience, as a masterly and effective work.

THE new Catholic Chapel, dedicated to the Blessed Virgin Mary and St. Charles, was opened at Tegbeanth on Tuesday, the 19th inst. The chancel has not yet been built; but the chapel, as it at present stands, relieats the greatest credit on Mr. Hansom, of Bristol, the architect; the west front is especially meritorious for its richness of detail.

RAGGED-SCHOOL TREAT.—We are informed that Mr. Worth, the respected treasurer of Sermon-lane Ragged-school, Paddington, will be enabled, on Tuesday next, to give every poor child attending that valuable institution a good Christmas dinner, by means of a penny subscription, set on foot by himself. It is astonishing what may be done by such efforts. It may be remembered by some of our readers that, last year, the same individual gave a treat entirely at his own cost; and on this occasion he wishes it to be done by a penny subscription, and no larger amount would be received.

A ROBBERS' CAVE.—The Court of Assize at Munich was lately occupied with the trial of a band of robbers, who had for some time back been committing a great number of robberies and several murders. What distinguished these men was, that they lived altogether in the air in a style. They inhabited a vast cavern in the Schulbinger Forest, the entrance to which was concealed by old roots of trees. Two-and-twenty steep steps led to the chambers below, five in number, two of which were twenty feet long by nine wide. In the kitchen was placed a vast fireplace, the chimney of which was in the midst of a thick clump of trees, and, through precaution, fire was only lighted there by night. The robbers had also their stables and storehouses under ground, and at the end of a long corridor there was seen found a sort of sandy storehouse, where they killed the animals which they required for food. The Court examined not only the accused to death, and the others either to imprisonment with hard labour, or to simple imprisonment.

CLOUDED TIGERS,

AT THE ZOOLOGICAL SOCIETY'S GARDENS, REGENT'S-PARK.

THE graceful species which we have taken as the subject of our Illustration, is not only one of the most beautiful objects in the menageries of the Zoological Society, but one of the rarest: the present specimens being the first which have ever reached Europe alive. They were captured in Assam in the autumn of 1853, and are now about fifteen months old. The original discovery of the species did not, however, occur in that country, but in Sumatra, and it is consequently possible that it may also be found in some of the other great islands of the Indian Archipelago. The sumatra name for the animal is *Rimau Dahan* (*Felis macrocelis Temm.*), and Sir Stamford Raffles, we believe, gave it that of the Clouded Tiger. With the Tiger, however, it has no immediate relation; but really belongs to an interesting little group of Leopards, distinguished from the ordinary type by an immensely-developed tail, large shaded blotches of colouring (instead of clearly-defined spots), and generally lower stature, resulting from shortened and thicker legs. The Grey Leopard of Thibet—the true Ounce (*Felis uncia*)—is another example of this form, and would doubtless prove an equally acceptable addition to the Society's fine series of the Cat family, if the attention of Himalayan sportsmen was properly directed to the subject. The extraordinary collection of Carnivora now in the possession of the Society merits an enumeration here; for we believe it to be unequalled in extent as it is at present unsurpassed in point of comfort on.

The Asiatic Lion is represented—the pair of magnificent animals, from the coasts of Goojerat, which were presented to the Society at the beginning of last year, by Sir Erskine Perry, M.P., and then engraved in this paper. Of the African Lion there are seven admirable specimens, varying in age, from an adult six-year-old Nubian male to yearling whelps bred in the establishment. The Tiger, Puma, Jaguar, Cheetah or Hunting Leopard, the ordinary Leopard, the Roman Dahan, the Ocelots, or Tiger-cats, of South America; the Javanese Kuwuk, a type of the Tiger-cats of the Old World; the Lynxes of India, Africa, and North America; all the known species of Hyæna, the Hyæna-dog, the Aard-wolf, or Maraouf Wolf, of Van Diemen's Land—are all admirably represented here, and would by themselves form a larger collection than the whole array of the *menageries ambulantes* which are so devedly welcome in the provinces—spreading as they do the first germs of zoological lore into the nooks and corners of England; and training up hosts of visitors to the huge accumulation of the most interesting objects in animated nature —from the Hippopotamus to the Zoophyte—which the liberality and enterprise of the Zoological Society have gathered together for the gratification and instruction of all who desire it. It is not, perhaps, so generally known as it deserves to be that, for some years past, the whole of the Society's Menagerie is thrown open to the public during the Christmas, Easter, and Whitsun holidays, for the very low price of 6d., as well as on Mondays throughout the year.

To return to the Carnivora, the Cat family being thus copiously represented as above mentioned, the Hyænas, Hyena Dog, Foxes, Wolves, Martens, Otters, Civets, and a host of *Viverrine*, or weasel-like animals, may be added to the list before we give our last attention to the Bears and the Seal. The only notable species of Bear which is not here is the great Grisly Bear of the Rocky Mountains; but his place can scarce y be said to be empty, as we have in his stead the most enormous Russian Bear on record, well known to the readers of *Punch* by his portrait in the "Bear who was to have eaten the Turkey." We have, then, Russian Bears, Syrian Bears, Thibetan Bears, Indian Bears, and American Black Bears. The most recent arrival among the latter

being the much-celebrated "Jenny," which for upwards of five years has been the faithful companion and much-cherished pet of the gallant Tiger; who, wisely thinking that Crimean life might be rather embarrassing to her, have placed her here while they are giving stalwart aid to the immortal Highland band, who, as a French contemporary says, are the soldiers "*qui ne reculent jamais*."

In no imperfect a notice of a single branch of this truly wondrous zoological collection, as we have hastily indulged in *apropos* to the particular animals before us (which are as docile as they are beautiful, playing affectionately with their keeper whenever he enters their den), it is impossible to do justice even to this division of it; but it may, perhaps, serve to give some measure of the gross value and interest of the whole, when we state, as we believe we fairly can, that most of the other great divisions of vertebrate animals are as instructively illustrated as are the carnivora; and that, according to our information, the animals we have mentioned as composing that group consume upwards of 100,000 lbs. of flesh in the course of twelve months; and the annual cost of their provision alone is little, if at all, short of £1500.

CLOUDED TIGERS, IN THE ZOOLOGICAL SOCIETY'S GARDENS, REGENT'S-PARK.

WESTMINSTER PLAY.

THE representation of one of Terence's plays by the Queen's College has not this year been met by any "hindrance," such as a few years since threatened the abolition of this classic custom. It will be remembered that in 1847, the question of its suspension being under consideration, a body of "Old Westminsters" signed a petition to the Dean for the retention of the performances; the petition being presented by the Marquis of Lansdowne. To the eminent Dean Newell, Westminster owes this custom, which Queen Elizabeth rendered obligatory by an express statute, "Quo juvenes . . . . . tum actioni tum pronunciationi decenti melius se assuescat," as the Queen herself expressed it, when she enforced its observance every Christmas by a penalty on those who should cause its neglect.—(*Liber Westmonasteriensis*)

The Play, represented for the second time on Monday evening, was patronised by the usual audience, and supported by the usual acting. The old Old Westminsters" still sat on the left, and the *young* "Old Westminsters, on the right, in the same old dormitory; the ladies were still in the same secluded position which has hitherto belonged to them; the "gods," perched on high at the back of the audience, still applauded by word of command; and "See, the Conquering Hero Comes," still announced the approach of the Head-Master. The same old proscenium still existed before the same old scene, and the opposite domiciles of the "Pamphilus" and the courtesan are still entered by a smart little rap, with a smart little knocker. Nothing is so pre-eminently conservative as the Westminster Play. Once, indeed, a revolution took place, which converted the fathers and sons of Athens from old-fashioned Britons, in bobwigs and opera hats, into veritable Greeks, clad in tunic and chlamys. But that revolution has been followed by no other, and the tunic and chlamys have in their turn become matters of ancient tradition, the contrary whereof no one is bound to recollect.

The play this year is the "Eunuchus," which Terence, according to his own confession, compounded of two separate plays of Menander—the "Eunuchus" and the "Colax"—and thus secured a double amount of success; for, while the former piece supplied him with that notable exploit of Chærea's which used to elicit indignant letters from British "fathers of families," till the scene with *Antipho* was omitted, the latter gave him the *Bobadil* and the *Parasite*, who are perhaps the most diverting personages in the play. The "Eunuchus" was always a favourite work with both the audience and the actors at St. Peter's College. It was last represented here in 1851.

It is rich in the *vis comica*. The attack upon the courtesan's house by *Thraso* and his strange band is a good piece of burlesque "fun," that produces an effect like that caused by the army of "Bombastes Furioso;" *Gnatho* and his portentous friend are certain to be subjects for mirth; *Parmeno*, with his strong woman-hating propensities, stands out in strong relief from the ordinary accommodating slaves of the Davus and Syrus breed; and there is this especial peculiarity, that the lady who wins the love of one of the young heroes is a prominent character; whereas in the other three plays acted at Westminster the heroine of the plot is not conspicuous to the eye. The appearance of a Queen's Scholar in female attire is always greeted with roars of laughter; and, hence *Thais* has, at St. Peter's College, a popularity of a kind which the author did not exactly intend. She is evidently written as a sort of sentimental part, and is intended, with all her faults, to be an interesting, loveable creature—a Rhodian *Dame aux Camélias*; but, let her say what she will, no one is expected to hear her with gravity when she treads the stage at Westminster. Hence we do not wonder that the "Eunuchus" has been brought forward this year a little out of its turn.

The cast was as follows:—

Phædria	.. ..	E. H. Wodehouse
Parmeno	.. ..	J. F. Dickson
Thais	.. ..	C. E. Fisher
Gnatho	.. ..	R. M. Freeman
Chærea	.. ..	H. L. Harrison
Thraso	.. ..	G. F. Wells
Pythias	.. ..	H. L. Thompson
Chremes	.. ..	G. A. aBeckett
Dorias	.. ..	J. F. Ingham
Dorus	.. ..	W. B. Collis
Simo	.. ..	W. W. Follett
Sophrona	.. ..	T. E. Gaskell
Laches	.. ..	J. L. Sim

PERSONÆ MUTÆ.

Pamphilus	.. ..	A. S. Harington
Simalio	Militis	S. G. Freeman
Donax	Servi	S. A. Eden
Syriscus		F. Catt
Ancilla Æthiops		I. Waters
Ancilla	.. ..	W. Henry

The acting of the young gentlemen was of the kind which has long been familiar to the audiences of Westminster Plays—consisting rather of a careful adoption of prescribed interpretations, than of venturous attempts in new paths. If we were to select those who manifested an individuality of their own, we should particularly mention Mr. Freeman, whose *Gnatho*—endowed with some of the characteristics of a modern fop—was represented with uncommon ease and readiness; Mr. Wells, who looked burly enough as *Thraso*; Mr. J. F. Dickson, who, in a very effective though perfectly unobtrusive manner, indicated the somewhat morose temper of *Parmeno*; and Mr. H. L. Thompson, whose *Pythias* came out with great force, in excesses of mirth and indignation.

Though Thursday week was the first night of performance, the prologue and epilogue were not delivered till Monday night—such being the usage of the school immemorial. The prologue, after alluding to the death of two "Westminsters"—one, Mr. Clinton, the author of the "Fasti Hellenici" the other unnamed, but supposed to be Mr. Vaughan Williams—passed on to matters of public interest, and the mention of "Almæ præclaridies" and "Balaclavæ tristis gloria" elicited applause, which was even exceeded by the shout which arose when the Captain, Mr. Dickson, uttered a line contrasting the British soldier with the *Thraso* of the comedy:—

Non noster est ille miles mercenarius.

Whatever was the intention of the writer of the prologue, the line was evidently taken as a stroke at the Foreign Enlistment Bill. The epilogue, which has always been a short dramatic piece illustrative of a popular topic, was on this occasion a mere speech, uttered like the prologue by Mr. Dickson, and referring to the war, its glories, and its calamities in a somewhat similar style. The gravity of the times is the reason for this diminution of the ordinary mirth. The little poem, written with considerable power and beauty, and exceedingly well delivered, was enthusiastically applauded.

Among the audience were—Lord Wrottesley, Baron Alderson, the Dean of St. Paul's, Mr. G. C. Lewis, Mr. M. Milnes, Archdeacon Lane Freer, Dr. Haggard, and Dr. Sutherland.

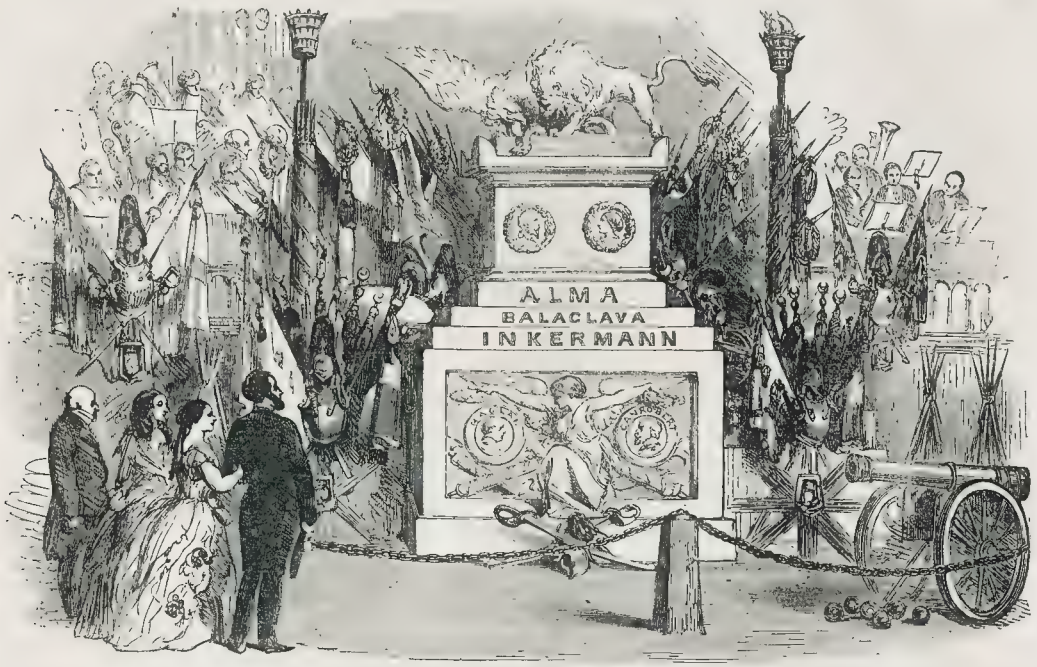
For the last twelve years the representation of the Westminster Plays has gained much in effectiveness and truth from the adoption of the proper classical costume, which was not attempted until 1841. The dresses on Monday evening were admirable for accuracy and neatness, especially those of young *Chærea* (Mr. A. à Beckett), whose white and blue were extremely tasteful and elegant; and *Thraso* (Mr. Wells), who bullied in his crimson and brass with most facetious ferocity. *Thais* (Mr. Fisher), *Chærea* (Mr. Harrison), and the *Ancilla Æthiops* (Mr. Waters), were also perfectly dressed.

The third and last performance took place on Thursday.

PHÆDRIA THAIS PARMENO.

Phædria, touched at *Thais* *Parmeno* cheers at his want of firmness

THE WESTMINSTER PLAY.—SCENE FROM TERENCE'S "EUNUCHUS," ACT 1, SCENE 1.



GRAND MILITARY TROPHY, AT THE CONCERTS FOR THE BENEFIT OF THE PATRIOTIC FUND, IN THE TOWN-HALL, BIRMINGHAM.

THE BIRMINGHAM GRAND MILITARY TROPHY,

AND CONCERTS OF SACRED MUSIC, FOR THE BENEFIT OF THE PATRIOTIC FUND.

THE Orchestral Committee of the Birmingham Musical Festival gave two Concerts of Sacred Music for the benefit of the Patriotic Fund, in the Town-hall, Birmingham, on Thursday evening, 14th, and Friday evening, 15th December. The music consisted of a selection from various oratorios, so arranged by Mr. J. O. Mason, the chairman of the committee, as to render the whole applicable to the occasion. The choir, consisting of 250 performers, together with the principal singers, gave their services gratuitously. The first part of the performance was intended to describe the supplication of the people on behalf of their leaders; the second part, the lament over the fallen; and the third celebrated the victories of the conquerors, and their triumphant return. The great feature, however, of the entertainment was a grand Military Trophy, designed and arranged by Mr. Peter Hollins, the sculptor; and Mr. George Wallis, the head-master of the Government School of Art, Birmingham (See Illustration). The former contributed a spirited group for the occasion, representing the British Lion and the Imperial Eagle of France destroying Despotism; and Mr. Wallis a basso-relievo and medallions "en grisaille," for the decoration of the pedestal and plinth. The relievo represented Fame crowning Lord Raglan and General Canrobert, and formed the panel of the massive base. Medallions of her Majesty Queen Victoria and Napoleon III., Emperor of the French, decorated the pedestal; the remaining portions of the composition being composed of the flags of the Allied Powers, and suitable arms and military appointments. The lighting of the whole was effectively managed by means of bescons, which were most appropriately introduced and gave a peculiarly warlike effect to the whole. It is hoped that the proceeds will be of such a character as to reward the Orchestral Committee, and those who so generously and unsparingly assisted them on the occasion.

WINTER DRESS FOR THE TROOPS IN THE CRIMEA.

To protect our troops from the rigour of the Crimean winter, a variety of new provision has been made in the clothing, with almost unexampled rapidity. We have engraved specimens of these new dresses. The head-dress, or cap, is composed of sealskin, shaped after the fashion of those worn by the Arctic Region explorers, and made to be almost round the entire head. The cap to be worn by the officers is composed of fine brown fur, "helmet shape," and lined with brown silk. A large flap falls under the back of the neck and under the chin, so that very little of the face is exposed. The cap to be worn by the privates is of the same shape, less refined, though as strong in texture. The cap has been pronounced by several officers and non-commissioned officers to be an article which combines warmth with ease. The officer's coat, or cloak, is made in the military style, and is composed of richly-finished fur, brown in colour. The coat for the non-commissioned officers and men is of a somewhat different shape and texture, and will, unlike that of the officers, have a waterproof shoulder-covering.

Officers and men will alike wear very strong overalls, to be composed of cow-hide. Of these, Messrs. Almond and Co., of St. James's-street, have supplied no fewer than 44,000 suits for the men, and 10,000 suits for the officers. They also forward a proportionate quantity of under-clothing, and close upon 50,000 gauntlets or large gloves, composed of fur. We may confidently anticipate the winter clothing will be a great boon to our gallant troops.

The quantity of stores which have been sent from the Tower is astonishing. Amongst other things, a short time since, 90,000 pairs of the best lamb's-wool drawers, 200,000 pairs of gloves, 200,000 pairs of stockings of the best lamb's wool, 50,000 morning-gowns for the hospitals, lined throughout with flannel, and 30,000 great-coats, to be used over those worn on ordinary occasions, when on guard or on picket, were shipped in one day.

WINTER CLOTHING FOR THE BRITISH TROOPS IN THE CRIMEA.

THE THEATRES, &c.

OLYMPIC.—A new piece, adapted from the French (*Les Mémoires de Deux Jeunes Femmes Mariées*), was produced on Monday, under the title of "My Wife's Journal." It consists of three characters only, who are on the stage at the opening of the scene —*Brown* (*Mr. Emery*), *Harcourt* (*Mr. Leslie*), *Mrs. Brown* (*Miss F. Meskel*) and *Mrs. Brown*, in conjunction with *Mrs. Harcourt* (who does not appear), keeps a journal of matrimonial experiences, and exchanges her diary from time to time with her friend. By this means *Brown* becomes acquainted with *Harcourt's* attempt on his wife's fidelity; and, subsequently, with a similar affair in *Harcourt's* own domicile. This knowledge he plays off amusingly on *Harcourt*, who is ultimately punished with a fit of jealousy—the curtain falling on the climax of his retributive agony. The piece was a trifle, and proportionately successful.

CHRISTMAS AMUSEMENTS.

Among the usual excitements to hilarity at this season of festivity the theatres put forward their spectacular attractions. At DRURY-LANE, which Mr. E. T. Smith elects to call "the people's theatre," an entire new grand pantomime is promised, written by Mr. E. L. Blanchard. It is entitled "Jack and Jill; or, Harlequin King Mustard, and the Four-and-Twenty Black Birds baked in a Pie." The subject is of culinary interest, and *Mrs. Glasse* is one of the characters as instructress of the heroine. The kitchen requisites and table ornaments are all animated, and the transformations take place in the gorgeous Temple of Salad. The flight of the Italian brothers from the gallery to the stage will conclude a performance which it is expected will be more than usually exciting. Harry Boleno is engaged to. *Clown*, and M. Milano for *Harlequin*. There are to be two *Columbines*—Mdlle Boleno and Miss Ellen Heavy. A new ballet-performance on Wednesday is also announced. The announcement also mentions the early production of Meyerbeer's grand opera, "L'Etoile du Nord," and of an Egyptian piece, with superb dresses. The latter is a tragedy by Mr. Fitzball. Mr. Smith has also accepted three new dramas; one by Mr. Bourcicault, and two by Mr. A. Harris.

At the OLYMPIC an extravaganza, called "The Yellow Dwarf," by Mr. Plaschke, is underlined; and at the LYCEUM a burlesque, by Mr. Brough, is promised.

At the HAYMARKET Mr. Buckstone will produce his second pantomime, which, we trust, may be as remarkable for its elegance and drawing-room attractions as that of last season. The subject is similar —that of "Little Bo-peep and the Girl who lost her Sheep." Miss Lydia Thompson, the *Silverhair* of last Christmas, is the *Little Shepherdess Bo peep*, Miss Mary Brown the *Columbine*, Mr. Charles *Harlequin*, Mr. A. Barnes *Pantaloon*, and Mr. Appleby, from the Theatre Royal Liverpool, will make his first appearance in London as *Clown*. The opening scenes are painted by Mr. W. Calle it, and are of surpassing beauty. Edward Fitzwilliam has selected and composed the overture and music; Morris and O'Connor have pa nted the scenes of the harlequinade; and, with the assistance of the well-known Edmund Bradwell, a capital pantomime may be expected.

The PANTOMIME at SADLER'S WELLS will be, as usual, by Mr. G. Conwood; and will afford peculiar opportunities for pantomime clowning on the part of *Harlequin* and *Clown*. The theme is "The Forty Thieves."

That at the MARYLEBONE (which is by Mr. Nelson Lee) will be remarkable for its magnificent scenery and decorations, and the effects produced by the grand orchestra of the house, which could, it is said, in that particular, any stage in Europe. The argument is taken from the tragedy or ballad of "Douglas." "Young Norval on the Grampian Hills, or, Harlequin and Lord Ullin's Daughter" is the title of Barnham and Chilman's pantomime for the Britannia. The characteries of the former are upset. In conclusion, *Norval* weds *Lord Ullin's* daughter.

The SURREY pantomime professes to be by the brothers Rumpelstilskin and Piffpaffcolurie, and rejoices in the mysterious title of "Harlequin and Little One Eye, Little Two Eyes, and Little Three Eyes; or, Beasts and beauties." The argument is altogether fanciful, and contrived for scene illustration on a costly scale. Mechanical effects also abound, and a ballet an result is expected.

ASTLEY'S continues to feed the patriotic sentiment by the representation of "The Battle of Alma;" but will, no doubt, introduce from the requisitions of the season by the production of one of Mr. Nelson Lee's pantomimes, which will be named "Gulliver's Travels, or, Harlequin Britannia." The Lilliputians are represented as little Turks, and Britannia enacts the part of a benevolent fairy. The islands of Horses and of Giants furnish incidents and lead to the transformation.

The CITY OF LONDON has, of course, a pantomime from the superintendent of its manager. It is entitled "Birds, Beasts, and Fishes; or, Harlequin a Natural History." The interest is scientific,—the zodiac and zoological tribe furnish matter: and the *Bear*, the villain and the victim: *King Lion* being, of course, master and conqueror in the dispute.

At the ST. JAMES'S the subject is derived from the "Arab in Nights' Entertainment," the story of "Abou Hassan; or, the Hun after Happiness." It is a burlesque, by Mr. F. Talfourd, and well spiced with puns and parodies

Of the extra-theatrical entertainments which now abound, there are a few peculiar to the season, but most are of a permanent character. Mr. Albert Smith will, every evening exhibit Mont Blanc, as usual, at the Egyptian Hall, with morning performances on Tuesday and Saturday. Mr. Love, the polyphonist, has taken the room lately occupied by Mr Woodin in Regent-street Quadrant, and will delight his audience on Boxing-night with the characters and doings of "the London Season," accompanied with those marvellous examples of vent-il-quism which have made his name, what it ought to be, a "household word." Mr. Charles Cotton will yet continue to visit Nelson's Flag-ship the *Victory* and celebrate the repeated occasion, as usual, with songs, and illustrate it with scenery and tableaux.

The ROYAL GALLERY OF ILLUSTRATION continues Mr. Sicquoler's Lectures on the War with Russia.

BURFORD'S BATTLE of the ALMA also will be open in Leicester square; and there the GREAT GLOBE will present to the curious in military strategy a large model of the country around Sebastopol.

The COLOSSEUM will exhibit, daily and nightly, its Panorama of London.

The Gardens of the ZOOLOGICAL SOCIETY will be open to visitors for sixpence, from Christmas eve, until the 6th of January.

The CRYSTAL PALACE announces specific arrangements for Christmas festivities, &c., an extraordinary display of Christmas-Trees, Christmas Gifts, Fruits, and Flowers, and a full band for the season. Also, a Russian Gun and Mortar taken at Bomarsund by Cap an Gifford, R.N., of H.M.S *Leopard*. A series of grand Military Concerts will also be given in the Christmas week, and during the winter.

The ROYAL PANOPTICON OF SCIENCE will gratify the intelligent with its various series of Lectures in Practical Philosophy.

BURFORD'S PANORAMA OF THE BATTLE OF THE ALMA.—Mr. Burford, assisted by Mr. Selous, has just produced an admirable panoramic representation of one of the most glorious achievements of modern times—the ever-memorable battle of Alma—which alone on account of the importance of the triumph, but on account of the great moral effect resul ing from it, being the first occasion, since the Crusades, on which the soldiers of England and France trod the battle field against a common foe. The position for the talent displayed in it, and the care of finish bestowed upon it, elevates this work above the ordinary level of panoramas—is taken from the sloping ground directly in front of the principal redoubt, at the moment when the three battalions of Guards, having overcome all obstacles, are victoriously driving the enemy from their posts, and when the gallant young Thistlewayte is planting the British flag upon the formidable redoubt which had been the key of the Russian position. The figures of Sir Colin Campbell, and the Duke of Cambridge, leading on their respective divisions, are very conspicuous at this part of the picture; and the animation which pervades the surrounding troops, the battle of the fray, the already-pierced and torn colours fluttering in the breeze, and the ground strewed with the dead, the wounded, and the dying, are all depicted with a fire and truthfulness which cannot be too highly praised. The distinctness and individuality of the various groups, in the midst of all this apparent confusion, is a point in which the artist has acquitted himself with remarkable success. On the right, in the face the terrible and blood-stained redoubt, we see the distant lines of the French and Turks; and, still more distant, have a view of the sea, with the vessels of war protecting with their fire the advance of these our allies. In the rear, immediately at our feet, is the little river Alma, meandering calmly, as undisturbed by the horrid din of war which shakes its very bed; and behind that the village of Burliuk, on fire. The pale green surface of the bold hills which surround the spot on all sides add much to the pictorial effect of the scene. Upon the whole, we may pronounce this to be one of the best-painted panoramas which we have for a long time seen, and one well worthy of the occasion it commemorates.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The Consol Market, on Monday, was inactive, and prices were rather drooping:—Consols for the 10th of January were done at 91⅞ ⅜. The Three per Cents Reduced marked 91⅝⅞, and the New Three per Cents, 91⅝ ⅜. Long Annuities, 1860, were 4 5-16 4⅜; Ditto, 1859, 4 1-16. Exchequer Bills sold at 4s. to 7s.; and India bonds, 3s. pm. 2s. prem. On Tuesday much heaviness prevailed in the transactions. Bank Stock was 207½ to 208½. The Three per Cents Reduced fluctuated from 91⅛⅛ the New Three per Cents, 91⅛ to 91⅜; the Consols for Account, 91⅛ to 91⅜; Long Annuities, 1860, 4⅜ 5-16; India Bonds were 9s., and Exchequer Bills, 4s. to 7s. prem. The dealings on Wednesday were trifling, on lower terms. The Three per Cents Reduced were done at 91⅜⅝⅜; the New Three per Cents, 91⅝⅝⅜; Consols for Account, 91⅜ to 91⅝⅜; Long Annuities, 1860, 4 5 16 ⅜; India Bonds, 8s. to 9s. pm. Exchequer Bills have been done at ¾ to ⅞ pm. Bank stock was 208½. On Thursday very little was done in Consols. The three per Cents realised 91⅜⅝ for the Account. The Three per Cents Reduced were 91⅜⅝; and the New Three per Cents, 91⅝ to 91⅝. Exchequer bills were 4s. to 7s. prem.; Exchequer-bonds 99½.

There has been a steady demand for money, the supply of which has continued plentiful, and the interest in the Open Market has remained unaltered. The imports of bullion have been to fling and the total exports, including several parcels to the East, have been under £100,000.

The last return from the French Bank—of 26,000,000—has been paid this week, and several dividends have been advertised. Among them Russian Four-and-a-Half per Cents. The Foreign-market generally has been very flat, and the transactions have been done at 74½ to 74⅝. Brazilian Five per Cents have sold at 98½; Chilian Six per Cents 1[illegible]; Peruvian Four-and-a-Half per Cents, 70½; Russian Four and-a-Half per Cents, 94; Ditto, Five per Cents, 97½; Grand Surrey, 48; Ditto, 50; Loughborough, 375; Neath, 160; Oxford, 110; Peak Forest, 88; Regent's, 18; Rochdale, 90; Stafford and Worcester, 420; Scarbridge, 285. In Waterworks there have been transactions in New Red, 19; New Brunswick, 75; Grand Junction, 70; Kent, 80; Southwark and Vauxhall, 90; New River, —; West Middlesex, 80; and Ditto Annuities. Companies have realised in the City of London, 100; Equitable, 28, Imperial Gas, 94; Phœnix, 2½; Hacking, 70; Westminster Chartered, 38½. In shares of Canal Companies have been—Alliance, 10; Ashby, 18; Ditto, Lia. Council, 42; Globe, 127½; Gosforth, 55½; Imperial Life, 3.5, D. o Life, 14½; Law Fire, 6; London, 39½; Marine, 28; Rock Life, 28; Sun Life, 57½; Victoria Life, 6½. Bridge Shares have ruled very dull: Hungerford, 12; Southwark, 9; Waterloo, 4½; Ditto, Old Annuities of £5, 31; Ditto, New Annuities of £7, 28; Vauxhall, 23.

From an official report just at hand from New York we learn that, since the 1st of January last, 40,000,000 dollars in specie have been exported from America; and that the total home production of gold in the States since the first discoveries in California amounts to 350,000,000 dollars. It is further shown that there is now in circulation 140,000,000 dollars in excess of the same time in 1850.

The business done in Railway shares has been on a very moderate scale, and the quotations almost generally have shown a tendency to give way. The following are the official closing prices on Thursday:—

ORDINARY SHARE AND STOCKS.—Aberdeen, 90½; Glasgow, Nobtnpham, and South Junction 45; Caledonian, 88½; Chester and Holyhead, 14½; Eastern Counties, 11⅛; Edinburgh, Perth and Dundee, 108½; Great Northern, 103½; Ditto, A Stock, 77½; Ditto, B Stock, 104½; Great Western, 78⅜; Lancashire and Yorkshire, 78, London and Brighton, 105; London and North Western, 100½; Manchester, Sheffield, and Lincolnshire, 59½; Midland, 69½; Ditto, Birmingham and Derby, 74½; Ditto, Bristol and Exeter, 74½; Ditto, Extension, —; North Staffordshire, —; Scottish Midland, 94; South Eastern, 58½; North British, —; Shrewsbury and Chester, —; Dock and Railway, 3; Yale of Neath, 17.

LINES LEASED AT FIXED RENTALS.—Bull and Sub-Half Shares, £2. London and Greenwich, 1½; Worcester, 4½.

PREFERENCE STOCKS.—Caledonian, 4½; Chester and Holyhead, 5½; Ditto, Guaranteed, 5½; Great Northern, 5½; Ditto, A Stock, 5½; Great Western, 5½; Lancashire and Yorkshire, 5½; London and Brighton, 5½; London and North Western, 5½; Manchester, Sheffield, and Lincolnshire, 5½; Midland, 5½; North British, 5½; Scottish Midland, 5½; Berwick, 7½; Ditto Extension, —; North Staffordshire, —; Scottish Midland, 5½; South Eastern, 5½; North British, —; Shrewsbury and Chester, —; Dock and Railway, 3; V

AMUSEMENTS, &c.

December 15th, 1854. By Order.

QUEEN'S CONCERT-ROOMS, Hanover-square.—The AZTEC LILLIPUTIANS the reputed Gods of the Mexicans, and the Lilliputian Troupe of the LANCASHIRE Nymphs the barrow under ground). The first of either race ever seen in Europe the advance of which has been much disputed. Grand Fantasmable Exhibitions, commencing Tuesday, 19th Inst., continuing for a few weeks. Doors open at 7 o'clock. Commence at Eight Precisely. Admission, 2s.; Reserved Seats, 3s. Children Half-price. The rules in which the Aztecs and Mr. Pepper, upwards of 300 These most extraordinary little creatures, now united with the Lancashire—a record easy in Instruction, dramatic, comedy, pantomime, race, or gig, and slavery—are now spelling some words, walk unright, and are greatly improved in every way, though of the same Lilliputian stature. EXHIBITIONS for the Holidays will be by Daily in the LINWOOD GALLERY, Le master-square, commencing at No Dec. 18th. Admission Prices—Gallery, 1s.; Body of the Hall, 2s.; Stalls, 3s. Exhibitions by from Three to Five and Seven to Nine o'clock in the Morning and Night. The Rooms, having been built for the purpose, will accommodate 1500 persons at a time. The arrangements adopted will enable all London an opportunity of beholding two kinds of human beings never before seen on this side the Atlantic fully grown, and the length of a man's arm—every way a most interesting proportioned, black glossy hair, deep olive complexion, and with the appearance of health by the natives and moral advantages around from the dust of centuries in the trackless deserts of the old World, and the far distant forests of the New. Mr. Charles Wallwood, Mr. Henry Smith, and Mr. W. J. Morris, on the business department, will assist in the management of the Aztecs and Mr. Pepper's Lilliputians, and who (since the Aztecs have been in England) forming an entertainment unlike any before introduced to the London public. History of the Aztecs, by Prince Poles, Sc. in Dublin, Belfast, Glasgow, Manchester, Liverpool, Leeds, Bradford, York, Hull, Nottingham and Birmingham. They have presented a new era in the appearance of persons said to a the Aztecs at the Zoological Gardens, Liverpool, in one day. N.B.—The REFRESHMENT will appear with the Aztecs at Hanover-square, also at Leicester-square every Evening. Admission to the Refreshment Department, 1s. Private Box Plan and Mr. Smith's Company's Polka (dedicated, by permission, to the Duke of Cambridge), 2s. 6d.

THE CONSERVATIVE LAND SOCIETY.—The FIRST DIVIDEND upon Shares declared for the year 1854, of Seven per Cent, will be posted to the Accounts of the Members on the transmission of their Pass books to the Secretary.

CHARLES LEWIS GRUNDY.

Offices, No. 33 Norfolk-street, Strand, London, Dec. 23rd, 1854.

CHAPPELL'S FOREIGN MODEL PIANOFORTE, Price Fifty Guineas.—This instrument has (unlike the ordinary Cottage Pianoforte) Three Rows of Keys, and the Scale is Grand compass of Seven Octaves. It is strengthened by every possible means to endure the greatest amount of wear, and to stand perfectly in any climate. The workmanship is of the best description, the tone is round full, and rich, and the power equal to that of a Second Grand The case is of the most elegant construction, in rosewood, the touch exacts, and the repetition very rapid. Every possible expectation has been taken to insure its steadier well in tune. Mr. Chappell especially invites the attention of the public, the profession and merchants to the Foreign Model, feeling assured that no Pianoforte, at all respects, comparable, has hitherto been made in England at the same price. Every instrument will be warranted, and (if desired) exchanged within twelve months of the purchase.—50, New Bond-street, London.

AUSTRALIA, AMERICA, EAST and WEST INDIES, &c.—The practical experience obtained during the on years' colonial and a long residence in the city, enab e the undersigned to offer many unusual advantages to ship ers, and keepers settlers, &c., &c. Every facility afforded emigrants. Rates strictly moderate. Offices, 14 Leadenhall-street, New Inn, Strand, and 21 Newcastle.—Apply to WM. BARNETT and C., 33 Philpot-lane London.

J. W. GILBART, General Manager

CITY of LONDON HOSPITAL for DISEASES of the CHEST, Under the patronage of the Princess of WALES, and H.R.H. PRINCE ALBERT, K.G., &c. Treasurer—H. R. H. the Prince ALBERT, K.G. Trustees—The Right Hon. the Lord Mayor, the Sheriffs, and Chamberlain. Special Appeal for opening the new Hospital, Victoria-park, in the Eastern suburbs. The Board of Managers having determined, in withstanding the inadequate funds, upon the completion and furnishing of the Hospital, to open the new Hospital at the Victoria-park, in the ensuing Spring, for the reception of the Chronic and the Incurable Classes of patients, it is hereby intended to add them in the accompaniment of this Notice which they hope to receive support.

The Board have come to the decision, under a deep conviction of the urgent necessity which exists for the immediate completion of the Hospital, and they trust therefore in their endeavour to open the wards at the early period of the year, to be sustained by the cordial and active co-operation of the public.

The present extreme weekly attendance of out patients amounts to the large number of 600, and very many of those require that most efficient treatment which the wards of a hospital only can afford.

The Committee have the pleasure to announce that a PUBLIC FESTIVAL is commemorate the opening of the new Hospital, will be held on the TAVERN, on WEDNESDAY, the 24th day of JANUARY next and that the Right Honorable the EARL OF CARLISLE, has kindly consented to preside, and intends his presidency on the occasion.

Donations and Subscriptions will be thankfully received by the Treasurer, H. E. Gurney, Esq., at 65, Lombard street, the Bankers, Messrs. Barclay and Co., Messrs. Coutts and Co., Messrs. Masterman and Co., by the Honorary Secretary, Sl, Old Broad-street, and by the Secretary, at the office, 5, Liverpool-street, Finsbury.

F. SEWELL, Honorary Secretary.
RICHARD F. MARTIN, Secretary.

BRANDY.—Dr. URE and Dr. LETHEBY having analysed our EAU-DE-VIE, concur in pronouncing it "a pure and delicious Cognac, possessing very fine flavour, perfectly wholesome, and decidedly preferable to do not imp imitations from Cognac." No. 720.—VOL. XXV.—DEC. 23, 1854.

THE COOK'S STORY; OR, HOW THE PLUM PUDDING WAS MADE.

[EXPLANATORY OF THE ENGRAVING ON THE TITLE PAGE.]

COOK SALLY had a curious dream, the other day, whilst sitting in her chair in the kitchen: She says herself that it was not a dream, but a "vision," and that she was quite wide awake all the time. Of this you will be able to judge for yourself when you have heard her story, which is here, every thing just as she says it.

She was sitting in her chair in the kitchen awake and [illegible] every minute, [illegible] a strange noise in the pantry. She began to fancy what could cause the noise, but could not make it out, and at last she determined to go and see. She was just on the point of rising with this intention, when the door of the pantry suddenly opened, and a funny imp with a horse's head, rolled a beautiful little fire-escape over the floor—close up to her. Standing on one of the lowest bars of the fire-escape, was a handsome little fairy dressed like a guardsman: his cutlass shone splendidly in the light which the fire threw upon it, and the plumes of his helmet nodded gracefully as he gave airs to his little head. Of course Sally was [illegible] alarmed at his strange appearance; so she stared at him [illegible] "Sir," said she, [illegible] she makes a point of *never* speaking to [illegible] till [illegible] addressed her, however, knew his manners better [illegible] below her example. He kissed his little fingers at her, [illegible] sweetly upon her, and bowed till his plumes touched the top [illegible] fire-escape. Having thus saluted her, he drew himself up and addressed her, saying that he was her slave, and that *his slaves* awaited her commands to have the plum pudding made. "Sir" said Sally, hardly knowing what she was about, "I am sure I am very much obleeged to you!" though to tell you the plain truth she wished him far enough. The guardsman then assured her that her commands would be immediately executed; and turning round, stamped, in a curious little language of his own, as if he were [illegible] horse. He was scarcely [illegible] speaking, when there sallied [illegible] kitchen, from the pantry, quite an army of little imps, [illegible] no one (except Sally) ever saw. Some of them rolled in casks; some drew sacks of flour after them; some pushed fire escapes before them, and some carried ladders. One company, all black and sooty, brought sacks of coals on their backs, and erecting a little crank, hoisted them by pulleys on to the fire; another company, all neat and clean, pumped up water into the pan which [illegible] it. Several little tailors, who [illegible] were quite [illegible], being covered with patches of many colours, brought in a beautiful piece of linen, which they got upon the dresser by means of a ladder. Having got it there, they pulled hard at its ends to stretch it, and remove the creases; and while doing this, spoke a great deal about "Oirland;" and Sally overheard one of them saying proudly, that "there never was no finer bit of cloth for a plum pudding com out of the ould counthry." There were besides [illegible] imps in cotton shirts and trousers, with black crispy [illegible] white shining teeth, who had rolled in a little cask. They turned it upon its end, close to the table, struck off the two upper hoops, and removed its head-boards. Then one of them got up upon it with a shovel, and fill'd the others' hods with sugar, which they carried over their shoulders up the ladder, and on to the [illegible] they tumbled it on the cloth, that the Irishmen were stretching. The sugar no sooner fell upon the cloth, than there came funny little men cooks, with paper hats on their heads, and [illegible] hands to spread it out and break the lumps.

While this was going on at one end of the dresser, the lilliputian millers, who had brought in the flour bags, were very busy in front, hoisting the bags by means of rope tackle, up a ladder to men-cooks who received it and put it into the dish in which the pudding was to be made. All this time, Sally was "scared," as she says, by the number of odd creatures, that were hurrying about upon the floor. There were imps with cows'-heads, carrying pails of milk, others with horses'-heads, carrying eggs; some with dogs-heads licking the dishes clean! On the table, close by her, (she says she could touch them with her hand) were imps with ox-heads, chopping up the suet, while some with birds-heads were busily picking the raisins from the stalks close to her feet! and others carried them in dishes up a fire-escape which was placed against the table and tumbled them into the flour. The most amusing imp of all, however, was on the further corner of the dresser—a cook with a hen-head, busily beating up the eggs in a saucer! By the way, I was going to forget one hearty little imp, sailor Jacky, who seemed to have nothing to do but to amuse himself. It was indeed, as Sally says, some time before she herself noticed him under the dresser, where he kept dancing a horpipe, with wide white trowsers on, a full breasted striped shirt with a rolling collar, and a sky-blue handkerchief, the end of which flew about as he danced. His jacket was blue, with brass buttons; he had no waistcoat on; his hair was jet black, flying in ringlets; his eyes were glancing, fingers snapping, and his curls, his neckerchief and the ribbons of his white straw hat kept flying about in all directions as he kept about it in a merry hearty whistle.

The imps were all so busy at their work, they took not the least notice of Sally; but I fear she didn't mind that much, so agreeable did the polite little Guardsman succeed in making himself to her. When her first surprise had subsided, he drew off her attention from his workmen, the imps, and launched into poetical praises of plum-pudding. That which he had the happiness and honour of making for [illegible] would, he said, be so very nice and light that it would hurt [illegible] how much soever he took of it. Speaking further on this [illegible] he asked her whether she would like to see the places from which he had got the materials for that which his men (the imps) were now making? She had scarcely given her assent to the proposed exhibition when, as if it were in a dream, she saw a beautiful field of standing corn, and reapers hard at work with their coats off, their neckerchiefs tied round their waists, and their shirt-sleeves tucked up above their elbows. She saw the corn bound in sheaves, and set up in stacks, and the farmer's house in the distance among trees and from this field, her polite companion told her, the grain came. He next brought her to a strange scene,—an avenue leading up to a fine mansion, and flanked on either side by fields covered with the tall stalks of the sugar plant. The mansion, he told her, belonged to a very fine gentleman, whose slaves the poor negroes were who worked so hard under that hot sky to make him rich, and to get sugar for the plum pudding. She was then brought to a hill, on the top of which stood a windmill, whose pretty white sails played round and round in the sunshine as if they enjoyed it. He told her that the wind had worked for the plum-pudding, and showed her the tall stalks of the sugar plant. The mansion, he told her, belonged to a very fine gentleman, whose slaves the poor negroes were who worked so hard under that hot sky to make him rich, and to get sugar for the plum pudding. She was then brought to a hill, on the top of which stood a windmill, whose pretty white sails played round and round in the sunshine as if they enjoyed it. He told her that the wind had worked for the plum-pudding, and showed her the tall stalks of the sugar plant. But her companion would not let her attention rest on these; he pointed out to her a man standing upon a ladder, who plucked the grapes and threw them into a basket which a little girl held up to receive them: and another on the ground who carried the grapes away to be dried. This, he told her, was a vine country, and these were the people who had prepared the raisins for the plum-pudding. Once again she was led back to England, and looked on a farm yard, where many hens and cocks were picking up grain. One fine cock, with a beautiful comb, and long, sharp spurs, strutted about the yard like a prince. She saw there, as well, a little dirty pig snouting the mud, and a fine cow [illegible] looking very kind and wise; she saw the farm house and the dairy-maid at work hand and hand, and a pretty little church, with a slender spire, standing away in the distance. From this place, he told her, had come milk, and eggs, and suet for the plum-pudding.

And now her singular conductor carried her away from the land altogether, away through mists and fogs, and over surfs and surges, far, far out to sea, where she saw a ship under full sail, which he told her was the "Homeward Bound," hurrying with sugar, and lemons, and citrons, and nutmegs, and all sorts of spices for the plum-pudding. Aboard of this ship she saw one that put her in mind of sailor Jacky, dancing the hornpipe under the dresser. He was there sure enough, hauling a rope and singing a song, so she now understood why he did no work in the kitchen while the other imps were so busy. But here comes the most strange part of the story, considering that Sally denies that she was asleep: she saw *herself* at the counter in CLARKE'S, the baker's, ordering flour, and the saucy young baker's boy, who brings out the loaves, leering at her; so, she saw herself at NEAL'S, the grocer's, buying all kinds of spices which the ship had brought.

And then the spaces seemed to her to be but young and growing, and before her eyes was a jumble of everything her companion had shown her or told her about. She saw lemons, nutmegs, citrons, oranges, wheat, mistletoe, apples, and holly, all growing out of the same trees, and so funnily arranged she couldn't make them out. And among them, all in the trees and flowers, there were growing bottles, and glasses, and spoons, and eggs, and milk-pails: it was quite puzzling to her. She saw her master and mistress wakening up in curious flower-beds, on opposite sides of a plum-pudding; her mistress, remembering it was plum-pudding day, rung the bell violently for her; her master yawned, like a lazy man, and went to sleep again. In another place she saw her master pulling out his watch, wondering when dinner would be on the table, and her mistress bidding the bellows to blow the fire, lest it should not be ready in time; again she saw them in their dressing-rooms, preparing for the party. At last she saw the party itself in the parlour, all sitting happily round the table, her mistress helping the plum-pudding, and her master eating it. Presently she saw nice and light it would be, and, not saying who told her so. When it came back to the kitchen she had a large help of it herself, and she thought (how curious all this in a dream) that it was quite delicious; and then she saw her master looking very ill, and her mistress looking as ill, while a bottle to see if there was enough for him; and what was so strange, all this seemed to be going on among the mistletoe, lemons, nutmegs, wheat, holly, oranges, and citrons.

At last, Sally says, she went to bed, quite pleased with the way the day had passed. Of course she made up her curls, and put on her nightcap, and drew up the blinds to admit the gas and moonlight before she got in, all cozy; and then she put the extinguisher on her candle, which rested on the table close to her pillow. She was thinking over the curious way in which the pudding had been made, and wondering what her mistress would say if she knew of it, when she heard a strange noise on the floor, as if people were walking about on it, and rolling things on wheels upon the carpets. Sally was, as you think, a little frightened at this, and turned her eyes sideways, without moving, to try if she could see what was going on. By-and-by the wheels were rolling close by, and to her great surprise there appeared the little guardsman, of whom she had lost sight among the trees, and fruits, and spices. He came up upon his fire-escape right over the bed, with his drawn sword in his hand, the blade of which was dripping with black-draughts and covered with pill-dust. He told her not to be afraid, and behaved as politely as in the morning, only Sally thought he sneered when he told her that the pudding was so light and nice it wouldn't hurt her. Then there was such a clatter, Sally never heard the like: so she lay upon the pillow and looked on the floor, and there she saw all the imps of the morning making mischief. There appeared such an array of pill-boxes and black-draught bottles against the walls, that she felt the bed, to make sure that she had not lain down by mistake in a druggist's shop. Imps with elephant's heads were pumping water out of a fire-engine on to the pills; the little blackies were breaking the black-draught bottles with their hods and shovels; the Irishmen were whooping furiously, and a farmer with a pitchfork was digging into the pill-boxes from the top of a fire-escape, while some of the bottles were bursting their corks, and pouring themselves out upon the imps, and the pills lay about like peas on a barn-floor. The noise of these mischievous imps was kept up at night, and even if she could go asleep in spite of *that*, the polite little guardsman continued till it was broad daylight, telling her, over and over, how nice and light the pudding was, and how it could hurt no one.

CHARADE N. I.

My first is found where'er Man is found,
On earth, in air, or water—underground;
King, Lord, and Peasant should be held dear,
Unless he knows himself to be my first.
And I could tell to whose happy lot shall find
Each friend my second, which must e'er be kind.
Unite my parts, and then at once you'll see,
Without my whole nor you nor I could be.

CHARADE No. II.

My first is oft in Chancery! luckless brute!
My second also is a Chancery suit;
My whole would make Cervantes [illegible],
[illegible]

PRIVATE THEATRICALS

ARE now so generally encouraged both in Town and Country at this season of the year that we have written the following dramatic sketch, especially for [illegible] amateurs, believing that its development will not require any very extraordinary [illegible] and any good-natured friend will officiate as the musician. We have made the gentleman of the piece an Irishman, as a brogue frequently assists "a part," and very little ingenuity is required to convert him into an Englishman, should such a change be considered desirable. The songs* may be omitted, or others substituted for those in the drama.

A PLEASANT HOUR

DRAMATIS PERSONÆ.

MADEMOISELLE MADELINE LA FLONCE, AND TERENCE DERMODY.

The Room represents the Interior of a temporary Railway Station. On the wall a large printed bill "Temporary Station of the Dooborough and London Junction,"—a fireplace, and a door at the side.

Enter MADELINE, *followed by* Porter *bearing a trunk, bonnet-box, birdcage, &c.*

Made. (*She speaks with a slight French accent.*) Two hours to London, you say, will be here in ten minutes?

Porter. Yes ma'am, up train in ten minutes. [*Exit* Porter.

Made. I need not have hurried away without my breakfast—*mais n'importe.* I shall enjoy my dinner the more when I get to London. What a time it is since I saw my cousin Clara. She was then a child, and now she is married and occupies one of the best houses in the Strand. With the money I have saved in the service of Lady Bouverie, I am about to purchase a share of Clara's business. How odd it will be to see my name in large gilt letters over a shop door—"Mesdames Crinolin," that's Clara's name; and "La Flonce," that's mine. I wonder whether I shall ever change it. I am two years older than Clara, and yet I never had a lover. Dear me, what nonsense I am thinking about.

Dermody. (*within.*) Where's the waitin' room, my friend. O, that is it (*entering*) is it? I'd have tuk it for an overgrown sentry-box, if you hadn't a told me.

(*Enter* Porter *with* DERMODY'S *bag.*)

(*Reads.*) The Trumpery Station of —

Porter. Temporary Station. Temporary!

Derm. If it's all one to you, I like my own reading best. (*Reads.*) The Trumpery Station of the London and Dooborough Junction.

Made. An Irishman. I dislike Irishmen, they are so very presuming.

Derm. Now please tell me, what time is the down train expected?

Porter. The *down* train, sir?

Derm. Yes, the down train to Liverpool.

Porter. In about ten minutes.

[*Exit.*

Derm. Ten minutes! and that fine woman could me I hadn't a second to lose! I've left the sweetest pig's cheek untasted on the breakfast table! No matter, my good brother Larry's larder will reward me for my sufferings. Only to think that we two Dermodys have been [illegible] and ten years ago, with nothing but our mother's blessin', and [illegible] what we are. Larry's an eminent market gardener and dealer in [illegible], and I am an independent gentleman with £50 a year, paid quarterly, a legacy from my dear old master, Colonel Peppercly, £50 a year for ever, provided I don't marry a (*with contempt*) French woman.

Made. (*To her bird*) *Ma petite! Ma petite!*

Derm. St. Anthony defend me, there is one! Ugly of course, or she'd never wear that blue waggon-tilt over her face. She *looks* a good figure, but we live in an artificial age, and there's no trusting to appearances.

Made. Ma petite. You shall go to London, you shall, my pretty bird.

Derm. I don't wonder at the Captain's dislike, they talk such gibberish that you can never understand what they say. Sure he hated them mightily, and so do I, as much as an Irishman can hate a petticoat; but I've fifty good reasons paid quarterly for my prejudice. (*Whistle's heard.*) Hallo, there's the train (*goes to door.*) Is that the *down* train?

Porter. No.

Made. Then it's the up. [*Gathering her luggage together.*

Derm. Why, there's only an engine. Pray, ma'am, are you going to ride with the stoker?

Made. No, sir.

Derm. (*To* Porter.) Where are the carriages? What? Here's a pretty shindy, ma'am.

Made. A shindy. What is that?

Derm. Oh, I forgot, you can't speak English. Why, the embankment, do you understand that, ma'am.

Made. O, yes.

Derm. Well, the embankment's gone to smithereens.

Made. Smithereens. *That* I do not understand.

Derm. Made'ar, Poor benighted creature. The embankment's away, and the [illegible] *down* can pass for an hour at least.

Made. That's unfortunate, but we must be patient, that's all

Derm. (*Aside.*) Patient, with a breakfast overdue, and shut up with an ugly old Frenchwoman in a blue mask.

Made. It's very cold, I wish that gentleman would shut the door.

Derm. (*Leaves the door open.*) I never could bear confinement in my life, and what I'm to do here, shut up for an hour, I don't know.

(MADELINE *closes the door.*)

I suppose like a bear in a menagerie, I must polish my nose against the bars of the window by way of amusement (*Goes to window.*) Hallo! (*Opens window.*) Is that a newspaper you have?

[illegible] No it beant. It's nothing for you.

* The music is published by JULLIEN & Co., Regent Street.

Derm. (*Leaves window open.*) That's what they call manners in these parts.

Made. What an inconsiderate personage.

[*Shuts window and removes her sun-shade.*

Derm. What will I do to amuse myself? I'll try a cigar; perhaps madam there may'nt object. I presume you don't smoke, ma'am?

Made. No, sir. I should have thought that question would have been unnecessary.

Derm. (*Not looking at her.*) No offence, I hope, ma'am, but some elderly ladies of my nation are rather partial to a dudeen.

[*Taking out his case.*

Made. Elderly ladies! (*Aside.*) Is the fellow blind as well as rude?

Derm. May be you don't object to my doing so, ma'am?

Made. O, sir, I have no right to control your enjoyments. Possibly my closing the door and the window may have been disagreeable to you, as you seemed to wish them open, therefore—

Derm. (*Aside.*) Very pretty for a Frenchwoman. (*Aloud.*) And was I the ill-mannered man to leave them open. (*Aside.*) She can't have got those eyes from the milliner's. (*Aloud.*) Will you forgive me? (*Aside.*) Those cheeks were never bought ready made.

Made. How rudely he stares.

Derm. I see you're good natured or wouldn't put my pipe out; but I'm not so fond of myself that I'll disregard the convenience of another. (*Aside. Puts up case.*) I wonder if she is French.

Made. I am much obliged for your consideration, for I really have a great objection to the odour of cigars.

Derm. And yet you wouldn't say so. (*Aside.*) She calls it "odour" too, as the Miss fancied that I'd be hurt if she called it a smell.

Made. He's not such a bear as I imagined, but I must be careful, he's an Irishman.

Derm. I'd like to talk to her, because she speaks French that a Christian can understand, but my tongue seems to fall me of a sudden. I can't tell her it's a wet day, because she knows it is already. The state of the weather's a good bit of leading information to begin a conversation with. I'll ask after the health of her canary. Pray, ma'am, is that a canary?

Made Yes, sir, a great favourite

Derm. I'm mighty fond of canaries myself.

Made. Indeed, sir.

Derm. My mother had a canary, and so had my sister; and I'd three cousins in Connaught that kept them too. In fact, ours is quite a canary family.

Made. Really, sir.

Derm. (*Aside.*) She's like the Maze at Hampton Court—she's nothing but stops. I've exhausted the canary subject. I'll have another shot. Pray are you going *down*, ma'am?

Made. No, sir, I am going up.

Derm. Oh, up!

Made. Yes, sir, up!

Derm. What, up to—

Made. Yes, sir, up to—exactly.

Derm. Exactly. I don't know that place on the line. It's clear she prefers solitude, and society has no charms for her. I'm getting mighty cowld, and that fire seems to have an airy place of it, for it goes out when it likes. Ah! She was taking a squint at the inside the caves of her bonnet. Those Frenchwomen know how to use their eyes. She's flustered. I'll ask for some more coals, and, ma'am, she'll warm up into something yet. (*Goes to the door.* Hi, Porter! We want some more coals here.

Porter. I can't get 'em. I'm busy with a signal. There's plenty at the end of the shed.

Derm. Do you hear that, ma'am? It's lucky I'm not a nobleman, or may be, I'd be above getting coals for myself; but that's a privilege I've enjoyed ever since I was foot-boy to Dr. O'Flaherty. [*Exit.*

Here, where are they?

Made. Really, he's not a bad fellow after all. Like myself, he seems disposed to make the best of his bad bargain, and I have always thought it better to have a merry heart than a sad one.

SONG.

Bright things are ever beautiful,
The stars when first they band the moon,
The flowers when each seem too bright to cull,
For then they fade so soon.
The streamlets sparkling as they run,
How bright and glad they seem,
As though they'd captive made the sun
And bound him in each stream.
Bright things &c.

Then as I love the stars of Heaven,
The flowers of the earth,
The streamlets and the streamlet given,
I pray to smile on mirth.
I would not wear a look of woe
Unless my heart's oppress'd;
Smiles are for me where'er they show
The truth within the breast.
Bright things, &c.

Enter DERMODY *with a few very small coals in a shovel.*

Derm. There, ma'am! Are you a judge of small coal?

Made. I can't say that I am, sir.

Derm. If you was, you'd admire my perseverance. You'd have fancied I'd been in California, hunting for gold dust instead of black diamonds in a coal-hole. There's the result of my labours at the Trumperary Station of the Doobcreagh Junction. [*Goes to fire.*

Made. I am sure I ought to be obliged to you for taking so much trouble.

Enter Porter, *he goes to a corner and takes down umbrella.*

Derm. Hallo! Are we going to lose the pleasure of your company?

Porter. Yes, sir. The train won't be here for some time, so I'm going home to dinner.

Derm. (*Interposing.*) Hist, a word with you. Would it materially interfere with your domestic arrangements, if you take a couple of friends home with you?

Porter. Rather. I don't keep a Refreshment Room. I'm only a porter.

[*Exit.*

Derm. And not a good fellowship porter, either. I wish he hadn't mentioned that word dinner.

Made. Indeed. Why, sir?

Derm. Because it reminds me of an absent friend. Ha, ma'am! I'm a man that has neglected his opportunities.

Made. Indeed. I am very sorry to hear that, tho' it's not a common fault, I believe, with your countrymen.

Derm. Indeed it's not; but this morning I neglected the opportunity of getting my breakfast.

Made. I'm sorry to say that I am in the same predicament. Fearing to lose the train—

Derm. You lost your breakfast, my case also.

Made. I am, however, not altogether without the means of retrieving my misfortunes. I have a small packet of sandwiches, which are equally at your service.

Derm. This generosity overpowers me. [*Seizing her hand.*

Made. O sir, you are too grateful. [*Withdrawing her hand.*

Derm. Not in the least; and to prove it, I'm ready to make a sacrifice, which none but an Irishman can appreciate.

[*Gets his bag.*

Made. Pray, sir, explain yourself.

Derm. (*Kneels and opens bag.*) That's what I'm about to do. In this Kidderminster receptacle—which some benevolent creature invented for the good of man—are two remarkable productions of nature, which I had intended as a present to my brother Larry Dermody, Market Gardener and Coal Dealer. Don't be alarmed, ma'am.

Made. I'm not. I'm only anxious to know your meaning.

Derm. They might have been the parents of a numerous progeny that would have filled everybody's mouth with the name of Dermody, for they were destined to bear that hitherto unillustrious patronymic.

Made. I can only listen, sir.

Derm. That's all I ask you to do. I am now about to sacrifice my dreams of fame on the altar of—on the altar of—I dont think there was a god or goddess of hunger; but it's that I mean, and there was a pair two (*one in each hand*) of the finest seedling potatoes that ever blessed the eyes of man.

Made. I appreciate your sacrifice; but pray do not make it on my account.

Derm. Don't try to alter my resolution; my only regret is that they can't be boiled—a pound of flour in each of them—as it is, we must roast them; and proud they'll be to be offered to such a divinity as yourself, ma'am.

Made. Divinity! What, am I to be the goddess of hunger? Rather an equivocal compliment.

Derm. (*Arranging potatoes as fire-place.*) Ah! that's my misfortune, ma'am. I'm a bad hand at compliments. I never open my mouth but I put my foot in it. I don't know why, ma'am, but I'd like to stand well in your good opinion.

Made. (*Aside.*) I hope he's not going to make love to me.

Derm. You see I didn't like you at first, because you were a Frenchwoman.

Made. And I didn't like you, because you were an Irishman.

Derm. But I've changed my opinion mightily, have you?

Made. Why, I suppose I must say, yes.

Derm. It makes the old story good. You can't tell what anybody is till you know what they are, can you?

Made. Certainly not. (*Aside.*) This is getting embarrassing.

Derm. It's like Aileen McCan and the little brown man.

[*Takes her hand.*

Made. (*Withdrawing it.*) Aileen McCan. Who was she?

Derm. Oh, it's an old song my mother used to sing to me. If you'd like to hear it whiles the dinner's getting itself ready there, I'll sing it to you.

Made. Pray do. (*Aside.*) Anything to get rid of his attentions.

Song,—DERMODY.

With snowy May-blossoms one bright summer's morning,
Young Aileen McCan was her brown hair adorning,
Her cheek was as fair as the buds she was wreathing,
The blossoms less sweet than her own balmy breathing.
Aileen's glass was the stream
Through the valley which ran,
And lo! there on the bank,
Stood a little dark man.

When she saw him she started, small blame to the maiden,
For his back with a mountain appeared to be laden,
His raven-black hair in long silk locks down flowing,
And his small jetty eyes like two fires were glowing;
"O mavourneen," he said,
But away Aileen ran,
And she heard a deep sigh
From the little dark man.

Aileen's father took ill, and to add to their sorrow,
Their cow, *Gluiss l'* was dead on the morrow;
The winter was near and their wealth all departed,
And Aileen *Machree*, was almost broken-hearted.
But the night brings the morn,
Thought poor Aileen McCan,
And lo at the door
Stood the little dark man.

O why came he there, for it was not to woo her,
He knew he was scorned, but his heart was true to her;
True love knows no anger, and although 'twas slighted,
By the kind word and deed all his coldness requited;
"Who so kind? Who so true?"
Sighed young Aileen McCan,
That thought made her the bride
Of the little dark man.

Derm. So you see there's a precedent for altering your mind if you wish to do it.

Made. Oh, yes, I dare say that. I think I'll look at the sacrifice on the hob, I mean the altar which you have dedicated to me.

Derm. Do, *darling.* (*Madeline looks round.*) (*Aside.* That's a straw to see how the wind blows.) Whilst you're busy with the hopes of the Dermodys, I'll be laying the table for dinner, (*brings down* MADELINE'S *bonnet-box,*) here's the dining-table, (*takes a clean pocket-handkerchief from his bag,*) and there's a table-cloth —now do you like that ma'am?

Made. And stay, I have a small knife and fork and spoon, the gift of my god-mother (*goes to her what-not*). I had nearly left them behind. [*Gives case.*

Derm. Well, I didn't expect to be supplied with plate in a hurry. (*Draws down trunk.*) There's one seat and there's another.

[*Places carpet-bag.*

Made. And there are the sandwiches, ready dished up in paper.

Derm. Beautiful!

Made. I think, sir, the potatoes had better form the second course.

Derm. If you please, ma'am, tho' what say you, as they are called Irish fruit, to making them the dessert?

Made. I'm quite agreeable.

Derm. That I'm sure you are. (*Feels first in one pocket, then in the other.*) O butler, what have I done with it?

Made. What's the matter, sir?

Derm. Faith, I can't find out which pocket is the wine cellar. I've a small flask—oh, here it is! (*produces a wicker flask with a cup-bottom*) a drop of the most particular East Injy Madeira, a small token of regard from my old friend the butler. If it hadn't been for that deceiver of a fly-driver it would have been a bottle, but the butler has an asthmy and he couldn't get up and down the cellar stairs in a hurry [*Places cup and flask on the bonnet-box.*

Made. Dear me, quite a banquet, I declare. (*Aside.* How foolish it is to have prejudices! I never will dislike an Irishman again.)

Derm. (*having arranged everything*). Now, madam, will you allow me the honour of conducting you to the trunk or the carpet-bag?

Made. Oh, the trunk if you please. I'll leave the ottoman to you.

Derm. Thank you, ma'am. (*Aside.* I wonder whether she could'n't be naturalised to the country and made an Englishwoman.) Will you do me the honour to carve?

Made. With pleasure. Will you take a square or a triangle?

Derm. I have no choice, ma'am, but to remove every difficulty I'll take both. (*Madeline helps him.*) 'Pon my word I don't think I ever tasted a finer sandwich.

Made. Nor I. I presume because we are disposed to be pleased that we are so.

Derm. I suppose so. Will you allow me to take wine with you, ma'am?

Made. Thank you.

DERMODY *fills the cup.*

Derm. Here's your very good health, ma'am. (*They bow—*DERMODY *drinks from the flask.*) I wish there was another dozen in the cellar.

Made. Will you oblige me by stepping to the kitchen? I think the sacrifice is burning.

Derm. Beautiful. They're done to a turn. (*Brings potatoes*) Scaldings! they're as hot as love. The knife, if you please, ma'am. (*Cuts open a potatoe.*) There's a beauty in a brown skin.

Made. Now, will you allow me to ask you a question?

Derm. Will I not?

Made Well then, how did you acquire your prejudice against Frenchwomen?

Derm. How did I acquire my prejudice? It was left me in a will.

Made. Left you in a will. A strange sort of legacy.

Derm. With fifty pounds a year to support it. My late master was Captain Pepperly, a sea-captain.

Made. Have you been a sailor?

Derm. (*shakes his head*) Don't mention it, ma'am. The ocean and I are on mighty bad terms. Whenever we meet one of us always disagrees with the other, and it's not the sea, ma'am, that has the worst of it.

Made. But I interrupt you. What was the Captain's reason?

Derm. His reason—the Captain, you must know, was one of those who don't trouble themselves much about reasons, but his own account was this. He had quitted the service on half-pay and a wooden leg, which was a very equitable arrangement, because he could stand at only half the expense of a man who had two legs to provide for.

Made. I don't see that exactly.

Derm. Neither do I, but the Captain did. Now the Captain was subject to the gout, and whenever he had it he always ordered a new wooden leg, in case the old one should catch the complaint.

Made. O, impossible!

Derm. So I thought, but the Captain didn't. Now, he'd a scapegrace of a nephew that was the plague of his life, and once when the gout had got the old gentleman fast by the foot, his nephew sent him a French dancing-master to teach him the sailor's hornpipe. You may guess that the gout's not the thing for the double shuffle, so the Captain took to hating the French; and those are the only reasons I could discover, or the Captain either.

Made. Half the prejudices in the world have no better foundation. And so for fifty pounds a year you are content to inherit your master's antipathy?

Derm. Why, you're the first Frenchwoman I could ever understand, that's the truth on't.

Made. Really the fellow's good-humour quite interests me. Heigho, I hope I'm not going to be foolish, and concern myself for one who can care nothing for me.

Derm. But you can't be French, or if you are, what's fifty pounds a year to the like of you. Only say that——

Made. Nothing now; our acquaintance is of too short a date to warrant any protestations.

Enter Porter.

Porter. The trains will be here in five minutes.

Made. So soon!

Derm. Ah, I see, you've not the heart to bid me despair. Burn the dirty legacy. I'll trust to a willing hand and a strong heart if you'll only say the word.

Made. You will?

Derm. I will.

Made. Then, sir, you'll have a marriage settlement of fifty pounds a year besides as bonest a lad as you'll find out of old Ireland. (*Trains.*) There's the train.

Porter (*Enters*) Now sir, are you going down? [*Exit.*

Derm. Wh's you to say the word.

Made. Why as we have spent (I hope) "A PLEASANT HOUR" together,

Derm. I trust no adverse fortune will ever separate us.

DUETT.

Two mountain rills which flowed apart,
Mingled at last, no more to sever,
And thus, untrue heart with heart,
Our love, our hopes, are one for ever.

THE FIRST CHRISTMAS MORNING.

Not to those in soft apparel,
Was the Saviour first made known;
Not to noble, or to high-born,
Or to courtiers round a throne;
Not to kings, or mighty monarchs,
Was the King of Kings reveal'd,
But to poor and lonely shepherds
In the lonely pasture field.

It was towards the dawn of morning,
'Ere the earliest streak of light,
And those lowly men were watching
Thro' the watches of the night:
Warm and white the flocks were lying,
Guarded by the shepherd band;
And the night hung like a curtain
O'er that old Judæan land.

Blazing brightly in the darkness,
As they lay upon the sward,
A glory shone around them
Like the glory of the Lord;
And a wing'd and radiant Angel
With a halo round his head,
Stood among the startled shepherds.
Bow'd and aw'd with holy dread.

Spake the Angel: "Lo! to all men
Joyful tidings now I bring:
For to you, in David's city,
This day is born a King.
The Christ, the Lord, the Saviour '—
On this sign shall meet your eyes,
The Babe, enwrapp'd in swaddling clothes,
Within a manger lies."

On a sudden, with the Angel
Were shining spirit throngs,
And they woke the sleeping echoes
With their joyous carol-songs:
"To God on high, be glory!
Good-will and peace on earth!"
And in awe the shepherds listen'd
To the Angels' sacred mirth.

Then they rose, nor fear'd, nor trembled,
And to David's city sped;
And they found their Infant Saviour,
Lying as the Angel said.
His palace was a stable,
And a manger was his throne;
And to lowly shepherd courtiers
Was the King of Heav'n made known.

Oh! that we too, like the shepherds,
Might trust the Angel's word,
And, in that cradled Infant,
Behold our Christ and Lord;
Then should we, too, like the shepherds,
Praise God for all these things;
And, in His uncrown'd manhood,
Behold the King of Kings.

CUTHBERT BEDE, B.A.

PAUL GERRETZ REMBRANDT,

COMMONLY CALLED REMBRANDT VAN RYN, OR RHYN,

Was the son of Herman Gerretz, a miller. He was born in 1606, in his father's mill, on the banks of the Rhine, near Leyden, whence the cognomen Van Ryn. When very young he was sent to a Latin school at Leyden, but he showed such a distaste for learning, that his father gave up the idea of making a scholar of him, and consented to his becoming a painter, as he had manifested a decided talent for it. Young Rembrandt was accordingly placed first with Jacob van Zwanenburg, and according to another account, George Schooten. He remained with his first master about three years. He then studied for a short time under Pieter Lastman, at Amsterdam, and lastly, for a short time, under Jacob Pinas. From these masters Rembrandt could have learnt nothing more than the mere mechanical part of his art, for both his taste and his style were peculiarly his own. After leaving Pinas, he returned to his father's mill, where he commenced painting, taking the immediate vicinity and the peasants of the neighbourhood as his standard of nature, and applying himself enthusiastically to his work. He had not finished many pieces before he was considered as a prodigy by his friends, and he was persuaded by them to take one of these early productions to a dealer, in the Hague, who, to his no greater joy than astonishment, gave him 100 florins (about eight guineas) for his performance. Rembrandt was so elated with his unexpected good fortune, that he posted home to his father in a chariot to convey the joyful intelligence. From this time he rapidly acquired both fame and fortune. In 1630 he settled in Amsterdam, where he resided the remainder of his life, and shortly afterwards married a handsome peasant-girl of Ransdorf, whose portrait he has often painted. His reputation became so great that he had many scholars, each of whom paid him annually 100 florins, and he so arranged their studies as to make them as profitable as possible to himself; he retouched the copies which they made from his own works, and sold them as originals.

The burgomaster Six was the only man of rank with whom Rembrandt associated, and with him he occasionally passed a few days in his house in the vicinity of Amsterdam, in which the burgomaster had fitted up a painting-room for him. The history of the celebrated print, the landscape De la Mouturde, which was etched in this house, is curious. Rembrandt could not relish his boiled beef without mustard, but it happened upon one occasion that there was none in the house; and the burgomaster desirous of pleasing his guest, immediately sent off one of his servants in haste to the city to procure some. Rembrandt, observing that he was rather a phlegmatic-looking person, offered to bet that he would make an etching before the man returned. The wager was immediately accepted, and Rembrandt forthwith, having taken a prepared plate, commenced to etch the landscape from the burgomaster's window, comprising a view of Amsterdam, which he finished in his happiest style with that vigour and lightness of touch peculiar to him, just before the servant arrived with the mustard; hence it was called the landscape De la Moutarde. Although it is little more than a mere foreground, an original impression from this plate is worth from thirty to forty guineas.

Rembrandt's best etchings realise prices, both the portraits and the historical pieces, varying from thirty to a hundred guineas. The most remarkable portraits are those of the burgomaster Six; Van Coppenol, the writing-master; Van Thol, the advocate; Uytenbogaert, the minister, and Uytenbogaert, the gold-weigher.

Rembrandt is supposed to have acquired his peculiar taste for a brilliant concentration of light from an appearance that he had been familiar with from his infancy in his father's mill, where a strong beam of light coming from a small and lofty aperture cast on the surrounding objects that peculiar tone which we see so happily illustrated in his pictures. He arranged the light in his own painting-room upon similar principles, and generally fixed a drapery behind his sitter of such colour as he intended to paint the ground.

Rembrandt's taste led him to imitate certain effects of nature, and in the truth and power which he gave these effects, both in his paintings and his etchings, he has seldom been equalled, and never surpassed. The prevailing light of his portraits is that of a brilliant sunset, and a rich golden tone of colouring pervades all his works. His originality is perhaps still more conspicuous in his etchings than in his paintings; he exhibited powers of the etching needle before unknown; many of his plates are prodigies of chiaroscuro; and there is a softness and reality about them which we look for in vain in the works of other masters. It is said that he made a great secret of his mode of etching, and never allowed any one to see him at work. Most of his more important plates have evident traces of the dry point.

Rembrandt, at the beginning of his career, bestowed great labour on his pictures, and, in the manner of the generality of the Dutch painters, wrought them up to a very high finish. The Woman taken in Adultery, in the National Gallery, is probably his best picture in this style. At a later period of life his whole attention was given to the effect, and his pictures, although still greatly laboured, had the appearance of having been executed with a remarkable freedom and boldness of touch; this is particularly the case with his portraits, some of which have an astonishing body of colour in the lights. When this roughness was objected to by any one, he was in the habit of saying that he was a painter, not a dyer; and when visitors ventured to examine his pictures too closely, he used to tell them that the smell of paint was unwholesome.

From this time (1630) says Houbraken, he began to distinguish himself, for the picture he completed in 1632, and which was placed in the Anatomical Theatre of the College of Surgeons, proved what he was able to produce. This *chef d'œuvre* represents Professor Nicholas Tulp giving an anatomical lecture on a body, which is stretched upon a table, before which he is sitting; the audience is composed of seven other persons—Jacob Block, Hartman Hartmansz, Adrian Slalbran, Jacob de Wit, Matthys Kalkoen, Jacob Koolvald, and Frans Van Loenen—who are so admirably represented, that it appears as if each countenance was penetrated with the explanations he is giving. The pen cannot describe this wonder of the art; here the work of man triumphs in rivalling nature; for the expression of life and the representation of death are so strongly depicted, that the impression this picture makes strikes the spectator at first sight with a feeling of aversion; yet, contemplating the *ensemble*, one discovers not only the great painter, but also that knowledge of human feelings, which speaks so forcibly to the heart, and which corresponds perfectly with what he often said to his pupils, 'that he had made it a strict rule never to paint anything without following nature.'

The faithfulness with which he represented the subjects he took for models, was the cause of his even following certain deformities which are sometimes met with in nature, and which he might have avoided in several of his performances, particularly in his studies of female figures; nevertheless, these seeming defects often form a contrast, which shows the peculiar beauty and originality of his works to greater advantage.

In 1633 he painted the picture which represents a ship-builder and his wife, who is in the act of giving him a letter. This painting, coming from the same style as that we have already mentioned; it is on canvas; height, forty-three inches and a half by sixty-seven inches.

But the most renowned of all Rembrandt's works is his grand picture, finished in 1642, known by the name of '*La Garde de Nuit*, or *La Bourgeoisie Armée d'Amsterdam*.' This was on the occasion of the expected visit of the Prince of Orange, with Maria, daughter of Charles I., King of England, whom he had lately married. The time chosen by the artist appears to be when the officers and men are leaving the guard house, for the purpose of meeting the illustrious visitors. Height, twelve feet, by fourteen feet six inches wide—canvas. This picture adorned the small Council Chamber of the Town House of Amsterdam.

This painting is so remarkable for its excellence, that, even among all the master-pieces of great men, there are few that can rival this astonishing work, which is, without exaggeration, as a production of art, one of the wonders of the world, and which the Museum of Amsterdam may well be proud of possessing.

It is astonishing that, during the intervals of painting the great works on which the fire of his imagination was employed with all its force, he had the patience and perseverance to finish so many precious cabinet pictures such as 'Suneon in the Temple;' painted in 1631, on panel, height twenty-nine inches and a quarter, width nineteen inches, now in the Museum at the Hague; 'The Salutation' (formerly in the collection of the King of Sardinia), painted in 1640, on panel, height twenty-two inches and a half by nineteen inches, which was imported into this country about the year 1807, and purchased in 1812 by the Earl of Grosvenor, now the Marquis of Westminster, for his lordship's superb gallery; 'The Woman taken in Adultery,' on panel, height thirty-three inches by twenty-seven inches, painted in 1644 for Joan Six Heer Van Vromade, afterwards in the possession of Burgomaster William Six, and now one of the ornaments of the National Gallery in London. All the before-mentioned pictures sufficiently prove that Rembrandt knew how to appreciate that sentiment and grandeur for which the Italian school is so much admired. Although some have pretended that he ought to have studied the antique, it is not less true that he was by no means deficient on this point, for it is known that he purchased, at a high price, casts from antique marbles, paintings, drawings, and engravings, by the most excellent Italian masters, to assist him in his studies, and which are mentioned in the inventory of his goods when seized for debt. The original sketch of 'The Jacob's Dream' is one of the treasures of the Dulwich Gallery.

In 1661 he painted 'Les Syndics de la Halle aux Draps.' The whole of this picture is pourtrayed in so grand a [illegible] the force of the execution makes the figures appear as if modelled in relief.

From 1630 to 1656 he was much sought after by persons of high consideration in the ancient Dutch Republic, several of whose portraits he has represented in his principal paintings, such as the Burgomaster Nicolas Tulp, and Cornelius Witsen, Captain Frans Banning Cok, Heer van Purmerland and Ilpendam, Jean Six Heer van Vromade, and others, whose patronage enabled him to establish himself upon a respectable footing in society. He married Miss Saskia van Uylenburg, by whom he had a son, whom he named Titus van Ryn. He, however, notwithstanding the brilliant example of his father, never became more than a painter of mediocre talent.

Rembrandt's multiplied success was soon pursued by that envy which has never spared merit, for a number of equivocal stories have been related, which report has handed down to our times, by citing jokes which his pupils made about his avarice, but which, without foundation, he appears to have been quite of a different character, the liberality of his disposition even embarrassing his latter days.

About the year 1656, Rembrandt determined to become proprietor of a house situated in the *Bree-Straet, St. Antonis-Sluys*. To assist him in effecting this purpose, the Burgomaster Cornelius Witsen advanced him 4189 guilders on a mortgage of the property; not being able to meet his engagement when his bond fell due, [illegible] were seized, and on the 25th and 26th of July, 1656, sold by the Commissioner of the Court of Insolvency in Amsterdam.

His talents, however, remained unimpaired, and were a lasting treasure to him; he did not forsake his palette, but continued to produce other *chefs-d'œuvres* until a short time before his death. Whatever might, at this period, have been his difficulties, he had at all events a consolation in knowing that no claim against him would be left unsatisfied, as it appears, after all his accounts were settled, there was a surplus of 6953 guilders, 9 stivers. It seems, however, that during his life-time he never would settle his accounts, either because he was of opinion that the Commissioners of the Court of Insolvency had improperly managed his interests, or from other motives which must remain unknown.

JACOB'S DREAM. By Rembrandt.

It ought to be added to the fame of Rembrandt, that there never was in Holland a school more productive of men of talent than his; among them the following were the most celebrated, and will ever form a prominent feature in the republic of the fine arts:—

Gerhard Dow, Ferdinand Bol, Gerbrandt vanden Eeckhout, Govert Flink, Nicolas Maes, Philip de Koning, Arnut de Gelder, Roelant Roghman, Jacob Lavecq, Adriaan Verdoel, Samuel van Hoogstraten, F. Victor, and Drost.

It was after his decease, which took place in 1665 (and not, as is said by Houbraken and other writers, in 1674), that his only son, Titus van Ryn, then a minor, obtained an act of majority to inherit the property left by his father.

A complete descriptive catalogue of his works was published by D. Daulby, in Liverpool, 1798; another, by A. Bartsch, in 1797, of Vienna; and a list of the principal of them is given in Bryan's "Dictionary of Painters." The best notices of Rembrandt are those in the work by Descamps, entitled "La Vie des Peintres Flamands," &c., and Fiorillo's "Geschichte der Zeichnenden Künste in Deutschland und den vereinigten Niederlanden."

There is a fine collection of Rembrandt's etchings in the British Museum.

BRINGING HOME THE YULE LOG.

THE CHRISTMAS DOLE.

RICHARD BRADING.

A STORY OF A MAN WHO KEPT A PROMISE.

BY CHARLES DICKENS.

bar on the Haxbury Road, and every body else in and near Marlford whose opinion was of any consequence in his own judgment or that of his neighbours.

Even the women had turned out in their best, and Lizzy, too. The parson's pretty, blue-eyed wife, who I often said a good deal to my husband in Richard Brading's behalf, could say no more, except that she hoped Mr Evelyn would act rather as a Christian than as the representative of Marlford with as little resentment and hardship as possible. Mrs. De Carter, at the Hall, was resolved to be double-headed and made no hesitation in stating that Squire Carter he always protected against the Do she would issue a warrant against the common enemy, and send him up to London, on the top of the coach, with handcuffs upon his wrists, to be tried for his crimes—for Mrs. De Carter's ideas of the power of a Justice were unusually liberal. The attorney, Spindles, had no wife, but made such as he had set his affections upon Miss Salvington, daughter of the doctor, his views were (for the present, in order to dance with those of his intended mother-in-law, and she would gladly have administered to Richard the most deleterious drug in the whole surgery she had. It happened that the landlady at the Cross Guns had better reasons than most of the other ladies for wishing that Richard were out of Marlford, and therefore, as will sometimes happen, she was to be found on the Parson and Dick Brading's behalf with any sort of remonstrance towards her, she would have fared but badly, both because her husband took the other side, but Richard had drunk at the bar only his own chance with the comely Mr. Hunkey. At the time of which we are speaking, had not united in opposing Dick, he might have had "Lizzy," and one which it would be for the credit of Marlford to get married as soon as it could be managed.

So here were the relations between the pleasant little country town of Marlford, and the young man, Richard Brading, as Christmas-time approached, about fifty years ago. What had Richard Brading done? What had he *not* done to make himself disagreeable to everybody in Marlford? He had established himself quietly down, like a yeoman of the better class, upon the little estate to which he had succeeded, and taking into his snug little house, in the capacity of wife, one of the plump, handy, fresh-coloured girls to be found in almost every farmhouse around (or even marrying Rosa Lincoln, the Marlford milliner, if he wanted a handsomer than he could find in a farmhouse), he had, upon coming into his uncle Sambrook's property, aforesaid, given himself over to evil ways. I am perfectly ashamed to write down what Dick had, and I am sure that my readers can take no pleasure in perusing the records of crime, and yet I must account for the feeling against him. He spent his money in the most reckless manner; bought dogs, and horses, and guns, at extravagant prices; grew tired of the articles, and sold them for next to nothing, or gave them away, and in the meantime got into the books of such of the few tradesfolk in Marlford as allowed themselves the luxury of keeping debtors, and to a far greater extent in those of the bolder traders of the county town twenty-two miles off. He gambled to—not with the Marlford people, whose quiet long whist and cribbage scarcely caused twelve shillings to change hands in twelve months, but with men in the county town aforesaid, hard headed land-agents, who could remember the thirteenth trump after the thirteenth tumbler, dashing commercial gentlemen, who brought patterns of London vices, with their other patterns, in their vehicles, and it was even said that in the back parlour of Ahasuerus Moss, who kept the jeweller's shop in the High Street of the county metropolis, Dick Brading had played unlimited-loo with some of the officers who were quartered at the barracks, and who, for reasons of their own, were tolerant of the oriental faith of Mr. Moss, and not unfrequently shared what he called the hothpitalitith of Mithreth Moth.

Dick lived a bachelor life, got into debt, and gambled. This was bad enough, but it did not make a county scandal. Undecided interference on the part of his neighbours. But Dick did more. Squire Carter was a strict game preserver. Dick Brading shot his pheasants—there was no doubt about it. The little property and the great one adjoined, and the birds, hatched and reared on the Carter estate, would go upon the Brading estate, and in the most ungrateful manner permit themselves to be killed there. Dick—for now on his own land, and his name was in his certificate, and the Squire could only scowl at him over the hedge, and wish he could catch him trespassing. Then Mrs. De Carter had a lady's maid called Zara (genteel for Sarah), and to this young person, whose bright eyes, smart figure, and ready tongue were, would it be speaking, some justification for the young man, did Richard Brading enunciate vows which might have been intended by an arrangement before the Reverend Mr. Evelyn, but Mrs. De Carter waxed furious at the idea. Several times, under pretext of taking the heir of the Hall for a ramble, had Zara managed to linger by the hedge already mentioned, until the first dulcet tones had sounded, and Mrs. De Carter, wrath in her heart and tangles in her hair, had waited, yes, worse than Louis Quatorze, had actually waited for her interior. As I when tearful and penitent Zara at last explained that Richard Brading had vowed, Mrs. De Carter spoke out loud and the result was (they do energetic things in country houses sometimes, as many a young lady can testify) that poor Zara was ordered to pack her box. If to a certain apartment until further orders, and an insulting intimation that a better match than a bankrupt junior was designed for her, was conveyed to the incensed Richard. He wrote letters; you can easily imagine what became of them. He tried to storm the Hall in person, but was repulsed by a terrific message from Mrs. De Carter and a most venomous housekeeper, which caused him to retreat, with his last hope shot away.

But other times we will pass over more rapidly. How he would go and drink much more than was necessary at the Cross Guns, and, although in debt there, would find funds (not undeserved) with the liquors, and contract them, unfavourably for Hankey, with those of his cousin at Haxbury, whom Hankey hated in correct fashion. How he would make unseemly mirth with Mrs. Hankey's giggling niece and bar-maid, and incite her to be playfully more repellent to customers; and how (this was his crowning scheme for hitting at his double) that Mrs. Hankey's lustrous black hair was let on severely Mr. Evelyn, devoutly, how to attend at Mr. Spindles's office the following morning at a certain hour.

Certainly Mr. Evelyn had not intended that all Marlford should attend the same appointment. He had made that Spindles's affair, he believed, that the affair might be settled out of the jurisdiction of compassionate little Mrs. Evelyn. But if Spindles had sent round the notice to the shops of Dick Brading's non-payments, the matter could hardly have been more complete and punctual. Before Richard appeared, the Salvingtons came in, but then the relations between the lawyer and Penelope Salvington accounted for her and her mamma being in and out of the offices half-a-dozen times a day. Mr. Jowley attended: but then he had a right to do so, as an officer of the sacred edifice Dick had outraged. Hankey of the Cross Guns came over, leaving a deputy in charge of the bar, and Mr. Brading's non-payments, the master

which Mrs. Dr. Salvington broke in. "Mr. Evelyn mayn't mind his chair being hooked to pieces, but if guests are to be fired off in the middle of the night, no matter whether people are ill or well, and death sets up" (the doctor's lady had caught a few medical phrases, and applied them with great freedom), "I should say people who fired them was murderers, and I always speak my mind."

Pen looked as if she should like to follow the maternal lead, but a glance from her *fiancé* hinted to her that she had better leave the case where it was, so she only rattled her high heels against the oak box.

"Everybody seems to think that I ought to leave Marlford," observed Richard, who not only kept silence until everybody had flung his or her stone, but for so long afterwards that the meeting became incensed at his continuanceumness. "*I will go.*"

"And a good riddance," said several voices.

"The sooner the better," added others.

"Much," said Mrs. De Carter, as closing the business.

Richard Brading looked quietly round bowed to the meeting in a composed manner, very different from that with which he had entered, and made his way to the door. There stood Rosa Lincoln and the basket-pet, and they had to retreat to let him pass. The housekeeper did so with a serious smile, but Rosa was of gentler heart and weaker eyes. The latter held certain tears, and the former told her to touch Richard's hand as he passed, and she obeyed. The touch was very slight, it could not by any perversion of language be called a hand-shake, but he noticed it, as did Pen Salvington, whose sensitive feelings rendered her acute in detecting such matters. She accordingly took a special dose, but there was but one milliner in Marlford, and Miss Lincoln had a little independence, and even the making a wedding-dress was no object to her—and when think very quickly Rosa escaped unrebuked. Richard departed, and went towards his own home. Mr. Evelyn left the lawyer's office, and hastened after his parishioner.

"Another word or two, Brading, which I had no wish to say before others. From what has evidently been passing in your mind, I do not suppose that you now give me credit for any other feelings towards you than those of your other neighbours. Hereafter you may possibly do so. I merely desired to say to you that if at any time you have occasion to communicate with a friend at Marlford, his address is at the Rectory. Mrs. Evelyn and myself unite in wishing you well."

There was tact in thus bringing Mrs. Evelyn's kind blue eyes into the picture before those of Richard Brading. It procured a softer answer than he had intended to make; though all he said was,

"I thank you, sir, and also Mrs. Evelyn. Good-day!"

He did not leave Marlford immediately; but he made two or three journeys to the county town, and on one of them the keen eyes of his landlord saw that he took away, and did not bring back, a large square parcel, like those in which solicitors make up title deeds. It was understood to have had conferences with Abasuerus Moss. A day or two before Christmas he went through Marlford, and paid all his debts—they were not much, including Hankey's claim. But he would enter into no conversation with any one beyond what was necessary, and even at the Cross Guns he refused to enter the parlour, but paid his bill over the bar. And when placable Mrs. Hankey held out her hand to wish him a happy Christmas, he merely raised his hat, gravely wished her the same, and went out without even a glance at the flirting niece. This was ungrateful, for Mrs. Hankey had intimated to Lawyer Spindles that though Dick was no better than he should be, yet, if Spindles did anything in the way of that arresting nonsense, Hankey's business should go to the attorney in the next town; and the niece had carefully and dutifully torn out of her uncle's books all the entries against Richard. But we never know our friends in this world.

On Christmas morning, a bright, clear day, with just sunshine enough to darken the stones of Marlford with moisture where the frost had lain, and as the bells were ringing, and everybody (except the Guardians of the Dining) were going to church, Richard, driving a dog-cart, passed slowly along the street, as if taking a last survey of a place he should not see again. A few saluted him—the more, let us hope, because it was Christmas morning—but he returned no salutation, and deliberately passed along, keeping his horse at a slow walk, and so he went gloomily out of the town. As he reached the toll-bar on the Hawbury road, his enemy, the pike-keeper, came out to take his money, and as he rattled his halfpence, he looked up with a spiteful knowingness.

"Off for good, Master Brading, I reckon?"

"Reckon your change, and mind your own business. You have cheated me of a penny."

"So I have—here it is—I wouldn't wrong anybody especially one who can't afford to lose it, Master Brading. Off for good, eh? Well, it will be for the first time. Well now! I never yet, ha! ha!"

"Something to help your memory,' said Dick, giving the tollman a tremendous slash with the hunting-whip, across his broad shoulders, and riding on.

The man remembered it a good while, with small complacency; but the pike and the world had lost him (in consequence of a determination of humanity to the head) many a long year before Richard Brading rode through that gate again.

Five and twenty years passed—the happy found them short ones—and the stirring, thriving, and striving wondered where the time had gone—and the poor and the luckless—but what right had they to think of anything except shame at not having erected themselves, and succeeded, and made proper provision for their families? Don't let us have *their* sentimentality, for gracious sake! The hole in the church door was plugged, the brass candlestick was set up, and much village wit was expended upon the process of mending the broken commandment. And then Richard Brading was forgotten, Waterloo, and a few trifling incidents of that kind, having given Marlford something else to talk about.

What became of Richard Brading during that period is not of much consequence. He engaged in the merchant service—and he made money.

Marlford, about the time of which we speak, namely, some five and twenty years after the expulsion of Richard Brading, suddenly experienced a discomfort and an uneasiness of a singular character. There was not much outward manifestation of this, but it was felt throughout the whole social circle. Everybody began to meet with disappointments, crosses, and general bad luck, and everybody began to suspect some one or other of his neighbours of being connected with his misfortunes. People grew distant, shy, and caustic. Inuendoes, which in provincial garb are tolerably explicit, were exchanged when meetings in vestry, or elsewhere, became necessary. A spy system was felt to be existing, and as usual, everybody shared the odium attaching to it. Neighbourly gatherings were given up, "nobody knew to what account his words would be turned;" the barber shaved his clients in silence, and in consequent torture; the Saturday club at the Cross Guns expired disgreeably amid sneering and scornful farewells by members who determined never to come there again; and market-day became a scene of skulking and avoidance, and all who were compelled to do business in the market doing it as quickly as they could, and getting home again, and those who could stay within doors making a special point to do so. On the day when all this was rife, Mr. Evelyn was meeting everybody all day long, and making the chaffering over chickens, eggs, butter, apples, gridirons, shoes, clothes poles, and the other glittering and sparkling temptations of the fair, an excuse for words of gossip and good-humour.

Specially—for people are more interested in hearing how gallantly Private Jones dashed his bayonet into a Russian, saved his comrade, and lost his arm, than in the general statement that the regiment charged splendidly, and turned the enemy's flank—specially let us mention what had happened to individuals. There was old Hankey mention what had happened to individuals. There was old Hankey mention what had happened to individuals. There was old Hankey

CUTTING THE ASHEN FAGOTS IN DEVONSHIRE.

CHRISTMAS TREES IN COVENT GARDEN MARKET.

CHRISTMAS CHEER AND CHEERINESS.

By Cuthbert Bede, B.A.

CHRONICLERS tell us that Old King Cole called for his pipe, and his glass, and also for his fiddlers three, the reader of the legend is thereby left to imagine that the monarch had arrived at the very extremity of hilarity, and could go no further. Perhaps, the tastes and habits of royalty were, in that day, suited to the simplicity of the times they lived in, and were somewhat deficient in those amenities which are now-a-days usually attached to polite society, from which — more especially in its Court Circle—the pipe and the glass, yea, and even the fiddlers three, are excluded. But it is evident, from the terms of the legend, that the elderly monarch (Cole) was in that state of doubtful happiness usually designated by the phrase "right as a trivet."

Now, what the peculiar rectitude of a trivet (in itself an inoffensive implement) may be, I have no means of ascertaining: and, why the consumption of vinous liquors, in a greater quantity, than is good for a gentleman to carry, should be followed by the sensation of this peculiar rectitude, is one of those abstruse points on which commentators may be allowed to differ. But I heartily hope that the rectitude felt and shewn during this present Christmas season may be of a very different description from this. Let a man call for his pipe, and call for his glass, and even call for his fiddlers three, if no so pleases, but, while he is fiddled to, let him drink and smoke in moderation, and not make Christmas an excuse for excess.

I confess that my ideas of cheer, as connected with Christmas, are not necessarily dependent upon the making a beast of myself, and the [illegible] a rack and my neighbour, and the passing [illegible] night in a state [illegible], and being fined five shillings by the next worn in the morning. My opinions of Cheer, [illegible] applied to Christmas—are not of this kind. I [illegible] that I am sceptical on a point, which so many would dogmatize [illegible] doubt, namely this—that I cannot [illegible] and duly [illegible] Christmas dinner and [illegible] swig, and stuff, and cram [illegible] and [illegible] and then [illegible] I turn into bed thence, [illegible] I don't put them to their proper use. I confess that I am really [illegible] of on this point, and that I am altogether unable to [illegible] unequivocally dyspeptic through a full understanding of a little [illegible] word "cheer."

I have these heterodox notions, but I frankly acknowledge that I cannot see [illegible] sort of cheer that consists in the [illegible] of the interior into a [illegible] else but delirium [illegible] a mixture, the [illegible] of which, though individually [illegible] in the mass indigestible [illegible]

"Rudis, indigestaque moles."

I like to see my Roast Beef of Old England, and my plum-puddings, and my mince-pies; I like to see whatever else is common to Christmas, and usually included under the name of "Christmas cheer," whether it be geese, or game, or turkeys, or oysters, or [illegible]. I like not only to see them—for I very much enjoy the eating of them [illegible] but I not only reject the notion, that, because it is Christmas time, and because these things are Christmas cheer, I must therefore do violence to my better judgment, and (in the language of the vulgar) "peg away" at these things in an unwonted manner. Nor less that I am mentally blind to the position that, because it is the Christmas season, I must eat far more than I am accustomed to do, and much more than is good for me. The goose may be a silly bird, but I should deem myself sillier if I looked at the goose in the light that [illegible] gentleman did, as "a bird that was too much for one and not enough for two," and did eat of it accordingly, simply because it was a Christmas goose, and I was partaking of Christmas cheer. I don't look at Christmas cheer in this light.

I don't see, that, because I am not indifferent to a glass of wine after dinner, I should therefore be compelled to reduce myself to the verge of imbecility, and the condition of the trivet's rectitude, simply because it is Christmas time, and proper to indulge in Christmas cheer. I don't see, that, because [illegible] comes but once a year, and gives public-office clerks a holiday, I am therefore to accept per-force certain [illegible] notions of [illegible] observance, and lower myself to the state of the gentleman to whom they gave the

—"next m[illegible] a couple of red-
Herrings a[illegible] soda-water."

don't see this. There may be many cups, besides the tea-cup, that cheer but don't inebriate, and I don't see that I am to get into my [illegible] and turn them into inebriating ones, simply because Christmas cheer would ask me to do so. No! I detest the pomp of the Persians; I don't want any unnecessary chaos at my entertainments, no later roses, no philyrian chaplets, nothing but the simple myrtle.

I detest make the Christmas season [illegible] anything rather than gluttony; let no unwholesome excess come near my Christmas feast; let [illegible] than waste of intemperance [illegible] to the great Christian Festival. Rather let my Christmas cheer bring me "one cheer more," the gladness of heart and [illegible] of [illegible] make me cheerless. So long as there are widows' hearts to make to leap with [illegible] and orphan children who already plead by charity, and shivering outcasts who stand in need of some helping hand of pity; so long as there are hungering mouths to fill, and sick at heart to heal, and wounds of bruised spirits to bind up, and naked sons and daughters of misery to clothe; so long as there are weary and heavy-laden to be released from their burdens, and broken links of affection to be formed anew, and dying embers of love to be kindled to a glow; so long as there are ears that have never heard the whisper of the words [illegible] on earth, goodwill towards men;" so long will there be ample opportunity for us to indulge ourselves to the full—and without any [illegible]ing—in *true* Christmas Cheer and Cheeriness.

THE KNIGHTING OF THE SIRLOIN OF BEEF BY CHARLES THE SECOND.

THE Second CHARLES of England
Rode forth one Christmas tide,
To hunt a gallant stag of ten,
Of Chingford woods the pride.

The wind blew keen, the snow fell fast,
And made for earth a pall,
As tired steeds and wearied men
Returned to Friday Hall.

The blazing logs, piled on the dogs,
Were pleasant to behold!
[illegible] as the steam'd from
[illegible] men—and cold

With right good-will all took their fill,
And soon each found relief;
Whilst Charles his royal trencher piled
From one huge loin of beef.

Quoth Charles, "Odd's fish! a noble dish!
Aye, noble made by me!
By knighty rights, I dub thee knight—
Sir Loin be[illegible] to be!"

And never was a royal jest
[illegible] with such readiness;
And [illegible] from [illegible] Sir Loin
[illegible]

* The Oak table upon which this ceremony was performed was a few years ago [illegible] Hall, Chingford, Essex.

CHRISTMAS DAY AMONG THE BRICKS.

CHRISTMAS morning! Fresh, bright, frosty, and invigorating; just the morning for a drive into the country to spend the day's holiday. The *trap* was at the door of our chambers before we had breakfasted; so we had to bustle about to get ready.

It may be mentioned, *par parenthèse*, that that charming spot, men of her sex, Mrs. Mollops, our laundress, is, by way of keeping Christmas, in one of her periodical states of "them sort of [illegible]" that necessitate the copious use of spirituous liquors; and consequently we have to "do" for ourselves. I am not quite sure that "doing" for ourselves is not, on the whole, pleasanter than being "done for"—*done for* in a good many senses of the word—by Mistress Mol'. However, here we are pulling away at that confounded fire that won't burn, because we are in a hurry; and trying to coax that kettle to boil, that never was made for boiling. Puff, puff—puff, puff. Bravo, Hicksie; a blaze at last: now for the eggs;—on with the chops. Capital!

Chops, eggs, coffee, and bread-and-butter, were *hors d'œuvre* (how very military one's phrases become in these times!) as the Paletots were donned, hats brushed, our arms full of rugs and wrappers; and away we went down the dingy, dirty stairs of our chambers, and were seated on the neat dog-cart, behind the cleverest little nut-brown mare that ever trotted unheard of miles in a day.

Give her her head, Bill: that's it. Tst! Tst! And we were fairly off. Off, through the gateway, and along Holborn, cutting in and out, past cabs and omnibuses and carts and waggons and brewers' drays; along New Oxford Street, and so to Hyde Park. What a breath of freshness comes across us from the Park—the first real breath of what we are to get as we go further on and on, till we really do approach green fields and [illegible] hedgerows.

Hicksie drove, and exhibited his talent in that line to admiration.; he inherited it, in fact, for you remember his father, Sir Dicksie Hicksie, one of the first "whips" of his day. Poor man, I doubt if the gout has now left him power to hold even four Coventry ribbons, instead of the "ribbons" he once so joyously handled.

Our trip this morning is to the house of a nephew of old Sir Dicksie's, and a cousin, therefore, of Hicksie's: a genial fellow, who had been intended for the Bar, and who, I believe, took chambers with that intent: but who had suddenly forsaken the "[illegible] of law to plunge into the *dolce vita* of [illegible]. In fact, finding, after some few years' trial, that he was as bad as on the day he was "called," he wisely [illegible] to be [illegible] some land, turned brick maker and farmer,—and was [illegible]

On we trotted at least, the clever little mare did, and merrily we rolled on behind her; the bright morning, and the anticipation of a pleasant holiday, making our spirits dance. On, past Shepherd's Bush, and so off to the left, through Turnham Green, to Kew Bridge. Not over the bridge though: albeit the little mare has an inveterate idea that's the proper road, because it leadeth to Richmond, the Star and Garter *to-day*, little mare; so you must, perforce, go straight on; and so through Brentford. When shall we ever pass through this "lengthened dirtiness long drawn out," with its glimpses of the whitey-brown Thames caught through the openings of the houses, here and there? Brentford End! there is no end to this interminable swelter of mud and muck. Through, at last! and we breathe again! Here's Isleworth: and now, in Hounslow—that is [illegible] Brentford, but with the [illegible] of being a trifle cleaner. Ah! [illegible], whose day of glory was [illegible] weeks, and [illegible] [illegible] [illegible]

...ng tal shot, for the bullet w... ...h the... my uncle's backbone—somewhere ... ... particulars), between the third ... ... down dropped my uncle all of a heap. In fact, when the bullet went through him, he seemed to shut up, in a second, just like one of the Pantecnni figures. The poor mare missing the encouragement of her master, or, perhaps, frightened by the shot, stood stock-still: and the highwayman, now making sure of his booty, galloped up to the ... Just as he reached it, however, a pistol was fired from the ...board, and the rascal's horse, with a start and a plunge, rolled over on the road, half burying its master under it.

"Satisfied of the success of his stratagem, my uncle now got up from under the seat of the gig, where he had been on his knees; and ...uming his cloak and the reins, drove on steadily to the town. He had, however, was gone;—that had rolled into the road when the highwayman fired: and as for his whip—that was cut slap in two by the bullet. His whip was not the only thing that had suffered: his cloak had been riddled by the ball; and my uncle, I believe, used the county for the damage. When telling his adventure, over a glass of wine, many a time afterwards, he used to say, that finding himself hard pressed by the highwayman, whom he doubted not was the notorious Bill Haines ... who had the reputation of having shot one man, and maltreated several others—my uncle slipped out of his cloak, which he propped up with the stick of his whip, on which he stuck his hat; he himself crouching down on the footboard, well sheltered by the seat, holding up the whip in one hand, and the reins in the other, having a pistol by his side ready for immediate service. He went many a journey subsequently, but I never heard that he crossed Hounslow Heath again after dark."

While Hicksie had been relating the adventure of his great-uncle, we had turned off to the right, along a road that brought us into a town long well lit, after following it for some time, led to a low cottage, at which we had scarcely passed when a joyous voice hailed us with "Hollos there: stop!"

Full as our minds were, just at the moment, of the highwayman, we might have fancied ourselves assailed in the same fashion: but the order to "stop" was in too friendly a tone for that; so we pulled up as desired.

"Ha! how are you, old fellow? Glad to see you, sir (this was to me); happy to see any friend of Tom's. Why, I say Tom, you've shot past the gate, and now you'll have to turn round: but never mind that, jump out with you, and Jennings or some of them will look after the cart. Here Jennings, Roger, Mason, where are you? That's right. Mason look sharp; come and hold the horse at the door; steady now, don't spoil the paint on the wheel against that block. Now then, come along into the house."

And we went accordingly into the house;—it wasn't a house though: it was a cottage, but a neat, tidy, pretty a cottage as a man would wish to live comfy and die easy in: it was furnished with all the appliances of ... and was "complete with every comfort," as the auctioneers say. There was a pretty little conservatory that led out from the hall, through which you got into a pretty ... flower-garden; then there was another garden behind, and an orchard, and a paddock; and vines and honeysuckle growing up the walls; and a piggery, and a cowhouse, and the barn and stables; in fact, a perfect Utopia of rural felicity, enough to turn the brain of any poor Londoner with patent leather boots on. But we did not mind these things at once, and at first; we had previously to pay our respects to the ladies of the family, whom we met on entering the ... and by whom we were as heartily, though not quite so boisterously, welcomed as we had been by the master of the house. Besides the wife, who was a very pretty, charming woman, there was a young lady on a visit, whom they called Caroline. She had a pair of eyes—pooh, nonsense! every woman has a pair of eyes.

After luncheon, Hicksie's cousin *must* carry us off to his brick-field, which was a very inhospitable proposition, as it broke off a delightful tête-à-tête between me and "Caroline." There was no help for it, however, and away we went, driven there in the cousin's mail phaeton.

Bless us, what a quantity of bricks! Enough, we thought, to have built a town; but the cousin said there were very few more at all, in fact. Stocks, grizzles, placers, shuffs, bats! We became quite excited in the management of bricks. And then there were the pug-mills, and the chalk-mills, and the backs (which were not backs, and it is impossible to say what besides;—unless, indeed, mention may be made of the great heap of ashes, all brought from the London dust-bins, and which the cousin astonished us by saying that this very insignificant looking mass of rubbish was worth—no, no I had cost him—many hundred pounds. So, after we had learnt everything touching the art and mystery of brick-making, and had gone up a ladder to stand on a sulphurous kiln, until I had put our "footing" when we came down, we got into the carriage again, bringing with us on our boots an agglomeration of stiff clay, enough to make a dozen bricks. Then we drove round by North Hyde; here there were more bricks: the whole of that part of the country was nothing but bricks, and by night the glare from the burning kilns seemed like some widespread conflagration.

And now it was time that we should be returning to the cottage; for the dinner was to be an early one in consideration of the drive to town which Hicksie and I had before us. So the cousin put the steam on a little, and we reached the house in time to set Mason and Jennings and Roger to clear some of the clay from our boots, and to get ourselves into presentable order again.

And what a dinner it was! The cousin said there was nothing; only just a huge piece of roast beef, a turkey, and a brace of partridges, and some veal; not to speak of the bit of Severn salmon that lurked with, nor the tarts, Christmas pudding, jellies, and blancmange, to end with. I am ready at any time to make a declaration before a justice of the peace, notary public, or Master in Chancery, that Caroline had a finger in the making of that jelly and that cross-barred tart: they were both so nice! But what was the jelly, and what the cross-barred tart, to the charm of sitting by the side of the pretty Caroline, whose—— Well, never mind! And yet, how beautifully she sang after we went into the drawing-room: I could have sat there all night long, and for ever; and should have done so, if that abominable Jennings, that son of a burnt father, had not interrupted us with the announcement that the "horse was to." Oh, miscreant Jennings, wretch, varlet, "brimstone pig;" there is no name too bad for thee.

On went the great-coats, however, and the comforters—mine was anything but a *comforter*, for it seemed that in putting it on I was taking off all hope of comfort. Three times I forgot that I had shaken hands with Caroline, and went and did it over again: the last time, I thought she smiled; no wonder, perhaps, I might have still lingered on, had it not been for the sharp "Now, then," of Hicksie, who had already seated himself in the trap, and was getting impatient. Thus suddenly recalled to myself, I bolted out into the darkness, stumbling over the step, and nearly knocking my head against the wheel. Of course we wished the cousin good night, and thanked him heartily for his hospitality; told him he was a perfect "brick" himself, and finally, having "mailed" him to come and dine with us at our club the following week, away we drove.

What a dreary drive it was: every mile that carried me further on sent my thoughts still further back to the pretty cottage and its prettier inmate. Neither Hicksie nor I spoke much on the road home: once, after noticing that I had been smoking a cigar for half an hour without smoking, he asked me if I had a light; and I answered "brilliant"—but I was thinking of Caroline's eyes. I fancy that Hicksie must have had serious thoughts, two or three times that evening, of the propriety of cutting across the country to Hanwell, and depositing me there, as one very much needing the sanative influence of the asylum.

At last we got to the Chambers: and then to bed. What a den after the trim little cottage; and what a contrast to be "done for" by that horrid old catamaran of a laundress. Imagine her having a finger in the making of one of those cross-barred—Faugh! don't mention it!——

"Oh, Caroline, Caroline,
In that little name of thine
There is music most divine;
Caroline, oh Caro——"

"Confound you, what a row you are kicking up;" bawled Hicksie, from the next room; "go to sleep, will you!"

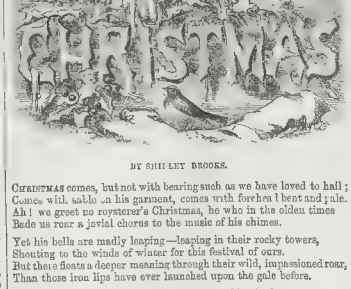
I suppose I must have gone to sleep, in obedience to Hicksie's orders; for I dreamed—dreamed that I saw Caroline throned upon a brick-kiln, with a trowel in one hand, and dressed as a bride, and looking very majestic; quite like, or infinitely better than, Britannia on the penny pieces; then presently the kiln turned into a church with a pug-mill for a pulpit, and Caroline and I were going to be married; but somebody—I think it was the Master of the Rolls—said that by a new Act of Parliament, Victoria 50 cap. 1000, it was impossible we could be married until I had built, with my own hands, a pretty, snug little cottage for us to live in: so I set to work immediately, and was getting on famously; the cottage was nearly up in a trice; but somehow, whatever I built it up on one side, a score of malignant fairies would knock it down on the other: and there they were, knock, knock, knock—what a din: and with the din, I awoke.

Knock, knock, knock! Surely I couldn't be awake. And yet the daylight was shining in at the window: but there was still the same knocking of my dream.

Knock, knock, knock! "Come, I say, old fellow; are you never going to get up? Why, it's half past nine!"

It was Hicksie's voice. And I declare it *was* half past nine! By Jove, how shall I manage about that appointment at ten!

H.B.



BY SHIRLEY BROOKS.

CHRISTMAS comes, but not with bearing such as we have loved to hail;
Comes with sable on his garment, comes with forehead bent and pale.
Ah! we greet no roysterer's Christmas, he who in the olden times
Bade us roar a jovial chorus to the music of his chimes.

Yet his bells are madly leaping—leaping in their rocky towers,
Shouting to the winds of winter for this festival of ours.
But there floats a deeper meaning through their wild, impassioned roar,
Than those iron lips have ever launched upon the gale before.

List, as in exulting clamour wave on wave of joy is thrown,
Listen to the refluent murmur, with its sad, repining moan.
Now again the lofty joy-notes thunder in tumultuous surge,
Now again the low-toned chiming of the muffled hurly dirge.

And the voices in that chiding wail the less common mood hand
That was with us in the spring-time, now is in the Spirit-land;
Wail for those whom distant regions saw delivered to their rest,
Garnered in the restless ocean—folded to earth's throbless breast.

No, we greet no roysterer's Christmas; this the dying year hath brought
Sobered, if not sickliest over, with the paler cast of thought;
Rather greet him as we welcome home a treasured friend of yore,
Coming to a board where some he loved will mark his glance no more.

Yet no mourning, no dejection. Hopes are high and hearts are strong!
Fill the wine-cup, speak the homage, pledge the health, and raise the song!
It were shame upon our mission did we pass the goblet by,
Closing such a year with sadness—silent tongue, and drooping eye.

Raise the wine-cup! Though it chanceth we have fallen on stormy days;
Strike no sunshine's golden arrows through the cloud and through the haze!
Is it nought that Freedom's banner to our honoured hand is given,
And our grasp is on the only fulchion ever blessed by Heaven?

Shout! Not now for deeds of heroes, —not for England's old renown;
Not because her lion-children rend the fiercest foeman down;
Not because her legions wildly flying, and their standards reft and torn,
Gentler thoughts befit the morning when the Prince of Peace was born.

Gentler! ay, and grander, prouder! Lightly let no word be said.
What is Peace, if not the cause why England's sword is bare and red?
What she holds her chiefest glory,—what her life-blood shall defend;
What she claims and wins, if needed, for the friends who call her friend.

Freedom!—freedom!—that is Peace. A slave alone has peace in chains.
Better wage a life-long battle while one latter link remains.
'Twere a mad blasphemer's raving, were that holy name bestowed
Where a despot's will o'er rideth the august command of God.

Right of faith, and right of utterance—laws no tyrants break or buy,
Freeman's claim to speak his boldest to his fellow's ear and eye,
Right to choose life's path and duty, right to choose the altar where
Judged alone by Him he worships, may the freeman make his prayer.

That is Peace—all else is mockery. Shall a Christian dare to say
Those are not her sworn Crusaders who—perchance this Christmas day—
Strike at yonder impious despot, self-proclaimed as God and Lord,
Trampler of each right of manhood,—ruler by a brutal sword.

Therefore let us raise the wine-cup, mindful of the day we keep:
At the health that we will challenge, every true warm heart shall leap.
Never nobler toast was proffered since at Yule the wine went round—
Be it with full cup accepted, and with ringing plaudits crowned.

"Health to those who bear our banner—to the noble and the brave—
"Honour to each Christian soldier who has found a hero's grave;
"May our champions, home among us, ere the summer-roses glow,
"Tell where Europe's Twin-Avengers dealt their last and fatal blow!"

THE MISTLETOE-SELLER.

BY ANGUS B. REACH.

THERE he goes, on the foggy December night, over the crisp white snow, the old Mistletoe-seller, his locks as hoary as the evergreens. He might have been a Druid but for this, he appears so venerable—a Druid leading the procession which carried the mistletoe to the temple, and placed it upon the altar as a sacred plant. A crowd of boys and girls surround him. The two to the right have got but copiously: one of them has her apron full, and the other a whole handful. It is evident that these young ladies are admirers of the *osculum* or kiss. A boy appears to be accompanying the old man, if not leading him. Can the Mistletoe-seller be blind? A sweet glance at his shut eyes shows that this is the sad truth. A little girl to the left, with her bonnet hanging from her neck, seems a sly touch at the prevailing foolery. She carries a basket on her left arm, and there is a sort of a symptom of a goose in it. With her right hand she holds the left of a sturdy little urchin, who grasps in his right hand a small branch of the magic excrescence. But regarding intently at the large bunch which the blind old man carries; as are also behind him a pretty tall shocked bright-eyed girl, with a boy (perhaps her brother), each apparently enwrapped at the thought of coming kisses.

Well, let me turn from Mr. Reader's charming design, with the hope that the old gentleman will sell all his stock, at good prices, without being necessitated to trudge long in the snow, and turn for a minute or two to the ancient Druids, of whom, I think, Norma, Orovese, Adalgisa, give the best living representation. The latter, as well as the children, are clad in white robes, and so are Grisi and Orovese, with the addition, in the case of the prophetess, of a light blue mantle, and a wreath of oak leaves and acorns round her brow. The moon shines on the sacred groves, and the Druidical stones stand like petrified ghosts along dreary Stonehenge. There is a gong attached to one fine old fellow of an oak, the monarch of the wood, which shows that the Druids were up in the composition of bell metal. Norma, stretching forth her white left arm, sunk to three strokes, and the Druids, men and women, immediately broke in to a choral air, which does Bellini credit. It will be remarked that the beards of some of the priests are rather askew, which shows that the Druidical barbers did not understand their business, or perhaps the process of it caused the heat. The Norma, have two daggers and a reaping-hook brought to her, two of the deputy-priestesses, proceeds to cut the sacred mistletoe, which, with the hook, she deposits in the two baskets still held by the damsels, who then retire, probably to place the offering on the altar to the gods. There are learned authorities who say that the Druids were not by any means at the Druidesses, and that it was cut with a golden, but a reaping hook. Others—not less learned men than the first by a brass hatchet attached to a shaft; but I hold the reaping-hook to be far more poetic than either scythe or hatchet—Ceres is one example, and Grisi is another. Both are emblems of summer, and of the gathering in of the harvest—in one case of the wheat, in the other of the bank notes.

Grisi then comes forward and sings to the moon, addressing it as "Casta Diva," which proves that the Druids were originally Italians and that they still preserved the musical tongue of the South. Through the details of the representation I shall not wander, farther than to remark that ancient priestesses of the mistletoe had their little peccadilloes, that Roman proconsuls were not all so implacable to female charms as Cato, and that some Druid priests, not many I suspect, were severe moralists.

I now wish to say a few words in order to show my extensive learning, premising that I owe them to the excellent "Every-Day Book" of Mr. Hone. From thence I confess to have stolen the scythes and the axes and I now restore them, adding that, according to Mr. Brand, the ceremony of cutting the mistletoe was preceded by a grand procession of the people, that the bards walked first, no doubt singing and playing on their harps. A herald, which proves that the Druids used armorial bearings on their carriages, their seals and their spoons, preceded three Druids with the implements for the cutting. Then came the Prince—Mr. Brand ought to have called him the Archbishop or the Cardinal, or even the Pope—of the Druids, accompanied by all the people. He mounted the oak with a golden sickle, cut the mistletoe—which, by the way, was called "All heal"—and distributed it to the "inferior clergy," who on New Year's Day dispersed it to the people, there must have been very few people or a great deal of mistletoe if each received his or her portion on New Year's Day—as a sacred and holy plant, crying "The mistletoe for the New Year." That the Pope of the Druids climbed up the tree and used a sickle—the first operation being ignoble unless indeed he had a ladder, and the second inconvenient to a degree—I do not believe, and I am backed in my infidelity by the example of Grisi, in *Norma*, who neither climbs the tree nor uses the sickle. In fact my private opinion is that Grisi, about two thousand years ago, was a Druidess, and remembers the real ceremonies, so that she is undoubtedly the best authority.

But let us pass to modern times. Mistletoe was abolished in the Christmas decking of churches because it was found to set the young ladies and gentlemen a reading the marriage service. Holly was retained to indicate to them the dark monotony of matrimony and the numerous thorns with which it is abounded. Mr. Archdeacon Nares, who seems properly interested in the subject, states that it was removed from the churches to the kitchen or servants' hall. Since his time, however, it has been raised to the parlour and the drawing-room, without, however, reducing the quantity of kissing in the lower regions. For the truth of this *vide* Dame Durden *passim*. The amount of smacking which went on in the establishment, with or without the mistletoe, of that respectable female must have been startling.

Dame Durden kept five serving girls
To carry the milking pail,
She also kept five labouring men
To use the spade and flail.
'Twas Moll and Bet, and Doll and Kate, and Dorothy Draggletail,
And John and Dick, and Joe and Jack, and Humphry, with his flail.
'Twas John kissed Moll,
And Dick kissed Bet,
And Joe kissed Dolly,
And Jack kissed Katty,
And Humphry with a flail,
Kissed Dorothy Draggletail,
And Katty she was a charming girl to carry tea in Hearing pail!

I recommend the sharp practice of the servitors of Mrs. Durden, not only to all the servants' halls—but all the parlours and drawing-rooms within these realms and without them.

Furthermore, I give them this bit of antique lore—which, being old, must necessarily be true—that any girl who is not kissed under the mistletoe will assuredly not be married before next Christmas at the very least. Even the very act of leaving the mistletoe has been attended with fatal consequences. We read that—

"The mistletoe hung in the Castle Hall."

And that—

"The Baron looked with a father's pride
On his beautiful child, young Lovel's bride."

And that—

"'I'm wearied with dancing (or kissing) now,' she cried;
'Do tarry a moment; I'll hide, I'll hide.'"

Everybody knows the deplorable results from which I deduce the motto:

"Don't forsake the mistletoe."

I understand that it is, or was, etiquette for the gentleman who kisses the lady to pull off and present her with either a twig, a berry, a leaf, or a blossom of the branch. If this be the present practice, I recommend that the Founder of the Feast do provide about one sack full, so that he can ring the bell and say to Jeames, "Two mistletoes to follow."

I am giving all these useful hints and excellent pieces of advice to young ladies and gentlemen, and also to old ladies and gentlemen, for the latter are every bit as fond of a sounding kiss as in the bloom of their youth and the maturity of their man and womanhood. They sometimes perform the ceremony, formally, however, and in the good old fashioned style. The old gentleman, in his long waistcoat and frilled and ruffled shirt, makes a low bow, the elderly lady rises, and achieves a stately curtsey, forming a balloon of the full skirts of her antique brocade. Then the pair walk hand in hand to beneath the mistletoe, and the old gentleman delicately touches, with his not yet withered lips, the slightly rouged cheeks of the elderly lady. Then there is another bow and curtsey, and a third when the gentleman conducts the lady to her seat.

How different all this from the free and easy usages, particularly at Christmas time, of the young ladies and gentlemen of the present generation. The mistletoe time is, indeed, a licensed saturnalia, and [illegible] What romping, what screaming—what tittering—what make believe running away—and what bold standing under the mistletoe. The [illegible] other, while another class of determined *osculatores* are the rather scrimp and running-to-seed young ladies of thirty-five, who are getting desperate, and the jolly bald-headed bachelors who kiss every girl who comes in their way. Modest boys, on the contrary, withdraw into corners, and talk about their schools, and munch as many grapes and almond-cakes as they can get hold of; and their fright is excessive when the lady of the house, with a couple of pretty girls of about their own ages, by her side, advances to the timid hinds, and presents Miss [illegible], Master Frederick Mannering, and Miss Annie Morton to Master Edward Brown. The young ladies make graceful curtsies, and the two schoolboys awkward bobs of bows. However, they give the young ladies their arms, and parade them round the room, thinking what to say. If the young lady be clever and off-hand, she sees and pities the perplexity of her companion, and begins to rally him about his backwardness, and to hint that that is a beautiful mistletoe, and so forth, until Master Frederick Mannering musters up courage and, with a red face, stammers out—"Wouldn't you like to be kissed under it?"

THE MISTLETOE SELLER. Drawn by Foster.

"Oh, what a question to a lady!" titters pert Viola, with an [illegible] glance of her bright black eyes; and Fred, making a desperate effort, finds himself under the mistletoe, and kissing Miss Viola, not once, but half-a-dozen times; so that the ice thus broken, they get quite confidential, and take another sort of ice together.

And so the night wears on. Whist-playing—the Christmas [illegible] flirtation on the stair-case [illegible] about flannel and rheumatism, and young ladies and gentlemen about flower-shows, the Opera, French plays, and the [illegible] style of ladies' bonnets, until [illegible] announced, and there is great fluster about the seats, and young gentlemen and ladies manœuvre to sit by each other, and the "smallest possible piece of the wing of a chicken," or the "breast of [illegible] in demand. Also, "I'll thank you for a slice of that beef. I like it cut fat, and not too thin," and "a leg and a wing of that goose," from old practitioners at suppers, who have no notion of being starved.

So fowls tied together by ribbons, and the turkey, and the goose, and the round of beef, and the *entremets*, and the *hors d'œuvres* begin gradually to hide their diminished [illegible], and, amongst the snapping of motto-papers, and the popping of champagne corks, silence is proclaimed, and the master of the house stands up, gives three loud hems, and proposes—"Her Majesty the Queen, and God bless her!"

But why should I follow a scene through all its phases which every reader knows by heart? Suffice it to say that the clock of St. Martin's [illegible] St. Mary-le-Bone, St. Pancras, each and all have "gone" four before the last cab has rattled from the door, and the linkman extinguished his lamp and entered the hall, still piled with mountains of plates, to devour his supper by the kitchen fire, and be paid for his cold night's service.

CUTTING THE ASHEN FAGOTS.

(*See page 661.*)

Our Illustration represents "Cutting the Ashen Fagot." The Ash is said to be the only wood that will burn green, and it is the policy of the wood-cutters to lay on as many "binds" upon the fagot as possible, as it is an old established custom that every "bind" should represent a jug of cider, not that this is the limitation of quantity consumed on the occasion, only that this is part of the ceremonial.

A hot supper is usually provided, and the wives and children of the labourers and servants, together with the farmer and his family form a jocund party, and there is no end of good solid cheer and hearty enjoyment, which lasts far into the Christmas morning.

THE CHRISTMAS GUEST.

CHRISTMAS EVE IN BRITANY.

THE STAR IN THE EAST.—THE FIRST CHRISTMAS MORNING.

SPARKS FROM OUR CHRISTMAS LOG.

By Sir Roger de Coverley.

"Come, pledge me heartily in hot ale and spice,
My own merry boy;
Trim the Christmas log with a bough of the holly,
And sit down and be merry.
And drink to your heart's desiring."
H. Nicholls's "Hesperides."

Hi! Christmas was something to speak of and write about when old Herrick entertained it in the following verse. Then was the Christmas-block, or Yule-log, drawn out of the fire by the servants into the great hall or kitchen, and each member of the family sitting down in turn on the log, sang a Yule song, and drank a cup of good ale to a merry Christmas and a happy New Year. Then were Yule cakes and bowls of delicious furmenty eaten, and beef and bread and good strong beer were abundant in the houses of the wealthy;—then was there no lack of pleasure provided for all comers: minstrels for the great chamber, and a Lincolnshire bagpipe for the hall: the minstrels to serve up the meats at the master's table, and amidst honest mirth and rejoicing hearts, the grotesque ox-roast Yule-log was cast on the blazing hearth, with prayers for the safety of the house and the happiness of its inmates until the next merry Christmas. Huge Christmas candles were lighted; and when tired of the dance, the games, and the sports, the revellers gathered round the blazing log in the wide chimney, and long stories or told legendary tales until the midnight chimes announced the merry morn. Charity then opened the doors of the rich to the poor and needy, and hospitality spread the feast for the welcome guest: the abundance with which Heaven blessed a man was freely shared with his fellow-creatures, and the sad heart was taught to rejoice for a season. Labour had its rights and privileges at the merry Christmas tide; further the servants enjoyed an immunity from all heavy work, and were permitted to an equality with their masters and mistresses, who mingled in the sports and pastimes of the hall and kitchen; and young folks of whatever rank might kiss and be kissed beneath the branches of the mystic mistletoe, which then played a conspicuous part in the Christmas festivities. Little gifts from tenants, servants, children, and humble neighbours, were requited by substantial benefits; the knot of urchins who stood outside the church door with a basket of red apples and a sprig of rosemary stuck in each, to be presented to all the congregation at the church door, had a return of copper or silver coin made to them according to the rank or liberality of the person who received the apple. But these times are gone. The manners and carol singers, and the roast turkey and chine, and the mighty wassail bowl, and St. George and the Dragon, and all the merry gambols of Christmas are now forgotten and despised: the good old custom of—

"At Christmas be merry and thank God of all;
And feast thy poor neighbours, the great with the small,"

is now changed to the dreary tune of—

"Down with the rosemary, and so
Down with the holly, ivy, and all,
Wherewith ye dress the Christmas Hall."

Such were the cogitations of Mr. Septimus Sandiman as he sat alone in his study on Christmas Eve, watching the last few sparks which diffused a cheering warmth through the apartment. He had placed his slippered feet on the fender, and sipped his wine: some old crusted port which had been twenty years in his cellar while communing with himself—for unfortunately Mr. Septimus Sandiman was what the world calls an old bachelor, and had no wife to assist him in keeping up the conversation, or to give an interest to it by differing with him in opinion. It not unfrequently happened, therefore, that Mr. Sandiman had the best of any argument that might happen to arise while the bottle lasted. People who took an interest in the affairs of other people, naturally ask why Mr. Sandiman, who was rich and independent, and past forty—and a bachelor—and nearly ingenious traps were laid for him by managing mothers for their daughters, and by artful widows for themselves—but without success: he was too wary to be caught by the ordinary baits employed for the capture of weak man by the other sex.

Mr. Sandiman, though a philosopher, had one hobby which he rode on all occasions; this was a prodigious veneration for what he called "the good old times of merry England." He averred that our ancestors were far braver, wiser, and happier than their descendants: that we were neither so strong, so healthy, or so long-lived as the men of the olden time; and that the disappearance of our old English sports and pastimes, and the disuse of our national festivals and merry-makings was a sign of the decay of manhood and public spirit among us. One of his favourite themes, too, was the superior condition of the "bold peasantry" of England, before the face of the country had been changed into a vast gridiron with those cursed railroads, and the people stifled with steam, and smoke, and pestilent gas.

Pursuing the reflections, Mr. Sandiman, having nothing better to look at, continued to look at the fire, in which his fancy began to trace strange and fantastic pictures. Whimsical faces peared at him from the coals, and strange animals, more grotesque than the Heads of Hogs ever created, wandered through golden forests, or couched in cavernous caves; while fairy landscapes, more beautiful than any that the pencil of Mr. Beverly ever produced—palaces of topaz, and domes of pure chrysolite, rose before his eyes. Suddenly the scene changed, and he beheld a large old fashioned apartment, in which a number of people, dressed in the costume of the Elizabethan age, were dancing and making merry. The mystic mistletoe suspended from the ceiling in the middle of the room, and the branches of holly and ivy stuck round the walls, informed him that they were celebrating Christmas in the olden time. Gazing into the picture, it appeared gradually to expand; the sounds of music and laughter came clearly upon his ear, and the objects grew larger and more distinct, while those in the own chamber seemed to recede gradually away. At the same time he was conscious of an extraordinary change going forward in his own person. His chin, usually so smooth and smug, began to sprout into hirsute honours, and casting his eyes into the mirror over his mantel-piece, he started back on perceiving that he was furnished with a peaked yellow beard and a moustache, and that his hair had grown much longer, and was combed back over his ears in a strange fashion. A doublet and a short nether-coloured cloak, had replaced the modern black coat built by a west end tailor; trunk-hose, garters, and square-toed shoes, with pearl buckles on the latter, completed his costume, which he had no difficulty in recognising as that commonly worn by gentlemen in the reign of the "good Queen Bess." A long sword hung by his side, and a pair of embroidered gauntlets adorned his hands—and now that he looked at them, they were really not such bad legs at all;—the pity was that their fair proportions had been so long disguised by the absurd trowsers of the modern mode. While contemplating his altered appearance with considerable complacency, he did not perceive that he had actually moved into the picture he had been looking at, and now formed one of the company in that Christmas festivity. But although he knew that he had undergone a strange transformation, and was, in fact, what he appeared, he possessed a sort of mental duality, by which the memory and the consciousness of his other self were preserved.

The merriment was at its full height when he found himself thus unexpectedly thrown amongst the revellers, with nearly all of whom he appeared to be on terms of intimacy.

"Come, Master Markham, what do ye here moping in a corner, when you should be in the midst of the sport?" cried the lady-mayoress, who was evidently the master of the house, giving him a tweak of his broad heavy hand on the shoulder, that made it echo the whole night after. "Remember, man, that Christmas comes but once a year, therefore, I say, pluck up a heart and be merry to-night, though it should cost thee a groat to-morrow. What game wilt thou play at, man—blind man's-buff, or hot cockles, or shoeing the wild mare, hey? or there are other recreations beseeming a gentleman's quality, which I see yonder, if it so please you."

"Perdicace," interrupted another of the company, "Master Markham would choose rather to witness the arrival of the Dey of Tripolis, who has just entered the court-yard with a gallant train of noble knights and beautiful dames, and arrayed in splendid apparel."

Sandiman,—we still speak of him by his former name, preferring a sight of the Dey of Tripolis and suite to any other amusement, unsuspectingly accompanied his new friend into the court-yard, where he was received with prodigious cheers and laughter by the domestics and a few of the guests who, like himself, had been unwittingly invested to assist at the gambol of drawing Dun, the yule-log, out of the mire. This Dun, he now recollected, was the Christmas log, which was to be drawn into the hall by the servants, and as many of the company as could be induced, by various persuasions, to go into the yard. He knew it was unbecoming to set, so laying hold of the end of a rope attached to the log, he set to work to pull it with all his strength, when suddenly the rope, which had been fastened to the log by a slipknot, was easily loosed by one of the servants, and poor Sandiman was thrown flat on his face and hands in the mire; a practical joke whose success was hailed with shouts of laughter. He felt disposed at first to resent this indignity put upon him, but recollecting the licence which custom permitted to the domestics on these festive occasions, he submitted to take it in good part, and assisted to draw the huge log into the kitchen, which was not done without much rude fun, caused by the pretended awkwardness of the clowns who contrived to drop the log on the toes of those who were not aware of their tricks, which they shouted at the full pitch of their voices a carol, to the tune of

"Old Dun, up draw out of the mire,
To burn upon our Christmas fire,
So have we sung at this time of the year,
For Christmas comes but once a year."

The whole company having joined in the noise, which was rendered more dreadful by the screaming of a bagpipe, the transformed Sandiman stole off to wash his hands and face in the horse-trough, and rub his clothes dry with a wisp of straw from the stable. During his absence the log was hung on the fire with much rejoicing, and was blazing up the broad chimney with prodigious crackling and sputtering. The hall was then cleared for dancing, an accomplishment in which the *late* Mr Sandiman had never distinguished himself; still he could not decline the invitation of a buxom matron, even when she struck him, and to it they went with might and main, flinging, curvetting, and capering, until poor Sandiman was bathed in perspiration. His doublet felt strange on him, and he felt in his puffed out trunk-hose like a man who had got his leg into a balloon. He, however, made superhuman efforts to keep pace with his vigorous partner, by whom he was whisked up and down the hall through forty couples of dancers, or carried round the room, as in a whirlwind, by the united strength of all the performers. Now, if it had been a stately pavan or a saraband, he might have had some chance; but to think of a *brawl, that* would require the agility of a harlequin and the strength of an ox to accomplish, and a figure too as complicated as that of a problem in the sixth book of Euclid: two singles on the left, two on the right, three doubles, a trassade of six round, do this twice entranced pace; a figure of eight—three times broken down, come up, meet two doubles, fall back and then honour. Bewildered by the figure, poor Sandiman suffered himself to be dragged here and there by his partner, until sick, giddy, and completely exhausted by his exertions, he was on the point of sinking on the floor, or fainting in his partner's arms, when a joyous outcry at the lower end of the hall announced the entrance of the mummers.

It was the privilege of these unearthly clowns, who represented the ancient Lord of Misrule and his attendants, and were dressed in grotesque costumes, to commit whatever ruthless and indecency they pleased, without hindrance or remonstrance. First, then, after bowing with mock ceremony to the company, a fellow with a great red pasteboard nose, a wig and long beard of flax tow, and a long staff in his hand, meant to represent Father Christmas, advanced, and with furious gesticulation and action, bellowed forth the following doggrel lines:—

"Here come I, old Father Christmas;
Welcome or welcome not,
I hope old Father Christmas
Will never be forgot.

I am not come here for to laugh or to jeer,
But for a pipe of tobacco, and a skinful of beer;
To show some sport as I used to do,
Gentlemen and ladies on this Christmas time.
If you don't believe what I say,
Come in, the Turkish Knight—and clear the way."

The Turkish Knight entered accordingly, and was, if possible, a more truculent looking knave than the other. He wore a great white cloth twisted round his head for a turban, and was accoutred with an old breast and back-plate, and a rusty sword. The King of Egypt and St. George were rather differently fitted with armour borrowed for the occasion from some of the antiquarians of the neighbourhood. The fair Sabra, the daughter of the King of Egypt, was a great hulking butcher's apprentice, who looked big enough to be her father. The Dragon, a "parlous beast," red all over, with a painted paper head, saucer eyes, and a long tail of some coarse kind of linen, stitched over with ivy leaves to resemble scales, was personated by a valiant little tailor, who, having already drunk too much strong ale, maintained a most desperate fight with Saint George, and would not be "brought to reason" until the mighty knight and the King of Egypt and "the fair Sabra, his daughter," assisted by the Turkish Knight, fell altogether upon the drunken Dragon, and by dint of pummelling and throttling, reduced him to something like submission, and finally kicked him out of the hall. Thus ended in rude disorder the Christmas play, with which, notwithstanding, the company were highly delighted; a circumstance that rather tended to lower the exalted opinion Mr. Sandiman had formed of the manners of our ancestors. After the play a folk was carried round the hall, in lieu or fool of the pieces, to receive the contributions of the audience, who liked the coarse jests of the fellow, as though they were the choicest wit. Then there was more guzzling of ale, more singing, and more shouting, with which the Mummers departed, to repeat the same riot as pranks in some other house.

It must be owned that Mr. Sandiman had as yet little cause to feel in the boisterous merriment of "Merry Christmas;" he sate apart from the company in the recess of a deep bay window, which being unprovided with shutters or curtains, was favourable to the free passage of the cold frosty air that whistled through the chinks and crevices of the sash. Then he thought of his own quiet comfortable study—so warm and cosey—with its damask window curtains, and nice soft carpet, and began to feel that with reference to rheumatism our forefathers showed they knew little about the matter.

But he kept his opinions to himself, hoping that he might assist something to make amends for his sufferings. The sports had begun again; and being called on to assist in Shoeing the Mare, he received a kick in the stomach from Dickon, the gardener, who performed the part of the Mare, which sent him sprawling on his back in the middle of the hall, amidst shouts of laughter that shook the old wall. Hot Cockles, Blind-Man's Buff, and Hunt the Slipper, followed, in which he got cuffed and thumped till his ears tingled and his bones ached—not that he was worse treated than the others, but it was the custom to give and receive those rough compliments with good-humour at Christmas-tide. But what most shocked Mr. Sandiman, —who was a man of great morality and a respecter of female decency —was the carelessness of the revelry, some of the games considered to be now tolerated in the lowest public-houses. Whipping were more daring matrons—who were, however, unconscious of committing any impropriety by these playful interchanges of wit. Mr. Sandiman was beginning to feel himself very much out of his element, and not at all at his ease, when the order was given to set the tables for supper.

"Aha!" thought he, "I shall be right here. The pastimes of our ancestors are, I find, more violent than amusing; I must say either that I approve of their dancing, and 'Sellinger's Round' is particularly disgusting to me. Neither am I satisfied with their music, it is decidedly discordant and distressing to ears that have been accustomed to the Italian Opera and the Philharmonic; their manners are coarse, and have certainly a flavour of antiquity about them—this a pity they are so much admired nowadays. As for their games, I must admit that they are rather riotous, rude, and vulgar, boisterous mirth could only be produced by swigging; but their suppers are quite different; they are truly enviable as moderns in the real hearty enjoyment of a Christmas supper."

His reflections were interrupted by the entrance of a couple of fellows with armsful of green rushes, which the maids scattered over the floor; then the heavy oak tables were dragged into the centre of the hall, and the chairs and benches placed "orderly" for the company, who began to get impatient for the appearance of the eatables. At the upper end of the table, where the master of the house, his family, and friends sat, the tables was covered with a coarse carpet-like cloth; but at the lower end where the servants and lower class of visitors were placed, there was nothing to conceal the bare boards of the table. Then the great Christmas candle was lighted and placed in the centre of the table; but the smoke and smell of the yellow flaring lamps, fed with grease, which were hung about the hall, was by no means agreeable to Sandiman, who recollected with something like a reproaching conscience the clear beautiful light of his white wax or composite candles, and the brilliancy of the gas-lights in the streets and shops of London, which he had so often abused. The supper was served with a good deal of rude ceremony. One of the scullions preceded the chief cook, who carried the head dish, armed with a wooden ladle, and cleared a passage through the crowd of idle loungers: half beggars and half hoppers—who filled the lower part of the hall, by striking them over the heads with his ladle, crying out, "Room there, masters," "Make way, knaves," "Way, my masters." The head dish was not the ancient boar's head—which was then rarely produced but at great feasts in noble houses—but there was the time-honoured goose in its stead. Sandiman looked in vain for the royal peacock, the aristocratic swan, or the much-prized crane,—there were none of them present; but there was no scarcity of substantial fare, huge pieces of roast beef, and quarters of mutton; a conger eel salted, a couple of fresh salmon baked, brawn, roast pig, turkey, capons; mustard, tureens of plum porridge, pancakes, mince pies, bowls of cream, pigeons, wild ducks, and widgeons; haunches of venison, and black jacks reaming with ale, mead, and cider, were set upon the table in abundance. Plates there were none, but wooden platters deeply scored and hacked from long service. Sandiman liked the preliminaries well enough, and his appetite having been wonderfully improved by his exercise during the evening, he was preparing to attack the wing of a capon, when he discovered that he had got no fork; and then recollected that forks had only been recently introduced into England by Tom Coryate the traveller, and were utterly unknown in the country. The large dishes were carved by the servants, and the plates of the guests were heaped with piles of roast, boiled, and fried, all together. Each person plunged his hand into his victuals and conveyed the meat to his mouth with his fingers; nobody ever thought of changing his platter, the mere suggestion would have been considered a proof of arrant coxcombry. The men ate of everything that came before them indiscriminately, and with appetites like wolves; and the ladies ate like men—aye, and drank like men, swallowing draughts of strong ale and cider, and pledging their neighbours with hearty good will. The spirit of so much eating quite took away Sandiman's relish for supper; and when he came to use his fingers for a fork, he felt so awkward that he could not eat a morsel. He wished to taste the ale, but was deterred by seeing the man who sat next him seize the black-jack and plunge his greasy lips and mustachios into the frothing liquor. This completely disgusted him, and he would have risen from table hungry and thirsty had not a mess of plum porridge and a wooden spoon been luckily set before him.

But now the cry of "Wassail! wassail! wassail!" arose from the servants at the lower end of the hall, and was caught up and repeated by the guests at the upper table. Hereupon the butler, with a white napkin round his neck, entered, bearing the huge wassail-bowl, decorated with ribbons and sprigs of rosemary, followed by servants carrying a pile of cups, and others with basins, ewers, water, and napkins for the select company to wash their hands; a ceremony that

minstrel of the state they were in, was much required. Then there was a "wyse of minstrelles," —and a confounded nice it was — still a carol, or wassail song, was sung.

After this the master of the house took the bowl, and pledging to the health of his guests, passed it to the person on his left hand, who, having drank to the master and the company, and wished them a Merry Christmas and a Happy New Year, plunged his face in the bowl, and took a deep draught of the lamb's wool, while the roasted apples floating in the spicy beverage bobbed against the drinker's nose or lip, reminding one of the mischievous pranks of Puck,

> "—sometimes lurk I in a gossip's bowl
> In very likeness of a roasted crab;
> And when she drinks, against her lips I bob
> And on her wither'd dewlap pour the ale."

Thus the bowl passed from hand to hand, and from lip to lip, and the coyest maiden refused not to "leave a kiss upon the cup" for her lover's behoof; until the strong ale and mead began to take effect upon the revellers. The men-servants hated the maids under the mistletoe-bough, to rifle, according to Christmas miracle, the kisses, which were by surrendered without much screaming and struggling. A crowd of lookers and mumpers who swarmed round the doors squabbled for the broken victuals thrown amongst them by the concerts, and a number of savage dogs snapped and fought underneath the tables for the scraps and bones flung there during supper or carried away by the servants when they came round with their "wyding knives" to clear the board. Carols and wassail songs were sung over and over, and dancing recommenced with greater vigour and less order than before;—contentions too sprung up amongst the wenches, and loud and angry words might have been followed by hard knocks, if the worshipful squire had not interposed his influence and authority to preserve the peace. Mr. Sandman, who was of a pacific temper, and detested brawling of every kind, resolved to make a timely retreat from the riotous scene, but on attempting to walk, found that either the ale or the plum-porridge had been too strong for his legs: the lights seemed to dance before his eyes, and the floor to slip from beneath his feet; the music, and laughter, and cries, all mingled in one loud roar; the dancers appeared to be whirling with inconceivable rapidity round him, like the Willis round their victim in the ballet of *La Gwelle*. He felt confused, bewildered, helpless, and tried to reach a seat, but in making a desperate effort to accomplish his design, a dancing table, that had stepped out to tread a measure with a stately upright backed chair, treacherously tripped him up, and left him sprawling on the floor.

The shock broke the spell:—the Squire's old hall and the Christmas revel had passed away; Mr. Sandman was lying beside his chair on the hearth-rug in his own quiet study, his candles had burnt low in their sockets, his fire was nearly out, and so was his wine. Rubbing his eyes and his elbows, he tried to collect his bewildered senses, and after a while began to comprehend what had happened; he had been asleep, had "dreamed a dream," and had kept his Christmas as it was wont to be kept two centuries and a half away, with all its glories, in the "Good Old Times of Merry England." He concluded that his feet had slipped from the fender while he slept, and that losing his balance, he had fallen from his chair.

But that night's vision caused a marked change in Mr. Sandman's opinions respecting Christmas *as it was*, and Christmas *as it is*. He ceased to talk about the pleasant gambols and rare sports of our ancestors: and he actually confessed to pretty Fanny Deaston—while pulling motto crackers with her after supper, at a pleasant Christmas party given by his friend Thomson at his villa near Norwood—that although Christmas was observed with great hospitality and boisterous mirth by our ancestors, they were far behind us in those social amenities and gentle courtesies that give a true zest to the pleasures of the intellectual mind. And he might have added, that although the spirit of Charity does not now manifest itself in riotous feasts and revelling on high festivals, it still dwells amongst us, and consecrates the Christmas season by deeds of pure benevolence that make glad the humble home of many a poor man.

ACTING CHARADES.

A CHRISTMAS Evening without a good frolicking game of Acting Charades is simply a Christmas evening lost! gone!! thrown away!!!

Well! perhaps this language is a little too severe. No Christmas evening can be utterly wasted. The mere fact of a family meeting together and breaking bread, does its good. You seem to start on the new year with a lighter and happier heart; every shake of the hand, each kindly word, is so much courage and strength to support you through the next twelve months' journey through life; it is as if your best friends had assembled to "see you off," and wish you pleasant 365 days' travelling down the railroad of time. There is no doubt of it. Christmas is and always was a very pleasant time, and should not be abused, even though the evening should be passed without Acting Charades.

But we still assert that for a Christmas evening to be perfectly jolly, this magnificent game should be introduced. It is as necessary as mince-pies or plum-puddings, or other good things. Unfortunate y you cannot—it's a sad thought—include in eating these glorious dainties; and the next best thing to them that we know of, is Acting Charades. We know many an old gentleman, who would have fallen asleep in the drawing-room, and perhaps gone home and had an indigestion, if he had not been forced to join in this fun. We know many an elderly lady, who if she had not been pressed into the amusement, would have sat still drinking tea until her health must have suffered severely from the imbibition; and we could give the names of at least fifty little boys and girls, who if they had not been acting Charades, would most certainly have been sent to bed by eleven, whereas they were indebted to this delicious sport for being allowed to sit up till one o'clock, and being very ill and cross all the next day.

We could, if we chose, mention a great many more of the benefits which we know to have resulted from this game. A young lady—a distant relation of ours—got married through it, despite a strong cast in the eye and a decided irregularity of the front teeth. A young fellow, in a government office—with whom we were excessively intimate—sprained his ankle whilst acting, and was thus enabled to stay at home for more than a month after he was perfectly recovered. Lots of little boys and girls have torn their clothes at the fun, and have had bran new suits and dresses given to them. With such evident benefits, we feel certain that every well-regulated mind will agree with us, that of all games that ought to be played on a Christmas evening, the very best one is Acting Charades.

The rules of this game are these:—the two most imaginative young ladies in the company are selected as the managereses of the troops of actors. They choose their sides, and whilst one band is enacting a charade, the other remains seated as the audience. A word is then fixed upon by the corps dramatique, which has gone out of the room, and "my first, my second, and my whole" is gone through, as puzzlingly as possible, in dumb show, each division making a separate and distinct act. When the charade is ended, then the audience commence guessing at the word that has been performed. If they are successful then they take their turn at acting, if not, they must still remain in their seats as lookers-on.

One rule, and a most important one, is, that not a word must be spoken. Everything must be played in the most relentless pantomime. The actors must be as dumb as Cerito, but then they may, if they like, be as graceful. Occasionally an exclamation is permitted, such as a sigh, a groan; the "oh" of joy, or the "ah!" of surprise, may in cases of emergency be introduced. It would be difficult to explain to, even the most enlightened, audience, that a young gentleman, in a white waistcoat and polished leather boots, was a barn-door cock, unless he was permitted to crow a little; or who would imagine that a lovely young lady, with a wreath of roses round her head and white kid gloves on her hands, was neither more nor less than a house dog, unless she be allowed to bark every now and then. But these indulgences should not be presumed upon.

Placards are legitimate. We do not object to a line or two written on a sheet of letter-paper. Yes! we allow placards.

The next great point to be observed, is the perfect good feeling that should exist between the ladies and gentlemen acting. We regret to say, that we have, on one or two mournful occasions, witnessed ebullitions of temper that have greatly pained us. One Christmas evening we distinctly beheld a very pretty girl, box the ears of a youth with light brown hair, pinky eyes, and thin legs; because it was his duty as the enamoured swain of the drama, to kiss her on the forehead. To avoid such unpleasant occurrences, perhaps it is better to omit all embracing incidents. It may lead to blows; and, even if it does not go so far as that, still it is sure to inspire jealous feelings in the pure bosoms of all the other youths who are present.

The expression of the human emotions in dumb show, has always been considered one of the sublimest efforts of human genius. Now, how would it be possible for a fellow-creature, temporarily deprived of speech, to inform an audience "that pea-soup always disagreed with him." Think for the moment, and you will at once comprehend the difficulty of pantomimic acting.

Monsieur Pirouetti, that heavenly dancer, usually expressed his speechless love for any adored female by kissing his hands, pressing it to his heart, and turning up the whites of his eyes. Monsieur Pirouetti, judging from his action, always struck us as being a man who could love sincerely, so that there must have been something in his movements suggestive of that sacred and appetite-destroying flame.

Herr Cuzoni was celebrated as the only faithful delineator of MADDENED RAGE. He had ground his teeth nearly away; and, before he was fifty-five, he had to wear wigs, from having pulled out all his hair. His stride, when overcome by the delirious emotion, was one of the grandest evidences of a dumb genius. He would not unfrequently shake his fist at the ceiling: but the clenched fist suggests fighting; and, unless in cases of jealousy, it is better not to hint at such things.

Anybody who has ever witnessed the acting of Mademoiselle Jane Sterne Stoke Pogis Theatre, Isopal, will never forget her INSPIRATION. It tore your heart to pieces. You felt inclined to ask her if a ten-pound note would be of any service to her. Her wave of the arm, as if pushing aside all consolation, the unsteady footstep, the half-childish nodding of the head, as, with wide opened eyes, she stood gazing at the footlights, all, everything, was perfect. And to think that this sublime creature married a ham and beef merchant.

Madame Sneeseby, the proprietor of the pupils, has over and over again told us, that HOPE was the most difficult of all human feelings that a pantomimist can have to express. The finger raised to the ear, as if listening; to the fond assurance that rest only in the cottage home, the breath held, as watching an infant asleep, and the quick joking of the hand as if all was indecision—everything quite satisfactory and secure; oh! how beautiful were these! But then come the fearful, the heartrending fits of despondency, the hand passed before the eyes as if a misty picture of the sad future hung like a fog before the weeping orbs. Ah! it pains us even now to think of these affecting yet wondrous actings.

But it is in the dressing-up of the different characters that the true genius of the performer is really displayed. With a wardrobe, consisting of a few shawls, sticks, umbrellas, and stair-carpets, must HARRY THE EIGHTH be clothed in royal magnificence, or ALEXANDER THE GREAT come forward decked in the warlike covering of a conqueror. These are the difficulties of the game, these are its glories. The ingenious actor must test his quick eye and hand and fix upon the properties emblematical of royalty, nobility, paganism, or any other condition that can be denoted by apparel.

What could replace the point-lace collar of Charles the Second's time better than the anti-macassar of the present day?

Could the star on the breast of the order-bearing diplomatist be more fittingly represented than by the glass pendants placed to catch the falling drops of the wax candles?

Could the epaulettes of a general be more effectively replaced than by dish-rushes resting on the shoulders? or could the ermine of a chief justice find a better substitute than an antique petticoat reversed round the head?

All these little contrivances constitute the great fun of the game. Shout after shout rewards the ingenious contrivance, and if after a couple of hours of such harmless sport, Christmas boxes are not doubled, and everybody does not feel thoroughly tired out and happy, then never pay at acting charades again, but on the next Christmas-day sit round the fire and sleep until the plum pudding is digested, and then go home and have nightmares and bad headaches.

CAPTAIN

A CHARADE IN THREE ACTS.

ACT I.

CAP—

DRAMATIS PERSONÆ.

WILLIAM TELL.	GESSLER (the Tyrant).	MASTER TELL
	Courtiers, Guards, Peasants.	

SCENE.—*A market-place. A bottle of Geneva placed on a side table denotes that the scene is laid in Switzerland. From the distant passage is heard the music-roll horn of the merry Swiss boy gathering his flocks from the crags and peaks of cloud-capped staircase.*

Enter SWISS PEASANTS, male and female, carrying baskets of new laid eggs (folded up), and ripe Orleans *coals*. The men wear the national dress: crossed over their shirts, and the ladies dear to the land of their birth by wearing aprons. The multitude utter a Swiss cry of "Le, la, la," and then offer each other their goods for sale. They rush to the open door and look anxiously down the prospect into the valley beneath. By their actions they intimate that somebody, for whom they have an extreme aversion is advancing towards them. The women kneel and implore the ceiling to protect them, whilst the men shake their fists at the wall to express that vengeance is at hand.

Enter a detachment of two FOOT SOLDIERS. They wear their dish cover helmets, and are armed to the teeth with carpet-broom halberds and drawing-room silk umbrellas. They drive away the crowd, forcing it to seek the friendly shelter of a neighbouring window-curtain.

The proud GESSLER now enters on the scene. He is ready awake are plumes of cut paper, and the dressing-room table cloth hangs in graceful yet picturesque folds from his shoulders. He is surrounded by his court, each Noble arrayed with the greatest magnificence—some in shawls, others in mantles and dressing-gowns. The proud GESSLER frowns disdainfully at the multitude of Peasants. Great fear of Peasants.

A sudden thought seems to strike GESSLER. He waves his hand and a lofty fishing-rod is carried into the room. The tyrant places his costly wide-awake on one end of the pole, and orders it to be raised in the centre of the public drawing-room.

The Guards drive the multitude from shelter [illegible]. As each one passes the pole, he or she [illegible]. Occasionally that he takes snuff with his courtiers.

Enter WILLIAM TELL, leading by the hand [illegible] TELL, his infant son. His shirt sleeves are [illegible] hands, and slung to his back is his half-a-crown umbrella in a case. He stands for a moment resting on his cross-bow of cane-whip, and bottom-plates with disgust the bowing crowd.

The tyrant GESSLER notices TELL and then fixing it in his coach-whip bow, retires into the passage. Breathless anxiety of Peasants. Suddenly a cheer bursts from the crowd; and MASTER TELL, gracefully stepping forward, exhibits the cricket-ball apple pierced by stair-rod arrow. Great rejoicing.

Enter TELL looking daggers at GESSLER. The tyrant alarmed, rushes from the apartment. The Peasants raising MASTER TELL on their shoulders, bear him off in triumph.

Exit TELL, blessing his native land.

ACT II.

—TAIN (TEN).

DRAMATIS PERSONÆ.

EDWARD III., King of England.
PHILIPPA, his Queen.
EUSTACHE DE ST. PIERRE.
NINE MARTYRS
Knights, Nobles, SCHLEPS, and Fry-ers.

SCENE.—*Wast plate before the drawing-room walls of Calais. On one side is the [illegible] of the British Monarch, over which by [illegible] Flourish of tin kettles for drums.*

Enter EDWARD in his dressing-gown robes of state. On his head he wears the jolly-mould crown of England. In his hand he carries the right-hon. sceptre. His bearing denotes a conqueror.

Nobles in suits of mail dish-covers, and armed with well tried umbrella-blades and shields of tea-trays, follow after him. Soldiers follow in regimental order, and range themselves near to the throne.

EDWARD mounts the arm-chair throne, and the troops present arms. Flourish of music-roll trumpets.

Enter EUSTACHE DE ST. PIERRE, crowned in his bubble garment of blanket and at the waist by a common hearth-rug girdle. He informs the conqueror that he is dying for hunger, and that others residing in Calais, outside the drawing-room door, are just as hungry as he is.

Enter FRENCHMEN, looking pale and emaciated. They also describe their excessive hunger in dumb show.

EUSTACHE suggests to the conqueror that he leaves an awful price. He gives the key of Calais on a trencher to EDWARD, at the same time telling the ground to denote that the town has surrendered to him.

The KING, angered at the protracted defence of the city, spurns the street-door key. He shakes his bright poker in a rage to the staircase. He takes the bell-pull garter from the waist of EUSTACHE, places it round the neck of the ALDERMAN, and, hailing up his fore finger, informs ST. PIERRE that unless ten of the inhabitants submit to be hung, he will not spare the city on the morrow. Exit EUSTACHE, weeping.

Enter QUEEN PHILIPPA, beautifully arrayed in counterpane mantle of the period. Pages follow her, holding up her train of state-apartment. EDWARD rushes to meet her, and, in energetic pantomime, expresses his admiration for her beauty. Guards again present brooms. The KING leads her to the throne, and gazes fondly on her lovely countenance.

Flourish of kettles. Enter EUSTACHE DE ST. PIERRE, followed by nine martyrs, each one clothed in flowing blanket, and having a bell-pull round his neck. They advance towards EDWARD and kneel.

The MONARCH instantly orders them to be strangled. Soldiers advance to execute the cruel deed; when the QUEEN, casting herself at the feet of her husband, implores for mercy. EDWARD weeps. The Nobles and Soldiers turn their backs aside. The Aldermen are pardoned. Exit NINE MARTYRS counting fifty.

ACT III.

CAPTAIN.

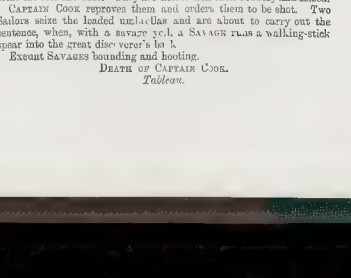
DRAMATIS PERSONÆ.

CAPTAIN COOK, OFFICER, SAILORS, SAVAGES.

SCENE.—*The Deck of that clipper built vessel the "Revolution," Drawing-room, A.1.*

Enter SAILORS, jumping about to show their readiness to work.

Enter CAPTAIN COOK with imposing paper cocked hat and hair brush epaulettes. He gives the necessary directions for steering the apartment. Some of the lads run to the music-stool, and begin turning the capstan to weigh imaginary anchor. Others commence pulling at the bell-rope to let go mainsail ceiling. Two of them take their places at the wheel and steer the room.



CAPTAIN COOK looks attentively through his music-roll telescope, and [illegible] examination proceeds to inform the audience that he distinctly perceives land to the nor-nor-west of the fire-place.

Scarcely has he concluded, when—

Enter several SAVAGES, dressed in fantastic costumes, who whoop and yell out for a few seconds: they are inhabitants of the Island of Owhyhee: whilst some of these unfortunate beings are conversing with CAPTAIN COOK, two of their companions attempt to steal the sofa life boat. They are detected in their robbery and seized.

CAPTAIN COOK reproves them and orders them to be shot. Two Sailors seize the loaded umbrellas and are about to carry out the sentence, when, with a savage yell, a SAVAGE runs a walking-stick spear into the great discoverer's back.

Exeunt SAVAGES bounding and hooting.

DEATH OF CAPTAIN COOK.

Tableau.

A CHILD'S DREAM OF TWELFTH NIGHT. Drawn by Charles Keene.

VERY FOND OF IT. Drawn by John Leech.

PIETY
LOVE
SORROW

PIETY.

Pressing with reverend foot the hallowed sod,
Thou tread'st the earth even as the sages trod,
In the old favoured days, who walked with God!

In ways where all sweet charities do meet
Thy steps are constant as the waves' timed beat,
And airs from heaven play about thy feet.

As one for whom God's better light doth shine
The downward eyes of silent thought are thine,
Whose soul, with lifted gaze, looks straight to the Divine!

LOVE.

Holy, and wondrous beautiful spell art,
O strength of Love! Who is there that would part
With that best music of the beating heart?

Thy sweetest tones may falter on the tongue;
The chords may break that with thy strains have rung;
But memory treasures all the soul hath sung.

Ye cannot drown it where the wild winds rave,
It hath a voice which Time and Death can brave;
For Love's undying echoes find no earthly grave.

SORROW.

There is no death in all the world! O vain
And idle fiction of the maddened brain!
The buried rise,—the death-struck live again!

Why weep ye with dim eyes above the lost,
They who the wider, calmer seas have crossed?
Ye, on life's shore, alone are tempest-tost.

Yield them to Him who steered them on their way!
In faith your heart upon their grave-sod lay,
Till He shall change your Night to their immortal Day.

Polytechnic Institution.—Among the novelties recently produced at this institution, we have much pleasure in noticing Mr. Cooper's lectures, descriptive of a journey from Constantinople to Nineveh, and remarks upon the principal mounds and excavations. Mr. Cooper is the artist who accompanied Mr. Layard upon his last expedition, and the descriptions are marked throughout by that air of fidelity and vividness which can alone emanate from an intelligent eyewitness. The lectures are varied by amusing anecdotes, and illustrated by paintings of many of the remarkable localities visited by Mr. Layard's party. They will be highly esteemed by those who take an enlightened interest in the wonderful discoveries of Nineveh, which are so replete with instruction, both of a Scriptural and historical character. We sincerely recommend these lectures to all classes, and especially to those who visit the metropolis during the Christmas holidays.

The Oldest Church in the United States.—The Richmond *Enquirer* says that the oldest church now existing in the United States is one near Smithfield, Isle of Wight county, Va. It was built in the reign of Charles I, between the years 1630 and 1635. The brick, lime, and timber, were imported from England.

Hints to Ladies.—Professor Felton, in a speech at the dedication of the new Normal School at Salem, Massachusetts, mentioned, on the evidence of a medical gentleman, that, in his practice, the number of cases of ophthalmia had increased fivefold since the introduction of the present fashion of bonnets, which affords no shade to the eyes.

Agricultural Prosperity.—During the last three years, the sale of cattle stock in Tipperary and Galway has risen from £1,540,000 to about £2,000,000 in the one case, and from £1,380,000 to about £1,930,000 in the other. Cattle of the finest descriptions are now to be seen in each of these localities. In these districts the number of cattle and sheep owned by Ireland's agriculturists stood as follows:

	Cattle.	Sheep.
1841	1,9 3,1 4 ..	2,106,190
1851	2,967,481 ..	2,121,126
1853	3,3 5,,309 ..	3,141,556

Not less satisfactory are the decrease of pauperism and the almost total absence of agrarian outrage. Ireland is no longer "the chief difficulty" of the British Minister.

New Dock at Southampton.—The large new graving dock in the Southampton Docks was opened on Monday for the first time for the reception of ships, and the General Screw Company's steamer *Orcana* was the first to enter it, which she did at high water. The dock is 800 feet in length, its extreme width 88 feet, its depth over the sill and blocks 30 feet. It has cost £62,000. It is formed chiefly of brick, and 7,000,000 bricks have been used in building it. The new dock would hold a ship 100 feet longer than the *Himalaya*.

Charges of Felony against a Bristol Merchant.—The Bristol magistrates were occupied on Monday in investigating several charges of felony against an oil-merchant of that city, Mr. John Gilbert, jun., and a man in his employ named Davey. Testimony was adduced in support of the presumption that the prisoner had committed robberies to a serious extent, from the fact that for some time past he had sold oil at a much lower rate than other persons in the trade could afford to do. The result of the investigation was, that the prisoners were both committed—Davey, on the charge of stealing; and Gilbert, for receiving the oil knowing it to have been stolen.

The New Bribery Act and Marylebone Election.—The recent Marylebone election is the first metropolitan contest since the passing of the new Bribery Act. By the provisions of that enactment the bills of cockades is forbidden. Bills for expenses are to be sent in within a month, and to be sent to the election auditor by the candidates, and no payment to be made except through the election auditor. The candidates are to pay personal expenses and the expenses of advertising. It is now illegal not to give refreshments to a voter on the day of nomination or polling. An account of the expenses of an election is to be made out and to be open to inspection. Each candidate is to pay the sum of £10 by way of remuneration to the election auditor, and two per cent. for the payment of the salaries and wages of the clerks. The reasonable expenses incurred by the election auditor in the business of the election to form part of the election expenses, and to be paid rateably and proportionably by the candidates respectively.

The Electric Telegraph in Russia.—In addition to the lines between St. Petersburg, Moscow, Warsaw, and Myslowitz, on the southern Prussian frontier, by which the communication is effected with Vienna and Berlin, and the rest of Europe, it has already completed a line from St. Petersburg to the north of Prussia by Mariopol, to the use of which private persons will soon be admitted, though at present only State despatches are forwarded by it. Another line is to be laid from Moscow southwards as far as Orel; from there two lines branch off—one to Azof and the Caucasus, via Kursk and Charkow; the other to Odessa, the Crimea, and Sebastopol, via Tschernigow and Poltowa. From the St. Petersburg Warsaw line a branch is to start off to Volhynia and Podolia. From Moscow a line is to stretch eastward, via Kasan, to Orenburg. From St. Petersburg a line is to be laid northwards to Archangel. From these trunk lines various accessories are to branch off to all the important fortresses, all the considerable towns along the coast of the bay of Finland are to be joined to each other and with St. Petersburg by means of a line of coast along the northern coast of that bay, and along the eastern coast of the Gulf of Bothnia, is to be taken in hand. For a still later period it is reserved to undertake a line into the Asiatic dominions, branching off from Orenburg to Tobolsk, and thence to Kamschatka, touching at all the important points of Siberia. The whole is very stupendous and admirable, but the reader involuntarily asks where Russia is to find the money for all this during a war with all Europe, and if she has the money where to find the hands, just when fresh recruits, to an undreamt of extent, are about to succeed the two years' levies of this year. By a ukase of the 27th ult., the surveys and estimates are ordered to be made for two new lines—one to form a junction between the St. Petersburg-Warsaw line (already in progress) at the Prussian frontier, with the Berlin-Königsberg line, which will be prolonged for that purpose to Stallupönen; the other from Moscow to Odessa, with a line branching off at Charkow, through Alexandrow, Bielaia and Arafat, to Theodosia or Kaffa, in the Crimea. The Russian couriers manage to get from Sebastopol to Moscow, by way of Odessa, in 36 hours, and from Moscow they reach St. Petersburg by an extra train in 12 hours; thus already 108 hours suffice, when no accidents occur, to convey Prince Menschikoff's despatches from the seat of war to the centre of government.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—Monday.

Their Lordships met at five o'clock.

THE WAR WITH RUSSIA.

Lord Brougham, on presenting a petition, took the opportunity of expressing his regret that he had not been able to be present at the opening of the session, that he might have added his testimony to the general opinion in favour of the present war—a war against all constitutional civilization—into which we have been plunged unavoidably; a war, indeed, of civilization against barbarism, and against a barbarism armed with all the weapons which civilisation put into its hands, together with all the force derived from its own savage nature and its ferocity in executing acts at which humanity blushed, and which would make it shudder to have recourse to (Cheers). That such a war should be speedily and successfully terminated must be the prayer of all good men. He had no reason to lament his inability to be present on the first night, when he found that all parties were most desirous of aiding in carrying on this war, and that all were struggling how it could be most effectually supported. He wished he could have been present to join his peers in the expression of thanks to their gallant army and navy, and to congratulate the House on the completion of the treaty with Austria. The cautious course taken by Austria had been abused by those who forgot that Austria was almost surrounded by Russia; at the same time it ought to be remembered that the present war involved Austrian interests much more than the interests of the Western Powers.

EMBODIMENT OF THE MILITIA.

In answer to the Earl of Glengall, the Duke of Newcastle stated that nine regiments of Irish militia had been ordered to be embodied, and it was the intention of Government immediately to order the embodiment of about as many more, making altogether a force of from 15,000 to 18,000 men. The same course was about to be taken with regard to the Scotch and the unembodied English militia regiments.

THE ENLISTMENT OF FOREIGNERS BILL.

On the motion for the third reading of this bill, the Earl of Ellenborough recapitulated the alterations which had been made in this bill in its progress through the House. Her Majesty's Ministers seemed to distrust the fidelity of these foreign troops if placed in the Mediterranean garrisons, and he could not understand how they could be trusted in the Crimea. If they revolted in Corfu, might they not desert at Sebastopol? The fifth clause gave power to the Government to make supplemental articles of war for the foreign troops. He did not believe that that clause had met with the approbation of the Commander-in-Chief, for that noble Lord, when in India, abolished the separate Articles of War under which the Indian soldiers enlisted, and placed them under the same discipline with the British soldier. He wished to know whence these troops were to come? He adhered to his opinion that there were no troops in the world like British troops. A chain cable formed of wrought and of cast iron links might look equally good in all its parts, and might act equally well in fair weather, but when the strain of the storm came the cast-iron links would be sure to give way. He wish was that the British Army should be composed, in all its parts, of wrought iron. There was a sense of personal dignity about an Englishman which he believed did not exist elsewhere. An Englishman felt if he disgraced his colours that he would be hooted when he went home—not a woman would look at or speak to him. It was different with foreigners. If they turned their backs they but disgraced the arms they had assumed, and they would go back to the banks of the Weser, or the Oder, or the Elbe, as much respected as they were before. He wanted to know what consideration we were to give these German Princes for thus obtaining the services of their subjects? If these petty German Princes were willing to sell the blood of their subjects for money—and he could not see way else they should give their consent to this system of enlistment—then he wanted to know what difference there was between this traffic and that carried on in the kingdom of Dahomey? Could that be right on the banks of the Weser which was denounced as the last atrocity on the banks of Dahomey? He confessed that his object in thus opposing the measure was to force the Government to draw their forces entirely from English subjects. He wished to drive Ministers out of that course they seemed to have adopted, of making war without a reserve; of conducting a campaign without means of transport; a system which condemned the Army to gain bloody but fruitless victories.

The Marquis of Lansdowne ridiculed the unduly exaggerated apprehensions entertained by the opponents of this bill, which, when brought to the light, vanished into air, like all spectres of a diseased imagination. He respected the fears entertained by the public out of doors, who did not know the provisions of the bill—he honoured them for their jealousy of the constitution—but surely noble Lords ought to know better. From the Duke of Marlborough to the Duke of Wellington scarcely a battle had been gained by Englishmen in which foreign troops had not come share. We were superior to Russia by sea—we were superior to her in both arms; and we were infinitely in point of population. It was important that we should redress that inequality by every possible means. What was the objection to our employment of foreigners in order to redress that inequality? It was alleged that her Majesty, enlisting those troops for the purpose of foreign war, would suddenly launch them against the native population; and though the noble Earl said they were not equal to Englishmen, still it was to be supposed that the British yeomen and the British militia would be no match for them, but that they would at once extinguish the liberties of England. He thought there was not a peasant on a village green who would not laugh at such an apprehension. The Minister who, in former times, had most employed foreigners was Lord Chatham, who made it his boast that he conquered America in Germany; that was, by the employments of Germans. The battle of Minden, which was one of the most English victories of the last century, was fought with a British force inferior in numbers to the foreign force assembled under the same banner. The Administration were as much impressed as the noble Earl himself could be with the necessity of bringing every well-trained Englishman into the field, but, having done that, they were impressed with the expediency of employing a foreign force as well, for the purpose of supplementing their employment and for their efficiency. With regard to the alteration of the Articles of War, all that was intended was to shape them so as to suit the habits and customs of foreign soldiers.

The Earl of Derby rebuked the Marquis of Lansdowne for the levity with which he treated constitutional objections to the measure. The excuse Ministers offered for not immediately embodying the English Militia was, that there was not enough of barrack accommodation for them, and yet it was proposed to quarter in this country—he presumed in barracks, but more objectionable still, if practicable—the 15,000 or 15,000 foreigners. The necessity for this bill did not arise from the want of foreign troops, but from the design to organise them in England; and they were to be organised in England because we were about to levy foreigners—not from foreign Governments, but the refuse of every country in the world. It was said that in all former wars we had employed foreigners. He admitted it; but then those troops served under their own banners, and fought in their own quarrel. In the battle of Minden the English were auxiliaries rather than principals. So it was in the wars of the Duke of Wellington. There were two objections to this bill, and he had not heard a satisfactory answer to either of them. The first was, a constitutional objection to levying and training foreign troops in England; and the next was—that it would discourage the native Militia if we were so entirely taking in England. If the articles in the Articles of War tended to exempt those foreign levies from corporal punishment, to which the British soldier was exposed, he thought no more dangerous course could be taken with the discipline of the British regiments. If men were wanted, he thought that large bodies of trained troops might be obtained from India. He wished to ask the Government whether any supplies of men or money for the support of this war were to be received from the United States of America? The colonies were now as independent of England as Ireland was previous to the Union—the only tie in both cases being that of the Crown. Yet was there ever a war in which England was engaged that Ireland did not contribute her assistance? He believed that the North American provinces would be as ready now to contribute both men and money towards carrying on this war. At all events, he was certain that if England would find the money, the North American provinces would be gratified to raise three or four regiments to share all the dangers and honours of the British Army, the only difference being that the latter usually passed by British troops in this country should be passed by the American troops in their own country. Though he retained all his objections to this bill, yet, as their Lordships had affirmed its principle, he would content himself with saying "No" to the third reading.

Lord Hardinge approved of the measure, as an attempt to get the largest force they could at the earliest possible period; and though he had every confidence in the army now in the Crimea, and in the spirit of the British people, still he could not think that would justify him in resisting this measure.

Earl Grey supported the bill, but thought there might be great convenience in having a difference in the Articles of War as applicable to British and foreign soldiers serving under the same banner. He did not believe there was any necessity for the clause, as it appeared to have been inserted only from the precedent of former Acts, drawn at a time when the condition of the British Army was very different to what it was now. He ridiculed the "wrought-iron argument" of Lord Ellenborough, and said there never was an army composed throughout of troops of equal quality, and that even some British regiments were considered superior to others. He thought this House and the House of Commons would take upon themselves a fearful responsibility if they refused to Ministers the means they asked for to carry on this great war; and he rejoiced, therefore, to learn that it was not intended to divide the House against the bill.

Earl Granville supported, and the Earl of Malmesbury opposed the bill.

The bill was then read a third time.

On the question that the bill do pass,

The Duke of Newcastle agreed to strike out the fifth clause, relating to the Articles of War, which, he said, had been copied from former bills.

The clause was struck out accordingly, and the bill in its amended form passed.

REASSEMBLING OF PARLIAMENT.

In answer to a question from Lord Malmesbury as to when Parliament would meet again after the recess (so we understood the question), the Earl of Aberdeen said, the 23rd of January.

HOUSE OF COMMONS.—Monday.

Several unimportant amendments in the Militia Bill were moved and agreed to. After which, on the motion of Lord J. Russell, the Foreign Enlistment Bill was read a first time. Mr. Disraeli observed that although it was not his intention to oppose the first or second reading, he would offer the bill his most uncompromising opposition.

HOUSE OF LORDS.—Tuesday.

PROPOSED THANKSGIVING-DAY.

The Earl of Aberdeen, in reply to the Duke of Grafton, said that it was not the intention of the Government at present to order a special form of prayer or thanksgiving for the Divine protection during the present war. It was in the recollection of their Lordships that her Majesty graciously directed a form of prayer imploring the blessing of the Almighty upon their undertakings, and he believed there never was a form of prayer more devoutly and universally observed than that answering as it did every purpose that could be desired. From these reasons, together with a reluctance to tamper with the Liturgy, he declined to counsel her Majesty to issue any order upon the subject.

After a few remarks from the Earl of Hoden, complaining of the decision arrived at by the Government, Lord Campbell expressed his perfect approval of the course which the noble Earl had adopted.

HOUSE OF COMMONS.—Tuesday.

On the motion of the Duke of Newcastle, the Militia Bill was read a first time.

SUBSIDISATION OF FRENCH TROOPS.

Lord J. Russell stated, in reply to a question from Mr. Muntz, that the only limit to the number of troops which the French Government was desirous of sending to the Crimea was the amount of transport conveyance which they could command; he added that there never has been any arrangement between the two Governments to send out French troops to be paid by the British Government.

Mr. Ewart obtained leave to bring in a bill for further promoting the establishment of free public libraries in towns.

The Marquis of Blandford obtained leave to bring in a bill for the better management of episcopal and capitular estates.

THE MILITIA BILL.

On the motion that the Militia Bill be read a third time, Colonel Sibthorp, in a series of questions regarding the standing of militia officers, so complicated in their construction that their reading afforded the House much amusement, as no one appeared to understand them. He then rose to oppose the third reading, when he was stopped by the Speaker, as having already spoken.

The bill was then read a third time, and the Colonel was allowed to state his objections, after which the bill passed.

THE FOREIGN ENLISTMENT BILL.

Lord J. Russell moved the second reading of the Foreign Enlistment Bill. As so much prejudice was felt with regard to this bill, he went at some length into the history of the country, so far as it bore on the question. The policy of England had uniformly been, whenever any individual Power in Europe attained a disproportionate extent, to use its influence in the first place—her force in the second, to adjust the balance, and maintain the independence of the smaller States of Europe. That had been the policy of Elizabeth, of Cromwell, of William III., and of the statesmen in the reign of Queen Anne. But we never maintained a large military force, it was always the practice of the country to levy foreign soldiers. In the campaigns of the Duke of Marlborough, for instance, his army was composed of 80,000 men, of whom 40,000 only were in English pay, and 18,000 only of these were British soldiers. Other wars followed, in which the same practice prevailed. He did not pretend, indeed, to justify the employment of Germans in the American war—that, he thought, was an unjustifiable employment of foreign troops. But in the late French war no one objected to the employment of the German Legion. Mr. Fox objected to their introduction into the country, but that was because they were introduced without the consent of Parliament. Why, then, should they now depart from their ancient policy and established practice and lay it down as a rule that their aid should now be excluded? Why fight with British soldiers? It was true that they were not now, as formerly fighting with Spain or France, but with Russia; and he could not see what difference that made—Russia now being a power as preponderating as France and Spain were before. Then it was said that the bill was an indication that the country was at the end of its resources. On the contrary, it was at the beginning of a war that the greatest pressure on our resources constantly occurred. They had raised their peace establishment of 120,000 men to 150,000; but how could they expect with the enormous dependencies which they had to guard, that the number could supply all the necessary reinforcements for the army without extraneous aid? If they determined to do that, they must be prepared to incur all the risks before they were properly drilled, at great risk and certain loss from disease. It was proposed, then, to raise a foreign force, and to bring them to the country for organisation, not to substitute them for British troops, but to act while British recruits were in course of training. He quoted the opinion of the Duke of Wellington when supporting the present Militia Bill:—

I find that with regard to the battle of Alburera the conduct of the German Legion was conspicuous and good in every point of view. Sir John and the Duke of Wellington spoke of the gallant charge of the German Heavy Brigade. But it was, indeed, generally admitted that the conduct of the German was deserving of the highest praise, and I am sure every one in these days would testify to their gallantry (Hear, hear). They fought in our cause—in the cause of Europe—and I do not think that, certain as the present day will maintain that we should not employ foreigners to fight our battles in such a cause. It was said by a person of great distinction and wit at that time—Madame de Staël—that we were in fact fighting the battles of Europe; and the Forces of England were the Wings of Europe. We were then engaged against a preponderating Power, and we employed foreigners in our service. I now come to the contest in which we are actually engaged, and I ask, why are we to depart from that ancient policy, from that established practice which has tended to the success of our wars, and why we are come suddenly to discover that every war which we are in failure to carry on, is to be carried on with the British army only? We are engaged now against a preponderating Power. It is not the power of Spain, or the power of France, but the preponderance of Russia that we have now to dread. Is there any reason

that we should not adopt the same means which we successfully employ I before, because Russia is the Power with which we have to deal?

It had been said that surely they were not so thoroughly exhausted at the beginning of the war as to need foreign aid. But it was at the commencement of hostilities that the pressure was greatest, especially when engaged, as we were now, with so formidable a military power as Russia. Let them remember what our military system had been: whether that system was wise or unwise, we had hitherto kept a very small army on foot:—

Till last year it did not exceed above 130,000 men; and these men have been employed on every service on the face of the globe where we required them (Hear). They have had sometimes to guard and secure 12,000 miles of frontier in India; they have had at one time to put down a formidable insurrection in Canada; at another to spread themselves over a difficult country and meet every device of savage warfare in the Cape of Good Hope (Hear, hear). Wherever they have been called on to perform that duty which the country expected, and justly expected, from them, they performed it well and satisfactorily (Hear). But when you attempt to increase suddenly those 130,000 troops—when you propose to us to raise them on paper to the amount of 170,000, but in fact to the number only of 150,000—can you expect that that number will be able to furnish regiment after regiment, army after army, without any considerable assistance and support (Hear, hear)? It was said by my right hon. friend the Secretary at War a few nights ago that we sent 55,000 men to the East, and that appeared to the House, as it well might, a considerable amount of force; but that number forms only one *corps d'armée* of the enemy with whom we are contending (Hear, hear). I have no doubt he has sixteen or eighteen such *corps d'armée* which he can oppose to us on the different points of his frontier, or wherever he may be attacked (Hear, hear). Now, what are the points which we have to guard? We have to guard Turkey on the various points where she is assailable. We have to guard the frontier of the Principalities, where Turkey is not now attacked. But where she may be at a future time. We have to guard Turkey against that force which menaced her from the Crimea—which would become more menacing in future—which would be a perpetual menace to the capital and empire of Turkey if some such was not put upon it (Hear, hear). But, thirdly, it is necessary to have a sufficient force on the Asiatic frontier of Turkey; so that while provision is made for her defence in the other parts of her empire, in the Principalities and in the Crimea, she may not be exposed on the Asiatic side. If, then, you say that you will have none but British regiments—that, for the first time in the history of this country, you will rely on British regiments alone, you will run the greatest danger that, whilst you are recruiting those regiments and furnishing your depôts, you may be called on, in order to preserve your forces abroad, to send out young men before they are properly trained, and thus expose them to destruction; while, by keeping them at home for a time, you would enable them to acquire that vigour and force with which British regiments act (Cheers). I remember hearing from the lips of a aide with the Duke of Wellington in the Peninsula during the war, and having seen the 10th Hussars, which had just come out. I thought them exceedingly well-appointed. I was struck with the intelligence and precision of their movements. As an ignorant civilian, I could not but be struck with the brilliancy of the spectacle. At dinner, however, the Duke of Wellington observed, "That regiment, at the end of a year, will be a very good regiment"—thus showing that even considerable training in the field is required, after training at home, to make a regiment fully efficient (Hear, hear).

It was said that the foreign troops would be fighting, not as the Germans were in the last war, in a quarrel in which they were personally interested, but that they would be fighting as mere hirelings. That argument gave up the whole cause of the war, and reduced it to a purely British quarrel. He had always maintained that this was a great European quarrel, in which there was no purely English or French interest involved. Though some of the great Sovereigns of Europe had hesitated, and left us to bear the brunt of a quarrel which more properly belonged to themselves, this was no reason why their subjects should not engage in it. Then it was said the service was so degrading that no officers of respectability would engage in it. Yet Sir De Lacy Evans and Sir Charles Napier had not hesitated to engage in the service of the ally of England, in a quarrel in which England was not engaged. He then came to the necessity for the measure. If they thought fit to offer bounties of £50 for recruits, and to send them forth without training, he had no doubt they would get a sufficient number of men. But he was looking to the prospect of a protracted war, and to the propriety of husbanding the national resources, and it was a gross fallacy to say if they had 200,000 Englishmen and 40,000 foreigners that they were equal to 240,000 swords. He thought it would be most unwise to change the policy which had been approved by Cromwell and by Chatham, by Marlborough and by Wellington. Such a course would be difficult in war it would be still more difficult in peace. The alternative, if we were to dispense with foreigners, must be—that we must at all times keep up a large standing army, and that within two years of peace would be found intolerable. The Government thought this measure necessary in the present state of the war. If it were not necessary, it would be proof that Ministers had not the confidence of this House. He was surprised that it should be imputed to Ministers that they distrusted the courage of the British Army. Their object was to support the army in the most effective manner, and thereby to bring the war to a glorious termination:—

But, relying on the British Army, we desire to carry on the war vigorously and effectively; and if this be a legitimate way by which the power of the Emperor of Russia can be crippled, by which his forces can be checked, it appears to me it is one which the House of Commons ought to adopt (Hear, hear). Many a man may say, as the great Spanish captain did, who, when asked to retreat from a post, replied, "I would not move a foot forward though it should lead to the grave, than step a foot backward though it should lead to safety." I say that every man in the British army is inspired by that sentiment (Hear, hear). But we should give them every support that we can (cheers). It is the object which her Majesty's Ministers have in view, and we seek thereby to a glorious termination of the war (Cheers). I now beg leave to move that this bill be read a second time.

The question having been put,

Sir E. Bulwer Lytton believed that the honour of England was pledged to this quarrel, and for that very reason he was not willing that now, at the outset of the war, they should convey the idea that they could not fight their battle. That which he relied upon to bear the country through this struggle was, not the population nor the wealth, so much as the enthusiasm of the people, and that very enthusiasm that still tended to damp. It was admitted by the Secretary-at-War that recruits were coming in faster than they could be drilled, and that it virtually said to those recruits, Your rude, untutored enthusiasm is not sufficient—we must rely upon hireling mercenaries to defend that standard which British valour planted on the heights of Alma, and raised from barbarian hordes on the hill of Inkermann! If we were now on the eve of a protracted war Could a greater change be brought about in the two countries? Why had they not prepared for that war sooner? All England saw it except the heads of the Government. If Ministers had but acted with ordinary energy after the battle of Alma, they might have had double the number of English soldiers sent over by this time. With regard to the precedents adduced by the noble Lord, they were unfortunate precedents. In the late war the Secretary-at-War defended the enlistment of foreigners, on the ground that they were subjects of the same Sovereign. It was true the Germans were enlisted, but still they had the closest sympathies with our quarrel. In the wars of Maria Theresa they were our allies, and offered to fight for the chivalry of their own country But the noble Lord referred to the speech of the Duke of Wellington in praise of the foreigners employed. But was it necessary to inform the House that the Duke referred not to mercenary soldiers, but to Spanish and Portuguese fighting under their own banner? But the Government had never yet told them whence these wonderful troops were to come. They heard much of their excellence nothing whatever of their parentage. It was rumoured at first that the force was intended to enlist a battalion of Poles. That idea had been so recuted by the Prime Minister, however, that it was hardly worth while to dwell upon it; but still, as the intentions of Ministers were more subject to change than those of ordinary mortals, if at some future time they should propose to enlist Poles under their standard, he would warn them, before doing so, to define the character of this war. If they intended to restore the independence of Poland, let them say so manfully, and they would not only have Irish but allies. But if they would not do that, then the enlistment of Poles and of other distressed nationalities would fix a deep stain upon the sincerity of Ministers. Other gentlemen might go into the general conduct of the war. It was not his intention to do so, for he could unfeignedly assure the Secretary-at-War that he had heard with more than pleasure, with admiration, the satisfactory manner in which the noble lord had disproved most of the charges brought against the Administration. There were other members in the Cabinet who's glory was so bound up in the history of the country as to give the largest stake in its prosperity. But he feared the Cabinet was composed of materials too discordant to allow of that unity and promptitude of movement without which war could not be successfully carried on. They had never blamed Ministers for their reluctance in going to war. What they blamed was, that Ministers had not frankly explained to the Czar the feeling of this country in opposition to his schemes, which, he believed, would have been a better security for peace than the compliments they had lavished in the memorable visit of Prince Albert. If he were to presume to give advice on this question, he would say, "Go to the market of war—the best market was at home; and buy the best article at any price; it would be the cheapest in the long run." The mere mechanical difficulties of the drill would soon be got over by our skilful officers: and for the rest, our recruits, even before they joined our ranks, had gone through a discipline far more precious than the three years' holiday service of the foreign soldier. They had been trained from their cradles to hardy habits, to patient endurance of fatigue, and, above all, in an indomitable conviction in the strength of their own right arm. These were the habits which made soldiers invincible; without them, armies might be drilled in the drill and valueless in the field. He concluded, amidst the general cheering of his party, by moving that the bill be read a second time that day six months.

Mr. M. Milnes supported the bill, and defended the resolution of Government to stake their existence on this measure, as it resolved itself entirely into a question of confidence.

Mr. Adderley urged that recourse should be had to our Colonies, in preference to foreign countries, for soldiers.

Mr. Watson would support this and every other proposition which was calculated to carry on the war with effi ency.

Mr. E. Ball, as an opponent of the war, opposed the bill, which he thought would only add to the calamities of the war.

Mr. M. Gibson denounced the attempt of Lord J. Russell to overawe the House by threatening to resign if the bill were rejected; but he thought there were principles involved in this bill more serious than the resignation of any Government. It was proposed to enlist foreigners either with the consent of their Sovereigns or without their knowledge. If their consent was obtained, where was the treaty? If not, it was a violation of the public law of Europe, many of the States of which, our own amongst the number, had passed laws against their subjects serving under the banners of foreign States. How could they object to Russia hiring the privateers of America after they had themselves sanctioned a principle which would fully justify it? The noble Lord defended this measure on the ground that we were not a great military power; but he forgot to say that we were allied to a nation that was a great military power, and that could supply a large body of men. He had been desirous, in his reluctance to embarrass the Government, not to vote at all upon the question; but, with his convictions, he could not act otherwise than use all the means in his power to have this bill rejected.

Mr. J. G. Phillimore opposed the bill, as involving a calamity and a degradation to this country.

Mr. Sidney Herbert justified and reiterated the intimation of Lord John Russell, that if this measure were rejected the Government would resign. But he defended the bill on its own merits, and he challenged its opponents to discuss it on its own grounds. The historical precedent had been attempted to be evaded on the ground that former wars were European wars. Well, he put it to the House whether there ever was a war which could more properly be called a European—a German—war than this one. Throughout Germany there was a sympathy with them. Was that sympathy to be rendered fruitless on the question of precedent he quoted to the House an Act for forming several battalions of the 60th Rifles from foreigners, which was actually carried into effect. He denied, however, that this was a question of precedent, but one that must be determined by the exigencies of the case. In the present case the difficulty was not to turn recruits into soldiers, but boys into men. The mass of these recruits, every one knew, were boys of eighteen. In a campaign, such recruits might, as the Emperor Napoleon said, consume his rations, but they impeded his marches and encumbered his hospitals. Now, according to the consumption of the campaign, every man was bound to serve in the Army for a number of years, which would not allow him to leave his country till he was of the age of twenty-six or twenty-seven. There was a great desire among the Germans to emigrate, and from 200 to 300,000 had passed through this country every year on their way to Canada or the United States. That was the class of men the Government wished to obtain. The Government could not pretend to say how many of these men they would obtain. But every man must indeed be endowed with the powers of prophecy if they could tell beforehand how many of these men they were to obtain. The number would depend upon the willingness of the men to join, and the willingness of Parliament to pay them. It was quite true, he was happy to say, that English recruits were coming in faster than they could form them into regiments. He had no doubt that these men would fight as their comrades had fought on the Alma and at Inkerman; but if they should have them till they were capable of standing the exposure of the campaign as well as the perils of a battle, the country would receive twice the amount of service from them. He denied that the foreigners would be mere mercenaries; on the contrary, the enthusiasm on the Continent was spread as far as this measure. The employment of foreign troops was not peculiar to this country. France had a foreign legion. The Turkish troops were officered by Germans; their artillery was organised by Prussian officers. Omer Pacha himself was of Austrian extraction; and in the Russian army half the officers were many German officers. He reprobated the use of insulting language towards foreigners that had been used in the course of this debate, which could only serve to deter the German Powers from taking a share in the quarrel. He concluded by conceding to every member of the House the right of forming his own opinion on this question; all he asked was, that the Government should not be forced to retain their places without having the powers committed to them which they declared to be necessary.

Lord Stanley regretted to find that the Government persisted in pushing forward a measure which he believed the unanimous opinion of the country had pronounced discreditable and unnecessary. No time had been allowed for a proper consideration of the bill, nor any sufficient cause shown for proposing it. Our own resources were ample for all demands. It was ridiculous to argue that a population of 26 000 000 could not succeed in furnishing 200,000 men. Referring to Mr. Herbert's statement that the British recruit was too young, he declared that the Germans would be too old having passed the age of service in their own armies, and almost attained that at which the British soldier generally obtained his discharge. If the addition of 10,000 men to the force in the Crimea was of such consequence, he suggested that they should be furnished from our French ally as far preferable to the trouble of hiring unattached mercenaries. With respect to the Foreign Legion, he expressed his wonder that a Government which had reformed the Reform Bill and Education Bill without remorse could not do the like here because they were not permitted to levy a few thousand foreign auxiliaries.

[In the next House Lord's session the same excitement was caused by the entrance of Sir Charles Napier below the gallery. Several members who [illegible] and Lord Palmerston rose together [illegible]

Mr. J. Fitzgerald supported the bill.

Mr. Drummond and Lord Palmerston rose together [illegible]

Lord Palmerston addressed the House. He denounced the inconsistency of the Opposition, who first blamed the Ministers for want of energy, and then, when they proposed the measure, they were met by [illegible] constitutional objections. The measure was no novelty; it had been practised not only by this Government, but by every Government that ever was engaged in a great war. Even Napoleon, who had the conscription in the absolute disposal, had his army full of foreign soldiers. But in England such a measure was most of all necessary; for, as long as peace existed, our army was kept down to the lowest possible level. The noble Lord said we ought to have prepared for war so [illegible] ould have come to Parliament at such [illegible] for the augmentation of our [illegible] Our system of voluntary enlistment gave us the best soldiers in the world; but it cost us time, and caused the price of the recruit [illegible] country without the consent of Parliament. A very good civilian argument had been used—that, as these men were to be trained soldiers, there could be no need to bring them here for training. True, there was no need to train them as soldiers, but surely it was necessary to organise them into battalions. Ah! but then, it was said, whence were the men to be got? There seemed a great curiosity upon that subject. Why, Ministers could give the information upon that subject till they knew Parliament would allow them to enlist them. Well, now, he should like to know what these constitution-reverencers would have said if they had extracted from the Government information that, before Parliament had given the consent, Ministers had been in treaty with foreign Governments for the enlistment of their subjects. There was no mystery in the matter, except that mystery which he was unable to solve—how it was that gentlemen who professed their willingness to assist the Government in carrying on the war should object to the first measure the Government proposed for that purpose. The reinforcements of 20,000 or 30,000 foreigners would be a great assistance to the brave men in the Crimea, who had so nobly deserved all the assistance this country could give them. Having entered into this war, they could not terminate it without having achieved great results, and those results could not be achieved by small and insignificant detachments.

Mr. Layard criticised the speech of the noble Lord as distinguished by that airy self-sufficiency which he knew so well how to assume when he had a bad cause. They were all agreed on the necessity of making adequate exertions; the only question was, whether the Government measure came under that category. He declined going into the general policy of the war, and would confine himself to the merits of the question before the House. The Government seemed at last to have discovered that Russia was a great military Power, and in the spirit of the largest charity they lost no opportunity of imparting that information to the House. On this subject, at least, there was no reserve. Neither he nor any one else had any objection to English troops fighting by the side of foreigners. That was not the objection entertained to the bill. They objected to mercenaries, not to allies. The President of the Council argued throughout as if there were no French alliance, and no French army fighting by the side of our troops. He would admit that, during the late war, some rare instances occurred of the enlistment of foreigners, which could not be justified more than the enlistment of Hessians in the American war—that shameful page in English history. The example of great commanders had been quoted in favour of foreign soldiers; but he cited extracts from various despatches of the Duke of Wellington, complaining of the desertion of the foreign levies, often to the great danger of his operations. These were the "Rear Rank Leagues;" the remarks did not apply to the German Legion, or to the subjects of allied Sovereigns. He also quoted from a semi-official article in the *Constitutionnel*, stating that the surprise at Inkerman was caused by a member of the Foreign Legion deserting, and giving information to the Russian Generals of the weak points of that position. But, irrespective of all other considerations, he believed this measure would prove ineffectual. It was not just in the noble Lord to charge the Opposition with faction. They had refused nothing to the Government—they were willing to grant them any amount of men and of money; and, instead of throwing obstacles in their way, they had adhered throughout to the profession they first made, "Act with frankness and firmness, and you may count upon our support as surely as upon your own most trusted adherents." But what would be the effect of this measure abroad? Its influence upon foreign nations might be estimated from an article he read the other day in a great Continental authority, not unfriendly to the Western Alliance, which wound up its argument with the conclusion that all they could deduce from the policy of the English Government was that the recruiting power of England was exhausted. The excuse that we could only enlist boys was contradicted by the general state of the country, and the noble Lord had but to ask Parliament, and he might, to-morrow, enlist 100,000 grown men. On the subject of the general policy of the war he would not now enter. The time would come when Ministers would be expected to give full explanations of that policy. It was now known that Ministers had sent the expedition to Sebastopol. Since the invasion of Sicily by the Athenians, there never was a more unfortunate expedition, or one on which more was staked. In the beginning of the expeditions there was too much similarity. The schemers were arrogant, boastful, over-sanguine. There were too many generals. There was too little cavalry. There was no reserve. In their proud despair, the Athenians sacrificed the fleet and suspended the sailing of their own countrymen. We, in less peril, but still in a time of anxiety, proposed to enlist foreigners to fight the battles of England.

Mr. Muntz, though he supported the war, could not support this measure. If Ministers would resign on this question, let them.

Mr. Deedes, as one of those who had near relatives in the army of the Crimea, would prefer that army to be reinforced by Englishmen rather than by foreigners

Several members rose to speak, but the impatience of the House for a division was extreme; and the only member they would listen to was

Lord J. Russell, who rose to reply. He stated that Lord Raglan complained of the youth of his reinforcements, who had been sent forward for the hospitals. Besides, that was the ratio of asking the House to vote more men, when 20,000 of those already voted by the House had not yet come forward? The age had been increased, the bounty had been increased, the standard had been lowered, and it was a question whether a further persistence in these measures would materially increase the recruits. He met the quotations of Mr. Disraeli from the Duke of Wellington's despatches as to the desertion of foreigners by other extracts from the same despatches, showing that those foreigners were in general taken from prisons. He justified the conduct of the war by its results, and showed that the Emperor of Russia was now willing to accept terms to which only a few months ago he gave a haughty and indignant refusal. He rebuked the right hon. gentleman for gloating over the prospect of disaster to our arms, and expressed his hope that England and France would yet achieve the triumph of civilisation over barbarism.

After a few words from Colonel Sibthorp and the Marquis of Blandford the House divided—For the second reading, 241; against it, 202: majority for Ministers, 39.

The bill was ordered to be committed on Wednesday. Mr. Disraeli stated that he would oppose it at every stage.

(*Continued on page 646*)

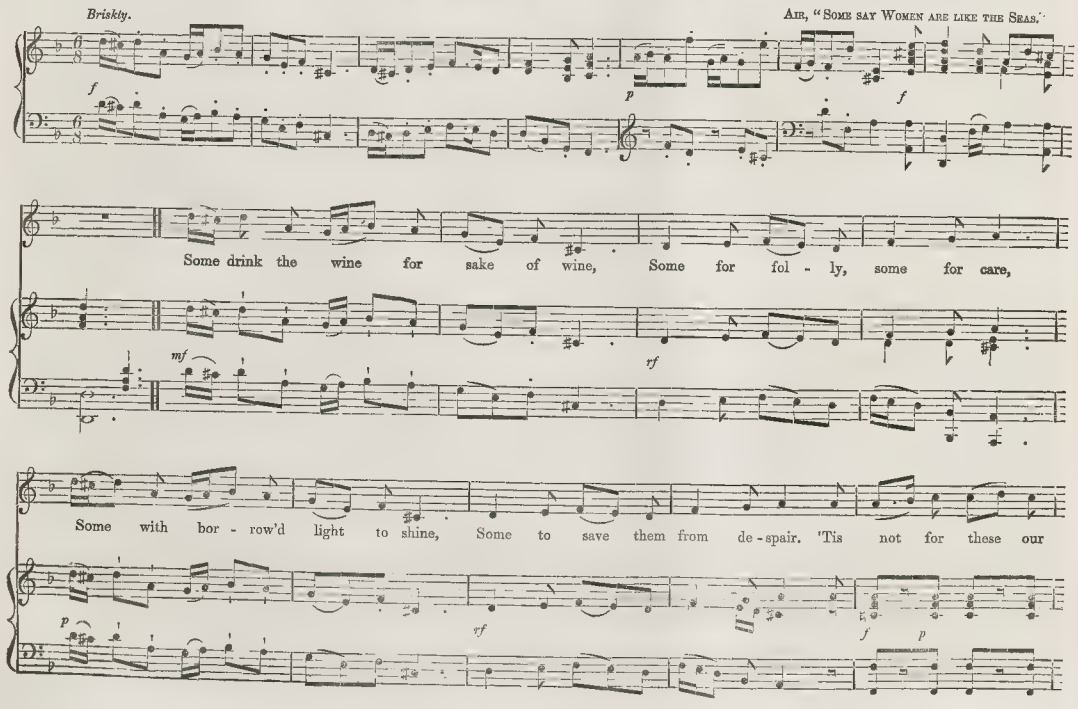
National Income and Expenditure.—The net public income of the United Kingdom, for the year ended October 10, 1854, amounted to £56,246,686 18s 7d, and the expenditure to £56,246,686 18s 7d, as shown by the following statement:—Income: Customs, £23,000,000; Excise, £20,000,000; Stamps, £8,000,000; Taxes, £3,000,000; Property Tax, £3,000,000; Post Office, £1,400,000; Crown Lands, £469,000; Miscellaneous, £377,686 18s 7d; total, £56,246,686 18s 7d. Expenditure: Interest on Debt, £26,956,548 8d, from the Exchequer; £3,154,605 7s 7d, from the Bank; Terminable Annuities, £5,972,093 2s 10d, from the Exchequer; Interest on Bank Stock, £1,200,000; Interest on Exchequer Bonds, £1,200,000; Interest on Exchequer Bills, £873,815 11s 6d; Interest on Irish Debt, £283,138 11s 6d; Interest on Irish Exchequer Bills, £57,000; Interest on Unfunded Debt (Exchequer Bills), £7,660,862 [illegible] for the Army, £4,[illegible]10d. for the Navy, £2,000,800 11s 9d. for the Ordnance. The sums paid in the last quarter, on the 10th of October last, amounted to the sum of £6,626 529 9s. 11d.

The Wreckers Wrecked.—You can well imagine with what joyful hearts the Cossacks approached such a noble prize as the wreck of the *Henri Quatre* presented. A large body came down towards a hillock, with four field-pieces, to pound the wreck. The French saw them approaching, and observed well that the spot on which the artillery would be placed was the highest of the reef was laid for that place, and all was kept silent on board until the Cossacks were well fixed and just about to fire. At this very moment the triggers were pulled on board the *Henri Quatre*—almost every Russian was shot dead—and our noble allies have now their four field-guns on board—trophies of a feat as clever as it was successful.—*Letter from Eupatoria*

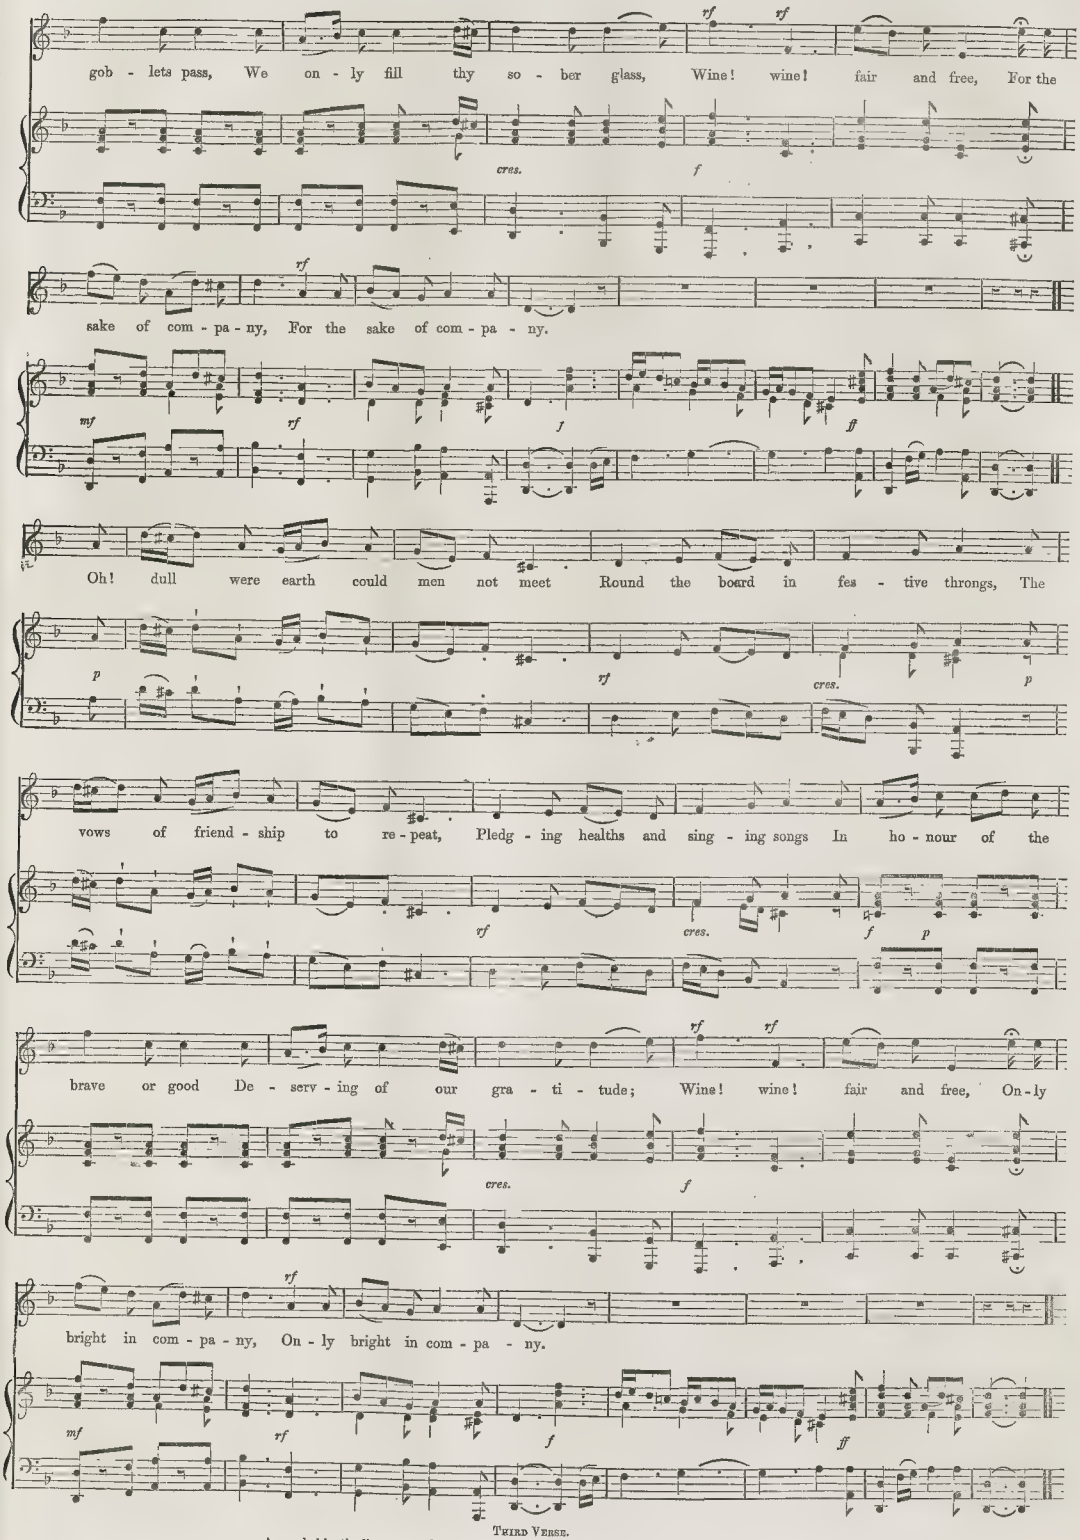
Proposed Canal Across the Isthmus of Suez.—M. Lesseps, formerly French Consul in Egypt, has obtained from the present Pacha, a firman, granting to a company, of which he is director, the sole power to make a ship canal across the Isthmus of Suez, connecting the Mediterranean with the Red Sea. The canal, seventy five miles long, is to be completed in twelve years, the company having a right to levy dues on all vessels passing through for ninety-nine years. The funds are to be raised by shares, and M. Lesseps expresses himself as confident of the support of eminent bankers in France and Germany. He will not be called upon to make any advances. Viceroy will have 15 per cent of the net profits, and at the expiration of the lease the works are to be come the property of the Government.

FOR THE SAKE OF COMPANY.

Briskly. Air, "Some say Women are like the Seas."



Some drink the wine for sake of wine, Some for fol - ly, some for care,
Some with bor - row'd light to shine, Some to save them from de - spair. 'Tis not for these our



gob - lets pass, We on - ly fill thy so - ber glass, Wine! wine! fair and free, For the
sake of com - pa - ny, For the sake of com - pa - ny.
Oh! dull were earth could men not meet Round the board in fes - tive throngs, The
vows of friend - ship to re - peat, Pledg - ing healths and sing - ing songs In ho - nour of the
brave or good De - serv - ing of our gra - ti - tude; Wine! wine! fair and free, On - ly
bright in com - pa - ny, On - ly bright in com - pa - ny.

THIRD VERSE.

As symbol be the liquor pour'd,
Symbol of a gen'rous worth,
To prove around our social board
Wisdom mingling with our mirth,
That we may know it sent to bless,
And only hurtful in excess;
Wine! wine! fair and free,
Only good in company.

ENGLISH SONGS AND MELODIES.

THE POETRY BY CHARLES MACKAY. THE SYMPHONIES AND ACCOMPANIMENTS BY SIR H. R. BISHOP, KT., MUS. DOC., OXON.

FOR THE SAKE OF COMPANY.

Some drink the wine for sake of wine,
Some for folly, some for care,
Some with borrow'd light to shine,
Some to save them from despair.
'Tis not for these our goblets pass,
We only fill the sober glass,
Wine! wine! fair and free!
For the sake of company.

Pledging healths, and singing songs
In honour of the brave or good
Deserving of their gratitude;
Wine! wine! fair and free!
Only bright in company,

As symbol be the liquor pour'd,
Symbol of a generous worth,
To prove around our social board
Wisdom mingling with our mirth;—
That we may know it sent to bless,
And only hurtful in excess;
Wine! wine! fair and free!
Only good in company.

Oh! dull were earth could men not meet
Round the board in festive throngs,
The vows of friendship to repeat,

Note on the Melody, by Sir H. R. Bishop.

"SOME SAY, WOMEN ARE LIKE THE SEAS."—This quaint and clever air—then newly adapted to Mr. Mackay's poetry—is in the fourth volume of Watts's "Musical Miscellany," 1731, and is therein stated to be composed by Mr. James Graves, who was the composer of several popular pieces,—among which may be mentioned a two-part song, "Generous wine and a friend," printed in J. Simpson's "Thesaurus Musicus." The present tune possesses more variety in its construction than the generality of English tunes of that period, and seems to have long continued a favourite. It is to be found in "The Convivial Songster," 1782, in Ritson's English Songs, and in other publications. It was also introduced, to the words, "Jealousy, like a canker worm," into "The Jovial Crew, or Merry Beggars," a ballad opera, containing many excellent old English melodies, which was first produced in 1731. In an edition of the music of this piece, published by John Johnson, opposite Bow Church, Cheapside, about 1750, it is stated that "the airs are as performed at the theatre in Covent Garden," and that "the overture and accompaniments to the airs are composed by Mr. (W.) Bates." Nearly the whole of these "accompaniments," however, consist of a simple bass part added to the melodies.

CHRISTMAS BOOKS.*

How many who leave this land, leave not its affect ons or its memories! They carry the mother tongue and the hereditary customs over broad oceans, and plant other Englands amid vast and fertile worlds heretofore buried in primeval seclusion from the human race. Many an immense and important region, rescued from barbarism or solitude, is now proud to recognise the English language as the first civilised sounds to which its wilds have echoed, and English books as the first literature by which its homes have been humanised, since the foundation of the earth. Not the least migratory and far-wandering species of literary production is that which is known by the name of "*Christmas book*." It has wings, and flies in all directions, even to the ends of the world, promoting in its own manner, a manner which is far from insignificant, the spread of our national connections. And how enormous are these! If Russia, for example, in the material and brute extent of its territory, occupies a sixth part of the habitable globe, the fact is as nothing, compared with the moral dimensions of Anglo-Saxon influence. Our race seems, indeed, to have inherited the virtual monopoly of the future. Beneath the Southern Cross arises a new system of humanity, as great in its destinies as was the whole ancient world. In the West—the "Imperial Republic" engrosses the prepotency; and to these spheres if we add a hundred colonies, we shall find that a "sea-beaten island of a northern sea" is truly the modern parent of races, and the latest of the universal empires. England, in fine, will yet be the generic name for the *second* "ancient world," because both her national manners and national books will live.

Among the qualities which conduce to this amazing result are two, which seem opposed to each other, yet which, in human nature (both individually and nationally), are but reciprocal compensations. The people of these islands are at once restlessly impatient of the present, and tenderly mindful of the past. No race is more full of ready venturesomeness and actual curiosity; yet none is more unconquerably tenacious of traditionary impressions. To change and to enlarge its sphere, yet never to forget "auld lang syne," this combination of passions will be found (on a broad analysis) to make three-fourths of the Anglo-Saxon character. And certainly we must number among the traditionary impressions to which we refer—the feelings of the better part of our community respecting Christmas. These feelings would strike with awe, and yet with delight, one of the wiser Pagans of antiquity, suddenly resuscitated. All that is most solemn in religion is strangely blended with all that is brightest and sweetest in domestic affection. Heaven and earth seem brought into confederacy to invest this season with whatever each possesses and may bestow, that is of most value to humanity. It is a festivity and a solemnity, all in one. There is mirth, and good sound human mirth, in families; while a recollection of the greatest of Christian mysteries hovers over the season with a dim halo of high and sublime suggestion. It is the touching point with a dim halo of high and sublime suggestion. It is the touching point between our worldly ties and our ulterior destination—the perihelion of the temporal orbit of a Christian people—"On earth peace, good will toward men." It is the time of general charity, sanctioned by many immemorial customs; and—to cut short these crowding thoughts—it is not only itself a festival of commemoration, but it is a festival which individuals wish to commemorate in its annual recurrence, on their own account; for we can—each of us, alas!—see but a fixed number of "merry Christmases."

For this reason, if for no other, Christmas Books will come, and be welcome; they are amply justified. Christmas passes; but *they* remain! By the log fire of the squatter in Australia—beneath the beams of the "Southern Cross," at night, on the desk of the trans-equatorial emigrantship—amid the snows of the Canadian plains—in the "backwoods" (if the term be still applicable) of the United States—wherever there is a "location" of our hardy colonists and adventurers, on isle or mainland, these Christmas Books will beguile the evening lamp and rushlight, and will reverse, for a fond hour, the wanderings of our migratory race, transporting them back again to the ancient parent land, to the innocent memories of the first home, to the dear scenes of the early frolic.

Yes, we may all well commemorate our various Christmases (itself, as we have said, a commemoration); for we all shall see our last of that joyous season; and in no way save in books—in remembrance—in sympathy—can we ever go back to the happiest instances of its visit

On the present occasion we have no reason to complain of any scarcity in the amount of literary keepsakes offered to the public. We have subjoined in footnotes the titles of several of these; and truly their contents bear us far and near, from home to remote and naval scenes, from repose to adventures, from simple life to wild vicissitudes, from infancy to age, from the base of society to its summit—in fine through all the immensity of human and divine conditions through earth and heaven.

Far is it from our meaning that all these contributions are of equal value; but they all, at least, appertain to a vital element of our community, and all help to constitute one of its most imperishable and most affecting monuments. Every great nation sees the day when its greatness either begins to fade without a memorial, or begins to leave memorials, and nothing but these. These, however, are immeasureably better than oblivion. The high part should not be forgotten; it should be survived by the illustrious memory, and the inspiring example. On this head there is little fear for the United Kingdom. We have seen how even all the vivid intelligence, and all the unwearied energy of the United States have failed to create, in "the far west," an indigenous literature equal to ours, or any literature worthy of the name, which was not a dim and somewhat delicate reflection of our ancient glory in that enduring department of human labour. Their poets are our poets—faded away, yet often beautiful; their historians, orators, tale-writers, moralists, feel proud of a resemblance to our moralists, orators, tale-writers, and historians;—and resemblance is much. The language, the laws, the thoughts, the fancies, the sports, the instincts,—all belong to a mighty race which, while it still sends its children to new scenes and hemispheres, sends them possessors of ancient lessons, and heirs of an ancient glory.

Let us turn to what immediately corroborate th ese general remarks, and examine the efforts of our literature (in the midst of wars, griefs, and anxieties), to perpetuate our constant usage and to honour Christmas. The season is a summary of the year—not to speak of national associations or still more solemn memories. And, truly, the books which now issue from the press, if taken all in all, are like a summary, *universal* in their character and aim.

For the convenience of those who may wish to select out of the immense mass, let us give a rapid epitome. The reader may be diverted, and will not be shocked, if the objects before him prove apparently heterogeneous when placed in juxtaposition. It is only the "contra-punto" of the time; the parts are various, yet the harmony is one.

No one would be astonished if "Illustrations of Scripture" were now issued. But for Scripture, in sooth, the end of December would be like the end of any other month. The Illustrations are in photograph; a newly-acquired art pays its humble homage to a venerable doctrine. The sketches are by an "Animal Painter" and the explanatory letterpress is by a "Naturalist." The result is a beautiful folio volume, fit ornament, in external equipment, for any table. In its way nobody can deny that it is a reminder and memento of Christmas, and that it bears also its own date in the principle of its execution. However, most of the illustrations are taken from the Old Testament; and the verses of a great but harsh and unforgiving modern poet are notually quoted by the side of Holy Writ throughout the whole production. Let us proceed. We know what a deep impression has been made by John Bunyan's "Pilgrim's Progress. He himself appeared lately to the Rev. J. M. Neale, in that reverend gentleman's bed-room! Read the account of that vision if you deem it worth while; it is one of our present "Christmas Offerings."

But we escape from the supernatural. Christmas is a festival, we have said, as well as a solemnity. Howitt (it is Mary Howitt) offers "Pictures for the Young." They are all about Jack and Harry. You know Jack and Harry? Of course you do. If any mischief is done, Jack or Harry does it. If the cows get out of the meadow, it is either Jack or Harry who left the gate open. They are as much interested about a powerful locomotive, as about their grandfather's old clock. They are prowling about before you are out of bed in a morning. Are they not? Why, they know everything. Then there is Jack musing among the goats. Did not Mahomet muse among the camels? And we have Dick and Arthur besides, and plenty of illustrations. A worse mistake might be made than to get Howitt's "Pictures for the Young" at Christmas. But the variety, the immensity of the choice, must perplex. We have "The Discontented Children, and how they were Cured;" with illustrations by the celebrated "Phiz" (Hablot K. Browne)—the story being furnished by Mary and Elizabeth Kirby. If those children do not find contentment at Christmas, and by means of Christmas lessons, we know not how they are to be satisfied or brought to reason.

But here comes a rigid man, not knowing that he is rigid—a purist in language, almost a martinet in feeling and in morals—the Reverend William H. Rule, with "Studies from History." His evidently deems himself a powerful writer, but it pains us to say he is only "a feeble hand." If his present work be properly appreciated, he promises much for the future. Alas! we shall not be disappointed by his next production.

A degree above this amazing mistake is the work of John G. Edgar, the author of the "Boyhood of Great Men." This gentleman tells us that "one of the ancient cultivators of history aptly described it as philosophy teaching by examples." We have frequently heard references to that remark. Why does he not allude to the beautiful passage in which it is said "All history is only the precepts of moral philosophy reduced to examples." And does he know where the passage occurs? And where he says that the French, "glowing with exultation," scarcely had entered Moscow when they became aware that it was in a blaze (page 421); does he know the real facts? And has he here, where a great strategical and political truth is at stake, fulfilled the vaunt of his preface, that he has rendered historical knowledge interesting without the smallest sacrifice of accuracy?"

But Captain Mayne Reed claims our attention for his "Forest-Exiles." This gentleman writes most exciting books; and though, in general style and spirit, they are like each other, such is the abundance of his creative imagination, that in the incidents, at least, they are as dissimilar—diversified without end. His present work consists of three grand elements: a great deal of botany, a great deal of natural history, and a great deal of adventures. He signally sustains his signal yet recent reputation.

"Peter Parley" must not be neglected. He has been a wanderer over "the far west," has seen the rivers, the mountains, the valleys, the wild animals, the tribes of still wilder Indians; has crossed the Rocky Mountains, and has stood upon the shore of the broad Pacific. This author, while relating the thrilling incidents within his experience, intends to make us acquainted with some matters concerning the Geography, Natural History, Manners, Customs (human), of the scenes which he has explored. It is nearly the same claim as the last, but addressed to a more juvenile audience.

But will no room be made for Seven Tales from Ancient History? The subject are "Cyrus," "Semiramis," "Sardanapalus," "The Plains of Marathon," "Leonidas," "Xerxes," and "Alexander the Great." They are designed for a still younger class; and we doubt not will impart to many a first taste for solid reading. In short we must say that a great justness of idea, and a thoughtful adaptation of matter and style to the several capacities of the circles respectively addressed, pervade the bulk of these Christmas lucubrations.

"Dashwood Priory; or Mortimer's College life," has a Scriptural extract at the head of every chapter; but is far from being a merely sanctimonious effusion. The author, E. J. May, aims at giving a great amount of practical information, and imparting even many principles of mechanical and physical science, through the medium of a lively and natural story, the scene of which is in England, and the subject English life.

Miss Birkbeck tries a less familiar, a more difficult, and ambitious theme—"Rural and Historical Gleanings from the East of Europe." Hungary is the principal country indicated in this title; and Hungary is certainly interesting, and has, in its richness, many rural; in its antecedents, many historical, instructions to give us. But how few ladies, in their literary effusions, are entirely impartial; and impartiality is justice, and justice is the Queen of Virtues. Whether it be a people or an individual who excites their sympathies—a living object or an abstract cause—zeal beyond measure, undiscriminating dislike of the opposite influences, and a love "not wise" for the elected object, characterise and warp the composition. Ladies, moreover, are generally bad judges on a military question; and finally, ladies are apt to forget that the pretty little affectations which their graceful presence might beguile us to condone, are often immediable blemishes in a literary work. "A letter blushes not," says the immortal Pully, on one occasion; "and I can *write* this, though I should not like to *say* it." We may add that a letter, or whatever else it written, smiles not, that it takes no graceful position, that *non "incessu patet dea,"* and that it is bereft of all those helps which Demosthenes termed the *vroogwata* of action. Therefore are we by no means pleased in English, during this nervous age, in which we dread the decadence of our language—during this dubious post-Augustan time—to read of "twenty-two battalions and fourteen *escadrons*." Why not *squadrons*? Pray why not? Or else, why not *batcillons*? Is it English that we are reading, or is it French? Or is it the approach of that redoubted jargon—that predicted jumble of every tongue, in which our noble language, shivered into a corrupted and hopeless dialect, is to pass gradually but finally away, like so many other splendid repositories of human genius, from the attention and the liking of all living generations? Are our female writers to contribute to the last miserable supplication of the English language? Again, consider this authoress (what few authoresses are prudent in assuming to be as a strategist; we obtain by this method the following enlightenment:—"Great, indeed, must the Austrian's terror have been when, actually in possession of the entire land, and backed in case of need by all the armies of Europe, from mere apprehension of Klapka's military renown, they granted a capitulation to a fortress (Comorn), which at farthest must have succumbed to a two months' siege." P.p. 448, 444. Klapka is a favourite with our writer; and we appeal to military men in general, and to Hungarians in particular, whether the Hungarian fortress of Comorn, garrisoned by twenty-two battalions and fourteen "*escadrons*," ought to succumb to "a two months' siege." We, as well as Miss Birkbeck, happen to know persons, and persons well qualified to express an opinion, who have travelled through Hungary, and who have examined Comorn. These persons think very differently. Moreover, the writer of these lines happened, immediately after the last Hungarian war, to have a conversation in Russian Poland on the subject of Comorn, with a Russian veteran—a soldier who had seen Napoleon, had fought against him, and had helped to gain the battle of Leipsic—a general who had risen under his orders, not merely a division, but a whole corps d'armée of fifty-seven thousand men, horse, foot, and artillery—an old campaigner, "cunning of his calling," who had besides been at Comorn, and had assisted amongst others at Klapka's surrender. To him, by a curious fatality, the inditer of these remarks put the very question—"How long would the siege of Comorn have practically detained you? How long would that fortress, decently and moderately garrisoned, have held out by what we call in Chess "forced moves?" His reply was peremptory, given in two words, and, as it chanced, in two syllables, "Un an!" We have no scruple in mentioning his name. He was General Paniutin, one of the most distinguished names in the whole Russian service. It remains to be seen whether Hungarians estimate at a lower value than do their enemies this noble and famous stronghold of their country. Miss Birkbeck's book is interesting, and by no means ill-written.

But we must turn to another lady, full of a sort of genius which would be the better for a rebuke, such as we have not the heart to give; and that lady, Adelaide O'Keefe, expects our attention to a tale of "The Broken Sword; or A Soldier's Honour." We have paid our attention: we hope that of the reader may be added.

But, as we pass along through this forest of sweets, this wilderness of spices, we hear "Words by the Wayside" we see "Children and Flowers." Alas! how many are the flowers in December? Emily Ayton undertakes to tell us. Who will turn a deaf ear to her recital? Last *but one* comes "Esperanza"—Hope! Hope before fulfilment. It is the home of the wanderer. We send emigrants to every land; we have tens of thousands of intended emigrants among us. Here is a poem or magical mirror, in which they may learn much that is collateral; and, perchance, see also, in a dim and general likeness, their own predestined future. Again it is a lady who holds the glass and "rough-hews" the beginnings

We have reserved for the last a work of real genius, sustained throughout with unflagging spirit, and fashioned by laborious art. We have seen it before. It is Leitch Ritchie's "Wearyfoot Common." There are here a thousand touches of true literary inspiration. "Heads it is"—out of the mist at a doorstep—that arch and pathetic beginning of an episode often acted and suffered, but seldom sung—is a master-stroke. Even the style of the book (which is not always correct) is full of eloquence. It is not always correct. "As for either he or his sister thinking" (page 62) is a vile sentence. The author, too—though doubtless Mrs. Cockburn has been betrayed into an occasional Cockneyism of language—He will himself best understand us. But his is a remarkable work; not likely to be either soon in any respect forgotten or ever forgotten altogether. We can scarcely say more.

Women, young and old, married and unmarried—men of every age and profession, from the venturous captain to the grey-haired recluse—clerics and laymen—soldiers and civilians—representatives, in fine, of both sexes, and of all ranks—wish to say something to the British community at this great season, and not only to the British community, in the strict sense of the word, but to all who understand our language. That peculiarly suggestive, and, at the same time, peregrinant character to which we have alluded as belonging to our Christmas publications, renders them the best vehicle for the satisfaction of a general want. Letters from individuals to individuals suffice for their own purpose; but class wishes, at least once a year, to speak to class, in an ordinary and familiar manner; not upon questions of excited politics, or social dissension—not on that general theme of severe business which occupies the greater portion of each commercial nation during the course of a twelvemonth, but to interchange good wishes, and to express the general sentiment of neighbourhood and friendship. Let people say what they please about the selfishness supposed to be so common; it is doubtless common in a thousand aspects; but, for that very reason (so complicated and so many-grained is the great mass of human character) for that very reason, we say, men seek to express their own but occasional traces of the most solemn sort; during which, not only the members of a family more sincerely recollect that they are of one immediate blood, and the families of a nation that they are of a common race, but a still wider sympathy, for a brief instant, seems almost on the point of arising. Practically, alas, it never comes to this; but there are moments and occasions when the tendency towards such a feeling is more prevalent than at other and ordinary times. We are mistaken if this is not, in part, the meaning of our Christmas Books; in part, the secret of our Christmas feelings.

On the present occasion, the progress of a fearful struggle must darken all the natural pleasantness of such associations, which are indeed rebuked by the rage of war. However, it is a war which we tried long and sincerely to avoid. And our soldiers, who are doomed to pass a Christmas very different from ours, will be glad to revisit in thought the scenes which the publications we have noticed tend in general so vividly to recall. Our men themselves have expressed a longing for papers and books from home—the more, say they, the better. Among them, be sure, such productions will command an interest of their own.

Some men, perhaps, surpassed in the desire thus expressed by troops who are in the midst of alerts and battles. But those who know anything of real service, say, those who have even been but travellers in distant countries, under circumstances of hard-ship and privation, will not share in the astonishment. At the same time, the case of the traveller, even supposing his hardships equal in kind and degree to those which our distant soldiers have endured in the Crimea, illustrates only half the reality. There are two feelings quite distinct from each other. Which most prompts or creates the wish to which we have referred. The one is the present want of what was formerly possessed, and this would apply to the casual traveller as well as to the groups who are now bivouacking round the watch-fires or the heights above Sebastopol; but the other feeling is that the business in hand is the business of the country, and that all eyes at home are fixed upon those who are carrying out that momentous trust at the price of their generous blood, ready to be poured forth in the service, ready to the last drop. This does not apply to the traveller imagine, then, the eagerness with which our troops before the enemy turn, in their rifle and praja-

rious intervals of leisure, turn, we say, hearts and thoughts homeward! This is the great secret of the clamorous request. "English publications, anything to tell us what you are about, anything to help an occasional five minutes of musing upon scenes which"—ah, yes, which they may behold no more!

We trust that the works, some of which we have here briefly criticised, may, in their limited scope, contribute to beguile an evening not only by the comfortable fireside of those who have been left behind, but in the wintry encampment and on the storm-beaten cliffs, where our matchless champions are staking their lives for our interests, our safety, and our honour.

THE STORY OF THE PEASANT-BOY PHILOSOPHER. By MAYHEW. David Bogue.

The author of this volume has, for many years, delighted the public by the smartness of his wit and the raciness of his humour. In the work before us, he stands forth as a teacher of solemn in some of its lessons, and most abstruse forms. He has made no discoveries, nor has he compelled the external world to surrender to him any of its secrets; his merit lies, and it is a rare merit, in the lucidity with which he imparts the knowledge he has acquired. These in indeed no Royal road to learning; its conquest can only be achieved by industry, attention, and reflection: nevertheless, the road may be full of ruts, or smooth as a railway. There are few lads, if, indeed, any, who do not approach the study of mathematics with reluctance, not to say disgust; and for every one who perseveres till he can master the "Principia" of Newton, or the "Mecanique Celeste" of Laplace, scores abandon the task in despair, after a few unwilling efforts. Of this truth the University of Cambridge affords annually abundant proofs, in the paucity of Wranglers scored with those who take little more than a nominal degree. Why is this? Without pretending to trace the result to a single cause, we believe that the majority of students are repulsed by the character of elementary books, which, in most cases, darken the subject on which they ought to throw light. Of course an instructor should be erudite and profound; but when he is in the act of teaching, he should adapt himself to the capacity of his pupil, whose mind is recipient, but at present empty. The knowledge conveyed by what is vulgarly termed "cramming" is soon forgotten; it just serves the deceptive purpose of passing a particular examination, and then oozes out as water passes through a sieve.

After a very careful perusal of Mr. Mayhew's volume, we can most conscientiously state that he possesses the faculty of imparting knowledge in a very eminent degree. He is skilled in the art of smoothing away difficulties; his illustrations are felicitously apt; he presents his various problems, not only with vivid distinctness, but in that alluring or enmaring guise which provokes inquisitiveness, kindling and sustaining the ardour of pursuit. In a word, he makes learning a pleasure, by keeping curiosity ever on the stretch. His object, as he states in his preface, "was not so strictly to teach, as to create in youth a *taste* for learning—it was to *appetise* rather than to cram—to excite a craving that would stir the young mind to seek its own food, instead of accustoming it to be, as we were, stall-fed." No doubt this is the judicious process; but the teacher, as it appears to us, must first of all experimentalise, and ascertain, by some tentative process, the bent of his pupil's mind; for all boys will not take to the same subject. As Horace remarked long since—"In mihi invida facies dicesve Minervæ." It is not every lad who has a turn for mathematics, or classics; and, indeed, the division of labour in practical life would never have been perfected, or, perhaps, established, if the universal current of thought had been confined in one channel.

An incident in the life of Fergusson, the shepherd-boy, and, in mature life, the celebrated astronomer, furnishes the starting-point of Mr. Mayhew's book. Curiosity and wonder were excited in the young mind of Fergusson, on seeing his father raise the roof of his cottage with a lever: and such is the case with little Owen Evans, the hero of our philosophic tale. He begins to make experiments, and finds out the properties of the lever. His inquisitiveness is excited by this success, and he then receives some hints and instructions from Roger Wilkins, the proprietor of a water-mill and a manufacturer of woollens, and makes a clock. His next tutor is Parson Wynn, who explains to him the doctrine of forces. Here we will give an extract, illustrating both the reasoning and the style of the writer. The boy asks, "What is a force?" The Parson answers that he cannot tell him fully and satisfactorily:—

"All I can tell you is, that it is not matter. By that I mean it is not solid, nor heavy—nor has it length, breadth, or thickness, like the things around us. Matter is that which we can touch and feel, and yet some force is the cause of solidity, heaviness, extension, and every other property of matter besides. You cannot have a pint of a force, Owen, nor yet a yard of one, nor yet a pound. Those problems that give power to the elements in the world without are something as subtle and mysterious as that which quickens and strengthens yourself. All the wisest of us can do is to give this unknown force a name, and call it 'spirit,' so as to distinguish it from the 'stocks and stones' which would remain for ever immovable without it." "Force is spirit, then?" remarked Owen. "Spirit of all," continued the Minister: he rose from his seat, and picked up a stone from the ground: "Here is a dull, dead lump of matter. Place it where you will, there it must remain to all time, unless stirred by some force; for matter in itself cannot move itself. Now, see, Owen! I jerk my arm suddenly, and away the dull dead stone flies through the air, like a bird instinct with a determination to proceed in that course in which I propelled it. Is not that strange?" cried Owen, as he watched the missile dart over the trees. "I've thrown many a stone, and yet never thought why it moved before." "Why, it did the stone get from me, lad?" inquired Mr. Wynn. "Say that I injected into it some subtle fluid, or 'ether,' as it is termed: but this will not help you; for the subtlest fluid is but a light gas, after all; and gas is only solid matter in the form of vapour; and, therefore, dead and inactive as the stone itself. So you see, Owen, the only thing the stone could have got from me was force; and force, as I told you, is spirit." "Was your spirit in the stone, then?" asked Owen. "Part of it must assuredly was," replied the Minister. "Did I not determine it should go in the direction I flung it? And was it not quickened with the same determination immediately it left my hand?" "That it was," said the thoughtful lad. "A force, then, Owen, would appear to be simply a determination, or inclination, if you please," remarked the Clergyman, "given to a body to set in a particular manner. What force you will, it merely amounts to this. Now, determination or inclination are the terms we give to the operations of our will; so that we must conclude that force is the result of will. But matter, being dead and inactive, can have no will of its own; hence, whatever force resides in it, must have arisen from the will of *some one else* having been impressed upon it—precisely in the same manner as you saw my will just now impressed upon that stone."

Parson Wynn then tells the boy that the primary will, the source of all will, is that of Almighty God. The pupil then learns the principles of navigation from the old sailor, Captain Jones—the use of the sextant and quadrant, the use of the log, the mode of measuring the circle of the earth, and the *rationale* of latitude and longitude. A Mr. Blackwater, a studious recluse, completes his education by instructing him in the highest branches of astronomy. All these lessons are illustrated by copious and excellent diagrams, and he must indeed be dull who cannot find out of this book completely master the wondrous subjects of which it treats. Every parent should place the volume in the hands of his children, whether sons or daughters, as soon as they are sixteen years of age.

Here we might close our remarks; but a supplementary chapter, if we may give it that name, requires a parting glance, were it only because Mr. Mayhew, in common with all really wise men, is sincerely religious on conviction. This chapter is designed to prove the immortality of the soul and a future state. It is known that if a body be once put in motion, it would continue in motion for ever, unless arrested by some external forces; or, to use Mr Mayhew's language, "no force diminishes or dies of itself; that is to say, there is no principle of decay or death within it." In our mental constitution we all are aware of what is termed "the law of the succession of ideas." Thought begets thought; now, remarks our author, "I say it is a necessary result of this principle that the sequence of ideas should continue for ever (in the same manner as the motion of a sphere once projected in space would go on to all eternity) unless there be some external cause to stop it; for the mental force has, like the other, no principle of death or decay within itself, but rather contains the elements of endless progress in it." In speaking of organism, Mr. Mayhew considers that it is necessary for the *prosecution* of sensations and ideas, but not for their *reproduction*. He states the case of Beethoven, who composed in his latest music after he had lost his hearing. "If, then," continues Mr. Mayhew, "it be possible for the soul to revive the ideas derived from *one* organ, after that organ is destroyed, why cannot the soul recall the impressions of *every other* organ, when the *whole* organic arrangement of our bodies is at an end?" This query is highly suggestive, but to comment upon it would require more space than we can afford. The phenomenon of memory would appear a miracle were it not familiar to us all. We all use that mental faculty from hour to hour; but very few dwell upon its nature, or trace its operations. We shall be glad to see Mr. Mayhew again in the garb of a philosopher.

SOME OBSERVATIONS ON THE ORIGIN OF CHESS.

BY DR. DUNCAN FORBES.

CHAPTER VI.—INTRODUCTION OF CHESS INTO PERSIA.

THE earliest and best account of the Shatranj or medieval Chess to which we as yet attained access, is that given by the poet Firdausí, who flourished in the latter half of the tenth century. We know, however, that during the eighth and ninth centuries, the acute Arabs, under the munificent patronage of the Caliphs of Bagdad, had made rapid and distinguished progress in the theory and practice of the game. A physician named Abúl-Abbás, who died A.D. 899, wrote a treatise on Chess; and within the next half-century lived the celebrated Al Súlí, who may be considered as the Arabian Philidor, distinguished at once as the finest player of his time, and as the author of the best work till then existing on the game. We also read of Lajlaj and 'Adalí, among the early masters, each of whom wrote a treatise on the subject; but it is very doubtful whether any of these works are now extant, their merits being superseded by performances of more recent date. It is possible, however, that one or other of them may still exist in the Imperial Library of Constantinople; and, if so, we despair not of their yet seeing the light, when our gallant Ottoman friends have finished the *serious game* in which they are now engaged—by *checkmating the Czar*.

To return to Firdausí. It may be proper to premise that the great epic poem, called the "Shāhnāma," or "Book of Kings," is really a versified history of the Persian empire, from the earliest times down to our seventh century. In fact, we have similar works of our own, though on a much smaller scale—viz., "Albion's England," by the good olden poet Warner; and the "Scottish Chronicle," by Wyntoun. The authenticity of the "Shāhnāma," as a mere history, is not liable to any objection which may not equally apply to the works of Herodotus and Livy. We know, from various authorities, that the more enlightened of the Persian Kings, from time to time, caused to be compiled the annals of the monarchy down to the close of their own respective reigns. Naushirwān, in particular, attended to this duty, so worthy of a Prince; and the compilation, thus carried on at uncertain intervals, was brought to a close under the reign of Yazdijird, the last of the Sassanian race, about the middle of the seventh century. The work was called by the Persians the "Bástán-náma," or "Book of Antiquity." This is most probably the work alluded to by Agathias, as having been translated into Greek (down to that period) by the interpreter Sergius (*a*). It would seem, also, that it was known to the Arabs, under the title of "Siyar-ul-Mulúk," or "History of the Kings." Towards the close of the tenth century, the renowned Mahmúd of Ghazní commanded the poet Firdausí to versify the Bástán-náma, which was accordingly done; and this splendid work, consisting of one hundred and twenty thousand verses, the labour of thirty years, was entitled the "Shāhnāma." The Greek and Arabic versions, as well as the original "Bástán-náma," are probably now lost to us for ever; but the "Shāhnāma"—like the "Iliad," the "Æneid," and the "Paradise Lost"—is immortal.

I have been thus particular in describing the nature and character of the Shāhnāma, that the reader may perceive the exact degree of credit due to the extracts which I am about to translate from that work. He it observed that the events narrated had been registered, in plain prose, in the annals of Persia, at the time when they took place, some 450 years before Firdausí wrote. That the poet has embellished and expanded this splendid record, is certain; but that he has either falsified or forged them, we have no reason to believe. With regard to the translation, I have merely to say that my main object has been to give the author's meaning, without servilely following his exact words and endless repetitions. I may also state that no two manuscripts of the poem exactly agree in all particulars: sometimes whole couplets and passages are found in one copy, and not in another. By a careful collation, however, of several MSS. (*b*), I have, I believe, succeeded in giving something resembling what the author would have said, were he writing in plain English.

TRANSLATION.

"Once upon a time the victorious Kisra Naushírwán was seated upon his lofty throne, in the gorgeous hall of audience. Around him stood the nobles, the brave, the learned, and the virtuous, assembled from Balkh and, Bukhára, and from all the other provinces of his extensive dominions. Meanwhile entered the watchful sentinel from the gate, and said, "Sire, there approacheth an Ambassador from the Sovereign of Hind (*c*). He is accompanied by a train of elephants, with rich canopies, together with a thousand camels heavily laden; the whole escorted by a numerous and gallant array of Scindian cavalry. He seeks access into the presence of the just and the renowned Sovereign of Irán' (*d*).

"When Kisra Naushírwán heard the words of the sentinel, he forthwith dispatched a chosen body of his finest troops, both horse and foot, in order to receive with due honour the embassy from India. Thus, at length the Ambassador reached the palace-gate, and was introduced into the presence of the Persian King. To one latter he made a low obeisance, after the manner observed in Indian Courts, and then he ordered the costly presents sent by his Sovereign to be displayed in the King's assembly. First of all, in front of the gate, stood the train of elephants, each furnished with a gorgeous canopy overlaid with gold and silver, and studded with gems the most brilliant and rare. Then in the midst of the spacious hall, the camel-loads were unfastened, and numerous baskets of jewels the most precious. There were diamonds, and rubies, and emeralds; also strings of pearls of incalculable value. There were various perfumes of surpassing fragrance—of musk, and ambergris, and wood of aloes; also chests full of Indian swords of dazzling brightness and of keenest edge; together with many other valuables too numerous to describe, the peculiar productions of Kanoj (*e*) and Mál. Then the Ambassador produced a letter richly illumined, written by the hand of the Sovereign of Hind to Naushírwán. Last of all, he displayed before the King and the astonished Court, a chessboard, elaborately constructed, together with the chessmen, tastefully and curiously carved from solid pieces of ivory and ebony.

The Letter from the King of Hind "to Kisrá Naushírwán, the Just and Great."

"O King, may you live as long as the celestial spheres continue to revolve. I pray of you to examine this chessboard, and to say it before such of your people as are most distinguished for learning and wisdom. Let them carefully deliberate, one with another, and if they can, let them discover the principles of this wonderful game. Let them find out the uses of the various pieces, and how each is to be moved, and into what particular squares. Let them discover the laws which regulate the evolutions of this mimic army; and the rules applicable to the Pawns, and to the Elephants, and to the Rukhs (or warriors), and to the Horsemen, and to the Farzín, and to the King. If they shall succeed in discovering the principles, and expounding the practice of this rare game, assuredly

(*a*) Sergius was eminently skilled in the Greek and Persian languages, and held the rank of First Interpreter at the Court of Naushírwán. At the request of his friend, Agathias the historian, he asked permission of the Persian authorities to have access to their historical records, preserved in the Royal archives, that he might translate the same into Greek. This was readily granted by Naushírwán, by whom he was held in high estimation; and, accordingly, a Greek version of the Persian annals was transmitted to Byzantium. Now, I would ask—is it not very probable that the game of Chess, which created such sensation at the Court of Chosroes, may have been known to so inquisitive and distinguished a man as Sergius during that period, when there existed such a close intercourse between the two Courts, may not the game have reached Byzantium even before it found its way among the roving Arabs? I do not assert this as a fact, for I have no positive evidence to bear me out; but, nevertheless, I think it is not at all improbable. *Vide Agathias Hist., Fr.*, 30, &c.

(*b*) I have chiefly followed MS. No. 16,188, in the Bodleian, as the most beautifully written in the British Museum, transcribed A.D. 1485. It was once the property of the late Dr. Scott, of Bedford-square. Also MS. No. [illegible] formerly belonged to the celebrated collector Mr. Rich, British Resident at [illegible].

(*c*) India is so called by the Arabs and Persians to this day. The term Hindustán, "the abode of the Hindús, or dark-coloured people," is more modern.

(*d*) The name by which Persia is generally designated in the Shāhnāma [illegible]

(*e*) Kanoj, [illegible] only written Canoge—during the earlier centuries of our era was the capital of the great kingdom, extending along the Ganges, on the [illegible] of which [illegible] city was built. [illegible] Mál, [illegible] Malwa, [illegible] Province of [illegible] Peninsula of India, [illegible] the capital of the [illegible] and [illegible] Mál [illegible] Naushírwán [illegible] Indian [illegible] Mál [illegible] which he [illegible] country, called "Tambouli," [illegible] the [illegible] of the areca or betel-nut, was [illegible] [illegible] refreshing, and stomachic, and is in much use to this day among all classes of the people of India. The expression is the same as if we were to say, in order to convey an idea of the grandeur of an American city, that it contained 30,000 shops, in which the black cake of the Virginian weed (Cavendish tobacco) was sold.

they will become entitled to admission into the number of the wise; and in such case, I promise to acknowledge myself as hitherto your Majesty's tributary. On the other hand, should you and the wise men of Irán collectively, fail in discovering the nature and principles of this cunning game, it will evince a clear proof that you are not our equals in wisdom; and, consequently, you will have no right any longer to exact from us either tribute or impost. On the contrary, we shall feel ourselves justified in demanding hereafter the same tribute from you; for mark! true prudence consists in wisdom, not in territory and troops and riches, all of which are liable to decay.

"When Naushírwán had perused the letter from the Sovereign of Hind, long did he ponder over its contents. Then he carefully examined the chessboard and the pieces, and asked a few questions of the Envoy respecting their nature and use. The latter, in general terms, replied, 'Sire, what you wish to know can be learned only by playing the game; suffice it for me to say, that the board represents a battle-field, and the pieces, the different species of forces engaged in the combat.' Then the King said to the Envoy, 'Grant us the space of seven days for the purpose of deliberation; on the eighth day we engage to play with you the game, or acknowledge our inferiority.' Here the Indian Ambassador made his obeisance, and withdrew to the apartments provided for himself and his suite.

"In the meanwhile the Persian King commanded the attendance of all the learned and intelligent men of his Court. He placed before them the chessboard and the pieces, and explained to them the purport of the letter brought to him from the Sovereign of Hind. Then the sages of Irán, each according to his abilities, betook themselves to discover the mystery of this seemingly inscrutable enigma. One man suggested one thing, and another something different. They made numberless experiments with the chessmen, and moved them about in all directions on the board. Every man asked questions which no one could answer; and thus they persevered till the seven days were nearly elapsed. At length Búzurjmihr, the King's chief counsellor, who had hitherto stood aloof, stepped forward, and said, 'O King, I will undertake, in the space of a night and a day, to discover the hidden secret of this rare and wonderful game.' The King rejoicing, replied, 'Let this task be thine, for well do I know, that thou excellest all men in brightness of understanding and acuteness of judgment. The King of Kanoj boastfully hints that we have not in our dominions, one man capable of unfolding the mystery of this marvellous game. To be compelled, as it were, to acknowledge our inferiority, would leave an everlasting stain on the learned and the wise of Irán.'

"Then Búzurjmihr had the chessboard and the pieces conveyed into a private chamber; and there he sat for the space of a day and a night, applying the irresistible powers of his penetrating intellect to the investigation of the principles and practice of the game. He examined with care the probable bearing of each piece, till at length the full light burst upon him. Then he hastened from his solitary chamber to the presence of Naushírwán, and thus spoke, 'O King of victorious destiny, I have carefully examined this board, and these pieces, and at length, by your Majesty's good fortune, I have succeeded in discovering the nature of the game (*f*). It is a most shrewd and faithful representation of a battle-field, which it is proper that your Majesty should inspect in the first place. In the meantime let the Indian Ambassador be summoned into the Royal presence, together with the more distinguished among his retinue, also a few of the wise and learned of our own Court, that they may all bear witness how we acquit ourselves in accomplishing the task imposed upon us by the King of Kanoj.'

"Kisra Naushírwán was delighted to hear the words of his wise and enlightened Minister. He embraced him as his friend, the ornament of his realm, and the brightest gem of his Court. Then he sent a deputation of the wise, the virtuous, the noble, and the brave, to invite the Ambassador from the Sovereign of Hind. When the latter arrived, Búzurjmihr requested of him to declare in public the message entrusted to him by his own Sovereign. Here the Ambassador repeated in detail the purport of the letter addressed to Naushírwán. When he had done speaking, Búzurjmihr placed the chessboard and the pieces before the King and the learned of the Court then present, and thus addressed them:—'You have all heard the words of the Ambassador from the King of Kanoj, now pay attention to what I am going to explain to you.' Here the sage counsellor pointed out to them how the board of sixty-four squares represented a battle-field, and thus he proceeded to draw up in battle array the ebon and ivory forces.

Arrangement of the Pieces.

"The King occupied the centre of the line in the rear; and, by his side, stood on the intelligent counsellor, ready to guide him in the path of victory, and to defend him in the midst of the combat. Next to the King and counsellor stood the furious Elephants, impatient to rush forward into the deadly strife. Next in order stood the War Steeds, ready to charge on the right and on the left, at the word. Next stood the Rukhs, or the irresistible Rukhs (*g*), the chosen champions and guardians of the King and the army. Woe to the enemy that crossed the path of the Rukh, for he at one bound could clear the whole range of the battle-field. In front of these stood the Foot Soldiers, whose task it was to open the combat, at the command of their King.

Moves of the Pieces.

"The King moved one square in all directions. The counsellor moved one square diagonally around his sovereign. The Elephant, with head reared aloft, moved three squares diagonally, but always on the same hue of the board. The War Horse could spring three squares obliquely, clearing the square next to him. The heroic Rukh, longing for combat, rushed on in each of the four directions: he commanded the whole range of the battle-field. The Foot Soldier, from either side, advanced straight forward at his King's command, in order to attack the hostile force; and in his onward march he slew the enemy obliquely, to the right hand and to the left. When he had traversed the whole field, as far as the opposite extremity, he was rewarded with the rank of Counsellor, and thenceforth took his stand by the side of his Sovereign.

"When Búzurjmihr had thus explained the evolutions of the ebon and ivory warriors, the whole assembly stood mute in admiration and astonishment. The Indian Ambassador was filled with mingled vexation and surprise; he looked upon Búzurjmihr as a man endowed with intelligence far beyond that of mere mortals; and thus he pondered in his own mind:—'How could he have discovered the nature and principles of this profound game? Can it be possible that he has received his information from the sages of Hind? Or, is it really the result of his own penetrating research, guided by the acuteness of his unaided judgment? Assuredly Búzurjmihr has not this day his equal in the whole world.' In the meantime Naushírwán publicly acknowledged the unparalleled acuteness of his favourite counsellor. He sent for the most costly and massive goblet in his palace, and filled the same with the rarest of jewels. These, together with a war-steed richly caparisoned, and a purse full of gold pieces, he presented to Búzurjmihr."

Thus far Firdausí, on the first introduction of the game of Chess from India into Persia.

(*f*) I am afraid that all those who know something of the game of Chess, will be inclined to smile at the poet's assertion respecting the penetration and acuteness of Búzurjmihr. Yet it is not quite so absurd as Sir William Jones's idea, "that some great genius conceived in his mind, *a priori*, the construction of the board, and the various powers and powers of the pieces, and the whole conduct of the game from beginning to end, all by the first intention." One of our late Chess celebrities—undoubtedly the first of his time—M. Deschapelles, appears to have very nearly equalled the Persian sage in precocity. A very amusing account of the eminent French player [illegible] Deschapelles is given in the *Chess Player's Chronicle*, 1843, p. 57, transcribed from the "Palamède." For my own part I am no main believer in the marvellous; and I would, with due submission, just hint as a probability, that some diplomatist—akin to the world by [illegible] Búzurjmihr must have been—might have come to a *satisfactory* understan ding with the Indian Envoy on this intricate affa r, while the men of wisdom were elsewhere puzzling their brains in vainly trying to solve the enigma.

(*g*) It would be out of place here to trace the various transformations of the Sanskrit "Rokā" into the Persian "Rukh," that into the Arabic "Ruhkh," thence into the "Bifrons Rochus" of the mediæval Latin writers, down to our own "Rook," *i.e.*, "cornix frugivora," as Hyde hath it. Suffice it to say, that the Sanskrit word "Rokā" is evidently that of "Champion," or "Warrior," *par excellence*, and in more places than one he uses instead of "Rukh," what he seems to consider a synonymous term, "Ashwárúha." He describes him mounted on horseback, as in the following couplet—

"Rubárú kí hap afgandad bar dará,
Ba dasti chap o rást, parkhá—[illegible]."

("A champion ready to urge on his w[illegible] host [illegible], to the right hand or to the left, longing for [illegible].")

Of course, the "Champion" would wear an armour, equipment, and appearance from the Knight. It is a curious fact that the Russians to this day on [illegible] piece by the same name that it originally had in Sanskrit, viz., "Ldda," or "Ldya" ("a "ship or boat"); a circumstance which would lead us to infer that the game reached them from India, direct through Túrán or Tartary, and not by way of Persia and Arabia, as in the case of the other European nations

(To be continued.)

CHARGE OF LIGHT CAV

Y, AT BALACLAVA.

THE BATTLE OF BALACLAVA.

* * * *
Each horseman drew his battle blade,
And furious every charger neighed
To join the dreadful revelry.
Then shook the hills with thunder riven,
Then rushed the steed to battle driven,
And louder than the bolts of heaven
Far flashed the red artillery.

The combat deepens. On, ye brave,
Who rush to glory or the grave!
* * * *
Few, few shall part where many meet!
The snow shall be their winding sheet,
And every turf beneath their feet
Shall be a soldier's sepulchre.

HAD Campbell stood upon the heights, watching the fearful tournament, when, in the face of an army of infantry, artillery, and cavalry, our gallant Light Brigade, knowing their doom, charged to certain death, determined to die hard, he could not better have described the fatal combat of Balaclava. There, ranking up, steady as on parade, rode beardless boys, "mothers' curled darlings," side by side with the brown bearded heroes of Indian warfare—Moodkee, Aliwal, and Sobraon; and, though the shell and shot of cross batteries tore huge gaps in their files, and a hailstorm of rifle bullets emptied many a saddle, no unwounded man—private soldier or officer—checked his rapid, steady, pace, or swerved to right or left. On straight they rode, a handful of heroes, and sabred all before them. Lord Cardigan leaped the parapets before the Russian guns as coolly as he would ride on fences in Northamptonshire. Then followed the moment of the fearful melée, which our Artist has seized—the gunners were cut down at their guns—the opposing lines "broken, beaten, driven all adrift." But there is a limit to everything—horses blown, men are tired out, squadrons scattered. Then was the moment for reserves to have fallen on the discomfited enemy; but, alas! we had no reserves. An Hussar writes—"I turned to look for reserves, my heart sunk—there was nothing but our thin second line."

Then, hot and bleeding, and covered with the blood of enemies, the remnant, keeping close to their officers, fought their way back, only saved from total annihilation by the desperate charge upon one of the Russian batteries made by the Chasseurs d'Afrique.

And so, in a purposeless attack, our Light Cavalry Brigade was destroyed, thus affording one more instance of the mistake to which English cavalry officers have always been prone—attempting too much.

To attack an enemy of superior force, in the three arms, unbroken by previous fire of artillery, is against the first rules of cavalry tactics; to attempt such a charge without sufficient reserves, in the presence of an enemy superior in cavalry—sheer folly.

But to fully appreciate the determined valour of the heroes of Balaclava, our non-military readers must understand that a charge over a distance of a mile and a quarter is not a mad gallop at full speed, in which every horseman rides as hard as he can; that would be merely running away toward the enemy.

The charge is a measured pace—trot, canter, gallop; the gallop timed by the commanding officer, so as not to outpace the slowest horse in the Brigade, and keep all in hand until the last hundred paces, and then to fall in a compact, irresistible body on the enemy's line.

The severe lesson and loss we have experienced from the want and the misusage of cavalry in the Crimea should not, however, dishearten us, but rather direct our attention to the excellent raw material we possess—material in every way superior to that of any country in the world, if we can get rid of Continental imitations, and the legacies of frippery left us by George IV., and his dandy Hussars.

Cavalry "ought to be at once the eye, the feeler, and the feeder of the army." It reaps the fruit of victory, covers a retreat, and retrieves a disaster. Cavalry consists of Heavy Cavalry, Dragoons, and Light Cavalry. Heavy Cavalry, composed of large men mounted on heavy powerful horses, are held in hand for decisive charges on the day of battle, and their horses are so overweighted that they require Light Cavalry to follow up the enemy they have beaten. They are not possible care is taken of Heavy Cavalry in the field. They do no outpost duty, no foraging, no reconnoitring: they cannot be made use of even to escort a convoy, because, if kept out long on the road, their horses fall off in condition and become incapable of carrying their riders. Dragoons were originally intended to be infantry mounted on horses. In our service they are divided into light and heavy, the heavy being brigaded with the household troops when in the field.

Light Cavalry are required to watch over the safety of the army, hovering on the flanks and in the rear, to prevent all possibility of a surprise. In open country they push on, and keep the enemy at a proper distance.

Having the command of swift and powerful horses, we destroy their speed and endurance by placing giants upon them. The effect of a charge depends more on the swiftness and freshness of the horses than on their weight. Velocity makes weight. Fashion has led us to put our Grenadiers upon horseback. The Hungarian Hussars, the Polish Lancers, and the Chasseurs d'Afrique are ten-stone men, and the two former have repeatedly ridden down heavy Cuirassiers. The efficiency of the latter is well known.

THE VOTE OF THANKS TO THE ARMY AND NAVY.
SPEECH OF LORD JOHN RUSSELL.

On Friday (last week) Lord John Russell (after laying on the table a copy of the Treaty between the Emperor of Austria and Her Majesty and the Emperor of the French) proceeded to move a vote of thanks to the Army and Navy engaged in the Crimea and Black Sea, and in so doing spoke as follows:—

In performing the task I have undertaken, I have the satisfaction of thinking that, however feebly and incompletely the task may be executed, I am sure of the sympathy of this House (Hear, hear). I cannot doubt that all those who were concerned with, or who approved of, the expedition that has been sent to the Crimea will gladly join in acknowledging and in admiring the constancy and the fortitude with which they have seen the service performed. I am still more sure that those who thought the expedition not quite wise, and that our army was exposed to duties for which it was unequal, will be still more inclined to admire the superhuman efforts that have been made by this army. I therefore, sir, now proceed to the task I have undertaken in the confidence that the House will approve of the motion I am about to propose. In performing that task, I may, perhaps, say at the outset, that I shall endeavour, as far as possible, to avoid repeating the details of actions the narratives of which have been given by Lord Raglan in his own clear and emphatic language (Hear, hear). I shall also endeavour to avoid entering into questions of tactics and military strategy. I hold we are none of us well qualified to perform a task which can only be adequately performed by those who are not only practically familiar with the art of war, but who also know all the circumstances of the operations which have been undertaken, and the manner in which those operations have been conducted. If I may give an illustration, I would mention that in the "History of the French Empire," the historian, in recounting the operations which belong to the battle of Wagram, states that the fire of Napoleon, having carried the battle to a certain extent, and seeing victory incline in his favour, ordered certain manœuvres to be performed. He said afterwards that these were another manœuvre which would have been far more decisive, and which would have had more splendid results; but as his army was not at that time composed of the veterans he had been accustomed to, and as many of his troops were young troops, he could not rely upon their steadiness for the manœuvre, which was of a too difficult and delicate nature for them to perform. Now, sir, military critics, having discovered that such a manœuvre may be performed, may easily blame that great commander for not having undertaken it. But he, knowing all the circumstances, being aware of the position of the ground, of the character and temper of his troops, no doubt judged rightly in the conduct which he pursued. So likewise with regard to every military operation. Unless you know exactly the nature of the ground on which the general is to operate, unless you can count exactly the force of which he is in command, and likewise the state and temper of that army, it is impossible to judge rightly with regard to the operations which were then performed. I say this because it is my intention only to state what operations have been performed. I have no doubt that they were performed with very great ability. I have no doubt that they were performed according to the best judgment that could be formed under the circumstances; but I do not intend upon this occasion to meet objections which might be made to any particular course of conduct.

Now, sir, let me proceed to state the position of Lord Raglan, Lord Raglan was chosen by her Majesty to command the expedition which was sent to the Crimea. That choice was dictated by the remembrance of the services he had performed, and of the character which he had attached both in the Army and in the country. Lord Raglan, when a very young man, might have used the influence of a very powerful family in order to obtain any station to which he might have aspired. The only thing he asked of the Government of that day was to be attached to the staff of Sir Arthur Wellesley. He was attached to that staff, and from that time every step he has taken, and the command he at present holds, are due to his merit and to his merit only (Hear). I remember him perfectly well upon several occasions, when I had the honour of being at the head-quarters of the Duke of Wellington, in the Peninsula, performing all the duties of the military correspondence of that great captain at a time when he had not only to conduct the military operations of the army, but also the correspondence with the Government at home, with the Secretary of State, with the Secretary of State for War, and also with the Portuguese and Spanish Governments. There was business enough to employ any office in this country which has the most business to perform, and yet it was all performed, owing to the clear head and the facility of dispatch of Lord Raglan. It was all done amid the hurry of the army, and with the hindrances arising from duty in the field. Accompanying the Duke of Wellington through his long career, he was at length wounded; but he returned to this country to perform other duties. And if the character of the officers of the British Army stands high, if the selection that has been made shows how much deserving has been attended to, it is in a great degree to Lord Raglan that the country has been indebted for those officers (Hear). Such was the man, therefore, who was appointed by her Majesty to command the army in the East; and let me say further that, having been so appointed, he at once commanded the confidence and affection of the British army, and in a very short time he obtained the entire confidence and hearty co-operation of the Generals of our ally the Emperor of the French. When we have to consider that these operations were operations to be conducted in common, that they were to be conducted in common with the forces of an ally with whom we had not been, at all events, accustomed to co-operate in the field, however intimate the alliance between the two Governments had been during peace, the House will see at once it was not only valour in the field—and more valour was never displayed—but it was other and no less necessary qualities in the character of Lord Raglan that have made him of such service to his country (Cheers). And now, sir, I will proceed to that expedition and to that contest in which some of the best blood of this country has been shed; and when I say the best blood of this country, I by no means intend to exclude any rank, military or social (Hear, hear). I consider that among the best blood of this country is the blood of those sons of labourers who, having entered the military profession, have devoted their whole hearts to their duty, who have stood in the field of battle without the hope or expectation of being distinguished by those rewards which reach those over them but who have performed their duty gloriously, and at the same time with a feeling of humble loyalty to which has prevented them, while they have been contending against the enemy, from committing outrage upon the fallen (Hear, hear). And I am sure that these children of England are no less prized than the sons of the highest and noblest in the land (Hear, hear).

The embarkation of the British troops took place towards the end of August. In a despatch of the 29th of that month Lord Raglan mentions the acknowledgments that he thinks are due to the officers of the British navy for the skill and zeal they displayed on that part of the service which I shall take notice hereafter, when I come to that part of the vote of thanks for the assistance they had given in order to effect the embarkation of so large a number of troops (Hear, hear). The expedition proceeded to the Crimea. There was some question with respect to the place of disembarkation. Lord Raglan himself preceded the fleet in a sailing steamer, surveyed the coast, found that some points which had been thought of for landing the troops were guarded by new redoubts and fortifications, and at length fixed upon a place for disembarking the troops, to which he obtained the assent of Marshal St. Arnaud, the Commander of the French army (Hear, hear). This selection was so judicious, that the whole army was disembarked without opposition; and that important operation was effected safely and completely in the course of a short time (Hear, hear). That, sir, was a worthy proof of the skill of Lord Raglan, and was calculated to give great satisfaction to this country (Hear, hear). Having landed on the 14th, the army proceeded, and made a march of considerable length on the 19th. On the 20th of that month they had to march a few miles further, and found the Russian army intrenched upon the heights above the Alma. They attacked them; and, in the course of a few hours, made themselves masters of those heights—the Russian army making no further attempt to occupy or retake that position (Hear, hear). It was a position well chosen: of great natural strength; and so strong, that, to her right of the Russians, the position was quite unassailable, from the precipitous nature of the ground. It is generally believed that Prince Menschikoff, who there commanded, said it was a position at which the Allied army might be kept at bay for three weeks, and thereby prevented from proceeding to the siege of Sebastopol; yet such was the brilliant valour of the English and French troops, that they carried the heights (Cheers). The Light Division of the British army were received with volleys of musketry and grape, which for a time thinned their ranks; but the brigades at large came up, and attacked the position with such force, vigour, and determination, that the Russians yielded the heights—never again to be recovered (Cheers). Sir, I have already said that, with regard to the details of these actions, Lord Raglan himself has told them in the clearest language. I may mention, however, some circumstances relating to that noble Lord himself. Marshal St. Arnaud carried at the same time the left of the Russian position (Cheers). The charge of the French was so impetuous and so vigorous, that the Russians yielded the ground, and the French army was established on the heights that had been occupied by the Russians (Cheers). On the British side great masses of troops were collected. Lord Raglan, seeing the great force with which he had to contend, desired an officer of his staff to go to a height that he saw, and see if there was any chance of planting a cannon on that height (Hear, hear). The officer, on rejoining him, said he thought it was possible. Lord Raglan immediately directed two guns to be taken to that height. The Russian artillery was very powerful and excessive, that most of the artillerymen who accompanied those guns were killed in ascending the height, but the guns were placed where Lord Raglan had desired. Officers of his own staff fired the first shots from those guns, and at first they were not effective; but presently they got the range, and their shots were so directed against the masses of the Russian army, that they made deep chasms in that dense mass; and after a time the whole body began to move, the columns were shaken, and the Russians commenced their retreat (Cheers). Such was a proof, as I conceive, of the effect that can be produced by a General seeing the point where the enemy may be attacked, and directing the attack as he did with the coolness that belongs to him, and the decision that is likewise his characteristic (Cheers). It was a proof that he saw the mode in whom the great forces of the enemy might be successfully opposed; and when I speak of the coolness of Lord Raglan, I may perhaps be permitted to mention that his staff thinking that he exposed himself too much, that he had gone too far in advance, that the Russian fire was so hot in that point that the life of the commander ought not to be risked, one of them said to him that he thought he was exposing himself too much. Lord Raglan's answer was, "Do not speak to me, now; I am busy" (Cheers and laughter). There is nothing of epigrammatic wit—there is nothing, perhaps, of heroic sentiment in these words; but they were the words of an English gentleman attentive to his duty, and quite regardless of any danger he might incur in the discharge of it (Cheers).

After the battle of the Alma was thus gained, the army halted for a time, while both the military and the seamen of the fleet were employed in assisting the wounded, carrying them to the ships, and burying the dead (Hear, hear). After a time the English and French army proceeded on their march. It was found that they crossed the next river, the Katcha, without difficulty, the enemy having abandoned all defence of that river; but when they came to the Belbec, they found there certain works which the Russians had erected to prevent the disembarkation of military and stores by the Allied forces at that time (Hear, hear). Great consultation was necessary, and it was considered whether these works should be attacked, whether the army should proceed, as had been originally intended, to attack the north side of Sebastopol, or whether some other course should not be taken. It was decided that, instead of occupying themselves in reducing those forts, the army should at once, at all risks, march across the woods to the south of Sebastopol, and endeavour to make themselves the masters of Balaclava. That march was accomplished on the 25th of September. It was conducted with great skill; the army being exposed, of course, to the danger of a flank attack while they were performing it; but it was most successfully performed. They seem to have surprised the Russian commander; for the rear-guard of the Russian army was met on the road to Sebastopol. The English and French army proceeded without difficulty, they made themselves masters of the heights, and of the country between that port and Sebastopol. I believe that operation was one showing great skill. But immediately after the operation Lord Raglan had to lament that the officer with whom he had so co-operated, and with whom he had concurred both as to the general decision upon the undertaking of the expedition, as to the means of embarkation of the forces, and of disembarking them, and as to the fight at Alma, was so reduced by illness that he could no longer continue the command (Hear). Marshal St. Arnaud, with heroic spirit, had determined to persevere to the last in performing his duty to his Sovereign and to his country (Hear). He was determined, although in a few weeks or perhaps in a few days, nothing but his dead body should remain, that that bust should not be without its laurels (Cheers). In a day or two expired an officer who had shown so much gallantry and heroism, with whom the army had every reason to be satisfied, and who would always be considered as a man who, to the last days of his life, had performed his duty (Cheers). I cannot omit here the words in which Marshal St. Arnaud spoke of Lord Raglan at the battle of the Alma, because they are the words of the chief of the army of another nation, and while they show the generosity of the writer, they seem to bestow worthy praise on the character of Lord Raglan. He says—"The bravery of Lord Raglan rivals that of antiquity. In the midst of cannon and musket-shot he displayed a calmness which never left him" (Cheers). The command of the French then fell into the hands of General Canrobert; and it is with great satisfaction I say that, ever since he has had the command, Lord Raglan and General Canrobert have acted together with a rivalry only as to who should best serve the common cause—with no other rivalry, with no species of jealousy—each admiring and upholding the character and the actions of the other (Cheers).

On the 28th of September the armies occupied the heights in the neighbourhood of Sebastopol. About ten days had elapsed when, after a full examination of the ground, it was the impression of Sir John Burgoyne and other eminent officers (and I mention Sir John Burgoyne because he was the best qualified to give an opinion on the subject)—the impression of Sir John Burgoyne was, that the task would be far more difficult than had been supposed (Hear, hear). It had been imagined that the regular fortifications of Sebastopol on the land side never having been protected, the allied army might have begun operations close to the town, and destroyed those defences. They considered that with such artillery as they had ready the capture of the town might be very soon accomplished. When I look back to letters that were written at that time by various officers, and transmitted to us by our Ambassador at Constantinople, I find confident expectations expressed that Sebastopol would soon fall. But Sir John Burgoyne, upon examining the ground, found that the hills, as they extended towards Sebastopol, opened into wide ravines separated from each other, and that the troops that were placed upon one part of the hill could not co-operate with the troops that were upon another (Hear, hear). He therefore found that it would be very difficult to carry on the approaches in the way originally intended, and that it would be dangerous above all to leave any part of the English force unsupported upon such ground as I have described (Hear, hear). It was accordingly necessary to bring as much heavy artillery into the batteries as could be brought, and the work which our soldiers did, both day and night, was performed with the utmost perseverance, in order to place the heavy artillery in position to attack the defences of the place, but it was clear from the earliest that determination—that necessary determination—was taken, the project became one of a very different character, for the Russians, having a great quantity of heavy artillery to be relied upon and a little gun-boat service of their large fleet, and having a considerable garrison, and the whole of the men that formed the crews of the ships, not counting the population of Sebastopol, commanded a force that was equal, if not superior, to ours (Hear, hear). From that moment, therefore, Sebastopol became one of very great labour and difficulty; and both on the French side and on the side of the British nothing was left undone in order to hasten on this work, and to open a formidable fire on the Russian defences (Cheers). On the 17th of October that fire was opened, and produced a very considerable effect. Many of the guns in the batteries of the Russians were dismounted, and their works were, for the time, nearly destroyed. At the same time the fleets—both English and French came near to the forts on the sea side, and opened a most formidable fire for some hours

RUSSIAN RECRUITING IN SWITZERLAND.—Accounts from Berne state that a letter had been received by the master-armourer of Zurich, from M. de Colette, the Secretary of the Government at St. Petersburg inviting workmen and armourers in Switzerland to join the Russian regiments. All expenses of their destination would be paid, with a salary of about £40 per annum, and they would be placed at the head of the workmen in their regiment.

THE PIOUS CZAR.—At a recent meeting in Rochdale, Mr. Bright defended the Czar against some incidental allusions of the Rev. Canon Stowell, by observing that his Majesty was a contributor to the funds of the British and Foreign Bible Society. He stated that he had been informed before the commencement of the negotiations which had led to the present war a shipment of Bibles and Testaments had been admitted into Russia duty free, to which extent he claimed for the Emperor the title of a subscriber to the great English association for promulgation of the Holy Scriptures.

SYMPTOMATIC.—At the grand representation extraordinary that took place on Tuesday night week at the Berlin Opera, in honour of Prince Charles Fredrick's marriage, it was observed that the President of the Council, Baron Von Manteuffel took his seat, not accidentally, but intentionally in the same box with the Marquis de Moustier and Lord Bloomfield (the French and English Ambassadors). Baron Budberg, the Russian Ambassador, and Count Benkendorff (the Russian Military Plenipotentiary), were seated in a box exactly opposite, on the other side of the house.

THE RUSSIAN TRADE ON THE PRUSSIAN FRONTIER.—From Königsberg mention was lately made of various cavalcades of kibitkas, of which one consisted of 150 of these one-horse vehicles, having arrived there loaded with hemp, flax, and tallow. From Tilsit (4th instant) letters state that goods are in large quantities on the Russian side, without there being any to take the corresponding duties. Although all the peasantry for a long way round, whoever can produce a cart and horse are attracted by the high wages to be earned there, their number does not suffice, nor can the custom-house officers, with such forces as, adequate to the increased work. The streets of Memel are encumbered with Russ as sledges and other vehicles, loaded with hemp, tallow, corn, linseed, and smelted iron, while from the seaside are imported, for Russian consumption, coffee, sugar, sheet iron, twist, and cotton goods, and, above all, olive oil. The last article is used in large quantities during the present Greek fasts, in preference to butter. Although the transit of pig lead has been prohibited by the Prussian Government, as being contraband of war. Salt seems to be one of the best articles of trade there just now, a million cwt. are stated to have been already exported to Russia, where the price has risen to three times what it formerly was.

LOSS OF AN AMERICAN SHIP.—The *Queen of the West*, one of the Newcastle and Liverpool packets from Liverpool to New York was shot on Leghorn Roads, on Quarantine Day, on the 15th instant. She sailed from New York on the 30th ult., under the command of Captain Pennell, with 140 passengers, and 1600 tons of merchandise. After the vessel went on shore, the passengers all landed. It is feared she will become a total wreck, but a large portion of her cargo is likely to be saved.

against those defences: but that fire did not produce the effect of opening the place to the immediate assault of the Allies, for the Russians occupied themselves during the night in repairing the defences which had been destroyed, and in placing other guns as substitutes for those that had been dismounted.

So affairs went on until the 26th of October, when the Russians, coming round by the valley of Balaclava, made an attack upon certain redoubts in the neighbourhood. Those redoubts were occupied by the Turks, and the Russians succeeded in attacking them. A great force of cavalry advanced, but a body of the heavy cavalry of the British, not regarding the superiority of numbers, attacked the Russian cavalry and forced it to retire. Later on the same day, by the misconstruction of an order which had been given by Lord Raglan, an attack was made by the Light Cavalry upon the lines of the Russians, consisting of batteries of artillery and large bodies of infantry and cavalry (Cheers). Nothing could be more distinguished than the bravery of these men (Loud cheers). I believe at no time, in the annals of the British Army has courage been more signally displayed (Cheers). We may lament that the action was not fruitful, and that it did not produce against the force to which it was sent that effect which under different circumstances it might have caused; but that is not the least disparagement to the valour of the men (Cheers) who thus were ready at any risk, and with those immense odds against them, to charge the enemy that they saw before them, and whom they were directed to attack (Cheers).

The works of the siege, being in themselves very laborious, occupied a far more than ordinary proportion of the besieging force—those works being the more fatiguing, because a great portion of the men were taken away by sickness and cholera (Hear, hear). Those men were thus employed when an immense effort was made by the commanders of the Russian forces—perhaps I should rather say by the Emperor of Russia himself, for two of his sons were present—in order to overwhelm the force of the Allies, which was on one side besieging a great fortified place with a numerous garrison and intrenchments defended by prodigious artillery, and on the other hand confronting the Russian army (Hear, hear). That attempt was made, it is said, by more than 60,000 men: I should think it probable that the number was not less than 80,000. The Russian troops that had not been present at the battle of the Alma. They were troops who did not know the enemy they had to encounter (Cheers). Those troops—roused to the utmost pitch of fanaticism, and, it is said, with their courage animated by other means—came in vast columns to the attack of the British on the heights of Inkerman (Hear, hear). Lord Raglan has related the events of that battle. He has stated how, in the darkness of night and in the fog of the morning, the Russians were able to place very considerable artillery—no less than ninety pieces—and to advance with them close to the English position (Hear, hear). In that darkness and that thickness of the fog it was impossible to exercise the powers and the discrimination of a Commander. It was impossible to represent the circumstances to him, and to say that they felt quite convinced that such acts as that must have been committed against his orders, and trusted that he would take severe measures to prevent such barbarities in future. I do wish I could say that the answer of Prince Menschikoff expressed that readiness which every one would have expected from an officer in his position; but he states that it is not the custom of the Russian troops to give no quarter, though the troops might have been excited, because a church had been burnt by some detachments of the Allies. It is said, whether truly or not, that a church had been entered and sacked by some soldiers; but that such an act should be mentioned as any palliation (Hear, hear), I must say I think is not to the credit of the Russian Commander (Hear, hear). We all know what was the conduct of the French and English to each other when they were fighting continually on the battle-fields of the last war (Hear, hear); we all know that in the Peninsula, after the battle was over, they would meet in the same crowds with their crossbelts off, as the Duke of Richmond said—that they would help one another and converse in the most friendly manner together, showing their mutual respect for the actions of each other. We know that when a violence was seen upon the army being about to retreat, whether it were the English army going to advance against the French, or the French against the English, that, scorning to take advantage, they gave him warning of the approach of the army, and sometimes helped him with his knapsack, in order that he might gain the thanks of his comrades. Such actions, sir, are characteristic of civilised nations; and in such a spirit one would have hoped that war in this nineteenth century would have been carried on. I am afraid that it is there—and, certainly, that any Russian general would order such atrocities; not, certainly, that the great Sovereign of the Russian empire would countenance for a moment such barbarous acts; but it shows that the enemy with whom we are to deal, if he obtained the command over that fair part of Europe, instead of civilising and humanising it, would but only destroy the arts of peace, but even darken the horrors of war (Cries of "Hear, hear"). I therefore trust, sir, that the cause of England and France may be triumphant, believing that it is connected with all the best interests of civilisation, with the progress of humanity, and the spread of real religion (Cheers). Men who have been thus excited by fanaticism—as we all know they were previous to the battle of Inkerman—who were called upon in the name of the Christian religion to take up arms and go into the field, were guilty within a few hours of such acts as I have mentioned (Hear, hear). I do trust that the Government of Russia, ashamed of these acts, will take some means to prevent any repetition of them.

Sir, there is but one thing further that I have to say, and it is of a more agreeable nature in itself, and one in which I trust I shall have the concurrence of this House. It was said, in reference to one of the victories gained in the course of the last war, by Mr. Wyndham, that, for his part, he would rather have to celebrate a gallant feat of arms performed by the British army, than to record the conquest of a whole archipelago of sugar islands. I am convinced that that saying of his was as wise as it was forcible and pointed. It is in these things that the life of a nation consists; it is by actions such as we have to commemorate to-day that the spirit of a nation is maintained from age to age (Hear, hear). It is by battles such as we have the glory to record in our history—by battles such as the French likewise have to record in their history—it is by such battles and victories that each nation has its separate existence, and that it is ready to defend its independence, at whatever cost (Hear, hear). We have been for years, all of us, the Parliament and the people of every class, engaged in commerce and in practices concerning the progress of wealth concerning the arts, and the machinery, and the improvements of peace. We have shown that those studies, that a devotion to such pursuits, have not in the least abated that fire which is common to this nation; we have shown that, whether it be England, whether it be Scotland, whether it be Ireland, a similar spirit animates the whole United Kingdom, and that we are ready to peril in a just cause all that is most dear to men. I say again, sir, that by victories which have been gained in such a cause as the present, and with such a spirit as the nation has shown, can fail to redound to our honour and to our fame in future generations, and to exhibit this nation to all after-time as an object of respect and admiration to the world (Loud and continued cheering).

THE FOREIGN FRUIT TRADES OF LONDON.

Of this trade, involving great interests, and employing an immense capital, we gave some interesting details in a former Volume. We find the accompanying account of the trade in Sir Francis Head's admirable paper, the "London Commissariat," in the last published number of the *Quarterly Review*: -

The foreign-fruit trade has its head-quarters in the city. The pedestrian who walks down Fish-street hill would assuredly never surmise that at certain seasons a regular fruit exhibition is kept up within these dull brick houses, before which the tall cranes rise in the air. All the world knows that Messrs. Keeling and Hunt, whose effigies seem to stand in the public eye upon a vast pyramid of pine apples. This firm holds sales of various kinds of fruit in their auction-room, at Mincing-lane. On these occasions the long apartment makes a show, before which, for quantity at least, that of Chiswick pales. Pine-apples by thousands, melons, forbidden fruit, and mangoes, fill the room from end to end; so famous indeed is the display, that there are lithographic engravings of it, in which the salesmen are seen walking about, as people do apparently by the luscious temptations around them, as they might have been in his own happy garden of modern date. The first cargo was brought to this about twelve years ago, and since that time the trade has rapidly increased, and at the present moment 200,000 pines come yearly into the port of London, of which nine-tenths are consigned to Messrs Keeling and Hunt, the original importers. They are principally from the Bahamas, in the West Indies, where they grow almost spontaneously; but of late years they have been more carefully cultivated, and grafts of our best hot-house pines have been taken out to improve their quality. There are five clippers appropriated to the carriage across the sea of this single fruit. The melons come from Spain, Portugal, and Holland. Spain is known to abound in melons, for Murillo's beggar-boys are perpetually eating them; but we believe it will be news to most Englishmen that the land of Pekoe supplies London with fragrant cargoes of an almost tropical fruit. The largest foreign-fruit trade, however, by far, is that in oranges. We shall perhaps astonish our readers when we tell them that upwards of 60,000,000 are imported for the use of London alone, accompanied by not less than 15,000,000 lemons. Any time between December and May the orange clippers from the Azores and Lisbon may be seen unloading their cargoes in the neighbourhood of the great stores in Pudding and Botolph Lanes. There are 240 of these fast-sailing vessels engaged in the entire trade, and of this fleet seventy at least are employed in supplying the windows of the fruiterers and the apple-stalls of London. All these fruits, together with nuts and walnuts, apples, plums, pears, and some peaches, &c., are disposed of weekly at the auction sales in Monument-yard to the general dealers, the majority of whom are located in Duke's place, close at hand, and are mostly Jews. Indeed, we are informed that many of them are the identical boys grown up to manhood, that used some twenty-five years ago to sell oranges about the streets, and whose old place has gradually been taken by the Irish. They act as middlemen between the importers and the pastetties, who at certain times of the day resort hither to fill their baskets and barrows. Covent-garden also supplies retailers of oranges and nuts, apecially the Sunday mornings, when the place is sometimes crowded like a fair. The following bill of quantities, drawn up by Mr. Keeling, is derived, we believe, from the Custom House returns:—

FRUIT.		NUTS.	
Apples	39,661 bushels.	Spanish nuts ..	72,609 bushels.
Pears	19,742 "	Barcelona ..	
Cherries	264,240 lbs.	Brazil	11,700 "
Grapes	1,256,190 "	Chestnuts	36,250 "
Pine-apples ..	260,000	Walnuts	36,088 "
Oranges	61,635,146	Cocoa-nuts	1,255,000
Lemons	14,408,780		

THE FLOWERS OF THE SEA

THE land has its flowers;—

Everywhere about us are they glowing.

They spangle the meadows—they open under the leafy canopy of the forest—they brave the wind that sweeps over the bleak old mountain top—they lurk in tiny rocks and recesses—in the crevices of old ruins, and in the fissures of rocks. "Call them not weeds," they are ornaments freely showered around us by the hand of nature.

The land has its flowers, and so has the ocean: but who ranges amidst these "treasures of the deep"? Unseen by human eye, they display their glories, some on rocks, some in nooks and caves, where long fronds of algæ, and delicately arborescent zoophytes bend over them in their tranquil asylum. Strange, fantastic, and smaller monsters of the deep, of uncouth aspect, creep and crawl around; shells pave their resting-place, and golden-tinted fishes sail over and among them. But these Flowers of the Sea are of animal, not vegetable structure; and the expansion of their beauty, and the proclamation of its glamourous appearance are voluntary; they can retract these organs within themselves, and thus assume the appearance of a bud.

These animal flowers are generally called Sea Anemones (*Actinia*), and are amongst the most curious of the lower orders of the Animal Kingdom. Few know anything connected with their history; many, indeed, are not aware of the existence of such beings, or have only learned it by watching them in the cisterns of the Aquatic Vivarium, at the Zoological Society's Gardens. These cisterns contain many rare and beautiful species: some of great magnitude, and of varying colours.

The Sea Anemones are very extensively distributed; they inhabit all seas, and are found at different degrees of depth, and in different localities, according to the species. Many are tenants of the British seas; some residing in deep water; others are fixed to rocks close along the shore, and left exposed by the retiring tide; others bury themselves in the sand of the beach, or in the sandy bed of gullies, intersecting low reefs covered with sea-weed. These latter may be often found in clear water when the sun is brightly shining, with their richly-tinted disa fringed with multitudinous arms like arms or tentacles, spread out like a full-blown flower; but, on the least alarm, they withdraw all those delicate arms, and with extraordinary celerity, retracting their arms and closing up the disc at the same instant

Nothing is more attractive than a rock-garden teeming with Sea Anemones. There are few parts along our coasts where they are not to be met with; but in some localities they are especially abundant. At ebb-tide these rocks are left bare, and are often easy of access; among them are quiet nooks, and grottoes, and jutting shelves, "coins of vantage," with little basins of the clearest water. Over all these beds of support may be seen thousands of Sea Anemones, often in dense array, displaying their azure disc and green and purple-tinted arms to the light of the warm sun. If we quietly watch them we may see all their particular forms assuming certain attitudes which are rarely

doubtful; but, even granting it, we cannot thence deduce susceptibility to pain. We make these observations because these Sea Anemones may be divided with impunity; each part will then become a perfect and distinct individual, and thus life, as by the cuttings of a plant, is multiplied. When the Anemone is severed transversely, the basal portion is said to be about two months in gaining its disc and rows of arms. With respect to muscular fibres and glands, whence a slippery moisture exudes, these are abundant and beautifully arranged; but we are not permitted here to enter into abstruse details. Suffice it to say that the arm or tentacles are hollow.

The body or stem of the Sea Anemone, when the crowning disc and its arms are expanded, is cylindrical; often of considerable length, and circumference. It is soft and fleshy to feel, and covered with a delicate skin lubricated with a mucous secretion. In some parts of the East many species of these animals are used as articles of luxury for the table; so also, are certain fleshy marine animals, called from their shape sea cucumbers, Tripang, or Trepang, and in French *Tripe de mer* (*Holothuriæ*), for the capture of which an extensive fishery is carried on by fleets of Malay proas in the seas north of Australia, and around the coasts of Timor, New Guinea, Ceylon, Macassar, &c. Vast quantities of these, after being split, and dried in the sun, are sent to China, where the cargo of each vessel finds a ready and profitable market. Besides these sea cucumbers, the vessels also trade in sharks' fins, and the gelatinous nest of a certain species of cave-haunting swallow. But the consumption of these sea cucumbers and these Sea Anemones is not confined to China and the Eastern islands. We learn from Delle Chiaje, that the poorer inhabitants of the Neapolitan coast prepare and eat certain species of the former found in the Mediterranean; and one species (if not more) of Sea Anemone (*Actinia fordacia*), found in the same sea, and ornamented with deep crimson tentacles, is in some parts of Italy esteemed as a great delicacy for the table.

The Sea Anemones are very variable, according to the species in the character of the disc, and the arrangement of the tentacles. Most beautiful and curious species are found in the Mediterranean, and in the South Pacific, but our own seas have many species of great singularity and splendour. Of these, as most easily attainable, we may mention the large leathery Sea Anemone (*Actinia tenuis*), and the small leathery Anemone (*A. coriacea*) — both sand-burrowing species; the purple Sea Anemone (*A. equina*), of rocks and reefs; and the white Anemone (*A. plumosa*). This species is white; the margin of the disc is developed into lobes, each lobe being furnished with numerous tentacles—short, and closely set. It often measures four inches in breadth.

Let us now turn to our Illustration, taken from a group in one of the cisterns in the Gardens of the Zoological Society. How picturesque—how beautiful—how strange—how fantastic, how luxuriant! Calm and undisturbed, they display themselves to the admirer's gaze in all their prodigality of form. Corals and sea-weeds are around them; shells glisten on their bed; and groups of small fishes leisurely swim about them. It was a happy idea, and admirably carried out, which led to the design and construction of these crystal prisons, wherein the rare and the strange things of the waters are presented to our contemplation—amidst submarine scenery, grottoes, and rude arches, cliffs, and rocks, where the tangled seaweed flouri-hes, and on which wave the most slender and delicate zoophytes. In the foreground a noble Sea Anemone attracts our immediate gaze. It reminds us of the head of Medusa, with its tresses of convoluted snakes; they are wreathing and twisting in all directions; ever in motion, till, from some cause which alarms, they are retracted internally and closed up; the animal then appearing like a little rounded hillock, as seen in the background figure to the left. To the right of this, another expanded Anemone presents itself, with shorter arms than the first, thus rendering the disc and central mouth more distinctly apparent. Its stem dilates broadly at the base, as does that of the opposite species the White Sea Anemone, with its broad marginal lobes around the disc, each plumose with myriads of minute slender tentacles. It is an exquisite flower! who can behold it without admiration? From the centre of the background rises up a tall, massive, furrowed stem—from four to six inches high, and of proportionate circumference, crowned, palm-like, with a tuft of multitudinous tentacles, reminding us of some grotesque vegetable production of the river-banks of Australia. This Anemone is sometimes orange-coloured, with crimson markings, sometimes paler, sometimes white, and sometimes of a dusky olive. When contracted, it assumes the form of a large semi globular mass, and might then, amidst the rest, pass unnoticed; but, when fully developed and expanded, it overtops them all—one of the Anakim in the group under contemplation. And, while contemplating such a group, may we not exclaim, "How wonderful are Thy works! In wisdom hast Thou made them all!"

TO THE FUTURE READERS.

THE YEAR 1855 bids fair to be one of the most important and eventful of modern history. On the 6th of January, 1855, will be issued the first number of a new volume of the ILLUSTRATED LONDON NEWS, and not merely a new volume, but of a New Year,—each volume being perfect and complete in itself—containing, for the time, a faithful record, pictorial and descriptive, of all Events of Interest in every part of the world. To that limited portion of the Public who do not subscribe to this Journal, it may be stated, that no period could be selected more opportune for commencing,—the whole expence being but Twenty-six Shillings per annum, exclusive of double numbers, which are issued on rare occasions, when it would be impossible to crowd the important events and engravings into a single number; for this small sum the Subscriber will receive twenty-four large Pages—seventy-two Columns—of the most interesting information, carefully selected from the News of the Week, interspersed with a variety of charming Engravings, with Leading Articles on the chief topics of the day.

The ILLUSTRATED LONDON NEWS has, by its impartial and consistent advocacy of the welfare of the Public, secured for itself a political influence scarcely second to any Newspaper in the Empire; and reference can, with some pride be made to the support afforded to all beneficial measures, proposed and adopted by the English Parliament.

Foreign Politics will ever command the attention which ought to be devoted to so important a feature of a Newspaper. On the question of the Russian War, during the year 1854, One Thousand Engravings appeared in the Illustrated London News. Extensive arrangements, calculated to improve this popular Journal, and engagements, such as will greatly enrich its literary, scientific, and other departments, have been made, and will thus combine on this Paper, the greatest talent of the day.

The ILLUSTRATED LONDON NEWS has been established thirteen years, during which period it has received a greater share of encouragement and approbation than any Journal ever published: this is proved by the Returns of Stamps issued from time to time by order of Parliament. The Stamps supplied for the first six months of 1854 was upwards of 2,734,000: shewing a WEEKLY CIRCULATION OF UPWARDS OF ONE HUNDRED AND FIVE THOUSAND COPIES!

TERMS (for payment in advance) ... Half Year, 13s. *Year*, 26s.

Any of the Volumes of the ILLUSTRATED LONDON NEWS, from the commencement to the present time may now be had, in paper or cloth. Covers for Binding the Volumes, 2s. 6d. each.

All Numbers may be sent free, by Post, to any part of the Kingdom, and the Colonies

Give an order for six months, to ensure all the gratuitous Prints and Supplements, supplied by all Booksellers and Newsmen. Office, 198, Strand, London.

THE

ILLUSTRATED LONDON NEWS.

TO THE

THE means by which the Gallery of Pictures in the ILLUSTRATED LONDON NEWS is produced, present striking instances of rapidity, skill, and truthful representation, such as can only be ensured in an age whose scientific triumphs, it has been said, bid fair "to annihilate time and space." The Steamboat, the Railway, and the Daguerréotype have greatly aided the genius of Art in the execution of the enterprise which first projected the ILLUSTRATED LONDON NEWS, in which the Pictures and Letterpress possess the same living interest. It has been well remarked, what valuable records would have been similar journals of ancient nations; and which would have exceeded in interest even the sculptures which, in our time, have been excavated from the sand of ages.

The production of a Picture in the ILLUSTRATED LONDON NEWS is briefly told. The locality, event, or incident, is sketched by an eye-witness, one of the professional artists of the Journal, or one of the contributors at home or abroad. Perchance it is a piece of artistic news from the seat of war, sketched in the "tented field," in the fleet, or before the fortress walls; and is forthwith dispatched by post. In many cases the photographic process is employed, as in details of the wonders of the Great Exhibition of 1851; and the same process is employed for portraits of distinguished personages, pictures, works of art, &c.

To individualize all the eventful scenes represented in the ILLUSTRATED LONDON NEWS, since its commencement, would far exceed the present limit. Among the memorable events, her Majesty's visit to various portions of her own dominions, and the Continent, have yielded many scenes of loyal welcome and picturesque festivity; the wars of Kaffraria and Hindostan, many important incidents of conquest and defeat. The French Revolution; the Great Exhibition of 1851; and the Gold Discoveries in California and Australia, have presented a succession of scenes of varied interest. The death and funeral of the great Duke of Wellington are recorded in this pictorial chronicle; and some of the numbers illustrating these events, attained the unprecedented sale of Two Hundred and Fifty Thousand Copies in one week! The war with Russia has greatly extended the fame of this Journal, whilst it has tested its success in the Illustration of great events of the time, by means of Artists, despatched to the several localities of the War. By such aids and appliances, the ILLUSTRATED LONDON NEWS has attained the weekly circulation of upwards of One Hundred and Thirty Thousand copies! Occasionally, large Pictures of the most stirring events are presented gratuitously to Subscribers with supplementary Numbers. The Journal has also been permanently enlarged to allow a fuller account of the News of the Week to be given; thus rendering it in every way worthy of becoming

THE FAMILY NEWSPAPER.

THE EMPRESS of CHINA'S TEA, recommended by the Faculty for its purity; and sold by nearly 1000 first-class tea dealers, on account of its superior quality. This is now in its zenith. For fine flavour, and the best ex Tea in England.—MOORE and CO., Little Tower-street, London. Agents wanted where none are appointed

HORNIMAN'S PURE as well as FINE TEAS are sold by Authorised Agents, in 1lb., ½lb., ¼lb., and 20z. packages; at 8s., 6s., 4s., 3s., 2s. 8d., per lb.

HORNIMAN'S PURE as well as FINE TEA is sold by PURSSELL (78 and 80, Gracechurch-street; 8, Fenchurch-street; 34, Regent-street, and 366, Oxford-street) are London Agents for Horniman and Co.'s Teas, which are found to produce a perfectly healthful and luxurious beverage at a moderate price.

HORNIMAN'S PURE as well as FINE TEA. Tea, when pure, is known to produce a most wholesome beverage. The impolicy of allowing it to be coloured by the Chinese is fully exposed by Prof. Johnston, Dr. J. C. Lyons, Dr. Hassall, "Blackwood," the "Lancet," and the "Times" (Oct. 6th, 1853). The fact, therefore, is now known that artificial colour is required to give the spring crop and the spent Autumn gathering the same appearance. All this pernicious and unwholesome fabrication is thus rendered not then be passed off as good causing the fat insipid infusion so frequently the subject of complaint. Dr. Lyons, "The Sanitary Commissioner Tea seen by me in the Docks (London), imported from China by Horniman and Co., presents a pure and wholesome appearance, from the absence of the usual Art-floral colouring, is of a natural olive hue." They are the purest of the spring product, from young and vigorous plants, which yield not only more strength, but the full degree of fragrance which the Tea when plainly natural alone possesses.
HORNIMAN and Co., Importers of the most approved Teas in Wormwood street, [illegible] general use, but free from the objectionable practice of colour on the surface of the leaf.
Sold by Agents in all Towns, in 1 lbs., ½ lbs., and ¼ lb. packages.

DOMESTIC ECONOMY.—H. SPARROW and CO beg to announce that, in consequence of the late reduction of Duty, and the present depressed state of the Tea-market they are enabled to offer

THE ILLUSTRATED LONDON NEWS.

No. 721.—VOL. XXV.] SATURDAY, DECEMBER 30, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE OLD AND THE NEW YEAR.

To those who review the past, and endeavour to calculate the chances and probabilities of the future, the last day of an expiring year is a natural standing point. It is a bridge over the stream of Time, from which the observer looks upwards and downwards, and draws what warning or encouragement he may, either to guide him in his own individual course, or, if he be a teacher of the people, to point the moral of contemporary history. This task has often been performed by journalists, by statesmen, and by divines; but seldom within the memory of living men has there been an occasion so momentous or remarkable as the close of the year 1854 for the lessons which it may inculcate. It stands boldly out from the peaceful winters which preceded it, and marks an epoch in the fortunes of mankind.

This memorable year began amid perils and perplexities of no ordinary kind. The rumblings of the distant thunder were heard, and the first faint tremors of the approaching earthquake were plainly perceptible. Like all great political and historical events, those which have signalised the year now verging to its last moments, had their origin in remote antiquity. Every event is the child of Eternity; and the greedy ambition of the Emperor Nicholas, which has thrown the world into turmoil and exasperation, dates from causes long anterior to his existence, and of which he is but the instrument, and not the master. Without going too far back to search for the origin of the great European war of 1854, we may find it in events which at first sight may appear to have had little to do with it. This struggle, long foreseen and ardently deprecated—a struggle of which no man can foretell the issue, but of which all have felt, or will feel, the inevitable pressure partakes of the religious, as well as of the political, element. Though religion may be no more than the cloak with which the Czar attempts to conceal one of the vilest acts of political wickedness that was ever attempted, religious feelings in parts of Europe, where he has neither sympathy nor control, acted upon the minds of men, and induced a state of excitement which stirred the loose-lying embers of political convulsion, and fanned them into a blaze. Nicholas, the great chief and firebrand of the Greek Church, was preceded in revolutionary acts by Pius IX., the great firebrand and chief of the Church of Rome. To the present Pope—the most mischievous, though doubtless well-meaning enthusiast who ever wore the tiara or the crown—Europe owes the period of revolutions which commenced in 1848, from which have been gradually, and of necessity evolved, all the great events of succeeding years—reaching their climax in the attempt of the Czar to dismember and appropriate the Turkish empire. The Papacy was becoming obsolete, and losing its hold on the affections of Roman Catholics, when, in an evil hour for the peace of the world, Pio Nono, then newly-elected to the Papal throne, announced himself as a reforming Pope—the friend of Liberty, of Progress, and of Civilisation. Every one knows what followed. The fierce democracy of Continental Europe—caring little for the Roman Catholic faith, and still less for the Papacy or the Pope—welcomed the new and unexpected ally. The French were the first to take fire; and Hungary, Italy, and Germany were speedily involved in the conflagration. The Pope himself was not spared by the demon of insurrection which he had so recklessly evoked; and thrones tottered and crowns and sceptres were dragged through the dirt in almost every part of Europe, except in free England and enslaved Russia—the two opposite poles of the European system. The head of the Romish Church had no sooner done the mischief, than the head of the Greek Church stepped in to profit by it. He announced himself as the great conservator, and friend of law and order; and threw over Austria and Germany the fatal ægis of his protection. As early in the story as September, 1849, when, after the defeat of Kossuth by Russian aid, that chief fled, with some of his compatriots and coadjutors, and took refuge in the Turkish territory, the Czar—scenting the quarry afar off—declared that he would immediately consider it a *casus belli* if the Sultan did not instantly and unconditionally surrender the fugitives. The Sultan, in this dilemma, threw himself upon the advice and assistance of Great Britain and France. Both Powers were firm in their determination to support the Turks. They nipped the evil in the bud by their unhesitating boldness and decision. Thanks to Sir Stratford Canning and General Aupick, in Constantinople, to Louis Napoleon in Paris, and to Lord Palmerston in London, the Czar found it wise to recede; and war, otherwise inevitable, was adjourned to a future period. But the unfortunate religious element was still at the bottom of impending mischief. Louis Napoleon, wishing to strengthen himself by the support of the Roman Catholic clergy of France, urged inopportunely a dormant and valueless claim of the ancient Sovereigns of France for the protection of the Roman Catholic Christians in the Sultan's dominions; and once more the Czar came forward as the chief of a Religion as a Pope as well as an Emperor—and urged, with scarcely-concealed ambition for secular dominion and authority, his claims to the religious protectorate of more than one-half of the European subjects of the Sultan. Had as much vigour been displayed in 1853 as was shown by France and England in 1849, the Czar might once again have been baffled and driven back. But this was not done, and when the year 1854 first dawned upon the world, it was easy to foresee that war was inevitable.

For nine months it has now raged with more or less intensity; and 1855 will not have numbered many weeks, or even days, before Powers who are not yet parties to it will be drawn into its vortex. It has already inflicted incalculable damage, and has cost Great Britain and France the blood of some of their bravest and noblest sons, and filled thousands of households with mourning and lamentation. But manifold as are the miseries of war, its results are not all evil. Vulgar and common-place orators, who find it easy to declaim upon the horrors of the battle-field, are often unable to render justice to its glories, its self-devotion, its manly virtues, and its disinterested heroism. The war has already exalted the national character both of France and Great Britain. It has elevated the popular mind into the higher atmosphere of Justice and Truth. It has excited generosity of sentiment, and cemented, by community of peril and exertion, the friendship of two nations who, united, can set the hostility of the world at defiance, and be the guardians and preservers of Liberty and Civilisation.

Thus the year 1855 opens more auspiciously than its predecessor. If it have faults and errors to look back upon, there are no defeats to cast a shadow over its promise. The victories of the past are incentives to greater victories in the future. Every day the disturber of the peace of Europe finds himself in a state of greater isolation. His friends drop off; his allies shun the danger of his countenance; and monarchs, slowly coming to the wise conclusions which the instinct of the people discovered at a far earlier period, are ranking themselves, with their subjects, among the number of those who not only approve, but will fight for, the

HEAD-QUARTERS OF LORD RAGLAN, NEAR BALACLAVA [illegible] (SEE NEXT PAGE.)

objects avowed by France, England, and—we may now add—Austria.

It may seem over-sanguine to predict that the year 1855 will witness the conclusion of so long prepared and obstinate a struggle as that which commenced in 1854. But, at all events, it is not unreasonable to hope so. Should the wish be realised, a mighty good will have sprung from a formidable evil. But, whether the war ends in 1855, or is continued through many dark and troublous years, the Allied Governments and the Allied Nations will not "abate one jot of heart or hope." They will spare no effort to conquer Peace. Peace negotiated, and not conquered, would be unstable. To endure, it must be founded upon the coercion of an offender who scorns treaties and breaks them when he pleases. Such a peace, with the blessing of Heaven, the Allied Powers will yet secure to Europe.

LORD RAGLAN'S HEAD-QUARTERS.

Upon the preceding page we have engraved, from a Sketch by Lieut. Montagu O'Reilly, a near view of the Head-quarters of Lord Raglan, not far from Balaclava. The house is a long building, of the villa and farm-house description, partly covered with vines, which are very luxuriant in the Crimea. Tents are pitched in the adjoining grounds; and on the right of the picture is stationed the British flag.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The *Jour de l'An*—that fête of all the fêtes of the year, most dear to Parisian hearts and Parisian stomachs—and we must add, by way of counterbalance, to Parisian pockets—once more comes round, with its *étrennes* and its *bonbons*, and its visits, and its gaieties of all sorts and kinds; for, even though the state of affairs renders gaiety in general but little the order of the day, still, to greet the New Year warmly, everybody feels more or less disposed; or, if they don't, *il faut faire semblant*, for that reason which has paramount importance in French society—*Il faut faire comme tout le monde!* What chapters we could write on the exercise of this axiom; but, all things in their place. It appears as if, in the lull that Eastern affairs have caused in commerce here, all the *fabricants* had been employing their ingenuity in the invention and execution of those thousand creations of art and fancy that constitute one of the great features of the manufactures of this capital. Giroux, in his new shop on the Boulevard—whose walls are not yet dry, and whose windows are hardly glazed Susse, Tahan, and a hundred other, more or less, important caterers for the taste of the *Jour de l'An* public, display a variety and brilliancy in their stocks that have seldom been equalled. The *bonbon* manufacturers have been no less active. Marquis, the celebrated *chocolatier*, has a choice of these delicacies hardly to be imagined; Boisnier, Bertrand, and Masson, stand up in rivalry; and all the shops of these celebrities of comestibles are crammed from morning to night with crowds of buyers and gazers: those who can afford it come to possess; those who can't, to desire the possession of these tempting butterfly things that look so brilliant and beautiful now, and that if, by chance, they live to see the light, or, more properly, the fog of next New-year's-day, will bear such a dusty, dingy, tawdry, slippery aspect. One of the new and characteristic features of this year's *étrennes* is the appearance of the children's toys, which all bear a warlike and an oriental type. Every nursery is becoming a miniature Constantinople, Sebastopol, or Balaclava; as if the instincts of children were not already despotic and destructive enough!

As we have already stated, it is the intention of their Majesties to give the utmost impulsion to the fêtes of the winter. *Apropos* of this fact, we may cite a trait of the first Emperor, not a little characteristic of himself and his time:—Walking alone in the Faubourg St. Antoine (the chief manufacturing quarter of Paris), and conversing as was his wont with some of the *fabricants*, he learned from them the paralyzing effect of the war on the different branches of their commerce. On returning to the palace, he demanded a list of the senators and chief public functionaries; and forthwith caused a divis on to be made of all the articles of luxury that remained on the hands of the manufacturers, and the different portions to be sent, with the bills, to the residences of the different public officers, enriched by the places and honours he had accorded them.

The Emperor and Empress were among the earliest visitors to the Gymnase after the appearance of the piece of Madame Emilie de Girardin. Certain allusions in the play (perfectly inoffensive *du reste*) to the Spanish character seemed to amuse both, and they displayed throughout the utmost appreciation of the merits of this clever performance.

The reading public are anxiously hoping to obtain possession of literary curiosity of the highest interest. It appears that two years before his death, M. de Châteaubriand, carefully reviewing the manuscript of his "Memoires d'Outre Tombe," cut out a large number of incidents, opinions, traits, and anecdotes, which, for the very reason that they were judged too delicate, or too questionable for publicity, acquire a double interest. These pages a former secretary of the author had announced the existence of; and it is believed that, if the objections of the family of M. de Chateaubriand are not found to be an invincible barrier, they will, ere long, appear. It seems that the signature of the writer being attached sets aside all question of their genuineness.

The *Fresh-Juge*, the ultra-Catholic journal, to be directed by MM. Granier de Cassagnac, Louis Veuillot, Sainte-Beuve, and Barby d'Aurevilly, has, it seems, fallen to the ground a significant symptom against the progress of the Ultramontanes.

The Obituary of last week announces the death of M. Victor Hennequin, formerly chief editor of the *Démocratie Pacifique*, and member of the *Constituante*. In the late years of his life, M. Hennequin gave himself up entirely to the study of the so-called spiritual phenomena of table-turning, rapping, &c. He composed a work, supposed to be dictated by the "Soul of the Earth," entitled "Sauvons le Genre Humain," a most singular combination of genius and absurdity. His wife, who was his sole companion and aid in the prosecution of these studies, has been for some time the inmate of a lunatic asylum. *Apropos* of the supernatural, a cart, laden with bottles, was a few days since stopped at the barrier for examination. The conductor declared that the bottles contained only water, a fact which the examination verified; the water in question was drawn from the miraculous spring of *la Salette*, lately the subject of fierce controversy in certain clerical circles; the marvellous liquid having had a no less marvellous sale in the department of Isère, commerce—with an eye to everything—*s'en mêlait*, and a dépôt was formed at Paris for the distribution, *moyennant* a certain sum of filthy lucre, of the blessed beverage; the *douaniers*, however, whose faith, it seems, is weak in miracles, seized the sainted cargo as mineral water, and we believe it yet remains in limbo at the *douane*.

The *affiches* of the Opera balls sign alise the introduction, or rather revival, of an old custom—that of all the ladies (?) appearing in masks—no mindless costumes, either, are to be admitted. These regulations are *de rigueur*.

A third *fauteuil* in the Academy becomes vacant by the death of the oldest member of the Institution, M. Baour-Lormian, who died at the age of eighty-eight. M. Baour-Lormian was known, during the Empire and the Restoration, as a poet, tragic author, and translator of Tasso. During the last years of his life he was blind, and so infirm, as to remain in total obscurity and retirement. MM. Poussard de Broglie, E. Legouvé, and De Falloux, are the candidates for the vacant seat.

The principal theatrical novelties are these:—"Le Maletier de Tolède, at the Théâtre Lyrique—the words by MM. Dennery and Cairville, the music by M. Adolphe Adam. The work is not *de la première force*, though there are pretty bits in it. Mdme. Marie Cabel is, as ever charming; and the *mise en scène* is effective. "Monsieur mon Fils," at the Variétés—a sufficiently-amusing novelty; "Les Guerres d'Afrique," at the Cirque; and "Bon-soir, M. le Vicomte," at the Vaudeville—where great preparations are being made for the appearance of the "Parisiens de la Décadence," which, it is expected, will have as great a success as that of the "Filles de Marbre."

OPENING OF THE FRENCH LEGISLATIVE SESSION.

THE EMPEROR'S SPEECH.

On Tuesday at one o'clock the Emperor met the members of the Senate and of the Legislative Corps at the Tuileries, in the Salle des Maréchaux, and opened the Session of 1855 with the following Speech:—

"MESSIEURS LES SENATEURS, MESSIEURS LES DEPUTES

"Since your last meeting great facts have been accomplished. The appeal which I made to the country to defray the expense of the war was so well understood that the results have even surpassed my hopes. Our arms have been victorious alike in the Baltic and in the Black Sea. Two great battles have conferred honour on our flag. A remarkable proof of the intimacy of our relations with England has been shown by the fact that the Parliament of that country has passed a vote of thanks to our generals and our soldiers. A great empire, renovated by the chivalrous statements of its Sovereign, has detached itself from the Power which, for forty years, has been menacing the independence of Europe. The Emperor of Austria has concluded a treaty, defensive at present, but soon, perhaps, to become offensive, which unites his cause to that of France and England.

"Thus, gentlemen, the more the war is prolonged, the greater becomes the number of our allies, and the more closely are drawn the ties already existing; and, in fact, what more solid ties can there be than the names of victories belonging to the two armies, and calling to mind their common glory; than the same disquietudes and the same hope agitating the two countries; than the same views and the same intentions animating the two Governments, on every point of the globe? And, accordingly, the alliance with England is not the effect of a temporary interest and of a policy of the moment; it is the union of two powerful nations, associated together for the triumph of the cause in which, for upwards of a century, have been engaged the interests of civilisation, their own grandeur, and the liberty of Europe. Unite, therefore, with me, on this solemn occasion, in here returning thanks, in the name of France, to the English Parliament for its cordial and warm-hearted demonstration, and to the English army and its noble leader for their valiant co-operation.

"Next year, should peace be not then re-established, I hope to have similar thanks to return to Austria, and to that Germany whose union and prosperity we so much desire.

"I am happy to have to pay a just tribute of eulogium to the Army and to the Fleet, which, by their devotedness and their discipline, have in France as in Algeria, in the north as in the south, nobly responded to my expectations.

"The Army of the East has, up to the present time, suffered everything and surmounted everything. Sickness, conflagration, tempests, privations, a fortified place unceasingly provisioned, defended by a formidable artillery by sea and by land, and two hostile armies, superior in number,—nothing has been able to weaken their courage, or diminish their intrepidity. Every man has nobly done his duty, from the Marshal, who seemed to forces death to wait until he had conquered, to the soldier and the sailor, whose last cry, in expiring, was a prayer for France, an acclamation for the elected Sovereign of his country. Let us therefore declare in unison, that the Army and the Fleet have merited well of their country.

"The war, it is true, necessitates cruel sacrifice; however, everything commands me to carry it on with vigour, and for that purpose I rely on your co-operation.

"Our land army is at present composed of 581,000 men and 113,000 horses; the navy has 62,000 sailors embarked. To keep up that force is indispensable; and in order to fill up the chasms occasioned by the annual liberations of men, and by the casualties of the war, I will ask you, as I did last year, for a levy of 140,000 men. A Bill will be presented to you, having for its object to ameliorate, without augmenting the charges of the Treasury, the position of such soldiers as re-enlist. This will procure the immense advantage of increasing the number of old soldiers in the Army; and of allowing, at a later period, the weight of the conscription to be diminished. This Bill, I trust, will soon have your approbation.

"I shall ask you for authorisation to conclude a new national loan. Doubtless, this measure will increase the public debt; but let us not forget that by the conversion of 5 per Cents, the interest of that debt has been reduced by 21½ millions. My efforts have had for object to bring the expenses to a level with the receipts, and the ordinary Budget will be presented to you *in equilibrio*; the resource of the loan will of itself suffice to meet the exigencies of the war.

"You will see with pleasure that our revenues have not diminished. Industrial activity does not decline, all the great works of public utility still go on, and Providence has given us a harvest which is sufficient for all our wants. The Government, nevertheless, does not close its eyes to the anxiety occasioned by the dearness of food; it has taken every measure in its power to put an end to that difficulty; and, in order to alleviate it still further, has created in many localities new elements of labour.

"The struggle which is going on, circumscribed as it is by moderation and justice, though it causes every heart to thrill, so little alarms material interests, that the various countries of the world will soon assemble here all the products of peace. Foreigners will not fail to be struck by the extraordinary spectacle of a country which, relying on Divine protection, energetically maintains a war at 600 leagues from its frontiers, and develops with the same ardour its riches at home; a country where war does not prevent agriculture and manufactures from prospering, or the arts from flourishing; and where the genius of the nation displays itself in all that can contribute to the glory of France."

ANOTHER RUSSIAN LEVY.—The Imperial ukase for a new levy of recruits throughout the eastern recruiting circumscription of the empire was issued on the 13th, and dated Gatschina. The proportion of the levy is to be in the *pro rata* of 10 men for each 1000 souls of population; or, allowing deductions of one-half for females, and one-fourth for those under and over age, 10 per 250 males fit for service, or four per cent. The Jews will furnish recruits in the same ratio. The levy is to commence upon the 15th of February, and end on the 15th of March next. Those furnishing recruits—that is, owners of serfs, municipalities, &c.—are required to pay 19 roubles 20 kopecks silver towards the equipment of each recruit. It may not be irrelevant to state that the Russian empire is divided into two grand recruiting circuits (eastern and western), each containing about 23,000,000 of population liable to furnish recruits; so that the levy, at the *pro rata* of 10 per 1000 souls gives a total of 230,000 for the forthcoming levy; and the sum to be furnished by masters, and so forth, will amount to about £420,000.

THE SIEGE OF SEBASTOPOL.

The latest telegraphic despatches from the seat of war come no further down than the 18th, at which date the condition of the Allies was described as much more comfortable than it had been. The letters and statements recently published regarding the want of clothing which prevailed in the English camp, appear to have been greatly exaggerated. Instead of the soldiers having had no winter clothing up to the middle of December as was affirmed, it is now said that by the end of this month most of the soldiers had received one portion of the new supplies, and the remainder must have arrived before this time.

On the 10th the *Caradoc* arrived at Constantinople with news that the new French and English batteries were all but completed, as also the works around the Bay of Kamiesch. Some few huts had been erected, and it was expected that a regular wooden town would soon be formed. The corps of observation under General Bosquet was directly between the English lines and the Russians. The chief portion of the Russian army was at Baghcheral, but there were powerful bodies of troops *en echelon* between that place and Inkerman. According to all accounts they were suffering much from want of provisions. Owing to the heavy rains the flat country from Perekop to Simpheropol has been reduced to a sea of mud so that the passage of troops or supplies to the enemy will be impossible until the frost sets in. At the date of the latest accounts, however, a change was speedily expected. Severe cold would, it was thought, soon harden the deep mire, and the first fall of snow would give the signal for sledge travelling, and enable the Russian army to display as much activity as it did in preparing for the battle of the 5th ult. There is reason to believe that the third Russian *corps d'armée*, which was formerly stationed in the Principalities, and afterwards in Bessarabia, has reached the neighborhood of Nicholaieff and Cherson, on its way to the Crimea. The wet and stormy weather, which so long inflicted severe hardships on our own troops, was an effectual barrier to the further advance of this force; but, whenever a decided change takes place, we may not improbably see a considerable addition made to the Czar's army in the field, as well as to its supplies.

Meantime the French and English armies continued to receive large reinforcements. The French expected soon to muster about 100,000 men; and the general belief was, that an assault would soon take place, if the weather was favourable.

Scientific officers who have recently returned from the Crimea to Constantinople express their firm conviction that, very shortly after the attack on Sebastopol is renewed, a part, if not the whole, must fall into the hands of the Allies. It is thought that, after a tremendous bombardment, some of the forts will be taken by storm; but this last operation would not be attempted until all the reinforcements had arrived. When the assault takes place, 410 guns (of which 130 are English) will open fire.

Nothing is yet known as to the Turkish expedition. "The landing place of Omer Pacha's army is kept profoundly secret, but it is considered certain that it will be on the north side of the fortress. A despatch, dated "Odessa, Dec. 16," says:—"Forty thousand Turks, with a division of French and English artillery, are about to strike upon Perekop, and forthy the lines there. The Russian force is weak in numbers, and by no means well furnished." Another despatch says:—"Eight steamers have been taking soundings off Eupatkoff, and it is thought the Allies will make a descent on Kimburn preparatory to an attack on Perekop."

RETREAT OF THE RUSSIANS FROM TCHERNAYA.

On the night of December 6, at twelve o'clock, there was a great stir down in the valley of Balaclava. The hoarse hum of great crowds of men was heard by the pickets, and they reported the circumstance to the officers of the French regiments on the heights. Lights were seen moving about in the redoubts occupied by the Russians since the affair of the 26th October. It was supposed that the enemy had received reinforcements or were about to make a dash at our position before Balaclava. The Hospital Guards and the invalid battalion were at once turned out, and the French shrouded in their capotes grimly awaited in the lines the first decisive movement of the enemy. The night was cold, but not clear, and after a time the noise of wheels and the tramp of men ceased, and the alarm was over. Ere morning, however, the cause of it became visible. About five o'clock a.m., an outburst of flames from the redoubts in which the Russians had buttoned themselves illuminated the sky, and at the same time the fire broke out in the cottages on the slope of the hill before Komara. When morning came the smoke was seen ascending to heaven, and the Russians were visible in much-diminished numbers on the higher plateaux of the hills, near Schargom and Komara. The faint rays of the morning sun played on the bayonets of another portion of the forces as they wound up the road towards Mackenzie's Farm, and passed through the wood over the right bank of the Tchernaya. The reason of this retreat was not understood at first, but it has since been ascertained that the severity of the weather and want of shelter forced the Russians to abandon the position in the valley. The French pushed down their cavalry and seized the plain. They found dummies (mock guns) in the embrasures, the Russians having carried off all their artillery, to the number of 85 pieces.

GLOOMY ASPECT OF AFFAIRS IN RUSSIA.

The latest accounts from St. Petersburg represent the state of feeling there as having become very gloomy within the last few weeks. The news of the treaty of the 2nd of December being signed had caused a great sensation in the higher circles. The Court is despirited as far from being in humour to enjoy the festivities of the approaching Christmas, the aristocracy did not venture to give their usually brilliant balls and entertainments, the merchants found their commerce nearly ruined, the shopkeepers had no sale for their fancy goods and articles of luxury, and the prevailing fear of coming misfortunes extended down to the very lowest classes.

The only person who seems to keep his spirits from sinking is the Emperor Nicholas. He is represented as applying himself to business more vigorously than ever, working daily for sixteen hours, sending despatches off hourly to each quarter or other of his sixteen dominions; in fact, doing all that any single mortal can do to make up for the continual failures that occur from the systematic rottenness of Russian bureaucracy. Count Nesselrode is said to be in St. Petersburg, still in favour, and is closeted with his Royal master for several hours every day. The general opinion is that a war with America is inevitable, although a part of the nobles affect to believe that Austria will never be brought to draw her sword against Russia; and doubts are beginning to be seriously entertained whether it will be possible even for Prussia and the States of Germany to maintain any longer their one-sided neutrality.

The Russian accounts from the Crimea are anything but encouraging. The army is decimated by disease, provisions are getting short, and in the present state of the roads, there is no mode of sending supplies. Great fears were entertained that Sebastopol would not be able to hold out much longer; and Menschikoff's flaming despatches, with his poetical description of brilliant attacks and successful sorties, failed to inspire general belief any longer.

It was said that the Emperor had sent for the venerable Field-Marshal Paskiewitsch from Warsaw to consult with him on the best means of defending the frontiers on the Austrian line, and to concert measures for certain contingencies that may be shortly expected in that quarter.

That the nobility and mercantile classes devoutly wish for peace cannot be doubted for a moment, however unwilling they may be to clothe in words such an unpatriotic sentiment. It is only the peasants who still entertain any enthusiasm for the Czar. The new levy to be raised in March of ten men in every 1000 inhabitants will drain the population of nearly a million of men—on paper, for nobody seriously believes the possibility of raising such an army by an Imperial ukase, it being well known that the Czar must first raise the means of equipping them.

Letters from Odessa state that the recall of the Grand Dukes Michael and Nicholas, has been decided on, but that they will probably return to the theatre of war next spring with the Czar himself. According to one account the Emperor has earnestly demanded the return of her two youngest sons from the Crimea, where, if they perform their duties with anything like the self-abnegation and recklessness of danger exhibited by the British Royal soldier opposed to them, they will mean hourly peril and hardships of the severest kind, without other probable laurels than those which their Imperial Highnesses reaped at Inkerman. Prince Menschikoff, notwithstanding his adulatory powers and courtier reverence, calls himself "géné" by their presence. Independent of the responsibility of looking to their safety, and yet of not too much circumscribing their bellicose ardour, the Russian General does not feel his hand quite free, and would fain rid himself of two Princes who can report truths to the Emperor. It is said that Prince Menschikoff has received an autograph letter from the Emperor, in which the latter thanks the army for the fidelity and

devotedness which it has hitherto shown, and expresses a convic ion that Russia, protected by so brave an army, need not fear the whole world. By the side of these congratulations, which have been made public in an order of the day, the autograph letter contained remonstrances of a nature to prevent the recurrence of events similar to those of the 5th. The tone of the letter is so severe that it is very clear that the result of that day has produced a very deep impression on the Czar.

RUSSIA AND OUR INDIAN EMPIRE.

The reports from India relating to Russian intervention in Central Asia, which have been generally discredited in this country, have been placed beyond all doubt by the letters and papers received by the last Overland Mail. The Bombay correspondent of the *Times* gives the following remarks on the subject, from the *Delhi Gazette*:—

As to Russophobia, there is still a rational one, and the question may be thus summed up. The fear of being laughed at for suspecting Russia of any design on the British possessions in India is the form which Russophobia takes among us at the present day. This reaction against the wild, because timid, policy which led us into the Affghan war, is natural enough. But, like every other violent reaction, it is liable to run into extremes.

Napoleon wrote to his brother Joseph (as appears from his lately-published correspondence) that Russia was too far off ever to give him any concern; and yet we all know how the history of a few subsequent years forced on him the conviction that there were but two alternatives for Europe, to become either Republican or Cossack. So here in India have we been accustomed to believe that Russia was "too far off" ever to disturb our peace. And yet there is evidence, hardly now to be gainsayed, that Russia is rapidly becoming possessed of the whole Doab of the Jaxartes and the Oxus—a country which for ten centuries of history and twenty centuries of tradition has supplied India with invaders. Whether a quarter of a Russian horde—how large or small that force is of little moment are now established within 500 miles of our North-West Frontier.

The *Friend of India* says it is "enabled to confirm absolutely the chief statements of the Calcutta correspondent of the *Delhi Gazette*, and, by implication, to authenticate the remainder." The former journal says it has no wish to revive the "Russophobia" panic. "So long as the States of Central Asia remain native States, their affairs are as much a matter to the Empire as the quarrel of Feejeans." But the question becomes a much more serious one if the whole of these states are to be united under one, and especially if it should prove to be the case "that the courage of the mountaineers is to be organised by the science of the West." The Bombay correspondent of the *Times*, after quoting the above passage from the Delhi paper, says:—

The object of the Czar is evidently to compel Persia to join him, and then to effect a junction with the Russian force in Khokan and the Persian army at Merve (or Merve). The junction would place the resources of Bookara, Persia, and Affghanistan at his disposa, and thereby render him paramount in all the countries between the Caspian and the Indus. The immediate advantages that Russia would obtain would be the co-operation of a Persian army against the Turks in Armenia, and the power of harassing our Indian army by hurling up and uniting against us the tribes of the Indus frontier, who are said in the Punjaub report to be able to bring at least 100,000 fighting men into the field. It is true that these are assertions unable to meet with our regular troops in the plains; but, by a well organised system of incessant inroads into our territories, they would compel us to keep up a very much larger force on the frontier than is necessary at present.

The most formidable result of the success of the present Russian policy in Central Asia would be the complete alienation of the two Mussulman Powers now interested in repelling Russian aggression, and the entire abandonment of a base of operations at Herat and Cabul for a future attack on British India whenever an opportunity should offer.

With their magazines of provisions on the south of the Hindoo Koosh, a Russian invasion of India would be easier, geographically speaking, than a French invasion of Italy. We might be able to crush them in their debouchement from the passes, but I believe that few who have seen Sepoys in the presence of the enemy, or held familiar intercourse with those who have, would wish to see the fate of British India staked on a battle between Indian Sepoys and European or Russian troops, even were the be, oys as two to one.

It would, of course, be many years before Russia could be sufficiently established in Affghanistan to cause any immediate apprehension of an invasion; but when her projects of aggression in the direction of Turkey are closed, she may be expected to pay more attention to the increase of her power to the eastward. Whenever an opportunity occurs for a rupture, it will be probably one of her own creating. A Russian force on the frontier of India will be an encouragement to revolt held out to all the native Princes of India, most of whom would be glad to free themselves from a British control if they dared. It must be remembered that these native Princes are very rich, and their armies exceed our own in number about a third.

THE PRUSSIAN MISSION.

The German papers are much at a loss to know what the object of Herr Von Usedom's mission to London means. According to one account, the object of the Prussian Envoy Extraordinary is to induce the English, and of course the French Governments to consent to a separate treaty with Prussia, instead of insisting on her adhesion to the treaty concluded with Austria on the 2nd December. Prussia hopes in this way to be allowed to place herself in a sort of *neutre armée*, by which she will satisfy the Western Powers, and satisfy public opinion in her own States, without compromising herself so completely with Russia as she would do by giving in her adhesion to the treaty of the 2nd December.

Spener's Gazette of Berlin states that on the 16th the Austrian, French, and English Ambassadors waited on M. de Manteuffel to demand the adhesion of Prussia to the Treaty of Vienna. M. de Manteuffel inquired whether they were authorised to communicate the interpretation of the four points, and on their replying in the negative, he said that under such circumstances they could not expect an immediate adhesion. On the 17th the Prussian Minister formally repeated his application to receive information as to the four points, and this being refused, the Ambassadors were told that Prussia could not give an immediate adhesion.

A letter from Berlin, of the 23rd says:—

As negotiations are to take place before long at Constantinople, to regulate the future relations of the Principalities and the Porte, the Prussian Ambassador at Constantinople, M. de Wildenbruch, has received orders to insist on his right to take part in these deliberations, and to act in concert with the Ambassador of Austria. It is false that Prince Gortschakoff has been authorised by his Government to accept unreservedly the four points, in case he cannot do better. It is said that the petty States of Germany are preparing a collective representation, to be addressed to the Cabinet of Vienna, against their expulsion from the deliberations which are to take place in consequence of the treaty of the 2nd inst. The Prussian Cabinet is disposed to second this representation. In consequence of a notice issued by the Russian Embassy, that medical men were wanted for the Russian army, twenty-three have presented themselves at the Russian embassy.

AMERICA.

The steam-ship *Africa*, which left New York on the 13th inst., arrived at Liverpool on Sunday. The papers are filled with the proceedings in Congress, and speculations about what is to be done; but the general impression at Washington was that no business of importance would be transacted until after the holidays.

In the Senate, on the 11th, a bill to establish a uniform rate of naturalisation throughout the United States, to act prospectively upon those foreigners only who entered the United States after the passing of the Act, was introduced, read, and referred to the Judiciary Committee. The bill extended the term of naturalisation to twenty-one years. In introducing the bill, Mr. Adams denied he had any connexion with the Know Nothings, or with any other political secret association, and disclaimed any hostility to foreigners; but he thought emigration dangerous, inasmuch as foreigners ranged themselves with the worst class. He introduced the bill because he had learned that a band of Germans had burned an American Senator in effigy. Mr. Brodhead moved that the Appropriation Bill of last session, for the support of the ocean mail steamers, be referred to the Committee on Post Roads. He thought the allowance was too high, and that the steamers were utterly useless for war vessels. He would give the notice, and take the vessels at their appraised value. The bill was ultimately laid on the table.

In the House of Representatives, on the 11th, leave to offer a resolution, requesting the President to tender his mediation in the pending war in Europe, was refused.

According to Washington advices the President was extremely anxious to accomplish a modification of the present tariff, the raising of four new regiments, and the increase of the Navy.

In the municipal elections in the United States, the Know-Nothings have been almost entirely successful. It is stated that there is not a single applicant for the office of Governor for the territory of Utah, soon to become vacant by the expiration of Brigham Young's term.

A run had been made upon the Savings-banks in New York, by the working-classes

The *New York Journal of Commerce* says—"The present war, if it humbles the power of Russia, as we believe in the end it must, will put a new commercial aspect upon this whole part of the world. The Porte has, indeed, been anxious to develop the resources of this region by attracting hither foreign trade and capital, but the condition in which it was bound by treaties to keep the Black Sea, has vastly impeded its enlightened plans. All nations besides Russia may find satisfaction in the prospect that this state of things will soon cease for ever."

The Canadian Parliament was to be adjourned on the 15th instant. Lord Elgin was to give his assent to the Clergy Reserves Bill, and the Abolition of Feudal Reserve Bill, and then to resign in favour of Sir Edmund Head. His Lordship was expected to leave New York by steamer about the 23rd. The Reciprocity Bill for Nova Scotia passed the Legislature on the 11th by a majority of twenty-two.

Despatches from the Sandwich Islands report that the treaty with the United States had been assented to by the Royal Family. The arrival of a portion of the Japan squadron at Honolulu had created a great sensation.

INDIA AND CHINA.

Letters and advices from India and China have been received of the following dates—Calcutta, 19th; Madras, 24th; and Bombay, 28th Nov.; Amoy, 20th Oct.; Shanghai, 4th Nov.; Canton, same date; Hong Kong, 10th; and Singapore, 20th Nov.

Dost Mahomed had opened a friendly correspondence with the Governor-General. A treaty had been made with the Khan of Kelat for the protection of our frontier from Kurrachee to Candahar.

Nepaul is increasing her military forces.

The Burman Envoy from Ava was still expected at Calcutta. The price of opium at Calcutta had begun to rise. Capital abounds, and is almost redundant. At Bombay trade was dull.

In the north of China the Imperialists had gained some advantages over the insurgents, and expected shortly to recover Shanghai.

The piratical fores in the river and in the waters near Hong-Kong was still alarming that Sir James Stirling had represented the matter, through the Lieutenant-Governor, Colonel Caine, to the Viceroy of Canton, and requested his co-operation in the destruction of these fleets. A ready assent was given, and the means at the disposal of the Imperial Government were to be placed in readiness to proceed with any expedition that Sir James Stirling might undertake. Two boat expeditions had already destroyed a number of junks at a village close to Hong-Kong, when the United States steamer the *Queen* had been fired upon while reconnoitring

On the morning of the 1st of November, the Arctic Expedition ship *Enterprise*, Captain Collinson, arrived at Hong-Kong, and all on board well. The *Enterprise* was to leave shortly for England.

THE COURT

The Christmas holidays have not been marked this year by the customary Court hospitality. This deviation from ordinary custom is to be attributed to the deference gracefully paid by the highest lady in the land to the political situation in which the Great Western Powers are at present involved with Russia.

Her Majesty has the week received a formal visit from his Excellency Baron Brunnow, the ambassador on Wednesday), specially appointed by the King of Prussia on an extraordinary mission to this country; but beyond this with the exception of occasional visits from members of the Ministry—there have been no additions to the ordinary domestic circle of the Sovereign.

On Christmas-day the Queen and Prince, the Prince of Wales, the Princess Royal, Prince Alfred, and the Princesses Alice and Helena, the ladies and gentlemen of the Court, and the domestic household, attended Divine service in the private chapel of the Castle. The Hon. and Very Rev. the Dean of Windsor performed the services, and administered the Holy Communion. The Duchess of Kent was also at the service. In the evening the Royal dinner-party included her Royal Highness the Duchess of Kent, the Duke of Newcastle, the Dowager Marchioness of Downshire, Viscount Canning, Major-General the Hon. C. and Mrs. Grey, Colonel the Hon. C. B. and Mrs. Phipps, Colonel the Hon. N. and Lady Mary Hood, Colonel and Lady Emily Seymour, and Mr. Glover.

Her Majesty's annual bounties, in food and clothing, to the poor of Windsor and the vicinity, will be distributed on Monday next, in the Royal Riding-house at Windsor Castle, in the presence of the Queen and Prince Albert and the youthful Royal family.

The Duke of Rutland is surrounded by a distinguished circle of friends at Belvoir Castle. His Grace's birthday will be celebrated with the usual revelries and festivities.

The Marquis and Marchioness of Kildare have arrived at Stafford-house from visiting the Duke and Duchess of Sutherland at Trentham. The Marchioness is expecting her confinement early in the ensuing month.

The Marquis of Clanricarde, accompanied by Lord Dunkellin, left Carlton-house-terrace on Friday evening for Portumna Castle, county Galway, to meet the Marchioness and her Ladies De Burgh.

The Countess Frances Waldegrave and Mr. Harcourt, M.P., are enjoying a large party at Nuneham Abbey during the holidays.

Viscount Ennismore, who was wounded at the battle of the Alma while serving with his regiment (the Scots Fusilier Guards), has been promoted to a Captaincy in the same regiment, without purchase.

We understand that the marriage of Sir Humphrey de Trafford, Bart., of Trafford Hall, Lancashire, and the Lady Annette Talbot, daughter of Mrs. Washington Hibbert, and sister of the Earl of Shrewsbury, is expected to take place about the middle of next month, at Bilton Grange, Warwickshire.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, DECEMBER 28

Month and Day.	Corrected Reading of Barometer at 32° F.	Thermometer. Mean Temperature of the Day.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature from Average.	Degrees of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign + denotes above the average, and the sign — below the average.

The reading of the barometer decreased from 29.85 inches at the beginning of the week to 29.68 inches by the afternoon of the 22nd, increased to 29.90 inches by the 23rd, decreased to 29.60 inches by the 26th, and increased to 30.40 inches by the end of the week. The mean for the week, at the height of 82 feet above the sea level was 29.870 inches.

The mean daily temperature of the week was 1·6° *above* to 3·8° *below* their average values. The mean of the 22nd was 49·8°, and is the highest mean temperature recorded on that day since the year 1828, when it was 51·9°; that of the 25th was 50·4, and is the highest since 1824, when the mean daily temperature was 53·1°.

The mean temperature of the week was 42·2°, being 4·2° above the average of the corresponding week during thirty-eight years.

The range of temperature during the week was 24°, being the difference between the highest reading of the thermometer, on the 25th, and the lowest on the 28th.

The mean daily range of temperature during the week was 10·3°.

Rain fell to the depth of rather more than two-tenths of an inch.

The weather on Christmas-day was bad; with this exception the week has been fine, with frequently a cloudless sky. Some snow fell on the 27th and 28th, in the northern parts of the country—there was only a very slight fall about the metropolis on the morning of the 28th.

JAMES GLAISHER.

Lewisham, December 29, 1854.

HEALTH OF LONDON.—The mortality of London is still high, and exceeds the average. In the past week 639 males and 653 females died, these numbers differ but little from those in the two preceding weeks. The mortality is still most fatal among children. Scarlatina is somewhat less prevalent. No less than 34 persons died from small-pox; of these 20 were children, and 14 were adults. There were two deaths only from cholera.

SEXAGENARIAN MEMBERS OF THE HOUSE OF COMMONS.—There are no less than seventy-two members of the House of Commons who claim to be wholly exempt on election committees on account of being more than sixty years of age. The list includes the names of Sir T. D. Acland, Sir J. Bailey, Admiral Berkeley, Sir George Berk ley, Mr. Brotherton, Mr. Hume, Sir C. Burrell, Mr. B. B. Cabbell, the Duke, Right Hon. E. Ellice, Sir De Lacy Evans, Mr. W. J. Fox, Mr. Goulburn, Sir Greene, Right Hon. J. W. Henley, Sir T. Frankland Lewis, Colonel Lowther, Mr. Masterman, Mr. J. F. Maunsell, Mr. H. Drummond, Mr. Plumtre, Sir G. Pechell, Sir R. Price, Lord John Russell, Mr. Scholefield, Sir G. Strickland, Mr. Thorneley, Admiral Walcott, Mr. W. B. Wrightson, and General Wyndham.

NAVAL AND MILITARY INTELLIGENCE.

THE 10th Hussars are under orders to proceed to the Crimea.

THE Board of Ordnance have given orders for the construction of a formidable redoubt at Freshwater, Isle of Wight.

THE Commander-in-Chief having decided on the formation of an artillery barrack at Devonport, the Ordnance are taking steps for its immediate construction.

THE Falkirk Iron Company have received from the French Government an order for 3000 stoves, for the seat of war. The same firm have also received a very large order from the British Government for shells.

THE *Nix* and *Salamander* gun-boats, sent from Prussia to Plymouth, in exchange for the British frigate *Thetis*, are to be surveyed by the officers of the Devonport Dockyard, in order to ascertain whether they are perfectly fitted, and whether their machinery is in good order, before the exchange is completed.

THE Government has entered into contracts for 50,000 Minié rifles and rifle carbines; the contracts have been taken by manufacturers at Liege, Birmingham, and London. The most extensive contracts have been taken by Belgian houses, and it is stated that the supply from all places will extend over 3000 per week.

THE Cavalry regiments in Ireland have received orders to raise each 120 men, instead of 60 already authorised, for each of the Cavalry corps in the East, and have been directed to use every means in their power to have the men drilled within the prescribed period allowed for cavalry recruits—viz., four months—in order that strong reinforcements of drafts and remnants may be ready for active service in the spring.

GREAT activity prevails at the small-arm department of the Ordnance, Enfield Lock, in the manufacture of swords, sabres, bayonets, rifles, and repeating pistols, for the armament of the reinforcements about to proceed to the Crimea; and the pressure not being sufficiently commodious, the Board of Ordnance are about to proceed with extensive enlargements and improvements.

THE *Black Prince* screw steam-vessel, having taken on board a large portion of siege guns, &c., at Woolwich, was taken up on Saturday afternoon to the dockyard to be coaled; and, relays of labourers having been engaged, continued to work all Saturday night, all Sunday and Sunday night, and until noon on Monday. When her coaling was completed, she left for Greenhithe, to have her compasses adjusted, preparatory to her proceeding to the Crimea.

ON Tuesday fatigue parties of the Royal Artillery, the detachment constituting the garrison of the Tower, with several extra labourers, were engaged in delivering from the Ordnance stores in the fortress military clothing, boots, and other military stores, for conveyance to the several head-quarters of those regiments already embodied, or about to be embodied, throughout the United Kingdom. It is intended to supply each regiment with a limited number of Minié rifles; and the officers, non-commissioned officers, and privates will be practised in the use of that formidable weapon, in case of volunteer-ing for foreign service.

THERE is every reason to hope that a large instalment of the wooden huts and other comforts have reached the army in the Crimea before this. The *Cosmopolitan*, the *Cumberland*, and the *John Bowes*, steam transports, laden with huts, left Gibraltar for the East—the first on the 15th, and the two last on the 18th instant. The *Alma*, laden with stores, also proceeded to the East on the 18th, after coaling.

ARRIVAL OF THE DISCOVERY SHIP, "ENTERPRISE," CAPTAIN COLLINSON, AT HONG-KONG.

(From our own Correspondent.)

On the 1st of November, 1854, at eight o'clock in the morning, a light haze lifted from the north-east entrance, and revealed the long-missing Collinson's *Enterprise*. There she came sure enough, with a white ensign flying, her sides, trebly fortified, still showing marks of many a hard nip, struggle, and grind, in conflict with the ice. The flag-ship hoisted the demand. It was answered by the *Enterprise* showing a number, which proclaimed her to be the *Endymion*, owing to a change in the number of her Majesty's ships. The truth was, however, soon guessed. It was a relief to all around that there would be no expedition to be sent after the *Enterprise*. Admiral Sir James Stirling hoisted the signals "We are rejoiced to see you! and "How goes it?" Answer, "All well!" as the boats of the squadron towed them to their anchorage as fast furled their sails

Your readers will remember that the *Enterprise* was put in commission 14th December, 1849: Capt. Richard Collinson, C.B.; Lieuts. G. O. A. Phayne and Murray T. Parks; Additional Lieut. Charles T. Jago; Surg. Robert Anderson; Assist.-Surg. Edward Adams; Second Master Francis Skead. These officers are all alive and in excellent health. The other subordinates and men are also well. They are very fat and strong. The sick list is blank, and they have lost only three men in the five years; of whom one died from chronic disease, one fell down dead on deck in a fit, and one died from ice injuries.

Captain Collinson, after having been to the north of Cape Barrow, in August, 1850, returned through Behring Strait, wintered at Hong-Kong, 1850-1, and sailed to Fort Clarence; and then north, through the Strait, in July, 1851, in prosecution of the search.

The *Enterprise* passed the next winter (1851-2) in Walker Bay, a little to the north of Minto Inlet, in Prince Albert's Land, lat. 71 deg. 30 min.; long. 118 deg west. In the summer of 1852 she passed up through the Prince of Wales Strait, and was at the Princess Royal Islands only ten days after Captain M'Clure; having picked up two or three of his marks, and four of Dr. Rae's, in that vicinity. She proceeded well outside to the north and west of the outlet called "Investigator Sound." At this point she was a very short distance indeed from Captain M'Clure, in the Bay of Mercy. From this point Captain Collinson retraced his way south and west through Dease's Strait, and spent the winter 1852-3 in Cambridge Bay, lat. 69° N., long. 106° W. From this point (so favourable for an attempt to penetrate through the Victoria Strait and Bellot Sound, into Fames Regent's inlet), no such attempt was made. It was said to be a source of bitter disappointment to Captain Collinson's officers, as well as of frequent disputes and unpleasant scenes, that, instead of advancing northwest (which there seemed nothing to prevent his doing), he decided on returning eastward, along the Equimaux coast, passing Cape Bathurst, without making any communication (which might have reached home long since); and he spent last winter in Camden Bay, long. 149° W.

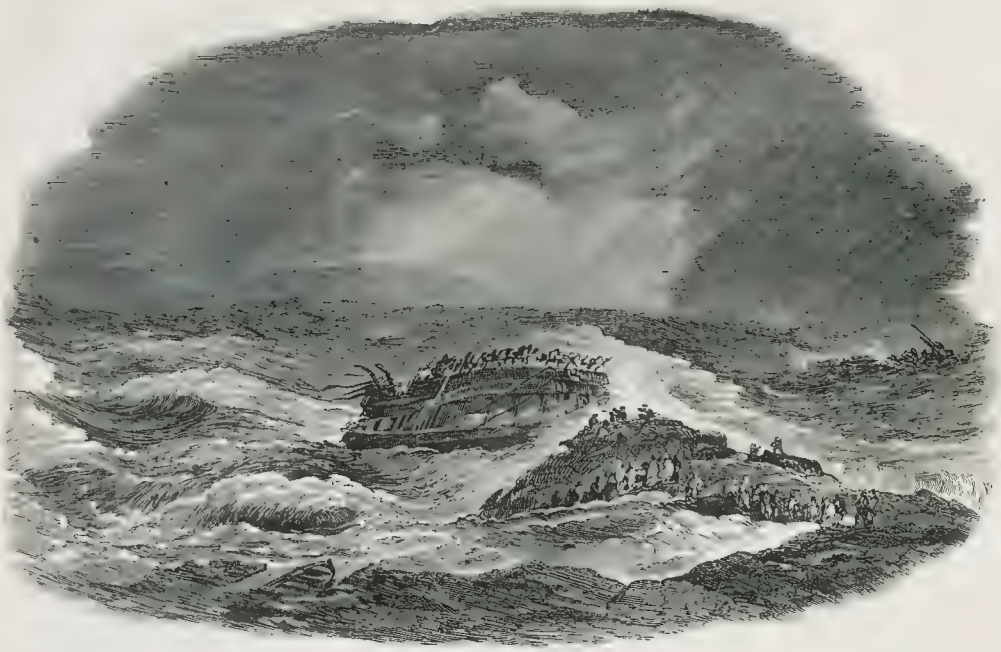
They were liberated after eleven months' weary wintering in the pack, early this summer, and ran from Port Clarence to Hong-Kong in six weeks, without seeing or hearing of any Russian ships, or any, except two American whalers. Every one of the officers was suspended from duty or under arrest. One had been confined to his cabin for nearly three years; another for nearly the same period. A very unusual and a very deplorable state of things prevailed. The officers were not even allowed to go on shore at Hong-Kong when the men went. Even after some conveyse with the Admiral, they were liberated, but without any references to the questions at issue, which are of too grave a nature to be decided here.

In some places the people of the *Enterprise* caught a great quantity of fine fish—sometimes as much as two tons at a single haul, and five or six salmon among them, weighing about 28 lbs. each. A great abundance of ptarmigan and other wild fowl were obtained, even by the inferior weapons of the ship's company; for, owing to the unhappy differences between the officers and their Captain, the former were deprived of the opportunity of trying their hands

The *Rattlesnake* was sent home from Port Clarence early in August. The *Enterprise* then went north to recall the *Plover*, and sent her home by the Sandwich Islands.

LOSS OF THE SHIP "CHARLOTTE," IN ALGOA BAY.

WE are enabled to Illustrate this appalling wreck from Sketches by two spectators of the melancholy scene. It appears that, on the 19th of September, the ship *Charlotte*, 886 tons—R. Affleck, Commander—having on board the 97th Regiment, 700 rank, for Calcutta, put into Port Elizabeth for water. On Wednesday morning a heavy sea commenced setting into the bay, with moderate southerly wind, which increased towards noon, and being more to the south-east, topgallant masts and yards were struck, and preparations made for a gale. During Wednesday night the wind freshened considerably; a very heavy sea continued to roll in, preventing any communication from the shore. About five o'clock the *Charlotte* made the signal "I have parted," and at half-past five she was observed to be drifting to the northward, having parted her second bower; an attempt was then made to beat the vessel out, and all available canvas was set, and the ship stood to the eastward, apparently making good way, but having no foresop-sail bent, and the topgallant masts struck (thus preventing the yards from being hoisted up) it was impossible to stay her, and they were obliged to wear. At eight o'clock the vessel had stood towards the shipping, and again attempted to wear; the wind had



WRECK OF THE TROOP-SHIP "CHARLOTTE," IN ALGOA BAY.

however, by this time fallen light, and not having sufficient canvas set, she drifted in towards the shore, and eventually struck on the rocks at the end of Jetty-street.

Every attempt was then made to communicate with the vessel. The life-boat had been sent to the head of the bay, hoping the ship would be beached there. Manby's apparatus was then brought down, and a rope was thrown several times over the vessel, but the communication was lost. The vessel had by this time settled considerably, and the sea was making a complete breach over her. The life-boat was then launched from the beach to the southward, and succeeded in reaching the ship three several times. But by this time the vessel had settled down on her starboard side, the men were standing up to their waists in water, and no warp or rope could be obtained. In a last attempt to communicate, the life-boat was filled and driven on the rocks, where she was knocked to pieces, and the crew narrowly escaped.

The vessel was now evidently breaking up fast, and at one o'clock the poop and mizen-mast separated from the fore-part, leaving a great number of soldiers and sailors on the forecastle. The poop drifted towards the rocks, and nearly all on that part of the ship were saved. In less than half an hour afterwards the bow of the vessel turned completely over, and every soul in that part must have perished. The unfortunate people thus saved were immediately provided for, as far as circumstances would admit, by the inhabitants, who vied with each other in their endeavours to comfort the sufferers. At daylight not a vestige of the ill-fated vessel was to be seen where she was wrecked: a mass of broken masts and timber entangled in ropes and torn sails strewed the beach.

Immediate search was made for the bodies of those who had perished; and during the morning twenty-three had been recovered, a portion of whom were buried before dark, followed by all the troops in garrison, and a great number of the inhabitants. Everything that humanity could suggest was done for the survivors; and a sum of nearly £400 has been subscribed towards their relief.

The crew consisted of seventeen British and four foreigners, the Captain and son, and first and second officer. Of these, the following are the survivors:—Captain Affleck, his son, first officer, and the butcher, steward, cook, and two others. There were also lost—62 soldiers, 11 women, and 26 children.

One of our Correspondents relates:—"Dr. Kidd, of the 27th, was washed overboard, and, thanks to a life-belt (which caused him to be the laughing-stock of his brother officers on the way) he was saved."

From the official report of the melancholy wreck, it appears that the Captain acted with great courage and coolness throughout the trying scene. It was the general opinion at Port Elizabeth that the moorings of the *Charlotte* were not of sufficient strength for a ship of her tonnage.

Our other Correspondent writes from Port Elizabeth:—"Never was there known such a melancholy occurrence here before, there being such protracted misery on board during the time the ship was breaking up; while, of the thousands who were looking on, none could help."

The Sketch shows the ship "at the time the life-boat attempted to reach her; but, at this time, all on board were clinging to her for life or death; every sea breaking over her and making her roll so frightfully that they were unable even to give a proper rope; many on board by this time were killed and others wounded attempting to swim on shore."

The foreground of this Sketch is Patrick-street, Port Elizabeth.

WRECK OF THE TROOP-SHIP, "CHARLOTTE."—ATTEMPT OF THE LIFE-BOAT.

THE CRUMLIN VIADUCT, ON THE WESTERN VALLEY RAILWAY.

THE CRUMLIN VALLEY VIADUCT.

Among the gigantic labours of this engineering age, we have already recorded the spanning of the Menai Straits, the undermining of the Thames, the crossing of Folkestone Valley, the tunneling of the Shakspeare Cliff, and the bridging of the Wye; to which colossal labours we have now to add the commencement of the construction of a Viaduct across the Crumlin Valley, of magnitude worthy to be associated with the above triumphs of engineering skill. It may bespeak the interest of the reader to state that each of the iron piers which are to support the girders of this Viaduct is, within 12 ft., the height of the London Monument; whilst each of the girders, of which there are several, is 160 ft. long.

The picturesque valley of Crumlin is about twelve miles distant from Newport, Monmouthshire, on the Western Valleys Railway. The surrounding scenery, although pleasing to the eye of the lover of nature, presents numerous obstacles to railway engineering, one of which will be overcome by the present Viaduct, in connection with the Taff Vale Extension Railway, which, when completed, will contribute materially to develop the mineral wealth of South Wales.

The following are a few of the principal dimensions of the vast design:—The total distance from abutment to abutment is 1046 ft. 8 in. The piers are equidistant from each other 150 feet; and are composed of 14 cast-iron columns, of 10 tiers in height, firmly braced together with cast-iron girders, and diagonals of wrought iron, having tightening cutters. The columns at the base of the piers are 60 ft. 1 in. centres, tapering to 28 ft. at the top. A triangular casting is properly secured to the top of these columns, on which rest the main girders for the roadway. The distance from the foundation of pier to top of rails is about 191 feet 6½ inches. In the accompanying Sketch, on the right hand, is a smaller Viaduct of two piers stretching across the Penydarn-road; and a Tramway, belonging to Sir B. Hall, Bart., M.P. This Viaduct, and a portion of the larger one, are curved to a radius of twenty chains. The principle of the girder is stated to be patented by Captain Warren and the contractor of the Viaduct, Mr. T. W. Kennard.

The ceremony of fixing the first column was performed by Lady Fitz-Maurice, on the 8th inst., in presence of several scientific gentlemen and numerous spectators. Previously to lifting the first girder, it was tested with a weight of 250 tons, and gave great satisfaction to the engineer who inspected it. On the 3rd inst., about half-past three in the afternoon, it reached the position destined for it, from pier to pier on the Pontypool side of the valley. The weight of this girder was twenty-four tons, and it was raised by machinery at the rate of four inches a minute. When the girder was "planted," a loud and hearty cheer burst from the lips of the workmen, who were some of them in most perilous positions; while one, more courageous than the rest, actually walked across the girder, which was about a foot in width, and 200 feet from the ground. In the midst of the excitement, Mr. H. M. Kennard, brother of the contractor, ascended a platform and spoke to the men in glowing terms of the dangers to which our troops were exposed in the Crimea, proposing to the men the desirability of contributing something towards the fund, as a sort of commemoration of the memorable day. The proposal was received with deafening acclamations, and a day's pay was at once cheerfully offered. The workpeople were afterwards regaled by Mr. Kennard, who has built a large permanent workshop adjacent to the Viaduct.

IRON CLOCK-TOWER FOR GEELONG.

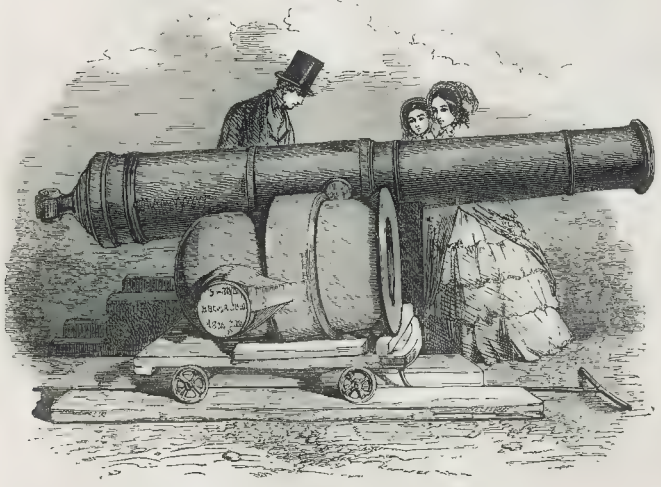
Nothing like iron would seem to be an industrial maxim of the present times, which may, indeed be designated "iron æval." Distinguished above other nations for the exuberance and cheapness of our supply of iron, we have, of late years, greatly multiplied its uses. We build leviathan ships and mansion-like houses of iron; and, in the instance before us, we have the ready adaptation of this material to the immediate wants of a rapidly-rising community, whose want of a public building is no sooner known in the mother-country, than it is provided and shipped for her golden colony. Poets have sung of "the iron tongue of midnight"—of which, by the way, we are just now forcibly reminded.

The height of the Tower, including the nave and base, is about sixty feet; and the width of the shaft about seven feet. It is formed of a frame-work of iron; between the framings are inserted stout tiles, made by Minton, of a neat drab or stone colour; each tile is about fourteen inches by eleven inches. As they approach the gallery they become ornamental, and proceed thus to the Clock face, and around it, giving a very pleasing ornamental finish. The balustrades and footway of the gallery are of iron-work, of elegant design. The doorway at the base is in the Moorish style. The Tower can only be used for the one purpose—viz., for the Clock, as a good space will be occupied by the weights, &c. From the base project four lamps.

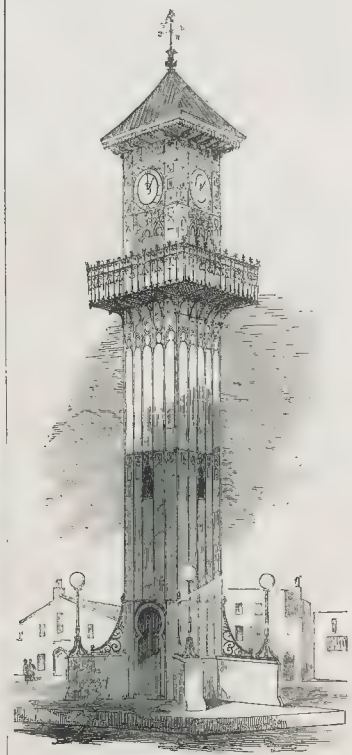
The iron-work has been executed from the design of Mr. James Edmeston, architect, by Messrs. Silvester and Co., of Great Russell-street, Bloomsbury. The Clock has four illuminated dials, and has been constructed by Messrs. Moore, of Clerkenwell-close. It is a gift to the town from Mr James Austin, the second Mayor of Geelong.

In this Tower, the first structure of its kind, the combination of iron framing and tiles, or slabs of burnt earth, offers infinite opportunities for variety of ornamentation. It is better fitted, even as regards strength, for a dwelling-house or church, than for such an erection as the present. A metal net, stretched on the inner rib, and then plastered on, leaving a space between it and the wall of terra-cotta, would make a comfortable room, warm in winter and cool in summer, and be infinitely superior to the houses of wood or corrugated iron. Hereafter some Clerkenwell laureate may commemorate the application of iron to the bell-tower as well as the bell.

In setting out the town of Geelong, the Liverpool of Australia, a square of eight acres was wisely reserved by the Governor, Sir George Gipps, with the humane view of promoting the health of the place; and



GUN AND MORTAR FROM BOMARSUND, AT THE CRYSTAL PALACE.—(SEE NEXT PAGE.)



CAST-IRON CLOCK-TOWER FOR GEELONG

we regret to learn that this sanitary measure is likely to be nullified by the cupidity and narrow-minded policy of certain members of the Town-council, who are desirous of converting this fine area into a fish and cabbage-market. Should, such, however, be the case, this is a most appropriate site for a pub lic clock; and, to bring time by the foreshore, it was resolved that the Tower should be of iron, thus avoiding the slower process of a stone erection. Th's novel structure is, throughout, entirely of cast iron; so as to avoid the injuries by oxidation to which wrought iron is liable. The whole is fitted together by means of dovetails, rangs, sockets, &c., and then run with lead, so as to form one compact mass. The castings are distinguished by their accuracy and sharpness; and all the minor details of construction have been minutely attended to.

CHRISTMAS AT THE CRYSTAL PALACE.

The Christmas attractions at the Crystal Palace have proved very attractive. On Tuesday the e were upwards of 10,000 visitors; and the attendance has since been propo-tionally numerous. The gigantic Chri-tmas-tree was, of course, the centre of attraction. It will remain there until the 6th of January. The Military Concerts, by the bands o' the First Life Guards, Grenadier Guards, Scots Fusilier Guards, the Royal Artillery, and the Crystal Palace Bands have also been very successful; and the programmes have included several fine pieces of classical music, interspersed with pieces of a lighter and more popular class. These performances have been altogether of a very superior class; and the attention with which they have been listened to shows there is a healthy taste for good music.

At a moment when the war with Russia is uppermost in most men's minds, any trophy of the advantage we have gained over the enemy is likely to be a great attraction. Accordingly, the gun and mortar from Bomarsund, and placed in the Crystal Palace, possessed a paramount interest in the eyes of the thousands of holiday visitors. Even amidst the more showy objects in the Exhibition these spoils of the war, and proofs of our mastery in the strife, have drawn around them thousands of inquiring visitors. We have engraved these interesting objects upon the next page.

The upper portion of the grounds of the Palace have been in excellent order; but the lower par. has been too abundant in diluvian mud for promenaders. However, not a few visitors flocked around Mr Waterhouse Hawkins's representatives of extinct animals. Altogether, the Christmas recreations at the Crystal Palace have proved a great treat to the holiday-seekers, more especially to those who prefer out-door exercise, as well as the beautiful objects of art and nature which are encased in the Palace itself. The round of amusements will be continued throughout the ensuing week.

CALENDAR FOR THE WEEK.

Sunday, Dec. 31. St. Sylvester.
Monday, Jan. 1, 1855. Circumcision. Union with Ireland, 1801.
Tuesday, 2. Edmund Burke born, 1730. Lavater died, 1801.
Wednesday, 3.—General Monk died, 1670.
Thursday, 4.—Roger Ascham died, 1568.
Friday, 5.—Duke of York died, 1677.
Saturday, 6.—Twelfth-day—Old Christmas-day.

TIMES OF HIGH WATER AT LONDON-BRIDGE
FOR THE WEEK ENDING JANUARY 6, 1855

Next week, Jan. 6, will be published the First Number of the Illustrated London News for the New Year, in entirely New Type, commencing, also, a New Volume.

Next week willbe ready, elegantly bound in cloth, gilt edges, price 21s.,
THE ILLUSTRATED LONDON NEWS,
VOL. XXV.,
With upwards of 600 Engravings; including a very numerous Series of Illustrations of the Progress of the War during the past six Months.
The Covers for Volume XXV., with the New Design, price 2s. 6d. each, may also be obtained next week, by order, of all Booksellers, &c., in the Kingdom.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 30, 1854.

The British Parliament, after a sitting of eleven days, in which a greater amount of important business was dispatched than was ever known within the memory of living men to have been transacted in a similarly short period, has closed its deliberations for a month. In the meantime the French Legislative Session has commenced, and is at the present moment in full activity. In our country, with its free press, the popular feeling does not require the speeches of parliamentary orators to whip it into enthusiasm; but in France—where the liberty of the press has been temporarily, and perhaps wisely restricted—the debates of the Legislature will be useful, in default of the lucubrations of public writers, in exciting the patriotic sentiment of the nation.

The Emperor has himself given the tone to the approaching deliberations of his Senators and Deputies. His Speech on the opening of the Chambers, on the 26th instant, was a masterpiece of calm and pregnant oratory. While it will satisfy the French people, and incite them to bear with [alacrity the burdens of the just war in which they are involved, it has produced in England a highly favourable impression; and will, it cannot be doubted, create in Germany and in other parts of Europe, a powerful effect on the action both of Governments and people. More is expected from an Imperial Speech in a country like France, under the present régime, where the will of the Monarch is the greatest agency in the propulsion of the State machine, than from a Royal Speech in England. In this country the Speech from the Throne is but the text which parliamentary orations are to expound and illustrate. In France the Imperial Speech is not a text, but the oration itself. But in either capacity the address of Napoleon III. has the merit of eloquence, power, and significancy.

For the first time since France was a nation, the thanks of its Sovereign—in which he will be heartily supported by his people—have been given to the Government and the Army of Great Britain. Writers in our day are accustomed to speak of "great facts;"—and this is one of them. Although the cordiality of the admiration and gratitude expressed by France and England, each towards the fleets and armies of the other, is of good augury in the present struggle, their deliberate sanction by the reason and sound policy of such a Sovereign as Louis Napoleon—shared as the sentiment is by the wisest and best men in both nations—gives additional value to the thanks, and throws a greater lustre over the admiration. It may be the first, but it cannot be the last time, in which courtesies so noble will pass between the two people. Henceforward our alliance with France will only be the stronger, the more chivalrous, and the more enduring, from remembrance of the fact that we once were enemies, but that, in the cause of right and justice—without self-seeking ambition, or views of aggrandisement, but to restrain the guilty, to protect the innocent, and to save Civilisation itself from Barbarism and Barbarity—we became friends. Such an alliance, as the Emperor says, "is not the result of a passing interest, and of a policy of circumstances." It stands on the firmer basis of Truth; and, like Truth itself, will prevail, whatever be the number and the force of the enemies that may attempt to withstand it.

The mention of Austria is significant, and will excite a sensation even in the frigid circles of St. Petersburg. Austria, "rejuvenated by the chivalrous sentiments of its Sovereign, has detached itself from a Power which, for forty years (Louis Napoleon might have said, a hundred years) has menaced the independence of Europe;" and "has concluded a treaty, defensive at present, soon perhaps to become offensive, which unites its cause to that of France and England." A few days will suffice to define the position of Austria with still greater precision. In the meantime the plot thickens against the Czar; and not even the defeat of the British and French armies before Sebastopol—a result which we hope and believe to be impossible—will save his cause from utter isolation, and prevent his ultimate humiliation and discomfiture.

Of Prussia the French Emperor says nothing; but a pithy paragraph, which all Germans will understand and appreciate—and Prussians not less thoroughly than their neighbours—expresses the hope that, if peace shall not have been re-established in 1855, the French Legislature will have to thank the armies of Germany for the same reasons which have induced it to thank the armies of England. If the King of Prussia does not discover that there is much meaning in this sentence, he will be blinder than his subjects. It is "miching mallecho;"—and means mischief.

The allusions to the internal and domestic condition of France in the Imperial Speech are numerous, and will be as gratifying to every foe of Russia as to every friend of France and England. The French Army—not like that of England, dependent entirely upon voluntary enlistment, but recruited by conscription—numbers at the present moment 381,000 men, inclusive of a cavalry of 113,000 horses. The French Navy numbers 62,000 men. To keep up the Army to this standard there is to be a new levy of 114,000 men. At the same time the French Government has resolved upon a new National Loan of twenty millions sterling. Sooner or later this country will have to resort to a similar expedient. To pay as we go is excellent policy, if we can adopt it without starving the war; but it is questionable whether our Government can much longer do without far larger sums than the taxation of any one year can place at its disposal. The French Loan will, there is every reason to believe, be speedily taken up. The English Loan, when it comes, we may be equally certain, will be quite as popular and successful.

France and England, however, will not only be allied in the glories of war, but in the triumphs of peace. Both countries—to use, with but slight variation, the language which Louis Napoleon with just pride applies to his own—not only maintain with energy a war at 600 leagues from their frontiers, but exhibit the spectacle of nations, in which War does not prevent Agriculture and Industry from prospering, and the arts from flourishing. In this country, as in France, measures of internal reform and improvement will not be utterly neglected in the prosecution of the war. We are masters of the sea. The world is open to us, and we shall be able to bear our burthen, were it ten times greater.

Poverty is said to make a man acquainted with strange company. But so does an extreme principle. It cannot have been a matter of any satisfaction to John Bright (who, notwithstanding his perversion of contemporary history in his letter to Mr. Watkin, and his significant silence upon the Sinope massacre, we believe to be as thoroughly honest as he is courageous) to find his epistle reproduced at full length in the official journal of St. Petersburg. But he and Mr. Cobden have got into even worse company than that, if such a thing be possible. There is a frantic Russian party at Berlin, as well as at St. Petersburg, which deludes itself with the notion that the alliance between France and Great Britain is not sincere, and may be easily broken. So well informed is this party of the state of British feeling, that its members confidently reckon upon Mr. Cobden and Mr. Bright—the friends of peace *par excellence*—as the instruments by which the alliance of the Western Powers is to be brought to a close, and Russia enabled to reign and ride rampant. Mr. Cobden does not merit the distinction which the friends of Russia have thus thrust upon him, for he is not a friend of peace at all price. But, if anything could open the eyes of Mr. Bright to the unpractical character of his policy—to the really warlike tendency of the peace-at-all-price principle, it should be the fact that he, the Peace Apostle, is considered a fitting instrument to foment illwill, and ultimately war, between France and England. These stupid visionaries talk of a "crusade against Paris," with Russia and Great Britain in firm alliance, to restore the Bourbons, against the will of the French people! John Bright, being an honest man, should avoid such company.

CHURCH, UNIVERSITIES, &c

Preferments and Appointments.—*Rectories.* The Rev. H. Alexander to Stoke Rivers, Devon; Rev. R. H. Fortescue to Stockleigh, Pomeroy, Devon; Rev. W. Gee to St. Martin, Exeter. *Vicarages:* The Hon and Rev. F. Sugden to Brignall, diocese of Ripon; Rev. H. Bacon to Baxterley, diocese of Worcester; Rev. C. W. Wood to Aswarby; Rev. E. Edmonds to St. Michael's, Southampton: Rev. H. I. Sockburne to Rostherne; Rev. J. Horden to Burton Agnes, near Hull. *Incumbency:* Rev. W. Gill, M.A., to the Church of St. John-the-Evangelist, Fitzroy-square, St. Pancras.

On Monday the vacant Professorship of Botany in Gresham College was filled up by the election of Morgan Cowie, late Fellow of St. John's College, and Hulsean Lecturer in the University of Cambridge. Mr. Cowie was senior wrangler in 1839, and for some years principal of the Engineers College, at Chatham.

We have authority to contradict an announcement made by two of our morning contemporaries concerning intended festivities at Hatfield House. No such intention did exist, or could exist, at a moment like the present.

LATEST INTELLIGENCE.

SIEGE OF SEBASTOPOL.

St. Petersburg, Dec 28.—The last despatches from Prince Menschikoff, dated the 20th, state that nothing new had occurred up to that time. The fire of the Russian Artillery was well directed, and annoyed the Allies.

Constantinople, Dec 18.—Admiral Dundas has gone home. He is to be succeeded by Sir Edmund Lyons. Admiral Hamelin will shortly be relieved by Admiral Bruat. Since the three actions of the 5th, 10th, and 11th, which were duly reported, the garrison of Sebastopol has received large reinforcements. General Liprandi is manœuvring in the neighbourhood of Balaclava with 40,000 men. The Allies are in force, ready to give battle. The third parallel of the French is now mounted with guns. Admiral Bruat has captured a fire ship near Kamiesch.

The following is a summary of Russian news from the seat of war, given by the *Soldaten Freund*:—

The recent expedition of the Russian steamers, which was merely a reconnoissance, lasted nine hours. The Russians only discovered that they had no chance of offering anything by sea against the French, as strand batteries completely protect their transport ships, 120 iron guns of the largest calibre have been placed in the batteries, and the works in the third parallel are completed. In a letter of the 13th, from Odessa, is the following passage:—"The unfavourable weather has made the roads so bottomless that two mails from the Crimea are over-due." It is also certain that the two Grand Dukes passed Perekop on the 9th, on their way to St. Petersburg. Generals Read, and not General Osterberg, has been definitively appointed to the 3rd Corps, which was formerly under Lieut-General Sacken. Until General Read arrives, Lieut.-General Montbreor will have the command. Twenty thousand men are occupied in fortifying Kiew.

The authorities at Malta have received orders to have quarters in readiness for 12,000 men, recruits, to be sent out for their military education.

DIPLOMATIC CONFERENCES.

Vienna, Dec. 28. Conferences of a positive character, at which M. Gortschakoff and Count Arnim were present, took place to-day. The Earl of Westmorland being still indisposed, the discussion took place in his apartments.

RETURN OF NON-COMMISSIONED OFFICERS AND PRIVATES KILLED AND WOUNDED BEFORE SEBASTOPOL, FROM 27TH NOVEMBER TO 5TH DECEMBER 1854 (BOTH DAYS INCLUSIVE).

KILLED.

Artillery: Bombardier Adam Lyle.
1st Rifle Brigade: Private John Randall.
4th Foot: Private Thomas Williams.
21st: Private Frederick M'Donnell, Isaac Sewell.
49th: Privates Patrick Smith Michael Fitzgerald.
50th Sergeant George Lapham
97th Privates John Cooter, Owen Doherty, Richard Nagle, Lewis M'Donald, George Rodney.

WOUNDED.

1st Foot: Private Martin Fegan, Henry Dew, John Wales, slightly.
8th: Privates Joseph Crowther, Thomas M'Cluse slightly, John Heare severely
19th Privates Thomas Cormack, Isaac Gedy, Matthew Flinn, George Hollstone, severely; Robert Wilson, William Davis, Enoch Pinder, Charles Wheeler, slightly
21st: Colour-Sergeant Thomas Rutherford, severely. Private John Bowes, severely; Daniel Ryan, slightly.
30th Privates Joseph Yates, Michael Hegarty, Samuel Mountain, Thomas Lee, severely; Pat Kelly T. G. Irwin, James Slade slightly.
33rd: Sergeants James Nutt, severely; Samuel Winston, slightly Privates John Nugent, John Hounsell, William Ibbs, slightly
44th Corporal William Courtenay and Private William Stephenson, severely.
46th: Privates John Griffiths and John Horton, severely. William Cook Nichols, Conner Peter Aldridge, Arthur Hawthorn Oliver Crowley, slightly.
47th: Private Thomas Connolly, slightly.
49th: Private Michael Fagan, severely.
57th Corporal Benjamin Inglefield, slightly Privates William Cooney, George Coombs, Peter Dineen, Thomas Harrymen, Miles Groom dangerously, John Hunter, John Macdonald, slightly.
77th: Private Robert Sewell, slightly.
88th: Private Thomas Johnson, slightly.
93rd: Sergeant John Murphy, slightly.
Sappers: Private John Gunn, slightly.
1st Rifle Brigade: Private William Barwell, Patrick Keough George Hammond, Silas Brown, slightly; John Coakley, dangerously; John Barker and Edwin Hudson, severely.
Ambulance Corps: Private James Mellavie, severely.

MISSING.

50th Foot: Privates Patrick Carney, George Ryan, James Howarth
J. B. BURNALL Brigade-Major, Adjutant-General.

Limerick Election.—Mr. Stephen de Vere was on Tuesday elected representative for the county of Limerick, in the place of the late Mr. Wyndham Goold. There was no opposition, and the whole proceeding was of mere routine character.

Norwich Election.—The nomination of candidates took place on Wednesday morning, at the Guildhall. The candidates—Sir S Bignold (Conservative) and Mr. A. Hammond (Liberal)—were each almost by large parties of their friends, and the hall was densely crowded by a noisy multitude of electors and non-electors. The show of hands was in favour of Sir S. Bignold. A poll was demanded on behalf of Mr. Hammond, which took place on Thursday, when sir S. Bignold was returned by a majority of 270.

Ayrshire Election.—The nomination of candidates to supply the place in the House of Commons of the late Colonel Blair, took place on Tuesday. The candidates were Sir James Ferguson and Mr. Oswald, of Auchencruive. The show of hands gave a large majority to Mr. Oswald; but a poll was demanded, which was fixed for Thursday. Sir James Ferguson was returned by a majority of 129.

A Northern League against Russia.—If our Government would desire to effect a Northern league against Russia that shall strike its roots through the Cabinets down to the hearts of the people of Prussia, Denmark, and Sweden, it must guarantee the speedy settlement of the Sound dues, as the price of their co-operation. This is a vital question for Denmark, for they provide more than one-sixth of her entire revenues; and their abolition, under some sort of compromise, is of the highest importance to Sweden and to Prussia, for they exert a most baneful influence. The United States of America, after a tedious course of negotiation, have decided on discontinuing the payment of Sound dues: and President Pearce, in his Message of the 4th inst., recommends Congress to give the one year's notice to Denmark, at the close of which the treaty of 1826 between the United States and Denmark on this subject lapses. All other privileged countries are entitled to the same treatment as Prussia's hands as she accords to any one, so that the abolition of the Sound dues in the case of the United States (without indemnity, as resolved by Congress) would entail on Denmark the total loss of the whole revenue of 2,500,000 thalers. England is also interested in the abolition or diminution of the Sound dues, since we are importers and buyers of grain, timber, tallow, hemp, flax, tar, &c., and exporters of salt, cotton, and colonial goods, which have all to pay this toll; on the other hand, the Sound dues are pledged to England for a certain loan. Our own treaty of 1841, expired in 1851, and requires now only a year's notice to become entirely invalid; the same with the Swedish and Prussian treaties. Russia is the only Power that is interested in upholding the Sound dues in their present form; not only because the amount is necessary to Denmark, for whom she has a kindly family feeling, as if the little kingdom were already a Russian Grand Duchy, but for two other reasons:—1. Copenhagen and Elsinore are Russia's two most advanced and useful sea-police stations; from her embassy at the one and her consulate at the other (comprising a staff of no less than seventeen intelligent men) she obtains early information on a variety of political and mercantile matters. 2. The delay and expense caused to the foreign merchantmen in the Sound harmonise with the spirit of exclusion and obstruction which characterises the fiscal system of Russia. These fiscal obstructions in the Sound, added to the difficulties of the navigation, have so far deterred our countrymen from visiting the Baltic, that, among the advantages of the campaign just closed it is mentioned that we have thereby "gained a knowledge of those waters." To protect Denmark against any evasion of the dues (it is quite possible, by bugging the Swedish coast, to keep beyond the range of the guns of Kronborg) Russia requires of every ship's master entering a Russian Baltic harbour, and coming from over seas, to produce a receipt for the payment of the Sound dues. This affectionate regard for the fiscal system of another country is exhibited under the pretence of its being a quarantine measure. Russia considers a receipt for Sound dues payment a clean bill of health. The same trick is played at Elsinore as at Sulina—on the Baltic and the Black Sea, it is all merely a sanitary measure. To get rid of the Sound dues any how would be as great an annoyance to Russia as running away with his horse-door would be to a flint-holder. *Letter from Berlin.*

New Bullet.—Mr. William Palmer, of Feltwell, Norfolk, has invented a ball suitable both for small guns and cannon, which he describes as far more deadly and destructive in its effects than any yet in use. He says, "It cuts, wounds, and lacerates in such a manner, that it is scarcely possible that any animal or man should live after having been struck by it. A ball that would fit a common gun—say five-eighths of an inch in diameter—expands on leaving the gun to four inches, and the instant it touches anything, cuts in all directions. A cannon-ball on the same principle would cut a space of at least two feet. The invention has been tried several times in small guns, and it does not appear to affect the flight of the ball in the slightest degree. It would be a very destructive shot in a regiment."

FINE ARTS.

WINTER EXHIBITION OF THE BRITISH SCHOOL, PALL-MALL.

THE Winter Exhibition of Cabinet Pictures, Sketches, and Water-Colour Drawings, of the British School, opened at the Small Gallery, 121, Pall-mall, upon the whole, an interesting and creditable display of native art. The exhibitors comprise amongst their numbers Sir C. Eastlake, Messrs. Ansdell, Frith, Elmore, Goodall, Maclise, Lee, Eckersberg, Roberts, Stanfield, Uwins. Some of the exhibits are sketches, original, of pictures already known to the public, others of pictures intended for exhibition; whilst others may be looked upon as original and finished works, intended to rest upon their own merits.

The accomplished President of the Royal Academy is seen to advantage in the "Pilgrims in Sight of Rome," in character full of intense devotional feeling, whilst in technical points, both of colour and masterly touch, it commands our admiration, to an extent which the artist has failed in doing in some of his more recent performances.

Frith's 'Study for the Picture of Renegate Sands," is almost a facsimile of that very clever work, with all the fun realised, though in diminutive proportions. It is placed just over the mantelpiece, and is well worth looking into.

Ansdell has three clever animal and shepherd pieces, which prove that he is as much at home in small as well as large canvas.

C. W. Cope treatens to a little bit of New School intensity—"Evening Prayer:" the child's dress illumined with the warm flow of fire-light on the one side of the picture: whilst on the other side all is clear—cold, starlit sky seen through a casement. This is called contrast.

Lee has a capital little piece, from an incident in the "Fortunes of Nigel,"—the prison scene, where Lord Glenvorlook discovers the shipchandler's wife in her page's disguise. The awkward attitude and conscious expression of the latter person are well conceived.

The "Religious Controversy," by Simons, is a sketch rather ambitious in subject, intended for a larger picture. It is a composition of several figures, amongst which is a Cardinal sitting as umpire between the disputants; but it has not as yet quite enough of life and purpose to make it "tell."

Glass, amongst half a dozen contributions, has one (a sketch - "Charge of Cavalry at Balaclava") which gives note of preparation for an equestrian performance, upon his usually extensive scale, for the spring exhibitions.

Goodall's two views—"Capilla del Perdon" and the "Aqueduct at Segovia"—display all his usual feeling, study, and delicate finish.

Leslie has a well-conceived and carefully-studied sketch from Henry VIII—the scene where poor *Queen Katharine* says—

"Sir, I most humbly pray you
To deliver this to my lord the King."

Maclise, who does not often come out in the small way, has a good group of two figures, *Hubert* and *Modge*. The expression of both faces is good; and to finish in all respects such as Maclise always shows; the tone also is more subdued than is his wont, with a successful attempt at *chiaroscuro*.

"The Gipsy Sisters of Seville," by J. Philip, is full of life and truth; the character of the Gitana race speaking through every feature, and the rich warm colouring admirably appropriate to their native clime.

Pickersgill paints an amusing and edifying satire in "A Lost Game." A gentleman on the eve of checkmate, at a game of chess with a fair damsel, with Cupid at her back; and Anacreon's lines appended to explain the allegory—"You are not a match for Love!"

Roberts exhibits two views—"Isaida (ancient Sidon), looking towards Mount Lebanon," and the "Ruins of Tiberias, Sea of Galilee." Mount Hermon in the distance—in which his inimitable treatment of sky and water surface is most happily displayed.

NATIONAL SPORTS.

ALTHOUGH one of their representatives annually attacks the Queen's Plate vote in Parliament, the Manchester men are always thoroughly indisposed to allow a great national holiday to pass over without something in the shape of sport be it racing, trotting, or rabbit coursing, and they therefore purpose inaugurating the New Year with a couple of steeplechases on Monday next. The Trent, 11st. 8lbs., stands head of a very numerous entry in the more important of the two chases, but the acceptances for it have not as yet been published.

Coursing pursues the even tenor of its way, with very little interruption from the frost; and there are six good public fixtures for next week: Westward (Wigton) claims New Year's-day; while Longner (Salop) is arranged for Wednesday; South Lancashire (open) for Wednesday; Baldock Champion (Herts) for Wednesday, Thursday, and Friday; Chartley (open), Staffordshire, for Thursday; and Ardrossan for Thursday, &c. Earl Sefton (whose passion for the sport is not inferior to that felt for it in olden times by the celebrated leash of coursing Earls, Derby, Craven, and Orford), has rather recovered his luck at the Altcar Club Meeting, where he ran up last week for one stake with his celebrated Sackcloth, and won another with his Sylph.

York will present no small charms for the lovers of blood stock on Monday and Tuesday, as both Messrs Johnson and Tattersall will set up their restrums in it on those days. Ten of the late Mr. Meiklam's stud are to be disposed of, including Sicily, Peggy, Inheritress, and Florence. Sires there are, also, for the foreign and home market, in abundance—to wit, Newport (one of the most gentlemanly and blood-like animals we have), Red Lion, Chief Justice, St. Andrew, Revolver, Arthur Wellesley, Burnedale, Pug-Grecok, &c.; besides several yearlings. The above list contains the clearings of Dawson's Middleham stable, at which the Revolver, whose mysterious travels and Chester Cup chances have of late caused no little speculation, is believed by some to be located. Several nominations for York and Doncaster races also close on the same day along with sundry others for Newmarket, and the chief racing towns.

The displacement of Gracculus Exerions from his pride of place in the Derby betting, by the reputed roarer De Clair—who will, no doubt, as time creeps on, have in turn to succumb before Bonnie Moran—is the only present feature of the Christmas market at Tattersall's; where, however, the capture of Sebastopol before twelve on the night of Christmas-day, is still said to be the subject of a £1000 even bet. During the past season of turf speculation, it seems that 1841 horses started; and that the weight-for-age races numbered 285, the handicap 506, the walk-over 40, the matches 30, and the match forty-17. "Mr. Howard" has an immensely strong team for next season, and it seems hardly probable that the untried St. Hubert will long keep ahead of his slashing rough-and-ready stable-mate, Oulston—the only fine foal that the renowned Alice Hawthorne has as yet produced. A return of the Royal Stud has just been published, from which it seems that eighteen out of twenty-one mares have foals; but that, as if to counteract their great recent sale luck, thirteen out of the number are fillies. Mr. Greville, who has twenty mares at the same place, has removed Alarm to Newmarket for the ensuing season; and we hear no confirmation of the report that he sold his "confederate," Mr. Payne, intend to train with Harlock, instead of Dockeray, in future. One of Herlock's late charges, Hibert, has gone to the stud, and, although no very distinguished winner, his union of Tomboy and Touchstone blood will secure his not being overlooked. Sir Tatton Sykes, who has a great partiality for Bay Middleton mares and chestnut sires, has also, we hear, purchased little Daniel O'Rourke, whose queer exercise pranks at Malton for the last two years have not much lessened the dignity of a Derby winner. One of the veteran Baronet's sporting Yorkshire contemporaries, Michael Brunton, has just passed away, at the patriarchal age of ninety. We last saw him at Doncaster in 1840, when he told us that he had not missed one meeting since 1780, the year that Earl Fitzwilliam won the St. Leger with Pewet, and the Prince of Wales, who was, with the Duke of York, a guest at Wentworth-house at the time, proved equally fortunate for the Gold Cup with Tot. We never remember to have seen him again in his wonted seat, side by side with his senior, Mr. Kirby, of York, under the grand-stand portico, chatting rather of old times than taking any very great interest in present running. Mr. Kirby still survives as the patriarch of the turf, of which Earl Jersey is, in common parlance, "The Father" and the disciple of Izaak Walton have just, we believe, lost theirs in John Vincent, "the old fisherman of Alverton," who, true to his gentle craft, till he was ninety-six, desired nothing more to the last than to

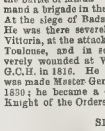
Angle on, and beg to have
A quiet passage to the grave."

The twopenny toll on carts and waggons entering the City, if not the property of freemen, will cease on Monday. This antiquated and unpopular impost produced £8600 yearly to the Corporation; but the threatenings of reform induced them to relinquish it.

OBITUARY OF EMINENT PERSONS.

SIR JAMES KEMPT.

GENERAL THE RIGHT HON. SIR JAMES KEMPT, G.C.B., Colonel of the 1st Regiment of Foot, died on the 20th inst., at his residence in South Audley-street, after a long illness. This distinguished officer had spent more than seventy-one years in the British service, and his career has been a very active one. He was son of Gavin Kempt, Esq., of Bailey Hall, Ranis, and of Edinburgh. He entered the Army on the 31st of March, 1783, and in 1799 obtained the rank of Lieut.-Colonel. In that year he accompanied Sir Ralph Abercromby upon the expedition to Holland, as Aide-de-Camp; and in 1800 proceeded with the same General as Military Secretary to the Mediterranean, remaining with him until his death; after which he was attached to the Staff of Lord Hutchinson, and was present throughout the whole of the Egyptian campaign. In 1806 Lieutenant-Colonel Kempt went as commander of a battalion with the expedition to Naples, and led the Light Brigade at the battle of Maida. He proceeded in 1811 to the Peninsula, to command a brigade in the Third Division of the Duke of Wellington's army. At the siege of Badajoz, Kempt headed the attack on Fort Picurina. He was there severely wounded. Kempt was a prominent officer at Vittoria, at the attack on the heights of Vera, at Nivelle, Nive, Orthes, Toulouse, and in several minor engagements. He was again severely wounded at Waterloo. He was created G.C.B. in 1815, and a G.C.H. in 1816. He was for some time Governor of Nova Scotia; he was made Master General of the Ordnance and a Privy Councillor in 1830; he became a General in the Army in 1841. Sir James was a Knight of the Orders of Maria Theresa, St. George, and Wilhelm III.



SIR ROGER MARTIN, BART.

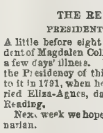
THIS venerable Baronet died at Burnham, Norfolk, on the 16th inst., aged 77. He was the only son of Sir Mordaunt Martin, 4th Bart., by Sophia Mordaunt, his wife, niece of the Earl of Peterborough, and great-great grandson of Sir Roger Martin, of Long Melford, in Suffolk (the representative of an ancient family in that county), on whom a baronetcy was conferred March 28, 1667. Sir Roger, the subject of our present notice, entered the civil service of the East India Company at Bengal in 1795, and was for some years Senior Judge of the Court of Appeal of Moorbedabad. In 1815 he succeeded to the title at the death of his father, and in 1828 retired from the duties of his Indian employment. Sir Roger has died unmarried.

DR. FAGAN.

DOCTOR STEPHEN FAGAN, of Woodhill, Cork, and Albion-street, Hyde-park-square, London, A.M., M.B., Grad. Univ. Dublin, 1826, M.D., T.C.D., 1852, was born in the town of Dingle, county Kerry, Ireland, on the 1st March, 1800, and died on the 9th November, 1854, at Woodhill, Cork.

He was chief of his name, and representative of the ancient family of Fagan, who for merly possessed extensive estates in the county Dublin, which were forfeited in 1691, by Richard Fagan, of Feltrim, for his adhesion to King James II. Richard was a zealous adherent to King James, and distinguished himself at the siege of Derry, as commemorated in the quaint lines on the subject:—

Below left Dalzell and his ancient hall
To see his monarch fleeched,
Fagan of Feltrim with Fingal
Here gave battle.
'Twas part of the plan that Lord Strahan
Should give his neighbours warning;
But they packed him off with a shot and scoff,
His hollow corner, scrubbing.



THE REV. DR. MARTIN JOSEPH ROUTH,

PRESIDENT OF MAGDALEN COLLEGE, OXFORD.

A little before eight o'clock on the 22nd inst., the venerable President of Magdalen College, the Rev. Dr. Martin Joseph Routh, died after a few days' illness. Dr Routh was in his 100th year, and had held the Presidency of this College for sixty-three years, having been elected to it in 1791, when he succeeded Dr. George Horne. In 1820 he married Eliza-Agnes, daughter of John Blagrave, Esq., of Calcot-park, Reading.

NEXT week we hope to engrave the Portrait of this venerable contemporarian.

THE REV. RICHARD WALTON WHITE, M.A., F.S.A.

THIS gentleman, the Rector of Wotton, Isle of Wight, and Upcerne, co. Dorset, one of her Majesty's Justices of the Peace for Hampshire, and many years Chairman of the Petty Sessions for the Isle of Wight, died suddenly at Wotton, on the 2nd inst., aged 71. He married Mary, daughter and heiress of John Popham, Esq., of Shankling and Kitehill, Major Commandant of the Isle of Wight Militia (who was great great-grandson of Alexander Popham, Esq., of Littlecott, M.P for Somersetshire, and one of Cromwell's Upper House), and leaves issue.

LEON FAUCHER.

LEON FAUCHER was in early life an "*agregé de philosophie*," and tutor in a private family. He, in 1830, became a journalist, and was connected with the *Temps*, the *Courrier Français*, and the *Constitutionnel* newspapers. In 1842 his direct connection with the public press ceased; but he wrote afterwards on questions of political economy. Amongst his most important productions were. "Etudes sur l'Angleterre." "Travaux sur la Réforme des Prisons." "Recherches sur l'Or et l'Argent;" and, more recently, a work on Russian finances. He was, in 1846, elected deputy for Rheims, in opposition to the great advocate M. Crémieux de Fonds, and voted with the Opposition. He subsequently became one of the directors of the Strasbourg Railway. After the election of the 10th December, 1848, Léon Faucher was appointed Minister of Public Works, and, subsequently Minister of the Interior. Both in the Assembly and in the Cabinet he vigorously opposed the Demagogue party: demanding the suppression of clubs; and insisting on a severe examination of the financial measures of the Provisional Government. He quitted public life with only a small fortune; and was highly and generally esteemed and respected.

HARRIET, MARCHIONESS CAMDEN.

THE death of this most estimable lady, which occurred on the 22nd inst., at Wildernesse-park, Kent, has caused the deepest sorrow. Her Ladyship was born February 8, 1813, the eldest daughter of the Right Hon. George Murray, Bishop of Rochester, by Sarah Maria, his wife, daughter of Robert, ninth Earl of Kinnoull, and married, August 27, 1835, George Charles, present Marquis Camden, K.G., by whom she leaves eleven children, three sons and eight daughters. Lady Camden's paternal grandfather, Lord George Murray, Bishop of St. David's, was second son of John third Duke of Atholl.

WILLS.—The Rev. Henry Raikes, M.A., Chancellor of Chester, has left personalty within the province of Canterbury alone amounting to £50,000 besides that in the province of York.—Major John Ward, H.E.I.C., Madras establishment, £20,000.—Kellynge Greenway, Esq., of Botough, Warwickshire, £50,000.—Mrs. Emily Lavinia Lenon, of Cheltenham, £70,000.

TESTIMONIAL.—On Thursday week, at a public dinner at the Freemasons' Tavern, Mr. T. M. S one, who has been connected with the Royal College of Surgeons upwards of twenty years, was presented by the chairman, Mr. Henry Watson, F.R.C.S., with a handsome silver tea and coffee service and tray, bearing the following inscription:—"Presented, with a silver tea and coffee service, to Thomas Madden Stone, on his retirement from the office of Librarian to the Royal College of Surgeons of England, by a few members of the profession, to mark their approbation of his ready and courteous attention in fulfilling the duties of his office, and as an expression of their appreciation of his worth. 21st December, 1854."

TOWN AND TABLE-TALK ON LITERATURE, ART, &c.

THE death of Dr. Routh, the President of Magdalen College, Oxford, at the great age of ninety-nine, has furnished our contemporaries during the present Christmas week with many appropriate retrospective reflections. The *Times*, in a clever article—evidently written by a Magdalen man—would throw us some two centuries back, by reminding us that the aged President just removed from among us "had been told by a lady—of her aunt who had seen King Charles II. walking round the parks at Oxford during the memorable Plague year of 1665;" but this is an appeal to a *third* generation. It evidently did not occur to our contemporary that Dr. Routh might have had for his godfather—that same godfather living to see him in his third year—one who has described in print (and most ably too) his having seen King Charles II. feeding his ducks in St. James's Park; and, scarcely less remarkable, his having (to use his own expression) *met* the Revolution which confirmed one of the ablest of his predecessors in the important office of President of Magdalen College. When Colley Cibber died (in December, 1757), the late President of Magdalen College was in his third year. Colley might have stood godfather to the future President of Magdalen;—Colley might have delighted the boy Routh with some of those stage pleasantries which delighted nearly three generations of Englishmen. But, to pursue this further, the lips of the boy Routh (those very lips warm within a week of when we are writing) might have been kissed by the surviving child of Wilmot, Earl of Rochester.

Mr. Warren, the author of the well-known novel of "Ten Thousand a Year," and other works deservedly popular, has just published in his collected Essays a letter from Sir Walter Scott to himself; written when Sir Walter was the Great Unknown, and Warren was a boy ambitious of double distinction at the bar and in literature. Warren, with boyish and legal impertinence (pardonable only because boyish) seems to have addressed him as the convicted author of "The Waverley Novels." Sir Walter, in his kind and thoughtful reply, observes, that he is not the author of "those novels which the world chooses to ascribe to him;" and on this it has been urged by a contemporary that Scott has written a lie. We could have wished that our contemporary had somewhat softened his language. Scott's denial is even more excusable than a "not at home" denial when the parties asked for are really at home. Sir Walter considered himself entitled, like an accused person put upon trial, to refuse giving his own evidence to his own conviction, and to deny flatly all that could not be proved against him. Is a man's silence, when an impertinent question is asked of him, to be construed into a yes? Will not his refusal to reply be treated as a tacit acknowledgment of what he is asked? What says our great moralist on this point?—"I should have believed Burke to be Junius," said Johnson, "but Burke spontaneously denied it to me. The case would have been different had I asked him if he was the author; a man so questioned as to an anonymous publication may think he has a right to deny it."

The Report to the President of the Board of Control for the affairs of India just made by Mr. Macaulay (the historian), Lord Ashburton, and others, will, when adopted, effect one of the greatest changes that has ever been made in the educational courses of this country. The Civil Service of India is to be opened to the youth of the United Kingdom. There is to be no more Cannon-row or Leadenhall-street patronage. The son of a tailor in Tooley-street may offer himself in competition with one who has all the blood of the Howards in his veins, and if he has more mind and education than the competing Howard, the tailor's son will obtain the appointment. The Report bears the mint-mark of Mr. Macaulay's mind in every part; and so obvious has this been to his fellow Commissioners—to Lord Ashburton especially—that the brilliant Commoner signs the report before the able Peer. The Messrs. [Longman should reprint the Report uniformly with the several editions of Mr. Macaulay's Essays. Let us add that it behoves every parent in the three kingdoms to make himself master of its contents. When the recommendation of the Reporters are put into practice, the memorable saying that education in England has been endangered by some of her most eminent sons will, thanks to Mr. Macaulay, be no longer applicable to the present generation. The Report has taken a comprehensive view not only of the educational wants of India, but of Great Britain at large. The studies of Oxford, Cambridge, Edinburgh, and Dublin, have one and all had proper attention paid to them in this masterly scheme of education in the nineteenth century.

The lovers of English Art will hear with regret that the original and only painting of Martin's "Belshazzar's Feast" was so seriously injured in a late railway accident (it was on its way from Liverpool to Mr. Naylor's) that all chance of successful restoration is, it is said, hopeless. This great loss is, however, the less to be regretted, when we reflect what a masterly engraving of it we possess by its own designer and painter. How soon and how completely may the best existing proofs of a great artist's skill be destroyed! A fire, or the act of a madman, might reduce to nothing the single picture which sustains the reputation of an artist so well known as Paul Potter.

The nominal head of the well-known firm of Simpkin and Marshall, of Stationer's-hall-court, died during the present week. He retired from business some twenty years ago, on a handsome annuity.

The fear seems to be confirmed that the open space at the east end of St. Paul's Cathedral will be built over. Mr. Pite, the architect, is fighting for the open space with equal ability and perseverance; but Government is still against him in the matter, and the City hardly, we fear, with him. The value of the space, as we have already had occasion to record, is £60,000, which it is proposed should be paid for out of one year's additional duty upon coal

The choice things at Mr. Croker's sale sold well—the Irish antiquities especially. Two ancient Irish war trumpets of bronze were secured for the British Museum—one at £25, the other at £12. The Charter Horn sold for £17 10s. The Ormonde Papers, in six volumes folio, brought £180; and the Orrery Letters, in two volumes, £60. The first five editions of Walton's "Angler" produced £29 10s.

Whilst on the subject of sales, we may announce that the collection of the late Mr. Thomas Windus, F.S.A., will pass under the hammer of the auctioneer during the forthcoming season.

A FRIGHTFUL SPECTACLE.—An exhibition is now taking place at the Cirque Napoléon, Paris, the perilous nature of which mightily attracts there a large crowd of spectators. A young girl (Mdlle. Borelly) enters a cage in which two lions, a lioness, a bear, and a hyena, are enclosed. These animals appear to live in the greatest harmony with each other and their youthful tamer; but it is fearful to contemplate the consequences of an instant of ill-humour in the "happy family" to poor Mdlle. B. while putting its members through their exercises.

AMERICAN COMMERCE.—The Secretary of the United States Treasury has prepared an informal summary of the annual commerce and navigation reports, from which it appears that the imports of foreign merchandise during the fiscal year ending June 30, 1854, were a fraction over £60,000,000. The exports of domestic produce were between 50 and 52 millions sterling. The exports of breadstuffs and provisions were somewhat in excess of 10 millions sterling. The difference between the imports and exports was made up in Californian gold, stocks, and mercantile obligations. The revenue from Customs was about £13,000,000. and from all other sources £16,000,000.

The bakers of Paris have decided that, according to a resolution adopted on the 28th ult., and approved by the Prefect of Police, they will present to the Administration, for distribution amongst the necessitous classes, 278,000 kilogrammes of bread of the first quality, instead of making presents to the servants of their customers on New Year's Day.

THE "VALOROUS" CHASING RUSSIAN STEAMERS INTO SEBASTOPOL.

RUSSIAN STEAMERS SHELLING THE FRENCH CAMP.

Two Russian steamers performed a very daring exploit on the 6th inst. One was a steam-frigate and the other the *Vladimir*, which is constantly on the move in the roadstead, and had often annoyed us with a gun of long range. At half-past one on that day the Russian frigate suddenly moved from its position, not far from the entrance to Careening Bay and proceeded under full steam toward the entrance of the roadstead. As she passed along, a rapid discharge of shells was made against the new English batteries on the right, especially a square redoubt placed so as to command some of the Russian ships on the south side of the inlet—the guns of which, however, were not yet mounted. The movement of the Russian frigate became an object of general attention to all the troops on the heights from which a view of the roadstead could be obtained. To the surprise of all she went past Fort Nicholas and Cape Alexander, and pursued her course boldly out to sea, attended by the *Vladimir*. Her object was soon explained. Rounding the Quarantine Fort and Harbour, she stood off beyond that part of the coast where are said to be the ruins of ancient Chersonesus, and then commenced to throw shot and shell towards the French works, which were thus enfiladed by her guns. The *Valorous* got up her steam as quickly as possible, and also a French steam line-of-battle ship. As soon as they were able to move down upon the adventurous Russian vessel, they of course compelled her to desist from her fire against the French works, and drove her to seek for shelter again within the batteries of the roadstead. Both she and the *Vladimir*, who appeared to act as an attendant upon her, got safely back. The *Valorous* chasing them too closely in was fired upon by Fort Constantine, and also by some battery on the heights above. Some of the shots must have gone very close to her if they did not actually strike. Why the Russian vessel chose the broad daylight for such an exploit, instead of proceeding under cover of the darkness of night, is a mystery; unless it was designedly planned with a view of bringing some of our vessels within range of the guns of Sebastopol.

We have been favoured by Lieutenant Edgar G. Bredin, Royal Artillery, with the accompanying Sketch, taken from a French redoubt, the guns of which are manned by the French navy. Two large Russian steamers came out through the sunken men-of-war, and went down opposite the French lines and shelled them—there being only two small French steamers (the *Mogore* and *Dauphin*) to oppose them, which they did most manfully, and drew the fire of the Russian ships on themselves. Meanwhile an English vessel steamed up, and drove the Russians in. All the guns of Fort Constantine and the batteries above it opened upon her: she gave them a few shots in return, and "sheered off."

THE "VALOROUS," OFF SEBASTOPOL.

(From a Correspondent.)

On December 6th, at one p.m., a French steamer stationed at some distance from the entrance of the harbour of Sebastopol, but in advance of the rest of the fleet, was observed to fire two guns in rapid succession; and almost immediately after, the mast-heads of a Russian steamer appeared over the low land towards the harbour mouth, and before many minutes had passed, another was seen following her. The first proved to be a heavy paddle-wheel frigate; and the second a small sloop. An alarm was immediately given, and in a few minutes our cable was slipped, and we were in full chase of our expected prizes, who had opened fire on a battery in course of erection at the entrance of the Kamiesch and Kazatch harbours, where the whole of the French transports and several men-of-war are at anchor, including both the French and English flag-ships. As we neared them, however, they turned tail and ran back under the batteries; we continued to follow them till we were within 1000 yards of the forts, firing several shots after them, but with what effect could not be seen as the forts and batteries now opened fire on us, and engaged our attention. We gave them several broadsides in return; but as we could of course make no impression on these stone walls, and were getting a pretty heavy dose of shot and shell—which cut away our rigging in several places, and completely destroyed one of our boats—we hauled off, leaving the fugitives under the shelter of their (to us) impregnable walls, while we returned to our anchorage, fortunately without the loss of a single man killed or wounded. Several other steamers fired a few shots during the time we were engaged; and the little Frenchman, who was first attacked, kept close behind us the whole time. The afternoon surprise has shown us that we must keep a bright look out on the enemy's movements. They have remained quiet so long that their sortie took us by surprise; and, had it been at night, they might have done considerable damage.

RUSSIAN STEAMERS SHELLING THE FRENCH CAMP, SEBASTOPOL.

THE BATTLE OF INKERMANN.

I.

Sebastopol lay shrouded
In thick November gloom,
And through the midnight silence
The guns had ceased to boom.
The sentinel outworn
In watching for the morn,
From Balaclava's heights
Beheld the Russian lights,
In the close beleaguered fortress far adown;
And heard a sound of bells
Wafted upwards through the dells,
And a roar of mingling voices and of anthems from the town.

II.

They prayed the God of Justice
To aid them in the wrong,
They consecrated Murder
With jubilee and song.
To the slain, the joys of Heaven,—
To the living, sin forgiven,—
Were the promises divine
That were passed along the line,
As they gathered in their myriads ere the dawn;
While their priests in full accord,
Chanted glory to the Lord,
And blessed the Russian banner and the sword for battle drawn

III.

Stealthily and darkly,
Amid the rain and sleet,—
No trumpet-call resounding,
Nor drums' tempestuous beat;
But, shadow-like, and slow,
Came the legions of the foe,
Moving dimly up the steep
Where the British Camp, asleep,
Lay unconscious of the danger lurking near;
And the soldier, breathing hard,
On the cold and sodden sward,
Dreamed of victory and glory, or of home and England dear.

IV.

Hark! Heard ye not a rumbling
On the misty morning air—
Like the rush of rising tempests
When they shake the forest bare?
The outposts on the hill
Hear it close, and closer still.
'Tis the tramp of iron heels,
'Tis the crash of cannon wheels,
And "To arms!" "to arms!" "to arms!" is the cry.
"'Tis the Russians on our flank!
Up, and arm each British rank!
And meet them, gallant Guardsmen, to conquer or to die."

V.

Then rose the loud alarum
With a hurricane of sound,
And from short uneasy slumber
Sprang each hero from the ground;
Sprang each horseman to his steed,
Ready saddled for his need;
Sprang each soldier to his place,
With a stern, determined face;
While the rousing drum and bugle echoed far,
And the crack of rifles rung,
And the cannon found a tongue,
And down upon them bursting came the avalanche of war.

VI.

Through the cold and foggy darkness
Sped the rocket's fiery breath,
And the light of rapid volleys,
In a haze of Living Death;
But each English heart that day
Throbbed impetuous for the fray,
And our hosts undaunted stood
Beating back the raging flood—
That came pouring from the valley, like a sea
Casting havoc on the shore,
With a dull and sullen roar,—
The thunder-cloud above it and the lightning flashing free.

VII.

On darkness grew the daylight,
'Mid the loud incessant peal;
On the daylight followed noontide,—
And they struggled steel to steel!
O ye gallant souls and true!
O ye great immortal few!
On your banner, bright unfurled,
Shone the freedom of the world.
In your keeping lay the safety of the lands—
Lay the splendour of our name—
Lay our glory and our fame;
And ye held and raised them all in your dauntless hearts and hands!

VIII.

For a moment, and one only,
Seemed the Russians to prevail:
O brave eight thousand heroes!
Ye shall conquer! They shall fall!
They can face you—if they must—
But they fly your bayonet thrust.
And hark! the ringing cheer
That proclaims the French are near,
And is heard above the raging battle din!
Giving courage to the brave—
Striking terror to the slave,—
A signal and an omen of the victory to win!

IX.

Break forth, thou storm of battle,
With a new and wild uproar!
Beam out, thou flag of England,
With thy sister tricolor!
For fighting side by side,
One in spirit, heart-allied—
In the cause of truth combined,
For the freedom of mankind—
France and England show the world what may be done;
And their star of glory burns
And the tide of battle turns
And the beaten Russians fly, and the victory is won.

X.

Thus fourteen thousand freemen,
Invincible in right,
Defeated seventy thousand,
In fierce unequal fight!
Thus Thermopylæ of old
And its men of Titan mould
Were surpassed, at duty's call,
By the Briton and the Gaul:—
(May the splendour of their friendship never wane!)
By the men who fighting fell
With Cathcart and Lourmel,
Or lived with placid Raglan, avengers of the slain.

XI.

And as long as France and England
Shall give birth to manlike men,
Their deeds shall be remembered
Should the battle burst again;
And to actions as sublime
Shall inspire each future time.
And when War's alarms shall cease,
And the nations live in peace,
Safe from Tyranny, its murder, and its ban,—
Let us tell with generous pride
How our heroes fought and died,
And saved a threatened world on the heights of Inkermann!

Charles Mackay.

MONASTERY OF ST. GEORGE, NEAR BALACLAVA.—FROM A SKETCH BY LIEUT. MONTAGU O'REILLY.

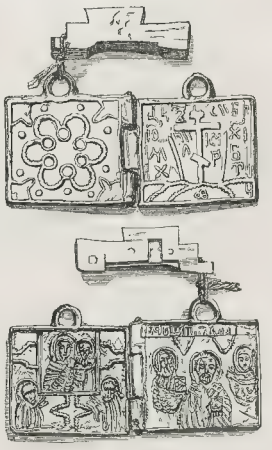
This Monastery—chosen with the usual cleverness which monks of all countries and ages display in the choice of their dwelling-places—is situated on the precipitous side of a little bay running in from Cape Fiolente. It seems evidently an institution getting into fashion, for everywhere you see traces of new, half-finished buildings, while even those which are completed seem still quite new. There are now fifteen monks remaining; twelve others are with the Russian army, where they do business as chaplains. The Monastery is guarded by a body of Zouaves under a sergeant, and there was some intention of converting it into an hospital; but the gale of the 14th has unroofed nearly all the houses, and even torn down the iron plates from the church roof, so that the repairings would give quite as much trouble as the building of a wooden shed for the same purpose. During the gale the Zouaves, as well as all the rest of the inmates, had to retire to the "hospitium"—an out-building erected for the accommodation of pious pilgrims who come to drink the delicious waters of St. George's Well, of miraculous power, and implore the chivalrous saint's protection. For an ordinary traveller the beauty of the spot would be quite sufficient reward. Even now, although everything wears the bleak autumnal tinges, it is one of the loveliest spots imaginable, with its white terraces, huge rocks, and dark woods, overlooking the wide expanse of the Euxine. Mr. Scott, in his recent travels in the Crimea, paid a visit to this spot, which he thus describes:—

We descended by a narrow zigzag path, cut in the face of the mountain' on every nook or ledge of which the monks have planted trees and flowers' making little terraced gardens in the midst of the black charred cliffs. From the shore we looked up and perceived the monastery, some hundreds of feet above us, and fifty feet beneath the summit of the precipice. Near to us on the right hand as we faced the sea, was a great, isolated, basaltic rock, rising above its neighbours.

* * * * * * *

The monastery of St. George hangs, as it were, to the face of the cliff, and the only entrance to it is by a door and flight of steps cut in the rock at its summit. From a little terrace in front, a magnificent view over the Black Sea is obtained, and projecting into it on the left is the Aya Boutoun, or sacred promontory, on which also a temple of Diana is believed, by some to have stood.

Crowds of pilgrims go to this monastery on the 23rd of April, the fête day of St. George, when the plateau near it puts on the appearance of an immense fair; booths, tents, and huts are erected in great numbers, and all kinds of things are sold at the various stalls. Nearly the whole of the Greek population of the Crimea flock there. It is most especially popular with the fair sex, and report says that on these occasions, when the Greek women display their charms to the greatest advantage, there is an assemblage of beauty rarely to be met with elsewhere.



RUSSIAN AMULET.

AMBULANCE FOR THE WOUNDED.

A RUSSIAN AMULET.

In describing the dress of the Russians who fell at Alma, most of the accounts refer to the amulets worn by the Muscovite soldiers. One of these relics of the battle-field has been forwarded to us, of which we give an Illustration in this week's publication. It consists of a small pewter locket, the workmanship very rude. The most prominent figure on the outside is a cross, surrounded with Russian characters. A small piece of wood attached by a string shows the remains of a Greek Cross, in the centre of which a metallic Roman cross appears to have been inlaid. On one leaf of the inside a rude figure of the Virgin and Child has been stamped, with two devout figures praying to her. On the other side the saint appears to have represented a female, but from the ravages of time or rough usage, the ill-earned of the countenance are not very well pronounced.

AMBULANCE FOR THE WOUNDED.

FROM time to time, many alterations have been made in the "Ambulance," or Hospital-cart, for removing the wounded from the battle-field; and at Woolwich Arsenal many of these "improved" models are still to be seen. We engrave the Ambulance which is generally employed. It is a light two-wheeled vehicle, on indiarubber springs. In front is a seat capable of accommodating four persons, who are not incapacitated by their wounds from sitting upright—a broad leather strap, buckled in front, giving them increased security. On the interior of the vehicle stretchers are slung lengthwise, for a similar number, who are more seriously are of a more serious nature. Should circumstances render an additional accommodation necessary, a board is let down behind, on which two persons can be comfortably accommodated. Provisions for the comfort of the wounded, including a vessel for heating water, broth, &c., are snugly packed underneath.

This model was greatly approved of by the Emperor of the French, who for some time had a large number constructed for the French army on the same plan.

RESULT OF THE CHOLERA EPIDEMIC—1854.

THE cholera in 1848-49 (15 months) was fatal to 14,593 persons, in the last epidemic, extending from August, 1853, to November, 1854 (15 months), 1,695 persons only were victims. Allowing for increase of population, the deaths in every 10,000 living give an average of 61 in the former, and 6 in the latter. By cholera and diarrhœa together the deaths were in

1848-49	..	..	69 431	..	81 in 10,000
1853-54	..	..	15,769	..	68 in ..

INSPARITY BETWEEN THE DISTRICTS.—Two (the North and Central) suffer a mortality of only 16 in 10,000 living, while the South has 9s of every 10,000 cut off by the disease. In the progress of cholera in 1849 by the Registrar-General, it is said, that the elevation of the soil in London has a more constant relation with the mortality from cholera than any other known element—the mortality being in the inverse ratio of the elevation; and so exactly has this been verified in the present epidemic, that a scale of premium might nearly have been drawn out in 1849 to rule in 1854, to the following effect:—For a person of average condition, dwelling under 20 feet of elevation, the premium to insure £1000 would be £12; while for those living at from 100 to 350 feet elevation the life office would be sure with a £2 premium.

The following facts worked out by the Registrar-General, show distinctly the inverse relation that the mortality of cholera bears to the elevation of the ground:—

182 560 of the people in London in 1851 lived upon sub-districts covering 2849 acres of the marsh ground, ranging from three feet below to one foot above the high-water mark; 2962 died there of cholera in 1849, and 272 in 1854, or 4220 in the two epidemics.

Seventy-six of the population in sub districts, on 12,146 acres of ground of eighty feet of elevation and upwards, lost 383 persons by cholera in 1849, and 272 in 1854, or 670 in the two epidemics.

12,824 persons died of cholera in the two years 1849 and 1854 on the 18,420 acres of low ground not more than five feet above the level of the tide; or 696,159, while in the same years, out of the more numerous population, 682,705 persons, living on 21,369 acres of the higher ground of sixty feet and upwards, only 2649 persons died of cholera, including all the deaths in the district of St. James.

On the lowest ground, taking the mean of the two epidemics, 13 in 1000 of the population—on the highest ground, 1 in 1000 of the population were destroyed by cholera.

At the intermediate stages of elevation was the danger of dying by cholera interm-diate? To solve this important question, as regarded the epidemic of 1849, London was first sub-divided into terraces differing 20 feet in elevation; and, if the same course is pursued now, it is found that in the two epidemic years 16,822 persons died of cholera on the first terrace, under 20 feet of elevation; 3787 on the second terrace of ground, 20 feet and under 40 feet; 1676 on the third terrace, 40 and under 60 feet; 2279 on the fourth terrace, 60 to 80 feet high; 899 on the fifth terrace, 80 to 100 feet; 878 on the higher terraces of 100 feet up to 350 feet. The population was 868,264 on the first terrace; and about equal, or 460,000, on the second, the third, and the fourth terraces; while it was 142,000 on the fifth, and 121,660 on the higher terrace or terraces.

PUBLIC LIBRARIES AND MUSEUMS.—A bill, just prepared and brought in by Mr. Ewart, Mr. Brotherton, and Mr. G. A. Hamilton, proposes to repeal the Library Act of 1850; but not to invalidate by such repeal anything done in pursuance of the same act, or any branch already established libraries and museums. The object of the bill is simply to extend the benefits of the measure of 1850 to towns governed under local acts and to parishes. For this purpose it is required that the council of any municipal borough of which the population shall exceed 5000 persons may, and a public meeting, on the requisition of ten persons paying the borough rate, in order to determine whether the Act shall be adopted for the said municipal borough; and, if at such meeting two-thirds of the persons present and qualified as aforesaid shall determine that the Act ought to be adopted, the council shall thereupon take effect and come into operation in such borough. The expenses of carrying the Act into execution are to be defrayed from the borough fund; and the Council is empowered, if it think fit, to levy a separate rate for the purposes. "Improvement boards" may adopt the Act and charge the expense on the improvement rate, if the previous requisitions with regard to population and local decision of public meeting be complied with. Parishes with the same population (5000) may adopt the Act, with the consent of two-thirds of the ratepayers, and the vestry will then appoint from three to seven Commissioners from the ratepayers, to carry the act into effect, to dispose of lands, and to sue and be sued as a body corporate. One-third of this Commission will go out of office annually. The expenses are to be defrayed out of the poor-rates. The vestries of two or more neighbouring parishes, having an aggregate population, exceeding 5000 persons, may conjointly adopt the Act in the manner already described. Not more than seven nor less than three Commissioners may be appointed by each parish to manage the library or museum. No rate levied for the purposes of this Act in any borough, district, or parish, is to exceed one penny in the pound. The Council are empowered to borrow sums of money for the purposes of the Act, with the approval of her Majesty's Treasury, and the Public Works Loan Commissioners are empowered to advance the same. Sums of money, Lands, &c., may be appropriated, purchased, or rented, for the purposes of this Act. The general management and control of the libraries and museums formed under this Act is to be vested in the Municipal Councils of boroughs, in the boards of districts, and in the Commissioners of parishes; and all real or personal property purchased for any library or museum is to be vested in the same respectively. All libraries and museums established under this Act are to be open to the public free of all charge.

THE AMERICAN FINANCIAL CRISIS.—I am glad to state that there is a slight, but a positive improving Stock-market, and that upward tendency is visible in our money affairs. We are very busily paying our European debt. The steamer to-day does not take out many specie, and the two previous steamers have taken scarcely any at all. The Bank of England seems to have replenished its vaults. We have had an arrival of a million and a half of gold from California, and another still larger arrival is looked for. We have the prospect of the largest cotton crop ever raised; our crops generally have not been so short as we feared. A new kind of economy, to which we have long been unaccustomed, has become the order of the day; luxuries, gewgaws, and all sorts of bijouteries, are selling for nothing, while the necessaries of life are at a premium. This is a great and terrible commercial revulsion, but Europe will bear it, as she did in 1837 now. There will be no repudiation of our debts by States; and very few of the corporations will be allowed to go on any further than they can make their ability to pay manifest to the parties interested. In other words, we are sound all, although we are, for the moment, partially paralysed. The banking-houses, and the banks of the west and south, have gone down, and are going, day by day; but all have to do is calculating medium, and we have money enough, high as its rate may be in the market, for transaction of all necessary business. The whole nation is learning a lesson of economy which will do us good. The contraction in the Money-market has come on gradually, and gradually will it move off; but thus far it is safe to say, that few or no men or institutions have failed, except those that were rotten in the best of times.—*Letter from New York*, December 13.

On Monday last the provision with respect to dogs being used for the purpose of draught came into force. Dogs are not to be used throughout the United Kingdom to draw trucks, barrows, &c., under penalties. The Act is the 17th and 18th Vict., c. 60.

THE THEATRES, &c.

PANTOMIMES.

DRURY-LANE.—As might have been expected from the extraordinary preparations which preceded the pantomime at this theatre, has met with remarkable success: it is entitled "Jack and Jill; or, Harlequin King Mustard and the Four-and-Twenty Blackbirds Baked in a Pie," and is indebted for its highly-meritorious introduction to Mr. E. L. Blanchard. The plot is, of course, founded upon the ancient nursery legends suggested by the title; but the author has evidently employed them as the means of allegorising the art of cookery. *Jill* finding her father's last will and testament, discovers that, according to its provisions, she "must not be a husband take, till she a pie can make and bake." Accordingly, the intrusting heroine proceeds to seek instruction from Mrs. Glass of ancient culinary celebrity. The lessons she thus receives are given after a very novel fashion. All the various kitchen requisites become animated, and detail their own uses in gastronomic practice. The *Kettle*, in a song, introduces *Jill* to his companions *Saucepan* and *Gridiron*. *Jill* is also initiated into the country of condiments. She visits the Court of *King Mustard*, who lives in Crust Castle, on the Tablecloth Terrace. Here she becomes acquainted with the family of the *Peppers*, the empress *Vinegar*, and the pungent *Cayenne*. A review of the "Army of Zests" with a humourous embodiment of the well-known relishes, constitutes, indeed, a great feature of the opening. *Chutney* is the Prince of Pickles," to next visited by *Jill*; where the *Pickles*, prepared by *Vinegar*, instruct *Jill*, and take her to the "Stupendous Salt Mine," where the fairy *Preserves* come to her aid. The scene then changes to the "Gorgeous Temple of Salad," where the usual transformations take place: *Jill* becomes *Columbine*; *Jack*, *Harlequin*; and *King Mustard*, *Clown*. The pantomime cast is very strong, including the names of Milano, Bolano, Wilkie (a clever sprite), and the far-famed Italian Brothers. The models by the Brothers Brunyknm are amazingly funny; and the scenery, by Messrs. Nicholls and Cuthbert, is unusually splendid. The final tableau, with the "Gilt tering Temple," revolving columns, the Allied Army Quadrille," Julien to conquer, and the terrific flight of the Italian Brothers from the gallery to the stage, closes the pantomime with a series of triumphs. The merit of these contrivances is indisputable; and both for literary and scenic excellence, the pantomime at this house may compete with the most gorgeous at any other. It was preceded by Lillo's prose tragedy of "George Barnwell"—of which, happily, no one heard a syllable.

HAYMARKET.—Mr. Buckstone has, as we predicted, depended on the drawing-room refinement and elegance of his pantomime, founded on the nursery-legend of "Little Bo-peep, who lost her sheep." According to his account, the heroine was a pretty Arcadian shepherdess, very good, yet having one fault—that of sleeping by day; which, considering it a beauty of an Arcadian sunrise, as represented in one of the scenes, was almost unfortunate. It would have been sufficient to keep her wide awake for the whole of the day. A wolf falls in love with her; but, being rejected, takes revenge on her sheep—steals them, and cuts off their tails, which he hangs on a tree to dry. Her grandmother, who is a fairy, appears to her in a dream, and shows her the consequences of her lazy habit, and the advantages of diligence. A vision visits her slumbers of a group of beautiful shepherdesses playing and dancing in a laburnum grove, beautifully painted by Mr. Calcott. On awaking, *Bo-peep* goes in search of her stray lambs; and, by a bargain with a mercenary cosherd in the pay of the wolf, gets back her sheep, tails and all. *Colin*, her lover, watches them during the night; but new difficulties ultimately require the intervention of the fairy, and the usual transformations. There is much more of joking in this pantomime than customary in these degenerate days—much more of temporary allusion and in the mock-heroic vein. The "American Baby Show" is well and one change of scene, from an interior to an exterior, with ladies seated first in a *salon* and next in a carriage, was calculated to excite especial wonder, so cleverly was it designed and adroitly managed. The piece has been also the occasion of introducing a new Clown, Mr. Appleby, who is well qualified for the courtly office of fool. In some respects the present pantomime is better than its predecessor, and that is saying no little in its favour.

PRINCESS'.—Mr. C. Kean has exhibited in his pantomime this year his usual laudable anxiety to please. It is, indeed, brilliantly appointed, and possessed of specific and extraordinary merits. The subject is one well known, as its title "may specify"—to wit, "Harlequin and Blue Beard, the Great Bashaw, or the Good Fairy Triumphant over the Demon of Discord." Little is known of the author, Mr. M. Merton, whose works of this nature are generally characterised by a classical severity which raises them in literary value. There is much semblance of passion in his demon *Rustifusti*, and the incantation-scene reminds us of "Macbeth" and "Der Freischütz"—they are, indeed, accompanied with snatches of music from Locke and Weber. The practical jokes enacted in the "Blue Beard" scenes, would serve as materials for a score of farces; and the scenic decorations are such as ought to enrich the most gorgeous of spectacles. The change of the old witches into young fair ones was not only effective, but enchanting. A scene painted by *Mr. Gordon*, of a Turkish village and a mountainous country was really magnificent. Nor must the highest credit be denied to Mr. F. Lloyds for that in which the transformations occur, representing the "Illuminated Temple of Concord," the mechanical portions of which by Mr. Bradwell, are also exceedingly effective. But, for battle and effect, nothing might be compared with the quarter-deck, by the same artist, of the *Royal Albert*, of 121 guns,"—the engagement and the victory were symbolised to the life. The final tableau presented one of those marvellous pieces that realise mechanically—such life-supposed of angelic appearances, as give so much éclat to "Faust and Marguerite." We need not state how well the whole was acted when we mention that Mr. Hulline was *Clown*, Mr. Cormack *Harlequin*, Mr. Paolo *Pantaloon*, and Miss Desborough *Columbine*, we "make sure we could sure." We are happy to perceive that Mr. Kean takes the opportunity of the Christmas week to present himself in some of his legitimate characters: the *Stranger*, and *Sir Edward Mortimer*, in the first of which he has been eminently successful. We always have seen him with more than ordinary satisfaction.

LYCEUM.—Mr. W. Brough and Mr. Beverley are the twin-gen to whom the fortunes of this theatre at this important season have been entrusted by Mr. C. Mathews. Mr. Brough's Burlesques is always richly appointed; superb scenes, just sufficient jest, and numerous and overflows with allusion, parody, and fun. His merits are in excess though he lacks, therefore, the point and finish which Mr. Planché gives to his productions. There is a life-like exuberance in the and bacchic effusion of his mirth which is irresistible. There is an earnestness, so to speak, in his burlesque, which makes extravagance look like reality. "Prince Pretty and the Butterfly" is rep ete with the comic, conceit, and grave absurdity *King Coccolorum* (Mr. Frank Matthews), the father of the youth (Miss Harriet Gordon) who is enamoured of the *Butterfly*, is one of those sleepy monarchs whom impatient subjects dream of dethroning; and his wife succeeds in benefiting to her fourth consort. *Queen Porcupeppa* was appropriately supported by Mrs. F. Matthews. The *Butterfly* pursued by the *Prince* is the daughter (Miss Fanny Terman) of the fairy *Butterfly Queen* (Miss M. Oliver), but for the time is the power of the *King of the Butterflies* (Mr. Arthur Bland), from which however, the *Prince* succeeds in delivering the fair captive. The bridal of the beppy pair is celebrated in the Crystalline Haunt of the Butterflies, an exquisite scene, crowded with brilliant accessories. The rest of the drama is occupied with the machinations of the *Bottle King* to disturb the happiness of the married couple. These malignant attempts are, however, speedily defeated; and the spectacle closes with a splendid exhibition of the throne of the *Butterfly Queen*, dazzling the eye with its variously-coloured magnificence. The acting and singing were throughout excellent—the latter, by Miss Gordon and Miss Terman (*à débutante*), especially. The arrangement of the music was by Mr. Tully. Both Mr. Brough and Mr. Beverley were summoned before the curtain.

MARYLEBONE.—The amalgam which we had predicted of "Young Norval" and "Lord Ullin's daughter," appeared in the shape of a pantomime on Boxing-night, under a title, including both hero and heroine. The pantomime commences with the resolve of *Barbarians* in full Court assembled, that with the progress of *Civilisation*, *Young Norval* (Mr. Shalders) is soon after presented studying a huge book—not of martyrs, but battles; inspired by the contents of which he successfully resists the robber horde by whom his especial *locale* was infested. The "Scottish fêtes in Lord Holland's Park" were capitally burlesqued. The "Wreck of the Lovers" is also well managed, and the transformations, indeed, are most splendidly illustrated; the extraordinary depth of the stage much aiding the effect. There are two *Clowns*, Messrs. Walbourn and Tanner, both "excellent fool." as any in the forest of Arden. The pantomime was preceded by "The Lady and the Devil" The house was excessively crowded.

SADLER'S WELLS.—The pantomime at this theatre is entitled "Harlequin Ali Baba and the Forty Thieves; or, Morg ana and the Arab an Nights" The subject of this piece may be said, by way of distinction, to be even æsthetic—tasteful and inappropriate as the term may seem to the treatment of something supposed to be so unphilosophic as fish sort of drama. The aim is serious one—to point a moral *apropos* of the stage. The imaginative is here successfully opposed to the melodramatic and terpsichorean, and the triumph of the spectacle is awarded to the legitimate drama. Mr. Greenwood treats all other forms of stage-art as "exhausted fountains of amusement," and leads his characters through various changes to the inexhaustible in the poetic play. The scenery of the introduction in which this truth is enforced is very cleverly painted by Mr. Fenton. The Palace of Imagination in the realm of Fancy is worthy of the theme. The comic scenes are full of bustle. The *Columbine* (Mdlle. Nathalie) is exceedingly good; Mr. C. Fenton proves graceful as *Harlequin*, and Mr. N. Denlin, as *Clown*, humorous and effluent. The performance was perfectly successful; and, if only for the idea sought to be embodied, merits more than usual attention.

ADELPHI.—It is somewhat difficult to describe the spectacle at this house, which is an elaborate allegory on some of the events of the war, strangely entitled "Zigler the Travels of Messrs. Danube and Pruth, with numerous Cuts." Miss Woolgar represents the *River King* reposing on the bed of the Danube, but soon disturbed with the noise of cannon and visited by *King Pruth* (Mrs. Keeley); whereupon both Potentates denounce the Russian Autocrat, and are joined by the *Black Sea* and the *Baltic* in their defiance. The *Spirit of Civilisation* also descends in a diving-bell, and promises to protect the Allied Monarchs on their proposed ascent to Earth, which they visit in the disguise of a monkey and a Peace Society, a Quakeress, a Magyar and his companion. Wallachian peasants serve to fill up the subsequent scenes, whose bridal festivities are interrupted by some Cossacks, headed by a tax-collector (Mr Selby), and a ukase for a levy of three children. The Cossacks are guilty of acts of plunder—lamp- and railway-grease being especially the objects of their cupidity. But the women come to the rescue; and, armed with brooms and pokers, put the marauders to flight. A more regular battle closes the first act, when the scene changes to "Odessa" and the Russian commander is shown fabricating false or exaggerated despatches. "St. Petersburg" next appears, and a procession of prisoners takes place. The "Aland Islands," and the landing of the Allies succeeds; when Paul Bedford, as an English corporal, contrives to make himself understood by the French, whom he invites to dinner, and the occasion is celebrated with toasts and songs of the right martial sort. "Eupatoria" and the Russians have next their turn; and then various freaks of fortune occur—which are triumphantly closed with a grand combat, in which the Russians are subdued. The scenery of this piece is uniformly striking, and the costumes are excellent. There is also some capital dancing, in which Mdlle. Marsquis distinguished herself. This spectacle may be cited as unique, and cannot fail to prove immensely attractive.

ST. JAMES'S.—Mr. Francis Talfourd, in his extravaganza at this house, on the subject of "Abou Hassan; or, the Hunt after Happiness," has evinced his usual ambition to unite with the eccentricity of pun and burlesque the merit of dramatic character. He shows, besides, his affection for and acquaintance with the bar, by providing his audience with a bevy of forensic ladies—not old, but young—who compose a fairy Court of Quarter Sessions. "Abou Hassan" has been made romantic by a delinquent sister, the fairy *Equanocta*, who is accordingly banished from fairy land, until she restores contentment to the mind of her "inspired idiot." Poor *Hassan*, as we know from the tale is placed by the Caliph and his Vizier in the positions that he emulates, and made to taste the miseries of high office when attempted to be filled by the incompetent. In the resulting incongruities there is fun enough, but it is not well brought out into full relief by the performers, Miss Marshall, Mr. Toole, and Mr. Sydney. Some of the songs were excellent: the whole, indeed, commanded the plaudits of a fashionable audience.

On Saturday the tragedy of "Macbeth" was performed for the third time by amateurs—the profits being for the benefit of St. Mark's Hospital, City-road. The average rate of merit was far above the usual amateur level; indeed, the acting of *Macbeth*, by Mr. *Gye* who imitates the general style of Mr. Charles Kean admirably—was very satisfactory. He was often and deservedly applauded. Miss Glyn's *Lady Macbeth* was distinguished by a rapidity and force of elocution greater than usual, combined with a calm and well-expressed dignity which gave a sentiment of power a terrible significance. The entire performance was well-conducted; and the audience, which was select and fashionable, had reason to be, as they were, well pleased with the play and the players.

OLYMPIC.—The management have done well in securing the assistance of Mr. Planché in providing a fairy extravaganza for the season. The sterility in general, as in the present instance, to the Countess d'Aulnoy for his story, this dramatist reproduces its incidents and points of interest with the utmost precision esteeming, as it would appear, fidelity to the original author as the first condition of success. We think Shakespeare did the same service to the extent of adopting arrangements that now seem to us to impair the theatrical effect. No

If, however, the great poet was right in principle; and Mr. Planché has proved by long practice that the plan, with all its drawbacks, leads in the long run to safety and triumph. The present piece, founded on the story of "The Yellow Dwarf," has evidently been a labour of love, so carefully has it been imagined, and so happily developed. The theme, too, has a serious colouring—for the *Yellow Dwarf*, alive to his deformity, passionately enamoured, impatient of a rival, resentful, sanguine of success, and yet defeated, is more of a tragic than a comic personage. Burlesque as the language may be that he is made to utter, play as he may on words, wanton as he must with a jest, deal as he should with parody; nevertheless, the situation receives necessarily its interpretation from the state of feeling that it implies. Mr Robson was, of course, entrusted with this *rôle*; and noted it in the spirit in which it was written—not overstraining the extravagance, and letting the basis of passion on which it grew manifest itself in its natural tragic force. Mr. Planché had furnished the actor with some fine opportunities for this kind of display. A parody of the scene in which the *Duke of Gloucester* woos *Lady Anne*, some passages from "Othello," and one or two from "Shylock," told exceedingly well, and proved, what has often been asserted, that, notwithstanding his minute art, Mr. Robson's power in a legitimate tragic part would be great indeed. The object of his affections, the *Princess Mimi*, was gracefully performed by Miss Ormonde; and his rival, the *King of the Gold Mines*, found an admirable representative in Miss St. George. The *Queen Mabbendetta*, by Miss Pitsallan, had some soliloquies in the heroic vein, which she was carefully accurate, and in the latter delightfully natural. When we add, that the costume and scenery were picturesque, glittering, and appropriate; and that "the making-up" of the demon-hero was Punch-like to a thought—an identity of the real and the ideal in the spirit in which it was written—not overstraining the extravagance, and letting the basis of passion on which it grew manifest itself in its natural tragic force. Mr. Planché had furnished the actor with some fine opportunities for this kind of display. A parody of the scene in which the *Duke of Gloucester* woos *Lady Anne*, some passages from "Othello," and one or two from "Shylock," told exceedingly well, and proved, what has often been asserted, that, notwithstanding his minute art, Mr

present occasion, successfully so. The name of this extra piece of magnificence is "Harlequin and Little One-Eye, Little Two-Eyes, and Little Three-Eyes; or, Beasts and Beauties"—the subject taken from the Brother Grimm's "Household Stories." *King Uranosaggronalaloufa* is an impersonation of the Russian Czar, and "Emperor of all the Beasts," who seeks *Little Two-Eyes* for a wife. The lady in question is a Princess, the daughter of *King Unioneyerumiustinstilloo*. These long words may serve to exemplify the general character of the jest—it is broad and palpable; suitable, in fact, to a Surrey audience. A miller's son is the successful lover, and outmatches the two Emperors. The scenery painted by Mr. Dalby, is first-rate; and the *Columbine*, Miss Gunniss, is a capital dancer. A *ballet divertissement* is introduced, in which some very *complètes* of the same name were distinguished by their grace, and taste. Mr. Shepherd, when summoned by the audience to receive the united testimony of their approbation, appeared well pleased with the acknowledgment.

THE STRAND.—The pantomime at this small house is performed by children, and the adaptation to the abilities of "Paffy, the Wehrman," who, for his theft of the beef, is punished by the mayor, being, moreover, the inventor of a "bit" for his own theatre under that name, generally contriving a "bit" for his own theatre "Birds, Beasts, and Fishes; or, Harlequin Natural History," is title of the drama, which, as we have already stated, is somewhat at the theme. The caterers for the more popular audiences have properly regard to instruction as well as amusement, and apparently succeed in proportion as they blend the two. The Signs of the Zodiac and a Council of Birds, Beasts, and Fishes commence the action. *Dame Nature* calls the Council together to state their grievances, and informs them of "a surly *Bear*," who is "wandering under water, to claim the hand of *Old Cock Salmon's* daughter." *Truth* proposes to obtain help from the *Fairy Goldfinch*—whereupon the birds fly to air, the beasts go to earth, and the fishes depart into the sea. *Goldfinch*, of Feather Island, sends a despatch to *King Lion*—whom we next find in his palace, then present at a review, and lastly in full march to attack the intruding *Bear*. The transformations take place in *Old Cock Salmon's* grot. The comic scenes are broad and bustling, and, supported by two celebrated *Clowns*, Paul Herring and Richard Stutt, commanded complete success.

MUSIC.

THE EUROPEAN MUSICAL LIBRARY, for the Pianoforte. Boosey's OPERA JOURNAL, for the Pianoforte. Messrs. Boosey and Co.

We do not intend at present to enter into much discussion respecting the reason or justice of the present law of musical copyright, as applicable to the works of foreign composers published in this country. After much uncertainty and many fluctuations, the question has at length been settled by a recent memorable judgment, whereby it has been decided that a sale by a foreign author to an English publisher of the copyright of a musical work is void unless the contract is made by the vendor, personally present in England. What ever support such a doctrine may find in the subtleties of lawyers, it is unjust, irrational, and at variance with the plainest principles of commerce. It has been recognised throughout the civilised world that the produce of a man's brain the work of his genius, talents, and learning—is as much his property as the work of his hands; and why he should be prevented from disposing of the one kind of property as freely as the other, is a question to which no answer can be found save by those whose faculties have been sharpened by the subtlety of a science which (in mockery, one would suppose) has been called "the perfection of human reason." But so it is. The "glorious uncertainty of the law," on one point at least, exists no longer. The question of copyright is settled, till more enlarged and enlightened views shall reopen it at some future period.

Meanwhile the recent settlement of the law is already working injuriously to the art of music in this country. Its gross violation of the vested rights of individuals was evident from the first. Many wealthy English publishing-houses, who have purchased, at high prices, copyrights of foreign works of celebrity, have found that all their capital so expended has been thrown away. They are reduced to a looking of equality with those who may choose to avail themselves of these works, without having been at any further expense than running to Paris, or Leipsic, or Milan, for a copy of it. It is the fashion, however, now-a-days, to treat vested rights with little ceremony. They must give way, it is said, to the general good. But it must first appear that the change is for the general good. In the present instance it is already apparent that the reverse is the case. The alteration in the English publishing trade is already operating fatally to the interests of the English musician. The publisher will no longer pay even a decent price for the copyright of an English work of genius, when he can load his counter with reprints of foreign publications which have cost him nothing. For proof of this, it is sufficient to look at the works exposed for sale in every music-shop in London. At present the public seem to derive an advantage from this state of things. Music sellers are vying with each other in the *cheapness* of their publications; but these publications are all foreign reprints; and, in running this race of cheapness, our publishers will no longer give their own countrymen the remuneration one to their reputation and talents.

The publishers who have, perhaps, suffered the most from the recent Judicial interpretation of the law are those who, in the course, contested the most strenuously against it—the eminent house of Boosey and Co. They possessed many expensive copyrights which that judgment has deprived of their value. It is to this circumstance, doubtless, that we owe the publications of which the first are placed at the head of this notice; but they are not only a judicious publishing speculation, but highly interesting to the musical public.

Both publications are for the use of pianoforte-players, and will make a most valuable addition to a lady's musical library. "The European Musical Library" is a large collection of pieces for the pianoforte, by eminent composers of the present day, both foreign and English: Herz, Nordmann, Voss, Dohler, Rosellen, Goria, Cramer, Wallace, Osborne, &c. It is published in numbers, each containing one piece; and seventy-two numbers have appeared. The pieces are of the most modern school, but very varied in style and in degrees of difficulty. Some are simple and popular, and others calculated to display the most brilliant execution; but they are all of moderate length, and well fitted, from their grace and elegance, for drawing-room performance.

The Opera Journal, also published in numbers, is a collection of favourite pieces from the operas of Bellini, Donizetti, Verdi, and others, arranged for the pianoforte by Nordmann, Dubelli, Calkcott, and other eminent masters. These arrangements are made in two ways, either as solos, or for two performers. In either of these forms the beautiful and expressive vocal melodies of the Italian composers are found to great advantage. They are not difficult to execute: their clear and simple style places them within the reach of every pianist possessed of taste and feeling. They call up agreeable reminiscences of the Opera-house, and heighten the elegant enjoyment of a social evening.

The publishers announce that, in consequence of the recent decision as to copyright, the price of these works is only one-half of what it would otherwise have been. This reduction, however, has had no effect on the manner in which they have been brought out; for, in respect to largeness of form, quality of paper, and beauty and accuracy of printing, they are equal to any publications which have issued from the musical press.

MISS HANSFORD is in the custom, at this season, of giving a series of musical soirées at her own residence, in Welbeck street. They are elegant entertainments, combining the character of a public performance with that of a social party. On Wednesday evening the rooms were filled with fashionable company, who enjoyed a fine selection of English music, admirably executed by English performers. The concert was chiefly vocal; comprising several of our finest glees, madrigals, airs, and duets. The singers were Miss Hansford, Miss Eliza Birch, Miss Rowland, Mr. Ransford, Mr. Foster, Mr. Smith, Mr. King, and Mr. G. Tedder. Miss Hansford's principal performance was Dr. Arne's celebrated bravura, "The Soldier Tired of War's Alarms," from "Artaxerxes;" which she sang with great vocal power and the most brilliant execution. It was loudly encored. Horsley's fine glee, "By Celia's Arbour," and Festa's famous old madrigal, "Down in a Flowery Vale," were also warmly encored. Such concerts as this are especially entitled to favour; as the works of the great English composers are too much neglected by the fashionable votaries of music.

CHESS.

TO CORRESPONDENTS.

A. L., Edgware-road.—The most favourite of juveniles to Chess must see that Black's first move in "Chess-Player's Handbook" (Qt to K 2nd King) to K Kt 3rd. Your Solution is altogether a mistake.

T. J., Hanworth; P. T., Derby; J. B., Hull.—) Wecan find no other way to Mate, assuming the position sent in Mr. Campbell's first Problem, but we have given. 3. At the last move White forces Mate obviously, by R to K 4th, or B to Q 8th.

BLACK AND WHITE.—There is nothing whatever in White's situation to compensate for the loss of a Pawn.

AN OLD SUBSCRIBER, Liverpool.—You must retract the moves made since Black gave check. W. C. C.—It shall be examined; but, as we have before mentioned, "first attempts" at composing Chess Problems are generally unsuccessful. To make the President proud (we must none but the best) requires great study, much patience, and considerable inventive power.

R. J. P.—Too illegible. You have evidently not the most distant notion of what is demanded in a Chess Problem.

CHRISTIAN RISK.—No. 1 shall have a niche among our Chess Enigmas. See notice to "Beta," in our last.

H. ORTON, of Burton, is thanked for his beautiful little stratagem.

ROOKWORM.—See Dr. Forbes' learned and very interesting account of the firs. introduction of Chess from India into Europe, which appeared in our last Number.

D.—St. James's Literary and Scientific Society. Wants is the list of directors and members. Is it pronounced?

F. B. C.—Your Solution of No. 561 will not do.

LEWIS REDUX.—You will probably see some intelligences of the foreign player you name by applying at Kling's Chess-rooms No. 454 New Oxford street.

G. F. Barrow.—The match between Oxford and Cambridge is not yet concluded. When over, we shall most likely print the games.

E. B. C., New Jersey.—Your long-looked-for packet has reached us safely by the last mail

F. P., of Norwich.—In your proposed solution of 564, you say, "If 1. P Queens White takes B, and mates next move." How can he do it? If Black then advances P to 6th, covering check?

TOUBLE C. A., stabled, Indus.—The packet of Problems has arrived safely, and shall be examined in a week or two.

R. B. D., Lisbon.—Your suggestion shall be communicated to the author.

JUVENIS.—In words "mate," "mated," in the old English writers from whom we quote, have no allusion to the game of Chess. "To mate" was to amaze, confound, &c. &c.

SOLUTIONS OF PROBLEM NO 565, by Dreever, Adriatic, W. C. C., R. H., Norwich; T. J., of Hanworth; Alpha, J. B., Hexham, Derby; P. T., Derby; F. B., Norwich; Forgues of Exeter; Gamma, J. P

THE FOUR-PADDLE-WHEEL DANUBE STEAMER, "TACHTALIA."—(SEE PRECEDING PAGE.)

lebone. Of course, if he had not been the eldest representative of an ancient family, intimately associated with the fortunes of the Whigs, he would not have found it so easy to be elected to Parliament, nor would he so soon have attracted the notice of the Ministers of the day; but, apart from these advantages, which are a part of the lottery of life, and of which he could not be deprived, he owes all his public position, and the good opinion entertained of him alike by superiors, subordinates, and contemporaries, entirely to his own capacity and excellent character; and for a certain class of public offices a more eligible man could not be found, if all the representatives of the people were put upon a trial of their claims.

His father, the second Earl Fortescue, had for some two years filled the office of Lord-Lieutenant of Ireland, when Lord Ebrington was, in July, 1841, elected member for Plymouth. In 1839, the Earl, then bearing the courtesy title of Viscount Ebrington, was called up to the House of Peers in the barony of Fortescue; and in 1841 he succeeded to the Earldom; when the subject of this Sketch assumed in his turn the courtesy title of Viscount Ebrington. He is the eldest son of the Earl, by the eldest daughter of the first Earl of Harrowby. He was born in 1818, in Upper Brook-street; and was educated at Harrow, where, and subsequently at the University, he distinguished himself. Elected, as we have said, a member of the House of Commons in July, 1841, he

VISCOUNT EBRINGTON, M.P. FOR MARYLEBONE.—FROM A DAGUERREOTYPE BY CLAUDET.

gave the Whigs 'r a general support, speaking rarely, but voting steadily, during th. opposition campaign under the second Administration of Sir Robe. Peel. When the downfall of that statesman paved the way for a return of the Whigs, Lord John Russell acknowledged the parliamentary service and the family influence of Lord Ebrington by making him a Lord of the Treasury. In this office he remained from July, 1846, to December, 1847, when his abilities and a certain aptitude as a speaker pointed him out as a fit person to take the post of Secretary of the Poor-law Board. Here, by his business habits, his firm but considerate application of rules difficult of execution, the urbanity of his manners, and his general uprightness, he gave very great satisfaction; indeed, with the sole exception of the late Charles Buller, no member of the Administration of the Poor-law was more successful—commanding a respect, blended with personal liking. His demeanour in the House of Commons, too, whenever the business of his department was the subject of discussion, tended to facilitate the movement of the Board, by softening asperities which former officials had provoked. Lord Ebrington, in February, 1851, resigned the post of Secretary to the Poor-law Board, for reasons into which it is not necessary here to enter. This was during the agitations which imperilled the existence of the Russell Administration, and foreshadowed its downfall, about a year after. He continued, however, to support the general principles of his party—walking, more or less, in the footsteps of his father, who, on more than one occasion, had exhibited his devotion to the Whigs when they were from time to time in temporary straits. Shortly afterwards Lord Ebrington accepted a post of importance in connection with the newly-made Public Health Commission; but he soon afterwards resigned it, not finding his position in accordance with his ideas of responsibility. When the Tory Administration of Lord Derby appealed to the country, in July, 1852, Lord Ebrington unsuccessfully contested the borough of Barnstaple—the two members being, however, subsequently unseated for bribery; and from that date until recently he ceased to take any prominent part in political life. The death of Lord Dudley Stuart having occasioned a vacancy in the representation of Marylebone, Lord Ebrington came forward as a candidate, with a Liberal programme, and the prestige of his personal respectability and official services. As compared with his opponent (Mr. Jacob Bell), he was regarded with favour by the Conservatives, and the result of the election was scarcely doubtful to those who knew the state of the borough when there is no very strong dissention between Whigs and Tories. Lord Ebrington was returned by a majority of 2773; polling 6940 votes against Mr. Bell's 4167.

We have already recorded Lord Ebrington's value as an administrative officer. As a political man, while holding to his principles, and working generally with the Whig party, he is distinguished by a certain independence of character which suits well with the temper of the times, and renders him eligible for the public service as a man whose motives inspire confidence. As a speaker, he has of late very much improved. He has also appeared in the arena of literature, with, among other things, a pamphlet on Representative Reform (published by Ridgway), and a little work (published by Parker and Son) edited and translated from the French of the Père Girard, entitled "The Mother Tongue; or, Methodical Instruction on the Mother Tongue in Schools and Families."

Lord Ebrington married, in 1847, the eldest daughter of the Right Hon. Colonel Dawson Damer (her Ladyship was then twenty-one years of age), by whom he has had four daughters. His Lordship is a Deputy-Lieutenant of the County of Devon, and a Lieut.-Colonel (1851) in the North Devon Yeomanry Cavalry, in which he had been appointed Major in 1842.

PONTELAND CHURCH.

FEW persons can fail to have remarked the dank and cavernous appearance of the walls of churches in rural districts; indicating dampness and other unhealthy conditions of such edifices. To remedy this defect, the most simple and efficacious means have just been adopted, with success, in the picturesque church of Ponteland, in the county of Northumberland. It was built, probably, in the early part of the thirteenth century, although its tower betokens an earlier date, in its Norman doorway entering from the west. The body of the Church is in a mixed style of architecture—Gothic, Transitional, Florid, Venetian, and bad Modern. Still, the nave, aisles, and chancel, are very striking. The interior has hitherto been, like too many of our country churches, damp, cold, unaired, with walls discoloured by the grass outside; and the woodwork decayed, and sending off offensive odours.

Externally, the soil had accumulated through ages, to the height of three feet, and bodies were buried close against the ashler work; consequently retaining all the water that fell on it. Such had long been the condition of Ponteland Church, when the parishioners and the neighbouring gentry, aided by the patrons of the living, and the Church-building Societies, set themselves in earnest to the restoration of the edifice. The earth was removed from the walls outside, and a most effectual drainage carried out. The rotten pews were entirely removed, and replaced by excellent benches of Memel wood, stained dark-brown colour, of uniform size and shape, and of an ecclesiastical character. Stoves and flues have been introduced, and 60 additional sittings have been gained; the walls have been cleansed, and thus this once-abused Church has been made fit for "man as well as Master's use."

The simple means by which this vital improvement has been effected will be explained by the accompanying sectional View. We have only to add that it would give us pleasure to have to record many similar instances of such simple means of adding to the healthiness of church congregations; more especially where the situation of the sacred edifice has rendered it liable to be affected by external damp, arising from such neglect as, until lately, characterised the Church of Ponteland.

NAVVIES AT THE NORTH-WESTERN RAILWAY TERMINUS, EUSTON-SQUARE.

NAVVIES FOR THE CRIMEA.

In the ILLUSTRATED LONDON NEWS for December 9 we introduced to our readers the novel engineering plan of Messrs. Peto, Betts, and Brassey, for the construction of a railway from Balaclava to the heights above Sebastopol, for the conveyance of troops, stores, ammunition, &c. For this great object the contractors have already organised a force of Navvies, together with the requisites for carrying out the views of the Government.

Vessels have started, or are about to start from Liverpool, Hull, Sunderland, and London, having on board several hundred navvies, with material for the works. The embarkation of the first corps took place at Birkenhead Docks, on the 21st inst. On the Wednesday week previous, this corps, fifty-four in number, headed by their gangers, and superintended by Mr. Shaw, under whose management the men are placed, left the North-Western Railway Terminus at Euston-square, *en route* for Liverpool. Prior to their departure "allotment papers" were drawn up and signed in one of the waiting-rooms, by those men who were desirous of allotting some portion of their wages to their families or friends, to be paid during their absence at stated terms. Many of the men were accompanied by their wives. The train by which they were to have proceeded to Liverpool was that at nine o'clock; but the allotment papers not being all signed, the men sturdily refused to leave London till every paper had been made out; consequently, they did not leave until ten o'clock. The waiting-room presented a most earnest and animated scene. In justice to the men, we should state that the amount allotted amounted on the average to twenty shillings each man. This may be accounted for by their high character, and the liberal wages they are to receive. Eight shillings a day are the terms; besides which, they are to have all their clothes and rations gratuitously. The train started amid loud cheers, in which the Navvies themselves most heartily joined.

The *Wildfire*, Capt. Downward, was to have sailed from Liverpool on the Friday; but, owing to the heavy gales, nearly a week elapsed before the embarkation took place. The vessel was sold to Messrs. Peto Betts, and Brassey, by Tonge, Curry, and Co., of Liverpool, for £4500. She is skipper-built, 467 tons, and was lately owned by the trustees of Edward Oliver's estate. The between-decks have been fitted up as a cabin and for berths for the men. Every arrangement has been made for their accommodation, and its completeness is due to the energetic superintendence of Mr. Scott, of the North of Europe Steam Navigation Company. On Tuesday evening, prior to the embarkation, a dinner was given by the firm of Messrs. Peto, Betts, and Brassey; when several gentlemen assembled at Gough's Hotel, Woodside Ferry, to take leave of Mr. Shaw, under whose superintendence the men proceed to the Crimea.

The weather having moderated sufficiently, the *Wild Fire* prepared to leave the docks at Birkenhead, and for that purpose was tugged to the dock gates. At eleven o'clock on Thursday morning, the 21st inst., the men, headed by Mr. Shaw, Mr. G. Arkle, and other gentlemen, left the Sun Inn, and proceeded down Bridge-street to the Docks. The windows

NAVVIES EMBARKING AT THE BIRKENHEAD DOCKS.

in the route were crowded with spectators, and the Navvies were greeted with loud cheers. Having reached the point of embarkation, renewed cheers burst from a large concourse of spectators; and everything being ready, and the order given to embark, the men proceeded to the vessel, which lay close at hand. The scene at this moment was very exciting: the men being full of high spirits, and eager to be off. On leaving the docks, the *Wildfire* was met by a Government emigrant vessel, when the united cheers might be heard far far away.

We annex the particulars of the organisation and equipment of this corps of Navvies:—

The vessels engaged as transports for "the regiment" and all its appurtenances, consist of seven steam and two sailing-ships, of the aggregate tonnage of 3491 tons and 900 horse power, as follows: *Lady Alice Lambton*, screw-steamer, 511 tons, 90-horse power; *Great Northern*, ditto, 678 tons (96-horse); Earl of Durham, ditto, 684 tons, 90 horse; *Baron Von Humboldt*, ditto, 400 tons, 60-horse; *Hesperus*, ditto, 800 tons, 150-horse; *Prince of Wales*, ditto, 621 tons, 130-horse; *Levant*, paddle-steamer, 694 tons, 400-horse; *Wildfire*, clipper sailing ship, 497 tons; *Monarch*, ditto, 880 tons. The materials consist of 1500 tons of rails and fastenings, 6000 sleepers, 600 loads of timber, and about 3000 tons of other materials and machinery, consisting of fixed engines, cranes, pile engines, trucks, waggons, barrows, blocks, chainfalls, wire rope, picks, bars, capstans, crabs, and a variety of other plant and tools, besides working machinery, forges, carpenters' and smiths' tools, &c. This material is distributed over the different vessels in such a manner that, should any one or two vessels be lost or disabled, it will not endanger the efficiency of the whole. The ships convey, in parties of 50 or 80, 500 workmen; each party under the charge of a foreman and assistant, as well as a surgeon to each vessel, and a clerk to attend to the victualling and care of the stores. The allowance of provisions will be on a liberal scale—both of the same description as usually supplied to ships' crews. Each man is supplied with clothing suitable to the voyage and the service he will have to perform on his arrival, as follows:—1 painted bag, 1 painted dull, 3 coloured cotton shirts, 3 flannel shirts (red), 1 flannel shirt (white), 1 flannel belt, 1 pair moleskin trousers, 1 monkey jacket with sleeves and serge, 1 fearnought slop, 1 linsey drawers, 1 blue cravat, 1 blue worsted cravat, 1 pair of leggings, 1 pair of boots, 1 strap and buckle, 1 bed and pillow, 1 pair of sheets, a portable store for every ten men, 1 rug and blanket, 1 pair of blankets, 1 woollen coat, 1 pair long water-proof boots, 1 pair fisherman's boots, 1 pair of grey stockings, and 2 pounds of tobacco for present use. By the above list it will be observed that each man is provided with a painted waterproof bag, capable of containing his kit, and also three days' provisions; no boxes or lumber of any kind being allowed. The fisherman's boots are knee boots, which will have to put on over all

AMUSEMENTS, &c.

THEATRE ROYAL HAYMARKET.—MONDAY EVENING JANUARY 1, and during the Week. The KING-GUITA of a SOUP-TABLE, with Mr. Buckstone, Mr. Compton, Mr. Chippendale, Mr. Howe, Miss Reynolds, Miss Charlton, and the New Pantomime by LITTLE BO-PEEP; with Harlequin and the Girl who Lost her Sheep. Bo-Peep, Miss Lydia Thompson

THEATRE ROYAL HAYMARKET.—TWO MORNING PERFORMANCES of the PANTOMIME next week, on TUESDAY, JANUARY 2nd, and SATURDAY 6th. Doors open at Half-past One. Commence at Two, over by Four. Box Office open daily from Ten till Five.

ROYAL PRINCESS' THEATRE.—MONDAY, COURIER of LYONS. Tuesday, Green Bed. Wednesday, Pam at. Thursday, Stranger. Friday, Rivals. Saturday, Iron Chest. The Pantomime every evening

ROYAL GALLERY of ILLUSTRATION, 14, Regent street.—DIORAMA ILLUSTRATING EVENTS of the WAR. Five Lectures by Mr. J. NOQUELEZ. Daily at Three and Eight. Admission 1s., 8s., and 2s.

THE HERO of ALMA and of INKERMANN.—A MODEL of that chivalric Soldier, Field Marshal Lord RAGLAN, in the full costume of his high rank, is now added to Madame TUSSAUD and SONS' GALLERY, BAZAAR, Baker-street. Admittance, 1s. Napoleon Rooms, 6d.

MR. ALBERT SMITH'S MONT BLANC is NOW OPEN EVERY EVENING (not Saturday) at Eight o'clock. The Morning Representations take place every Tuesday, Thursday, and Saturday, at Three o'Clock. Stalls can be taken at the Box-office, every Day from The till Four. Egyptian Hall, Piccadilly.

LOVE'S NEW ENTERTAINMENTS.—Christmas Holydays.—Upper Hall, Leicester-square, now completely Refitted for the occasion, with Mr. VENTRILOQUE'S Magic Mirror Rooms, &c.—Every Evening at Eight, and Saturday at Three. Mr. LOVE, sole proprietor and original Dramatic Ventriloquist in Europe, will present his NEW HOUSEHOLD ENTERTAINMENT, called "The London Season."

TREAT for the CHRISTMAS HOLIDAYS.—ILLUSTRATED EXHIBITION, 18, Regent-street, Piccadilly. The Largest and most Attractive Exhibition in the Metropolis. Open Daily, from Ten a.m. till Ten p.m.—Admission, 1s. Saturdays, 6d.; children, 6d.; half ditto, 3d.; Stalls, 6d. Ice.

THE ARCHITECTURAL EXHIBITION and Collection of Patents, Manufactures, &c., with Architecture, is NOW OPEN, at the GALLERIES of the SOCIETY of BRITISH ARTISTS, Suffolk-street, Pall Mall. Admission to One Shilling. Season Tickets, for Students and others desiring come frequently, Half-a-Crown. Catalogue, Sixpence.

JAMES FERGUSSON, F.L.A.S. }

ROYAL POLYTECHNIC INSTITUTION.—Mr. KING'S NEW LECTURE on the Principles of Art, as illustrated in the Works of Raphael, with beautiful Photographic Illustrations, and WHITE'S NEW LECTURE on the Steam Engine, and a NEW COURSE of Monday Evening Lectures on the Indus Basin, by the Chevalier WOOD, by Dr. LEEMING, and Mr. GOODEVE, on the Chemistry of Coal

(*Continued from page 698.*)

as well as our pleasure, to watch the progress of antiquarian discovery, and avail ourselves of those treasures which are sure to be found at the excavations of classical sites.

The art-excellence of ancient pottery must be looked for during the Greek and Etruscan periods. There still hangs a strange mystery about Etruria, and whether that singular people were the producers, or only the importers of the interesting vases found in their sepulchral mansions. Be this as it may, the art is Greek, and much of it singularly fine, as the Illustrations of the present Vase will, I think, sufficiently demonstrate.

Nearly all the ancient pottery which time has spared and accident has brought to light are funeral tributes, which have been found in tombs.* This is by no means remarkable, as the respect shown towards the resting-places of the dead naturally protected their contents; that is to say, so long as the inhabitants of a site professed the same religion as those who had already departed for the "happy isles," and even the early Roman Christians, who occasionally plundered Pagan tombs, generally left the pottery and glass; so that we have only lost the gold ornaments, coins, and bronzes, even of those tombs which have been rifled. The domestic pottery of the ancients, that is to say, drinking-vessels, &c., shared the fate of terra-cotta at all periods of the world; it is, therefore, remarkably scarce.

Signor Riccio, well known for his numismatic researches, had discovered at Capua, from time to time, fragments of vases remarkably light, and of a bright red colour, with bas-reliefs thereon of very high art. Eventually fortune enabled him to find all the pieces of a Cantharus, which when put together presents an example of Greek art perhaps unequalled in terra-cotta. Signor Riccio has allowed me to make a drawing from the bas-reliefs of this beautiful Vase (See Illustration), which he considers to have been a nuptial gift. The four figures of the Seasons surround the Cantharus, divided by Bacchic emblems and festal decorations. First, after the candelabrum, comes Winter (rich with the spoils of the chase), the season considered by the ancients as most suitable for marriage; then follows Spring, with a flower in her hand; succeeded by Summer and Autumn, each bearing the fruity wealth of the period. The drawings show the wonderful beauty of the composition and form with which this Vase is enriched. The Cantharus is about fifteen inches high; the relief is not very great; the detail remarkably careful, whilst the outline is sharp and distinct. The colour of the pottery is bright red, singularly light, and varnished. I have seen no example of this description of pottery in any public or private collection which can be at all compared with it for art-excellence.

The discovery of this Vase was a pure accident; it was not found in a tomb. Workmen were employed in boring for a well, when, at a considerable distance below the surface of the earth, they came upon a portion of an old building, and in a recess of the same the fragments of this Vase were found. What the building might have been it is impossible to say, since no farther excavations were made, and the earth has again sealed the dwelling of those who 2000 years ago produced such art as we now contemplate with wonder and delight.

VASE RECENTLY FOUND AT CAPUA.

* Such is the opinion of Bottinger, Minervini, Dennis, and all who have written on ancient pottery.

PARIS FASHIONS FOR THE NEW YEAR.

The Fashions for the coming year partake but little of the customary festivity of the season, owing to the gravity of the paramount subject of the day. Thus, instead of brilliant robes for balls, hardly a thought is bestowed this year on dresses either for soirées, theatres, or dinners. Instead of Court robes and mantelets, little else is seen but rich day dresses. The materials are rich and stout, but they are not of light and graceful shades. An attempt was, it is true, made a short time since to bring in "Alma sleeves," and "Inkerman bonbons;" but the public good taste quickly rendered justice to these injudicious novelties.

Nevertheless, the *demi-toilette* will not be less charming for being deprived of Court and ball-dresses. There is still the same indecision as to whether flounces will be worn or thrown aside; the shop-windows would make one believe that they are in as great favour as ever, though at the Théâtre des Italiens and some select receptions, they are comparatively rare. The excessive fullness of the petticoats, which sustain the robes, has rendered flounces almost superfluous; since the fullness of the robe is obtained from beneath the skirt, and not outside it by flounces, as formerly. Neither are they worn in the beautiful robes of *gros de Tours*, with pattern velvet and garlanded flowers woven in the material, and running around the dress. Nothing is richer or more elegant than this dress.

Moiré antique is without flounces, and is distinguished by the fullness and beauty of its folds; this is simpler, and perhaps in better taste. At first much of this material was made with large patterns of lively and varied colours; now they are almost always plain or in wide stripes. The Empress has just introduced an elegant novelty, called *Reséda Imperiale*. It is composed of golden trellis-work, beneath which is a black velvet cap, ornamented with little black feathers; and in the squares of the trellis-work are sprinkled diamonds or other precious stones. When this head-dress descends from the Court circles, for the precious stones are substituted jet.

THE ILLUSTRATIONS.

Lace Cap, *en point d'Alençon*, with groups of flowers on each side; sometimes, instead of these groups, the flowers are placed in a crown, beginning at the middle of the head, going on increasing on the cheeks, and terminating by water-flowers with long pendent sprigs. The latter flowers are more especially worn with open ball-dresses.

Robe de satin turc, with basques, ornamented with a mossy fringe, finishing in front of the corsage, and forming a *brételle*. Pichu and sleeves of lace, similar to the bonnet; the inside of the sleeve is trimmed with a double **row of fringe to match**.

Girl's Dress.—Taffetas bonnet, trimmed simply with ribbons of the same; *tour de cou* of ermine; mantelet of black or violet velvet, trimmed with simple silk braid. Robe without flounces, of *poult de soie*; pearl grey percale trousers, bordered with English embroidery, interspersed with *broderie en plumetis*.

Bonnet of rose-coloured *velours épinglé*; robe of plain Irish poplin; *mantelet à basques* of the same: the mantelet is ornamented with black velvet, and the robe with black fringe, which encircles the corsage, and descends in four rows in front.

Boy's Dress.—Sailor's cap, bound with oil-cloth; brown cloth cloak; jacket of black velvet, with rather wide sleeves; black trousers, and patent leather boots.

Cap of blue *velours épinglé*, with a white feather, and a knot of velvet ribbons of a similar shade.

Robe, a large pelerine of *drap cephir*, grey, with a silk braid of the same colour, though somewhat darker; large gaiters of grey cloth, to match the dress.

PARIS FASHIONS FOR THE NEW YEAR.

PEMBROKE-HOUSE, WHITEHALL-GARDENS, THE OFFICE OF THE MINISTER-AT-WAR.

PEMBROKE HOUSE, WHITEHALL-GARDENS.

THE concentration of Government Offices which occupy a portion of the site of the extensive Palace of Whitehall, has recently received the addition of Pembroke House, as the official residence of the new War Minister, His Grace the Duke of Newcastle.

Pembroke House is one of the mansions which were erected upon the gardens, grounds, and site of the old palace, after the great fire of 1698. It is a stately edifice, on the south side of what are now called "Whitehall-gardens," and is almost immediately opposite Gibbons' beautiful statue of James II. The south front commands a chee' view of the Thames; the approach from Whitehall-gardens is through a large and lofty gate, across a small court. This was formerly the residence of the late Earl of Harrington, who died in 1-'1. Adjoining the above front is an ivied wall, part of a bastion, and a fragment of the palace —a blocked-up arch—facing Whitehall-yard. Here also are the offices of three minor departments of the War-Office; so that this new location of its Minister is likely to prove a convenient choice. As the official duties of the new War Minister are not generally known, it may be as well to append their outline, which we are enabled to do by the recent issue of a revised edition of Mr. Murray's *Official Handbook of Church and State*, edited by Mr. Redg ave.—

On the declaration of war in 1854, the opinions which had for some time been entertained, that the authorities entrusted with the political control of affairs connected with the military administration should be centred in the hands of one responsible Minister, led to the separation of the duties of War Minister from those of the Colonies, and the appointment of a Secretary of State for War. The patent of the Duke of Newcastle, who then, as Colonial Minister, had the charge of the war, was revoked, and he was re-appointed in general terms one of her Majesty's Principal Secretaries of State and placed at the head of this new department, and a new appointment was at the same time made to fill the vacancy thus created at the Colonial office

The inconvenience was foreseen which would arise from making extensive changes by the consolidation of duties immediately relating to the conduct of the war, at a time when the greatest promptitude was required; and the immediate duties with which the newly-created Minister was invested were, in the first instance, those only concerning the charge and control of the war, which had belonged to the Colonial Secretary. He has, therefore, succeeded to the direction of the war, and plans the operations of the British armies abroad, conveying to the officers in command the instructions of his Government, and receiving their despatches. He also cares for all matters connected with the wants of the British armies engaged in a campaign. He recommends to the Sovereign for the Order of the Bath. He has, further, a general authority in all matters relating to the Army, and is responsible for the amount of the military establishments it being his province, after consulting the Commander-in-Chief upon the total amount of the force which the Government propose to be maintained for the year, to submit it for the Queen's pleasure. He also conveys to the Commander-in-Chief the approval of her higher military appointments which require the sanction of the Government. He prepares for the Royal signature, and countersigns (a duty heretofore belonging to the Home Secretary) all military commissions, except those prepared by the Colonial Secretary for officers serving in India, Ceylon, or the Colonial

RECEPTION, BY MESSRS. CUTHBERT, PATERNOSTER-ROW, OF LINT, ETC., FOR THE WOUNDED AT SCUTARI.— (SEE NEXT PAGE).

cepts it, and notification from the Secretary of War that Her Majesty's pleasure is taken thereon by the Commander-in-Chief. In the same manner he receives and conveys to the Master-General of the Ordnance her Majesty's commands for the supply and issue of arms.

Arrangements are in progress to transfer to the Secretary of State for War the extensive Commissariat duties now under the charge of the Treasury; and it will remain for future determination what portions of those civil functions belonging to the Ordnance, the War-Office or other departments which are connected both with the military and political duties of the State, may be advantageously transferred to his care.

HOSPITAL AIDS FOR THE WOUNDED.

No sooner had the wants of the wounded in the Hospital at Scutari been made known through the powerful medium of the public journals, than a generous band presented themselves for the supply of the requirements of suffering humanity. Foremost in the rank were Messrs. Cuthbert, of Paternoster-row, who at once offered to receive and ship any quantity of remedial provisions for the mutilations of war as might be forwarded to them. Their offer was speedily responded to by vast numbers of committees organised for the purpose; while the nobility and gentry of all grades of taste instantly sent in their contributions of hat, razor, woollen shirts, stockings, and warm clothing to a large amount, freely did the parcels pour in, that it was with difficulty hogsheads and other packages would be provided to receive them. Upwards of sixty long weighty cases since that time have been received at the list of contributors, would require long for us to print, but a few names out of the long list will show from what high sources the kindly feeling flows. Thus we find the names of—The Duke of Sutherland, the Duke of Devonshire, the Earl of Cholmondeley, the Marquis of Cholmondeley, the Marquis of Exeter, the Viscountess Holmesdale, &c. The Local Committees formed a list of considerable length; showing how universally and instantaneously the sympathy spread through the length and breadth of the country. The vessels in which these necessaries were shipped were the *Queen of the South* (about three tons on board) and the *Gottenburg* (about ten tons), leaving a large quantity to be shipped; but in a few days the huge piles shown in the illustration were on their way to the Hospital at Scutari.

A party of benevolent ladies feeling it to be the duty of every one, at this important crisis, to evince their sympathy with the brave men who are now fighting the battles of their country, are making articles of substantial comfort for the soldier. They have commenced with high, strong, and warm-knitted woollen socks. They have also undertaken to accept the contributions of other ladies who, animated by the like sentiments, may be disposed to make and send socks of the same kind, which will be received at the board room of the Charing-cross Hospital, near Strand, and transmitted to the seat of war.

The following are suggestions for those who wish to contribute articles of their own make:—

1st. The Wool yarn should be six-thread fleecy, and be first a rack by immersion in hot water and dried

2d. The Needles used to be of the size No. 16

3d. The Stitches should be about 8 to the inch

4th. The Ribbing at the top about 12 inch deep.

5th. Cast on double.

6th. Length of Leg part from top to the bottom of the Heel, 13 inches

7th. Length of Heel from the Toe to the commencement of the Heel, 4 inches

One hank of Wool contains 1 lb., which, being divided into two balls, will suffice for one Sock; that is, one ball for the Leg, and one for the Heel and Foot.

GUN-COTTON FOR THE WAR.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

If the private enterprise and mechanical talent of this country were as slow to move, and as unwilling to learn, as some of the Government departments, we should be the last in the race of manufacture and commerce. Compare the relative progress of our civil and military engineering in the last forty years, and the question naturally arises, why the one profession is at the helm of progress in every European nation, whilst the other has recently been proved but a tardy copyist at best. We can have no more glaring illustration of this than appeared in a corner of the *Times* a few days back. It was cursorily announced that 150 guns were being, or had been, cast at Vienna, to employ Gun-cotton, instead of gunpowder. Sub-leaders on the subject with super-or effect into twelves of the description which the Russians are now employing. It is no longer surprising that we hear from the Crimea that Russian guns of the same calibre have a greater range than our own.

Gun-cotton is from four to six times as powerful as gunpowder; it is quicker in its discharge—but it is quick or slow, according to the degree of compression; it makes little smoke; it does not foul the gun; it saves the delay of priming; it seldom misses fire in the worst weather; it may even be kept in water for seven years uninjured; it heats a gun less than powder; and it will be found, in use, and even in the process of manufacture. An impression has gone abroad that Gun-cotton explode spontaneously, or by an ordinary blow, like chloride of nitrogen, or detonating-powder. This is not correct. It is a chemical substance which will only explode by some means capable of producing a temperature of 380° which we may, in practice, call nearly double the acquired temperature of boiling water.

I have never had an accident with it myself, although I have submitted it to several tests; and I believe that, whenever accidents have arisen from its use, they are in all cases attributable to its being used in such quantities, or in such a manner, that equivalent quantities of gunpowder would have produced the same result.

Common cotton (or any vegetable fibre) immersed in strong nitric and sulphuric acid for ten minutes, and washed in water for half an hour, forms this invaluable ammunition; and a besieged city, possessing a few tons of acid, need never want supplies. This is a manufacture which the Russians at Sebastopol can carry on as long as they have access to the harbour; and that they are doing so there is reason to believe, without a possibility of our being able to explode a single magazine.

The bombardment by the Allied fleets on the 17th October would have been much more effective if the discharge of cast-iron shot had been supplemented, and capable therefore, of the direct and explosive, instead of being chance shots at a grand mark. How many brave gallant Englishmen would have lived to tell of the bloody day on Inkerman, if the powder of the miners had not been rendered useless by night-work in the trenches. Sufficient ammunition for immediate use could have been recovered from the wrecks of the 14th of November, and innumerable other advantages secured if our Ordnance authorities had been but a step in advance of the Viennese. The Austrian Government has presented their intentions; and a chemical manufacturer has lately received a very large order for nitric acid from the same source.

Seven years ago Gun-cotton underwent a few experiments at Woolwich; but, by the help of the united interests of the gunpowder manufacturers, it was suppressed in the act of birth. Seven years' experience of it, and on a large scale, have satisfied me, as it has many others, that it possesses an enormous advantage over gunpowder (as great indeed as our present system of artillery will bear) and very few of its defects.

A 12-pounder gun loaded with Gun-cotton, weighing one-half the usual charge of powder produces the effect usually attributed to an 18-pounder, and the increase of range obtained by its use will room. If this war goes on, it creates a revolution in our ordnance affairs. Gun-cotton there is no difficulty in arriving at the long-talked of desideratum of dispensing with a touch-hole, and firing the charge in the very centre by galvanic agency.

I am, &c.,
COTTONENSIS.

THE LUCK OF THE FRENCH MINERS AT SEBASTOPOL.—A correspondent of the *Journal du Loiret*, at the seat of war, states that the French engineers were employed in mining certain portions of ground, over which the fortifications of one of the faubourgs of Sebastopol extend. The difficulties of the ground, says the writer of the letter, are immense, but the soldiers do not complain, and they are at times rewarded for their trouble by what they find. It appears that the inhabitants, foreseeing the fate of the place, had buried many articles of value, which they hoped to be able to dig up again at a future day, when the army should have departed. They, however, did not reckon upon the works of the miners; and every day these men find considerable heaps of value, in the shape of silver and plated articles, jewels, and costly ornaments, and, among other things, is an elegant bonnet, carefully packed in a box. The bonnet is of pink satin, of the first style of fashion, and still bears the address of the maker in the Rue de la Paix, in Paris. The bonnet, after having been tried on by all the men, has since been hung up as an ornament in one of their tents.

ELECTION EXPENSES.—The first return of candidates' expenses under the new Act which has appeared is that relating to the late Canterbury election. The aggregate expense of four out of five of the candidates was £850, which forms an extraordinary contrast with former elections, when the expenses of each candidate were invariably counted in thousands. The auditor's statement is published at length in a Kent paper. From it appears that Sir William Somerville's expenses amounted to £450; Mr. Lushington's, £217; Mr C. P. Cooper's, £738; Mr. Bowles, Butler's, £309. With reference to the fifth candidate [illegible] Glover, the auditor significantly remarks: "The sheriff's account of E. A. Glover, Esq., not having been furnished to the auditor, he is unable to publish them." The sheriff's charges were £33 8 [illegible] of each candidate ranged from £16 to £40. The election [illegible] £50, £75, £116, and £261 respectively, [illegible] the expenses some under the head of "Sundries," [illegible] and messengers.

WAR OBITUARY.

(Continued from page 678.)

BAYNTON (Captain Benjamin), R.N., lost in the *Prince*, was an old and distinguished seaman. He entered the Navy 3rd November, 1801, and proceeded to the Mediterranean in Lord Nelson's flag-ship, the *Victory*, in which he assisted at the capture of the French frigate, *Armonde*. Subsequently, we find him gallantly engaged against the Spaniards, more especially in 1806, when he was instrumental in effecting the capture, after a severe action with three privateers, of the largest, the *Neptuno Dus de los Mares*. In 1808 he contributed to the reduction of the town of Damanta, and the seizure of a flotilla of vess ls anchored under its protection, and was present at the defence of the Island of Capri. In 1810 he received the thanks of the patriot General O'Donnell, for his conduct at the storming of a fort, near Palamos, as well as for his services on the coast of Catalonia, where he was present at the defence of Tarragona. In the retreat from Palamos, Captain Bayaton was wounded in the thigh by a musket-ball, which was never extracted. The gallant officer was born 17th Sept., 1789, the son of the late Major Benjamin Baynton, of Duncannon Port. He married 18th January, 1821, Miss Ann Ogilvie, of London, and leaves several children.

MAINE (Lieut Arthur Francis), of the 77th East Middlesex Regiment, died in the camp of the Light Division before Sebastopol on the 21st ult., of dysentery and intermittent fever, brought on by fatigue and unavoidable exposure in discharging his duties, was the second son of the Rev. J. T. Maine, of Bighton-wood, Hampshire. He was in his twenty third year. He was educated at Winchester School; gazetted to an Ensigncy in the 77th Regiment on the 18th of January, 1853, and made Lieutenant the 13th of August, 1854. He landed in the Crimea with his regiment, was actively engaged at the battle of Alma, and amongst the outlying pickets at the battle of Inkermann. He was much beloved for his modest and amiable disposition. His colonel, in announcing his death, says:—"He remains were interred by the side of the Captain of his company (Nicholson), who fell in the hard-fought battle of Inkerman. He was full owed to his grave, in front of our lines, and within view of the works of Sebastopol, by his brother officers, to whom he had endeared himself much. During the performance of the funeral service we heard little but the booming of cannon." One of his brother officers writes, "He will be a great loss to all of us; he was most amiable and good-natured, and a general favourite."

OLDHAM (Captain John Augustin), 13th Light Dragoons, was killed whilst gallantly leading on his regiment, in the disastrous cavalry engagement at Balaclava, on the 25th of October. He was the son of Lieutenant-Colonel Oldham, of the 8th Royal Veteran Battalion, who was severely wounded ascending the heights of Paliana, in California, against a strongly-posted enemy; and grandson of the late Captain Oldham, of the 62nd Regiment, who met an early death during an insurrection in one of the West Indian Islands: he was also brother of the late Captain William Joseph Oldham, of the 2nd or Queen's Royal Regiment, who fell, bravely fighting, at the Cape on the 9th September, 1851.

POWELL (Charles Thomas), Major in the 49th Regiment, killed in the trenches before Sebastopol, on the morning of the 26th October. Joined in the Sutlej campaign, under General Sir Charles Napier, as Lieutenant in her Majesty's 22nd Regiment; was at the battles of Meeanee and Hydrabad, and at the taking of the Fort Imaumghur. Major Powell was the eighth son of the late John Follett Powell, Esq., some time of Sandy Brook, co. Derby, and afterwards of Leamington, and grandson of Richard Powell, Esq., of Standege Park, Radnorshire, who married the eldest daughter of the last Earl of Foliott, of the Irish Peerage; and, on the maternal side, was related to the Scotts, of Great Bury, Staffordshire; the Adderleys, of Hams Hall, Warwickshire; and other distinguished families. His Colonel, Brigadier-General (now Major-General) Adams, in communicating to Fort Family the intelligence of their loss, spoke of Major Powell in the following manner:—"He was an officer of the highest class, and one that had the pleasure the Almighty to have spared his life, must, by his bravery and talent, have proved a great commander." An autograph fragment of Major Powell's services, the Commander-in-Chief has appointed a nephew of the deceased to an Ensigncy, without purchase, in his late uncle's regiment (the 49th).

RICHARDS (Captain Edwin), of the 41st Regiment, killed at Inkerman, was the eldest son of Captain Edwin Richards, R.N., of Ravendon House, county Carlow, an old and distinguished naval officer of the late war.

THISTLETHWAYTE (Lieutenant Arthur Henry), Ensign and Lieutenant Scots Fusilier Guards, son of the late Thomas Thistlethwaite, Esq., of Southwick-park, Hants, by Theodosia Tryphena, daughter of the late Henry Bathurst, Lord Bishop of Norwich. Tryphena, daughter of Charles Henry, Lord Castlecoote. Lieut. Thistlethwayte distinguished himself by his bravery at the battle of the Alma, where he carried the colours of his regiment, which were pierced by innumerable bullets. After having suffered from a severe attack of cholera, he retired for a short period on board ship, but returned to the Camp in time to share the dangers of the memorable battle of Inkerman. He had just purchased his promotion, and was home on his way home in the *Rip Van Winkle*, when the vessel was wrecked, and he was drowned. Walker were the only survivors. Lieut. Thistlethwayte died on the 26th November, in Scutari Hospital, from the effects of exhaustion, produced by dysentery and fever. He was brother-in-law to Lieut.-Colonel Pakenham, who was killed at the battle of Inkerman.

WILLIAMS (Captain Samuel Toosey), of the Scots-Greys, died on the 23rd ult., at Constantinople, where he had been conveyed from Balaclava. The origin of his illness was low fever—the result of exposure, privation, and excessive fatigue, prior and subsequently to the battle of Balaclava, at which he gallantly led the second squadron of the Scots Greys, on the memorable 25th October. A gallant soldier, a kind-hearted friend, and a popular companion, Captain Williams dies deeply lamented. He was eldest son of B. B. Williams, Esq., of Bucklebury, Berks, and of Westbourne-terrace, London. He had not completed his thirty-second year, and yet had been more than once honourably mentioned in the Army, his commission of Cornet bearing date 24th June, 1840.

*** Through an error of the press, the name of Lieutenant-Colonel Duross was placed in the War Obituary. We are very happy to correct this error, and to state that the gallant officer is living, and, we trust, will soon be able to continue his valuable services in his country's cause.

It is Captain Charles Butler, at present in India, who married Miss Prosser, and not his brother (Captain Henry T. Butler), who fell at Inkerman. The latter gallant and lamented officer was married, on the 18th July, 1839, in St. John's, Secunderabad, to Elizabeth, eldest daughter of the Rev. William Tonnoir, chaplain of a Battalion in the H.E.I.C. service. Mrs. Henry T. Butler, who survives her husband, is also niece of the Rev. Charles Forster, Rector of Stisted, Braintree, Essex.

IMPROVEMENTS IN PROPELLING AND NAVIGATING STEAM-VESSELS.

(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

THE painful account given in the ILLUSTRATED LONDON NEWS of the 16th inst of the loss of lives and steam-vessels on the coast of the Crimea, on the 14th ult., induces me to urge a motion to our improvements in propelling and navigating steam-vessels, convinced that they will be of the greatest importance to all concerned in steam navigation. Arrangements are also required for every class of vessels, for war or commerce—for yachts, for pleasure, and for navigation, canals, or rivers of light draught of water is required. The finest form of hull may be given, and vessels rigged in the best way for sailing. A greater speed is attained with the same amount of steam power, than by either paddle-wheels or screw. Sailing and steam power may be favourably combined. The steam-engine is never reversed, or are done by the seamen on the deck, without any change being made on the engine, or communicating with those attending it. The full power of the engine is always available for every movement necessary; and, in avoiding danger from collision, or other sources, the vessel may be instantly backed, or stopped within a very short distance. The engines are not affected by the rolling or plunging of the vessel in a heavy sea—there not being any reaction on them, as with paddle-wheels and screw. As the propelling power can be applied exclusively to either side of the vessel, the too near approach to a lee-shore may always be avoided. The vessel is also independent of the rudder, and may be navigated without it, if damaged or lost. These are some of the important advantages to be derived from adopting our improvements; and we are confident that both lives and property would be rendered much more safe by their use.

Edinburgh. J. and M. W. ROTHVEN, Engineers.

AMONG the contributions to the Patriotic Fund are offers by several gentlemen and ladies to educate orphans till they have attained a certain age.

EPITOME OF NEWS—FOREIGN AND DOMESTIC

The last news respecting the health of the Empress of Russia is most satisfactory, a dysentery having declared itself, which there has been no other way of stopping but by opium.

Sir De Lacy Evans had an interview with the Emperor of the French on Saturday last.

The Coronation of the Emperor of Austria is to take place in March. Orders have been received for the purpose by several jewellers.

The Vienna *Presse* is said to have been suspended, on account of an article directed against Lord John Russell.

The Emperor of Austria has authorised M. Franzini, a refugee, to return to Lombardy. The sequestration laid on his property is taken off.

Marshal Narvaez, who has been residing for some time at Orleans, is about to quit that place to fix his residence at Paris.

Miss Stanley, daughter of the late Bishop of Norwich, sailed last week with additional nurses for the East, to reinforce the corps under the direction of Miss Nightingale.

The Duke and Duchess of Brabant arrived at Vienna on Christmas-day. The Emperor received them at the railway station, and accompanied them to the palace, where their Royal Highnesses had an interview with the Emperor.

It is reported in Vienna that the Emperor Napoleon has conferred on the Emperor Francis Joseph, the Grand Cross of the Legion of Honour.

Mr. Brodie, of Aberdeen, has sold his statue of Corinna for £500.

The Emperor of the French has given 40,000f. to make a promenade by the sea side at Biarritz, the watering place where the Empress stayed so long last season.

There are now three vacant seats in the French Academy, caused by the deaths of MM. Ancelot, St. Aulaire, and Baour-Lormaln.

It has been determined by the Bar on the Oxford Circuit to place the bust of Mr. Justice Talfourd in the Crown Court of Stafford.

Colonel Céard, son of the celebrated engineer who directed the works of the road of the Simplon, has been named Chevalier in the Legion of Honour.

The Duke of Saxe-Weimar is restoring the ancient castle of Wartzburg, an edifice c[illegible] with the House of Saxe. The restorations include the [illegible] occupied by Elizabeth of Hungary, the Hall of the Minnesingers, and the apartment where Luther worked on his translation of the Bible.

Alexander Oswald, Esq., of Auchencraive, has purchased the estate of Dronganan in the parish of Stair, for £15,600. The lands are understood to contain a large field of coal, and probably ironstone.

The "Flight into Egypt," the new oratorio by M. Berlioz, was produced the other day in Paris with so much success, that a second performance of it was announced for Christmas-eve.

Dumfries papers mention the death of Miss Kirkpatrick, in her 86th year. She was aunt to the Countess de Montijo, and grand-aunt to the Empress of the French and to the Duke de Berwick and Alba.

Switzerland has hitherto been represented at Vienna by a provisional Chargé d'Affaires; but it is now, that, at the commencement of 1855, Colonel Ochsenbein, ex-Military Director, will proceed to the Austrian capital as permanent Chargé d'Affaires.

Mr. Digby Seymour, M.P., is appointed Recorder of Newcastle-upon-Tyne.

The Prince Bishop Wolff of Laybach, who, on the 15th inst., celebrated the jubilee of his fifty years' ministry, appropriated the sum of 15,000 florins to the printing of a new large Sclavonic dictionary.

The French artists are working hard for the Exhibition of next year. M. Jerome has an "Apotheosis of Augustus" in hand; Yvon, a "Retreat from Moscow;" Couture, a "Carnival Supper Scene;" Scheffer, a "Christ Tempted by Satan."

Peter Mathieson, for nearly thirty years coachman to Sir Walter Scott, died last week at Abbotsford, at the age of eighty-four. He had been a great favourite of his master, and had shared the ups and downs of his fortune.

The Cardinal of Bordeaux has organised a collection of Roman coins for the convalescent soldiers; he has himself contributed 600 bath-s of fine old wine.

At the sale of the late Baron de Meilenburg's collection of pictures, in Paris, the crowd of amateurs was so great after the first five minutes that it was impossible to enter the room. A landscape by Hobbema fetched 30,000 francs; the "Horse Market," by Wouvermans, 72,000 francs, and a landscape by Both, 26,500 francs.

A testimonial to the late eminent antiquarian has been named to promote a testimonial to Dr. Diamond, as a just acknowledgment of public gratitude for the eminent services rendered by this photographer to the interesting art.

The Spanish Government has not accepted the proposition made by the English Ambassador, to proclaim the Slave-trade piracy, but it has given orders for the strict execution of the conventions already existing with England on that subject.

A nugget of gold, weighing three pounds and a half, was lately taken out of the Hornitas Creek, Mariposa County, California.

A prize of one hundred pounds has been offered by the Council of the Evangelical Alliance for the best essay on the sabbath, to be written with a special view to circulation among the higher classes of the community.

The cost of the American ocean mail packet service is £400,000 a year.

Five propellers were frozen in at Cleveland, on Lake Erie, when the steamer left New York on the 18th; and the propeller *Baltic*, which had been compelled to return, reported solid ice as far as could be seen.

The Cunard and Collins steamers are now so arranged to ply between this country and America, that there will be a regular weekly communication.

During the past season California has produced the astonishing yield—in one instance, at least—of 824 bushels of wheat to the acre. In England, under the most perfect system of cultivation, we seldom reach as high as 60 bushels to the acre.

In consequence of the circulation of a statement that the Emperor of France is about to decree a reduction of 50 per cent in the duties on tallow, cocoa-nut oil, and grease, an advance in cocoa-nut oil has taken place of about £1 per ton.

The *Corriere Italiano* says the Allied Generals have hit upon a plan for throwing a strong light upon the fortifications of Sebastopol, by means of electricity, while the positions of the besieging armies will be shrouded in darkness.

The Manchester Exhibition of Pictures was open seventy-two days at 1s., and there were 6086 admissions; six days at 6d., 1050 ditto; and thirty evenings at 2d., 31,249 ditto.

The *Salut Public*, of Lyons, states that one of the most adroit barbers of that city lately made a bet that he would shave 50 persons in an hour. He was, however, only able to get through 32.

A motion had been made in the Second Prussian Chamber, praying the Government to take measures with Denmark for the abolition of the Sound duties.

The Free cln soldiers now in Gloucester have been entertained at a public banquet, at which the *entente cordiale* was pleasantly sustained

Letters are conveyed now between New York and Port Phillip in Australia, Havana, and Nassau, and between New Orleans and Havana, for an ocean postage rate of one penny the half-ounce. Newspapers are conveyed between those places at one farthing each, and pamphlets and magazines for one half-farthing an ounce.

In Prussia the post service is suspended on Sundays. The Chambers of Commerce of Berlin, Elbing, Tilsitt, Konigsberg, and other towns, addressed a petition to the Government, praying that the post-offices may be obliged to perform their service on the sundays and fête-days.

The snow on the Appenines and the adjoining country was so deep on the 19th inst., that it took the last railway-train from Genoa, with three engines, two hours to go a distance of little more than a league, and had to stop at the Serravalle station until the snow could be cleared from the rails.

The graduates of Edinburgh University propose to form an association to include all those who have taken degrees in the College, either in medicine or in arts. By this means the distinguished *alumni* of the University would be kept in connection with it.

A trip to Honolulu is getting quite the fashion in San Francisco; going down and stopping there a fortnight, amid the bananas, oranges, and pine apples, paying a visit to the volcanoes and other natural curiosities, and then returning back to business, refreshed in health and spirits, after an agreeable sojourn in the beautiful tropical climate of the Sandwich Islands, and an absence of little over a month.

Upon a farm, the property of Mr. John Orford, near Ipswich, several foundation walls have been uncovered, which appear to have belonged to a Roman villa, and a considerable portion of tesselated pavement is remaining proves the certainty of this conjecture.

The Porte has recompensed the Jews of Moldavia for the loyalty which they have always shown. All the Jews whom the Russians had incorporated by force in the Moldavian militia have been liberated, and have had a part of their taxes remitted.

THE BATTLE OF INKERMAN.

(FROM A SERGEANT OF ARTILLERY.)

Hospital, Scutari, Nov. 25

Dear Brother, Before you receive this letter you will no doubt have heard of my having been wounded at the battle of Inkerman. As days break on the morning of the 5th of November a strong army of Russians, said to have lately arrived from Odessa, made an attack on our Division (the Second), and commenced by firing shot and shell into our camp, which proceeding rather took us by surprise. We immediately turned out, and advanced to meet them, and when we came into action we gave it to them very sharp. Our battery took up a position on a hill in front of Sebastopol, where we fired away the whole of our ammunition, the shot and shell from the enemy coming thick among us, also a heavy fire of musketry. The Russians advanced in large columns towards us, and when they were about forty yards from our guns we opened our fire with canister upon them, which mowed them down in sections. They then turned but shortly after advanced again upon us. We still continued firing canister at them until our ammunition was expended. We then got the order to limber up; but the enemy made a rush on our guns, the detachments made off (leaving the guns), with the exception of myself and one gunner belonging to my detachment. He and I tried to get the gun away, but the Russians surrounded us, and I, [illegible] were obliged to defend ourselves, but, unfortunately, our swords were too short for the long muskets of the enemy. I threw a number of them off with my sword, but was soon knocked down, and bayonetted in twelve different places. I received one in the chest, which beat me double, breaking a small bone in that locality. This wound I received before I fell. The others were in the following parts of my body, &c.:—Three in the left arm, three in the right thigh, two in the back, one in the right ribs, and two in the head. They sent me left for dead. It was God's mercy that the savages had no more time, or they would, no doubt, have settled the account with me themselves and myself in a more expeditious way. However, they did manage to the guns away with them, after all, as the French came to our assistance and compelled them to retire.

I lay on the ground for an hour before I was carried to the rear, the blood flushing out of my wounds. The doctor came and dressed them up, which stopped their bleeding. My breathing became very short, through the broken bone in my chest, which the doctor said touched my lungs. He told me to prepare for the next world, as he thought I could not possibly get over it. I [illegible] really, and I [illegible] I left to either call anything nor turn myself in a bunk, but after a while I began to recover, every day gaining strength, and by the [illegible] I was able to walk about a little. I [illegible] on an allowance of [illegible] and assist in giving the [illegible] a other good drubbing.

Our battery was greatly cut up on the 5th. It was a dreadful engagement, and lasted all day; it was much more severe than the battle of the Alma; that being my first. I thought it bad enough. We had two men killed and 15 wounded in the battery, and I believe about 30 horses. Several wheels and limber boxes were broken by the shot from the enemy's batteries. The gunner who was wounded with me at the gun has died since. This is the third battle I have been in since I arrived in the Crimea, and escaped all except the last one.

Captain Turner came to me at night, after Inkerman, and praised me for my brave conduct, and promised that I should not be forgotten; so I expect you will hear something official about me. This alone gave me great consolation, to think I had given so much satisfaction in the performance of my duty.

ANDREW HENRY, Sergeant R.A.

REDUCTION OF FRENCH POSTAGE.—A new postal treaty has been entered into with France. There will be a reduction of postage upon paid letters weighing not more than ½oz (a weight which includes this great majority) to 4d. instead of 8d., or 2s. instead of 4s. The reduced postage of 4d. will carry the letter from any part of the United Kingdom to any part of France or Algeria. If the letter be posted unpaid, the charge will be double. The new treaty comes into operation on the 1st of January.

CIRCULATION OF THE PARIS NEWSPAPERS.—The *Presse* of Tuesday publishes from authentic returns the circulation of the daily Paris journals. It is as follows:—*Presse*, 41,000; *Siècle*, 38,000; *Constitutionnel*, 26,000; *Pays*, 16,000; *Patrie*, 15,000; *Débats*, 9000; *Univers*, 6000; *Assemblée Nationale*, 5000; *Union*, 4000; *Gazette de France*, 3000 Total per day, 161,000, of which the two journals which represent the Moderate Republican party stand for 77,000. Their success, however, is not due to their being disloyal to pure Republican sentiments, but to the fact of their being considered Opposition journals.

ON THE NEW BANK OF ENGLAND NOTE,

AND THE SUBSTITUTION OF SURFACE PRINTING FROM ELECTRO-TYPE FOR COPPER-PLATE PRINTING.

On the 29th inst., a very interesting paper upon the above subjects was read before the Society of Arts by Mr. Alfred Smee, F.R.S.; Mr. Henry Cole, C.B., Vice-President in the chair. The Society's large room was crowded with an attentive audience. Of Mr. Smee's paper, the most attractive contribution of the season, the following is an abstract:—

In the month of November, 1851, I had the honour of presenting a report to Mr. Hankey, the Governor of the Bank of England, on a peculiar method, that from facts and observations which had come under my notice, I believed that the time had arrived when surface-printing from electrotype could be advantageously employed for Bank of England notes, and that they could be both printed and numbered by ordinary printing-presses, with considerable saving of expense and increased identity of appearance.

Heretofore the notes and cheques of the Bank of England had invariably been printed from copper and steel plates, in which the lines were engraved or cut into the metal. In these hollows the printers rubbed the ink, which in process of printing, was transferred from the plate to the paper. In surface-printing the reverse state of things exists, and the design, instead of being cut in the plate, is left in relief, and the ink being put to the eminences by means of the rollers, is transferred in a press to the paper to form the impression.

In accordance with this report, Mr. Hankey at once directed the experiments to be commenced, and subsequently allowed me to sit with Mr. Henseman, the Engineer, and Mr. Coe, the Superintendent of Printing; and though each of us had our separate departments in which our individual labour and knowledge was most useful, we counselled together on every matter, and by our mutual exertions, acting together as one end for the benefit of the Bank, we have been enabled to overcome every difficulty, and to bring the process into practical operation for all the manifold varieties of cheques and notes which the Bank of England requires for its purposes.

The orig nal form or pattern of the various notes and cheques which have been adopted was accomplished and settled under the direction of Mr. Hankey, and the Court of Directors, before any of us commenced our labours.

The whole of the written part of the note was originally cut by Mr. Becket, the engraver to the establishment, but the Britannia was designed by Mr. Mac ee, R.A., and engraved by Robinson. The vignette was the base of our operations. After various experiments the cutting of the Britannia in a manner suitable for easy duplication was executed on a steel die, by that veteran engraver Mr. Thompson, whose artistic feeling is fully recognised by the public. The other parts of the notes and cheques were in a great measure cut by Mr. Scirving, in some cases upon pieces of brass, in others on plates of copper, about half an inch in thickness. In no case is the original ever employed for printing, but is simply used to make moulds, so that, throwing out of consideration accidental mechanical or chemical injuries, they will retain their integrity for any length of time without change, and will enable any number of duplicates to be made therefrom.

For the duplication of the original designs, we have recourse to the power afforded us by the processes of electro-metallurgy. For the purpose of the Bank of England, we have had recourse to the various forms of battery apparatus described by myself in the *Philosophical Magazine*, and in my "Elements of Electro-Metallurgy."

To ascertain the changes which are occurring in the battery we commonly employ an hydrometer; but I have specially constructed an instrument which I call a battery meter. The point constituting specific gravity 1, 1130, is called unity, and the interval between that point and 1360 is divided into 144 parts. By this division every degree represents one grain of zinc dissolved in 1000 grains of bulk of the fluid. The opposite side of the scale, between the same parts, is divided into 144 parts, each of which is, for every 1000 grains of bulk in the fluid, about one thousandth of an inch in the thickness for every superficial inch of surface, upon which the copper is reduced in the precipitating-trough.

At the Bank of England we generally find it convenient to employ parallelopiped-shaped vessels. Those made of mahogany, and lined with gut s-percha, are convenient and economical. For most of our purposes we use the vertical trough, because the sub t ce can be readily inserted and removed for inspection. For rapid d osition we employ the horizontal trough, in which the subject is placed at the bottom, and the copper pl te above. In the use of this apparatus some refin d chemical laws are involved. In the first place, sulphate of c pper possesses a low diffusive power, and is carried, by virtue of that property, so slowly through the fluid, that if we relied upon it failure would surely attend our labour. Secondly, the saturated so ution of sulphate of copper f rmed at the positive pole is so heavy that it d scends from the place of its formation like a cataract to the bottom of the vessel. Lastly, the part of the solution deprived of its copper, becomes so light that it rapidly rises to the top. For all rapid depo-ition we seek to for a new salt at the top of the apparatus, that it may descend to the place where it is required, and the li ht fluid may rise to mix with the denser portion.

Up to the present time the best standard salt for the reduction of copper by electro-metallurgy, is the sulphate; and, with the occasional exception of the nitrate, is favourably employed. We always have a neutral trough containing a simple solution, three parts saturated. For general purposes we use a saturated solution diluted with dilute sulphuric acid of battery strength, to the extent of from one-half to one-third of the bulk.

If we examine the precipitating trough we can but regard it as a very curious and wonderful chemical laboratory, in which two processes are being carried on at the same time, and in precisely equivalent proportions. In it we have the beautiful art of all others, applied for the production of sulphate of copper by the combination of the plate of copper with the acid of the salt, and in it we may perceive the most perfect of all foundries wherein the metal is cast upon the mould atom by atom, with a skill which rather shows the perfection of nature than the deficiencies of the operations of man.

As a general rule, we employ a single battery with one trough. Where we desire rapid action we employ a compound battery of two cells in series; but this entails a double cost of battery power. In a great many cases, where time is of no object, we employ a compound trough with a single battery; that is to say, we arrange two troughs in series with one battery—a contrivance whereby we use our battery power twice over, and obtain two equivalents of copper, one in each trough, and consequently at half the cost.

The deposited metal is of excellent quality, and a part of one of the Britannias when carefully weighed, was found to have a specific gravity of 8·88. To ascertain the ductility of the metal, I formed a series of scraps to Messrs. Horne and Thornthwaite, and one pound of metal was found capable of being drawn into three miles and a half of wire.

For all our other originals, when we desire perfection, we rely upon electro moulds, and electro-moulds alone. For this purpose the original is placed in the precipitating trough, and a thick electro-mould deposited. The casts of the Britannia are generally deposited so thick in the compound trough that they can be backed to the required form and size. Other subjects are generally backed with solder, and turned to their proper thickness.

The electro casts, when ready for printing, are mounted on solid brass blocks; and many tools had to be constructed for this purpose. By this system of tools, if any part of a form is damaged another piece is immediately inserted.

When the paper is dried it is moderately glazed, to give a smooth surface for printing. The smoothness is given by placing the sheets of paper between plates of copper, and subjecting them to a pressure sufficient on the one hand to give a fine and true surface, and yet not sufficient on the other to damage the water-mark.

The printing-ink used for the Bank-note is also a matter which has received attention. The properties of ink, when carefully prepared, are very curious, and require considerable judgment to adjust them to particular papers. To Mr. Winstone, the printing-ink manufacturer, has been intrusted the preparation and adaptation of the ink for the note, as it required some what careful treatment for the peculiar arrangement of the blocks and lights in the note.

For the cheques it was considered that the double-platen was the best machine, which was in active operation at the time. But that reason a machine by Hopkinson and Cope was adopted, and the cheques were printed by it, as also were the two journals.

For the Bank-note a new platten has been specially constructed by Messrs. Napier and Son, with contrivances for both inks and tables and the inking apparatus to traverse, by which means an effect is produced equivalent to rolling with a single hand roller twenty different times. In the machine a plan of great value is employed, as the form of every note is made to one gauge, and every denomination has its separate tympan and overlaying. By these means, when a note-form of one note made ready for press with its overlaying, it is always ready at a moment's notice, without further preparation, for taking impressions.

Counting-machines are appended to each end of the machine, that no impression can be taken without being registered; and when 100 impressions are printed, a bell strikes, to call attention to the fact. In Cyclopedia machines 3000 notes are printed per hour, and two boys are required to feed with paper, and two to take off the notes.

After the note is printed as a part of the system, we proposed that it should be numb red and dated at the printing machines instead of the first, as is now heretofore employed. These machines are also double, requiring two boys to feed and two to take off. By this working the note is completed, and handed over to the cashier, to be examined and counted. By this part of the system the note is decidedly superior to that of the old, the printing by the new process being very much improved as a mere question of printing.

When the form is arranged in the printing-machines, the first act of the printer is to obtain a perfectly level impress on, equal in tint at every part, which is accomplished by filling the back of the blocks wherever he finds any elevation exists. This may be called a general picture, which possesses the general appearance, but without the lights and shades which give beauty and excellence to the impression. When the general picture is obtained to the printer's satisfaction, four impressions are taken upon thin paper, and according to the gradations of tint required, the impression is cut away, so that in one place no thickness exists, in others one, two, three, or all the thicknesses remain. For the darkest portion the four thicknesses are left, for the lighter none are allowed, and for the intermediate tints two or three thicknesses are left. The whole are then pasted together and placed over the electro-tes, and by the contrivance of the overlaying those parts which are desired to be darkest get the heaviest inking, those required to be of a lighter tint are the least heavily pressed, and in this way the impression is in a great measure brought to perfection.

The time has long since passed away when scientific men would think of attempting to devise an inimitable note. A note to be inimitable must be made with a skill superior to the power of imitation of all men. The doctrine of inimitability should be hurled with that of the philosopher's stone and the elixir of life; nevertheless, certain properties are demanded by the mercantile community which may practically determine a good note. In this matter constancy of appearance is of paramount importance, and in this particular the new surface-note stands pre-eminent. As far as the protection of the Bank is concerned intricacy is not required, as the Bank is never a loser by forged notes. The impression, be it executed ever so skilfully; and the system pursued by the Bank is so perfect, that no forged note ever has escaped eventual detection.

The doctrine even of difficult imitation is one which must be studied by physiological principles, and must be considered in reference to the faculties of the eye and the properties of the mind. From such causes it is found by long experience that a great extraordinary complexity is not only useless, but deleterious and dangerous, often leading the mind into details which cannot be successfully appreciated.

In speaking of identity, there is also another property of the eye to be considered, for although there can hardly be any such thing as absolute identity or likeness between any two objects, yet any object which do not differ more than four seconds will appear alike to unaided vision, though with the microscope great differences may be discernible. Whenever, then, throughout this paper I speak of identity, I refer to the identity observable by the unaided sight, and after all it is a rough one. Comparative identity, a mere vision of identity when examined in a philosophical point of view. As far as the public is concerned, nothing can exceed the value of a uniform appearance; this the new note affords in the highest degree. Day after day, and year after year, the character of the paper will not vary. The same signature of "M. Marshall" which appears in the paper of one note will be repeated in the next. The same wave lines, the same rough edge of identity, and the same shadows in the water mark will be brought continually before the eye. The Britannia will have the same expression of countenance, and will be repeated line for line, and dot for dot, for millions of impressions unchanged and apparently unchangeable. The very weight of the paper does not vary above two or three grains, unless damaged by wear, and the colour of the ink will be maintained as far as possible.

Bank-notes are perhaps as little or less liable to be falsified than most other human inventions, in consequence of the certainty of the eventual detection of the fraud, and the great risk of punishment from the care and vigilance employed to trace out delinquents.

For extensive production and uniformity of expression, surface-printing stands pre-eminently as the master. Although the daily production of the *Times*, and the weekly production of the ILLUSTRATED LONDON NEWS may justly be termed this typographical wonders of the world, yet the care bestowed upon the note to render its unlimited duplica ion perfect, has a tendency to materially influence the printing art in this department in a beneficial manner.

We are also apt to think that art will stop at our point, and not progress; but it is the property of invention ever to move forward. The goat as it walks we have arrived must be the step from which future improvements must spring; and, proceeding step by step, the most possible excellence will doubtless eventually be secured.

There are certain characteristics which are common to the whole class of Bank of England Notes, which should be known to all the world. In the first place, every note has three of the natural edges of the paper, and one cut edge. In the centre of each note is a water-mark, composed of words and figures; and the words "Bank of England" are inserted in the sub tance of the paper at the lower and upper portion; and a fac-simile of the autograph of Matthew Marshall, the esteemed Chief Cashier of the corporation. The Britannia is printed on notes of all denominations; and all notes have the words, "I promise to pay the bearer on demand."

The entire class of Bank-notes include twelve genera, as each of the eleven branch establishments issue notes with the town name—as Manchester, Liverpool, Birmingham, Leeds, Newcastle, Leicester, Bristol, Portsmouth, Plymouth, Hull, Swansea and these, with London, form twelve establishments issuing notes.

Each genus comprises several species, as notes are of several denominations. Thus, in London, nine notes are issued—£5, £10, £50 £100 £3 0, £200, £300, and £1000 notes. In every branch notes are issued up to £100; and as the two important commercial towns of Liverpool and Manchester notes of £500 are issued in addition. In every genus of note the denomination up to £50 is placed in the water-mark in letters and twice in shaded figures.

Every species of note is made of innumerable individuals, each of which has an individuality as distinct and determinate for a Bank-not as the individuality which characterises every human being; and such characteristics as marked in the eyes of the Bank, to distinguish one from another, and no more likely to be mistaken than our chairman is likely to be mistaken by you for our secretary, even when you are so perfectly familiar with their likenesses. This individuality is given by a number and date being added to the denomination. The number is of no value alone, the date of no value alone, but the number, date, and denomination together conjointly mark the specific individual; and any person having these [illegible] can learn at the Bank to whom the note was issued, and when it was re-issued, the date of its return to the Bank, and the person to whom money was paid for it, with many other matters of its peculiar and family history, which are only objects of interest to its mother, the Old Lady of Threadneedle-street.

It is not generally known to the public that there are letters preceding the numbers on every note, and which with the number, tells the whole story of the note. Therefore, if the public will but take down the letters and numbers, they can learn every other particular on applying to the Bank.

To give an idea of the extent of our operations, I find, on casting them up, that there are sixty-six kinds of Bank notes, and about fifty varieties of cheques, which had to be prepared. Besides these, there are twenty-five kinds of Bank-bills, issued from eleven offices; the independently of sixty day-bills, and various matters which would not be interesting to the many, further than to show that the Bank has not merely adopted surface printing for a bank-note, but to all similar documents of a similar character which they require.

If we examine forms of notes printed by typography, we shall observe that the note of the Bank of France and the Belgian notes are so produced, but in these cases the character of the note is adapted to the style of printing; and even there the number printed is so small as to appear insignificant when compared with the number issued by the Bank of England. At the former establishment about 300 impressions are printed every day; at the latter, 2,000 are printed, and—as 8,000,000 notes are issued per annum, representing nearly £300,000,000.

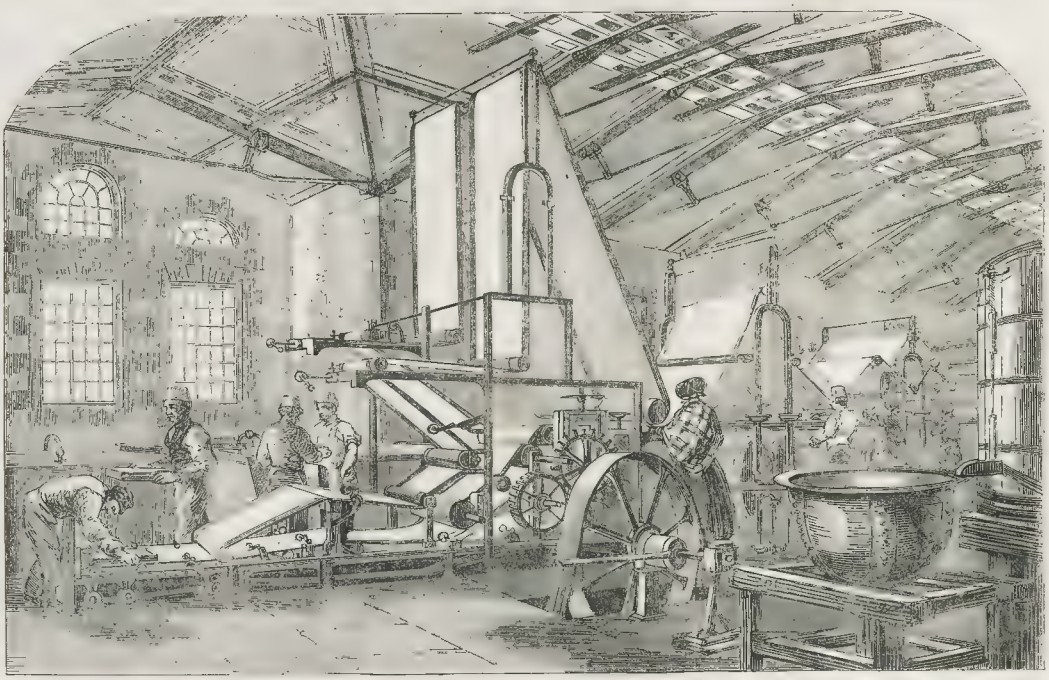
If we examine the note through its different stages, we cannot help being struck with astonishment at the care which has been taken to protect the public from impo-ition. In the manufacture of the paper every sheet must be accounted for, and the Legislature has wisely provided that no person, under the pain of transportation, may manufacture, sell, or expose for sale, paper with the words "Bank of England" in its substance, or any curve bar lines, or any denomination in words. When it is received in the Bank it is again counted and [illegible] decimal system, under the care of the [illegible] before it is [illegible] away. When issued to the printer, the same number must be handed over to the Treasurer; and when it receives its final imprint, and is converted into the representative of money, it is received by the Cashier, who again examines and counts the number. These perfect notes are deposited in a place of security till life is given to them by being carried as a debt into the Bank books. When it passes into the hands of the public, it is amenable to laws which are known to the authorities of the Bank. Each denomination has a different average duration of life, like individuals in different cities, and some are never heard of again, like people who go to foreign lands, and their fate ever remains unknown. When the note returns to the Bank, after inspection, it die, never to be re-suscitated. The signature is cut off, the denominations are punched out, and it becomes a piece of waste paper. The registry of its death is taken by a system devised by my brother Mr. William Smee. This system, which is remarkable for its simplicity and rapidity of execution, has been in use with great success for many years, and those who are partial to the details of scientific book-keeping, will discover many devices of interest, but which it is foreign to the purposes of my paper to consider in detail. After the death of the note is registered, it is then deposited in the vaults for another term of years, when it is burnt. The object of retaining the notes for so long a period is exclusively for the accommodation of the public, for although such a course entails a very considerable cost to the Bank, yet the value of the information which is daily being supplied from this source, shows the importance of it to the monetary community. It is not an easy matter to wisely destroy so large a number of notes as those which are issued by the Bank. Experiments have been tried to reduce them again to pulp, but they have never altogether succeeded, as the paper answers so well as their destruction by fire. A large iron cage is built in the middle of a yard, including a light brick furnace pierced with holes. In this cage the notes are placed and burnt by sackfuls at a time, and nothing is left but a little white ash. Formerly the paper was coloured with smelt, and this was left at the bottom of the furnace as a curious blue mass. The same care which is taken in the manufacture of the paper, and in the transition through its various stages, is maintained to its final destruction at Chat. from the linen-pulp of the cradle under, no person can become possessed of a single sheet without committing a felony, immediately liable to detection. As the final result of the changes Bank-notes undergo, I am enabled to show you a piece of the blue ash, a portion of the white ash, and a curious mass resembling peat, which arose from the conversion of a number of Bank-notes into a peculiar substance from years of exposure to wet and pressure.

A vote of thanks was then voted to Mr. Smee for his very valuable paper; and a vote was also given to the Governor and Deputy-Governor of the Bank of England, for their kind liberality in allowing the specimens to be exhibited, and the process to be detailed.

THE MILL

The Bank-note Mills, the property of Mr. Wyndham Portal, are situated in the parish of Laverstoke, in Hampshire, in the picturesque valley of the Test. This is a limpid stream, rising about three miles above the mills, chiefly running by Stockbridge (famous for its fishing club), and flowing through Lord Palmerston's property at Broadlands, near Romsey, finally discharges itself into the Southampton River. The waters of the Test abound with the trout.

The first Bank-note paper ever issued was made in these Mills, in about the year 1719, and it has ever since been produced on the same premises. From an analysis lately made by an eminent chemist, it has been ascertained that the water of this river is well adapted for the purposes for which it is required in this establishment. The building, the machinery, and, indeed, the entire premises, have undergone very considerable alterat ons and improvements of late (in fact, they are not yet brought to completion), in order to adapt them to the perfect execution of the paper used for the new Bank-note, the issue of which is to commence on New-year's-day. The new buildings in which the unique machinery is placed, were erected under the superintendence of Mr. Hellyer, architect, of the Isle of Wight; and, while great care appears to have been taken to provide for every convenience and possible desideratum as regards light, ventilation, and comfort for the workmen, Mr. Hellyer has, at the same time, succeeded in giving to the whole an appearance of beauty and chasteness, which is but seldom to be found works of a similar character. Although Mr. Portal's engineers (Messrs.



THE BANK-NOTE PAPER-MILL, LAVERSTOKE, HANTS.

Donkin and Co., Manchester) have constructed machinery of the most improved character, and on an extensive scale, for the various departments of Bank-note paper making, upwards of eighty hands are kept in constant employment. The water-wheel (at least the principal one) just erected by Messrs. Donkin, is a turbine—a description of water-wheel but little known, as yet, in this country, though much used and highly appreciated in some parts of the Continent. It is a horizontal wheel, and to it, in this instance, is attached a beautiful contrivance, rendered necessary here by the constantly varying level of the water at the tail of the mill.

These mills are used exclusively for the making of Bank-note paper; and, at the present time, about 50,000 Notes are made daily. The artizans and workpeople live mostly in neat and picturesque cottages adjoining the premises, and are occupants of the same dwellings formerly tenanted by their great-grandfathers.

The quality and the water-mark of the Bank-note paper have in the new Note (now on the point of being issued to the public) been brought to a high degree of excellence. The moulds from which the paper is made are executed by Mr. Brewer, who, with Mr. Smith, patented a very valuable invention, which was rewarded by a medal at the Great Exhibition of 1851. Mr. Brewer is constantly in attendance at the mills, in order that the slightest defect in any of the moulds may be immediately rectified. It is not necessary here, nor, indeed, expedient, to attempt to explain in detail any of the processes that are carried on in the rooms of which Sketches are given. Suffice it to say that, in thus improving and endeavouring to perfect the Bank-note paper, the authorities of the Bank have had entirely in view the protection of the public from fraud and loss. "Instead of defending themselves," (said the Rev. J. Barlow, in his lecture at the Royal Institution, on 'a Bank of England Note'), "as is the practice in some other countries, by secret marks on their paper-money, the substance and printing of which are equally ill executed, the Bank of England accepts no security which may not be possessed by any one who will make himself acquainted with the following characteristics of the paper and printing." The paper is distinguished by—1. Its colour. 2. Its thinness and transparency. 3. Its characteristic feel. 4. Its watermark. 5. Its three duple (or natural) edges, and one cut (or artificial) edge. 6. Its strength. No observant person can fail to notice the great diminution of forgeries within the last few years—before which time the punishment for such crime was no less than death. May we not hope, and may not the Bank of England derive some satisfaction from the thought, that the abatement of an offence which education was once supposed to promote, may be attributed to the diffusion of useful instruction and information liberally supplied, combined as it generally is, with moral and religious influences.
